Thomas Keyes, Jr., was born in the town April 20, 1802, and died October 30, 1831, aged twenty-nine years. He was the son of Thomas and Lydia Keyes, and grandson of Thomas Keyes, who settled here in 1767. Very early in life he manifested a strong inclination for invention and mechanical work, but as his friends intended and expected that he would lead a farmer's life, those traits were discouraged, and it was not until after his majority that he could devote any time to his natural inclinations. Had he lived a few years longer there is little doubt that he would have achieved a name that would have been a world-wide one. Astronomy was one of his favorite studies, and his great mechanical ingenuity led to the construction of the orrery, an instrument since becoming well known, for the purpose of illustrating the movements of the solar system. It is so simple and easy of management that it has become one of the most valuable instruments in use for the purpose it was intended for. With the orrery, one of his last designs was the construction of an apparatus which was to embrace the Lunarium and Tellurium on a different plan from any then known. Unfortunately, the traces of the designs which he left were so obscure that it was impossible for any one to understand them well enough to complete it. A board on which he had begun to trace these plans was the last work of his life, he being suddenly stricken by the disease from which he never recovered. Another invention of his was a stop-motion, a machine used in the warping of cotton and woolen yarns. This machine was afterward improved and perfected by his brother-in-law, David C. Murdock, and for about half a century was the only machine used for the purpose, and was in use in every cotton-mill in this country and many in Europe.

Mr. Keyes was very much interested in education, and exerted a great influence among his associates in the promotion and sustaining of lyceums and debating societies. It was a leading trait in his character to fully communicate information and especially to explain to others any discoveries he chanced to make.

He married Eveline Murdock April 10, 1827, who died at the age of twenty-four years.

David C. Murdock was born here December 21, 1805, and died October 15, 1886. He was the son of Deacon Artemas Murdock, and spent all of his long and useful life in this town. He was a natural mechanic, and learned the trade, and worked several years as a machinist. About the time of the decease of his brother-in-law, Thomas Keyes, Jr., before spoken of, he engaged in the manufacture of school apparatus and other small machines, made mostly for J. M. Wightman, of Boston, and continued the business until 1868, when his establishment was burned, and losing all his tools, patterns and models, this work was never resumed.

Soon after the death of Mr. Keyes he made improvements on his stop-motion machine, and so perfected it that it had continued to grow in favor until it had been introduced into nearly every cotton-mill in the country. On rebuilding, after the fire in 1868, he gave his whole attention to this machine, and had almost a monopoly of making any machines for tending warping of cotton yarn. Mr. Murdock was a man of much intelligence, and all his life-time exerted a great influence in town and public affairs.

He served many years as chairman of the Board of Selectmen, being in that position during the time of the late Civil War, when his activity and exertion went far towards the town's doing with credit its full share of carrying to success that great struggle. He sent two of his sons into some of the first regiments raised in the county, who served throughout the war, both reaching captain's positions. He served as a representative to the General Court four years, for many years was on the School Board and for nearly all his life, after thirty years of age, he was connected, in some capacity, with the town government. He married Adeline King, also of this town, October 6, 1829, who survived him less than a year. She died June 30, 1887.

Eli W. Holbrook, was born in Rutland, Mass., in 1809, and first came to this town in 1818, when about nine years of age, a poor boy entirely dependent on his own thrift and energy to obtain a living, he being the eldest of several children. His mother,

E. W. Holbrook

with six children, living in Rutland, had, up to this time, supported her family by weaving cotton cloth in a loom worked by hand, at her home, coming or sending to West Boylston for the yarn, and returning the cloth. She removed here in the above year and continued to weave in the hand-loom for about four years, or until the work that was commenced on power-looms in 1819 had increased, in 1822, to such an extent as to do about all of this part of the work. Eli went at once into the mill here and commenced his long life-time connection with the cotton manufacture, which is more fully noted in the history of the different mills in town, on other pages of this history. Mr. Holbrook continued all his life to be one of the leading men in the town. With a genial and kindly disposition he united a large benevolence and public spirit, spending much time and money in improving the public ways, by grading, setting out of trees, and other work thereon. He was a large contributor towards the support of the Gospel and many benevolent institutions, and was ever a leading member of the Congregational Society. His kindly nature ever made him a favorite with all the young folks, and he was ever noted as retaining the services of his employés for long periods of time. He was connected with the town's government for many years, serving as selectman, assessor, and in other positions. He represented the town two years in the Legislature. He was very successful in his business and accumulated a handsome competence. April 30, 1835, he married Miss Adeline Worcester, of this town, with whom he lived over half a century. She died February 5, 1887. He suffered several of the last years of his life from failing eyesight, but otherwise lived an active life until a few weeks before his death, which occurred November 26, 1888, being but a few days short of seventy-nine years of age. He leaves two daughters and five grandchildren.

PHYSICIANS.—Dr. Amariah Bigelow was the first practitioner to settle within the limits of the town. He came here in 1780, and married Persis, daughter of Major Ezra Beaman. He lived on the farm at the south part of the town, which, for long years, has been known as the John Temple farm. He died very suddenly in 1787, leaving a widow and three children. His widow afterwards married John Temple, still remaining on the farm where she began life with Dr. Bigelow until her death, in 1832.

Dr. Uriah Bigelow came here in 1788, and, after remaining a few years, went to Central New York, where he died at an advanced age.

Dr. Nicholas Jenks, from North Brookfield, settled here in 1809. He lived in what is now Oakdale, where he also kept a store. After a stay of ten years he removed to Southbridge.

Dr. John M. Smith settled here in 1819, where he remained fifteen years, when he, too, went to Southbridge, and died there in the meridian of life.

Dr. Jacob Moore settled here in 1828, and died in 1831. He was a young man very much liked by every one, and gave much promise of usefulness in his future career. He married a sister of Dr. John M. Smith.

Dr. Sherman Smith, a brother of Dr. John M. Smith, came here in 1831, and remained for a few years, and then went to Walpole, N. H., where he died suddenly in 1852.

Dr. Samuel Griggs came here in 1832, and stayed here until 1846, when he removed to Westboro', where he afterward died.

Dr. Ephraim Lovell was a native of this town, being a son of Amos Lovell. He began practice here in 1841, and continued until the time of his death, in 1869, although, for the last four years, he was in failing health, and had an assistant. He was a man of a very amiable character, and was greatly beloved by every one who knew him.

Dr. George W. Warren came here as a successor to Dr. Griggs in 1846. He was a graduate of Amherst College, coming here as his first place for practice, and still remains, having followed his profession for more than forty years. Within the past two years he has associated with himself his son, Dr. Ernest L. Warren, a very promising young man in the calling.

Dr. John S. Andrews came here from Sterling, and remained several years previous to 1859, when he sold out and removed from town.

Dr. Franklin L. Hunt came here in 1859 as the successor of Dr. Andrews, and remained until he joined the army in 1862, as elsewhere noted.

Dr. Charles A. Wheeler settled here two or three years before the war, and he, too, went into the army, as noted in the military records.

Dr. Lemuel H. Hammond came here as an assistant to Dr. Lovell in 1866, and removed to Worcester in 1869, where he still has an extensive practice.

Dr. E. C. Peck came here as a successor to Dr. Hammond, and remained until 1882, when he went from town.

Dr. Warren Pierce came here from Sterling about 1873, and remained until 1881, when he removed to Plymouth, where he still remains in the practice of his profession. Dr. Pierce was one of the most skillful physicians who had ever lived in the town.

Dr. William A. Earle came here in 1881, and still remains, having established an extensive practice.

During the past twenty years several French Canadian physicians have come here and remained a few months and then have gone elsewhere.

Three or four others, native-born doctors, have tried the field, but have not succeeded in establishing a foothold, and after a trial of a few months have left the work to the old incumbents.

The accounts of a few individuals who were natives of the town and who received a liberal education, fitting them for a professional life, is here given very briefly.

Ephraim Hinds, son of Benjamin Hinds, was born

in this town (then Shrewsbury), in 1780. He was a lawyer and lived away from town, following his profession until about sixty years of age, when he again came to this town, buying a small farm, on which he lived until his decease, June 18, 1858. He left three sons and one daughter.

John Reed, son of Capt. John Reed, was born here about the year 1800. He was fitted for and entered Harvard College, where he proved himself to be one of the smartest young men of his class. But owing to his great propensity for fun and causing the faculty much annoyance and trouble, his father was notified "that it would be best to take his son away." He, however, had managed to obtain an education ranking him as a great scholar for his age. He followed the business of teaching for several years, being very successful. He left town during the late war and soon after died.

Dr. Ephraim Lovell, son of Amos Lovell, Jr., was born here in 1812. He studied for and fitted himself for a physician. He settled here in 1841, and followed his profession very successfully until his decease in 1869.

Rev. William Murdock, son of Artemas Murdock, was born here in 1812. He was a graduate of Amherst College, and was settled afterwards for several years in the ministry at Candia, N. H. Having a difficulty about his throat which prevented the use of his voice in a great measure, he returned to this town about the year 1852, and went to work for his brother, David C. Murdock, where, from his great natural mechanical ability, he ever seemed as much at home as in the pulpit. He died very suddenly November 13, 1879, aged sixty-six years, four months, ten days, leaving a widow, two sons and one daughter.

Sylvanus Morse, son of Joseph Morse, was born here about the year 1800, received a college education and was the principal of Bradford Academy for several years. He returned to this town, and opened a family school in 1845, and was quite successful for a few years, when he sold out and again left town.

Dr. George W. Peirce, son of Levi Peirce, was born in 1819. He studied medicine and established himself in the town of Leominster about 1845, where he was a successful practitioner for many years. He died in that town in 1885.

Henry F. Harris, born here August 19, 1849, son of Charles M. Harris, graduated from Tufts College, and has been for several years in successful practice as an attorney in Worcester, Mass.

Edward A. Murdock, son of David C. Murdock, was born here May 24, 1854, studied medicine, and first established himself at Waltham, and afterwards removed to Spencer, Mass., where he is in the very successful practice of his calling.

Louis Cutting, born here November 11, 1849, son of John S. Cutting, has for the past two or three years been studying law and is now located in Worcester, where he has been admitted to the bar.

Alfred Lovell, son of Addison Lovel, born December 28, 1851, graduated as a civil engineer at the Technical School in Worcester, about the year 1875, and is now located at Rustic, N. J.

Albert W. Hinds, son of Albert and grandson of Ephraim Hinds, Esq., has recently graduated from Brown University, and is fitting himself for a teacher. He was born in this town November 30, 1864.

Elmer F. Higgins, born January 21, 1862, and Tracy L. Newton, born February 20, 1867, both natives of this town, are now students at Brown University.

David Bigelow Lovell, son of Portland Lovell, born here March 22, 1865, is a student at a medical school in New York City.

Llewellen Drake, born in Maine, and a graduate of our High School in 1885, and Harry L. Peirce, born here November 1, 1870, and was a graduate of the school in 1888, have both entered Colby University, at Waterville, Me.

MILITARY.—One of the first settlers of this town of whom we have any account as having enlisted for any of the military movements was Benjamin Bigelow, who enlisted as a soldier in 1745, in the expedition for the capture and reduction of Louisbourg, then belonging to France, and considered the Gibraltar of America. The capture and possession of this place was regarded at the time as a great achievement, and highly important in its advantages to the British Crown. On his return from this expedition Mr. Bigelow brought with him several articles of iron manufacture, some of which are yet in use on the farm which he then occupied, and which is now in the possession of Thomas N. Keyes.

Ephriam and Ithamar Bennett, sons of Phineas Bennett, one of the earliest settlers of this town, enlisted as soldiers in the army sent to Ticonderoga in 1758, and attempted to capture the fortress at that place. They were in the so-called "Morning Fight," which resulted, after four hours of hard fighting, in a disastrous defeat to the English army, and both of these two young men were killed in the terrible conflict.

At the commencement and during the progress of the war for the American Revolution the inhabitants of the district now comprising the town of West Boylston were zealous and active in all the efforts made to obtain and secure for the Colonies liberty and independence. Major Ezra Beaman was a prominent and leading spirit in this important and patriotic work, and nearly every one around him was also firm and determined in favor of freedom and the rights of the people.

On several special and important occasions the citizen soldiers here turned out, readily leaving their families and business to engage in the service of their country, and that without pay or remuneration, other than the satisfaction of having discharged their duty. During the continuance of the war several men here

enlisted and joined the regular army at different periods, all of whom, with one exception, served out their time, returned home and lived to enjoy the blessings and advantages resulting from the toils and suffering which they had bravely endured. The names of these enlisted men were Ezra Beaman, John Bixby, Joseph Bixby, Zachariah Child, Joseph Dwelley, William Fairbank, Oliver Glazier, Benjamin Hinds, Jr., Jason Hinds, Ebenezer Inglesby, Ebenezer Pike, Paul Raymond, Isaac Smith, John Temple, Nathan Wilder and John Winn.

Of these men, the history of Ezra Beaman is given in another place; of the two Bixbys, no reliable account of their subsequent life can be found. Their father, Samuel Bixby, came from Woburn and settled here about 1750, and both he and his wife died in 1800, since which time no one of the family seems to have lived in the town.

Zachariah Child was born in 1763, being the eldest son of David Child, who was the owner and proprietor of the farm afterwards owned and occupied by Rev. William Nash, the first settled minister here under the precinct formation. Mr. Child was a young soldier, but served with credit, and after an honorable discharge settled on a small farm adjoining his father's, and in 1784 married Lydia, daughter of David Bigelow, of Worcester, and had a large family of children. He died in 1845, aged eighty-one years. His wife survived him and died in 1849, aged eighty-five years. For many of his last years Mr. Child was in the receipt of a pension.

Joseph Dwelley was born in Worcester, and after the war he purchased a farm in this town, the same afterward owned by Dea. James Fiske, which he owned and occupied about forty years, when he sold out and removed to Oakham, where he died in 1840, aged seventy-five years. He enlisted into the army when only fifteen years of age, served faithfully during the last three years of the war, enduring cheerfully many hardships and trials. He was in all the movements which resulted in the surrender of Cornwallis at Yorktown, and received an honorable discharge at the war's close.

William Fairbank was born in 1758, being the youngest son of Jonathan Fairbank. He was a farmer and occupied the farm now owned and occupied by James W. Robbins. He was a man of ability and prominence in the town, being often chosen to offices of trust and responsibility by his fellow-townsmen. During the last years of his life he received a pension from the government. He died here in 1840, aged eighty-one years.

Oliver Glazier was born in 1763, and was the son of John Glazier, of Boylston. In 1785 he married Rachel Hastings, of Boylston. They had ten children, all of whom outlived their parents. His wife died in 1841, when he went to Northboro' to live with his eldest daughter, with whom he continued to live until his decease in 1855, aged ninety-two years, living the longest of any of these soldiers.

Benjamin Hinds, Jr., and Jason Hinds were sons of Benjamin Hinds, and soon after the war are said to have gone to Maine and settled there. They were brothers to Jacob and Joseph Hinds, who both settled in this town and had families, but at the present time there is but one representative of the name in town, Solon Hinds, son of said Joseph Hinds, now over eighty years of age.

Ebenezer Inglesby. The only account we can give of him: is that he settled in this town about 1750, and removed therefrom in 1794. "He married a daughter of Aaron Newton and had a large family of children."

Ebenezer Pike settled in this town about 1760, and died here at an advanced age. "He was a soldier in the Revolutionary War and served his country faithfully."

"Paul Raymond was an early settler here, but removed from town previous to 1780." Probably he did not live here after the close of the war.

Isaac Smith was born about 1755, and came to this town soon after the close of the war, when he married Prudence Cutting, and settled on a farm one mile west of the old Common, where he lived until his decease in 1824. Of him it is said "He was a soldier of the Revolution, and performed good service during that memorable struggle; and by the faithful discharge of duty, and the fatigue and hardship endured, he merited and ought to receive the gratitude and veneration of future generations. He was truly one of those brave spirits who, by their persevering efforts and untold sufferings, helped to consummate our nation's independence."

John Temple, the oldest son of Jonas Temple, of Boylston, was born in 1762 and died in 1841, aged seventy-nine years. He was, next to Major Beaman, of these Revolutionary heroes, the one most identified with the town's growth and prosperity. He first married Lois, daughter of Micah Harthan, who only lived one year after her marriage. In 1793 he married Persis, daughter of Major Beaman, and the widow of Dr. Amariah Bigelow, with whom he lived until 1832, when she died, leaving two children by Mr. Temple and two by Dr. Bigelow. Mr. Temple was an enterprising and successful farmer, possessing and occupying an extensive farm in the southerly part of the town, which had been previously owned by Dr. Amariah Bigelow. Mr. Temple was all his life a prominent citizen of an energetic temperament, which enabled him to act with promptness on matters of importance. "He was chosen several successive years as chairman of the Board of Selectmen, and frequently was called to the performance of other important duties of a public character. After the decease of his second wife he married Polly Dakin, of Boylston, who survived him and died in 1856."

Nathan Wilder, son of Abner Wilder, was born in 1760 and died in 1822, aged sixty-two years. Of him we only have this meagre history: "He married and had children, some of whom were living twenty-five years after his decease."

John Winn, son of Jacob Winn, was born in 1760 and died in 1843, aged eighty-three years. He married Abigail Cross, of Boston, who survived him and died in 1853, aged eighty-nine years. Mr. Winn was a cooper by trade and occupied, during his life, the premises now owned by Mrs. Cranson Cook, on the road to Lancaster. Mr. and Mrs. Winn had several children who survived them, but at the present time no one of the name is a resident in the town. And it is a singular and remarkable fact that of the sixteen Revolutionary soldiers of this town there is not a single descendant of the same name now living in the town.

We have no records of any persons having enlisted or of serving in the second war with England in 1812, but as other towns of the county were called upon to furnish men for temporary service, this town may have done so; but at a meeting held on the 3d day of July, 1812, the following votes were passed by nearly a unanimous one of the meeting, only two voting adversely: "That the town disaproves of the late declaration of war against Great Britton." Also chose the selectmen and town clerk a committee to prepare certain resolutions, expressive of the sense of the town.

In the Mexican War two young men volunteered and went with the army to Mexico. George Flagg, son of Francis Flagg, was in most of the hard battles which resulted in the capture of the city of Mexico. He was taken sick while on his return and died in the hospital at New Orleans July 26, 1848, aged twenty-four years.

Charles W. Allen, son of Daniel W. Allen, served through the war with credit and came home after its close; he remained here about two years and then went to California, where he died November 12, 1867.

West Boylston, in common with the towns of the whole North, was thoroughly aroused at the first indications that the South would rebel against its lawful government, and all such steps were at once taken to render all the aid to the constituted authorities to maintain the integrity of our Union, in the power of the town to show and maintain. Many meetings were held, volunteers for the army were encouraged to enlist, money was raised for their equipment and for the care of the families of all who had one to leave. Our young men were urged to drill and otherwise perfect themselves for soldiers, and in fact all persons in town—men, women and children—seemed to vie with all others in their efforts to meet the needs of the hour. At the first legal meeting held by the town, after the fall of Fort Sumter, April 29, 1861, the town voted to appropriate two thousand dollars for the equipment of a military company. It also voted to pay the men for the time spent in drilling, also to pay all the needed aid to families of men who should volunteer. The town also chose an efficient committee to attend to all the necessary work. As a consequence the town had volunteers in nearly all of the first regiments that went into the field, having men in all the regiments raised in the county. During the war the town sent into the army two hundred and fifty-two men. Of these, twelve were commissioned officers and two were surgeons. The commissioned officers were: Major Alonzo D. Pratt, of the Thirty-fourth; Major Addison A. Hosmer, of the Twenty-eighth; Captain Pelham Bradford and Captain Woodbury Whittemore, of the Twenty-first; Captain Charles C. Murdock, of the Twenty-fifth; Captain George L. Murdock, of the Thirty-fourth; Captain C. Alden Pratt, of the Forty-second; Lieutenant, William D. Toombs, of the Second; Lieutenant Harlan P. Houghton, of the Thirty-fourth; Lieutenant James Conner, of the Forty-second; Lieutenant Albert M. Murdock, of the Fifty-seventh, all Massachusetts infantry regiments; and Lieutenant Elliot F. Brigham, of the Fourth Massachusetts Cavalry. Only one of these officers lost his life while serving in the army. Lieutenant Albert M. Murdock, while leading an assault on Fort Steadman, at Petersburg, Va., March 25, 1865, was almost instantly killed. His last words were, "Save the flag, boys." He was a very promising young man, the only son of Cyrus Murdock, only nineteen years of age when he left the Highland Military School at Worcester to join his regiment in the last year of the war. He took part in all the hard battles of the Wilderness and around Richmond, and ever showed himself a cool and brave officer.

Several of the other officers received wounds in the many battles they were engaged in, and most of them won their promotions by their services; but all came home and, so far as known, are all still living and filling responsible positions in life.

The two surgeons were Dr. Franklin L. Hunt, of the Twenty-seventh, and Dr. Charles A. Wheeler, of the Twelfth Regiment.

Dr. Hunt was a young man of talent, of a very genial disposition and greatly beloved by all his acquaintances. He had only been in the practice of his profession three years when he joined his regiment at Newbern, N. C., in August, 1862. On November 18, 1862, while riding just outside the lines at Washington, N. C., he was fired upon and killed by straggling guerrillas. His body was recovered, brought home and buried at Douglas, his native town. He left a young wife and two children.

Dr. Wheeler served through the war, came home and afterwards resumed his practice in Leominster, in this county, and still remains in that town.

Probably no soldier of the great Civil War was better or more widely known than Sergeant Thomas Plunkett. He came to this town when about twelve

years of age and lived here until the commencement of the war. He enlisted from the town as a member of Company E of the Twenty-first Regiment, and saw much hard service and fighting previous to the battle of Fredericksburg, Va. In this battle he was the color-sergeant of his regiment and had both arms shot away by a fragment of a shell. Notwithstanding the great loss of blood and the delay before his wounds could be attended to, his indomitable will carried him through, and he survived his injuries and lived until March 8, 1885, receiving from every one love and respect for his patriotism, courage and great physical loss. He held positions of trust at the Custom House and State House in Boston several years before his death, and was at his post at the State House nearly up to the day of his death, although his friends urged him to retire. His death was announced in the House of Representatives March 10th, when it was voted "to appoint a committee of eight to attend his funeral," and also "that a guard should be detailed by the Sergeant-at-arms to carry the colors which were borne by Sergeant Plunkett at the battle of Fredericksburg to the funeral," which was held in Mechanics' Hall in Worcester, and drew together a concourse of people large enough to twice fill that great hall. The Governor and staff, a large number of the State officials, many members of the General Court, many military companies, different Grand Army corps and citizens from all parts of the State came together to do this brave soldier honor. He left a wife and two sons.

After his recovery from his wounds his many friends raised for him such a sum of money as rendered him independent during his lifetime. He resided in this town several years after his return and marriage, but for the last few years he was a resident of Worcester, Mass.

At one time efforts were made to have him promoted, and an application was made to Governor Andrew to give him a commission. This would have been gladly done, but after much thought and deliberation, that noble Governor says, "No! as *sergeant* he has achieved his wide reputation, and as such he will be longer remembered, *so let him be ever known as Sergeant Plunkett.*"

During the war the town paid for recruiting and other expenses, with the amount of State aid paid to families, about forty thousand dollars, besides which, the ladies of the town raised, in various ways, upward of twelve hundred dollars in money, and sent stores of clothing, etc., to the hospitals at several times during the great struggle.

The following-named soldiers were killed or died while connected with the army:

Charles F. Bigelow, Co. D, 24th Regt., came home sick from Charleston, S. C., and died soon after.
George L. Bigelow, of the 34th Regt., died in Andersonville Prison.
William H. Blunt, Co. D, 2d Regt., was mortally wounded at Gettysburg.
Amos W. Broad, Co. C, 15th Regt., supposed to have been lost at sea.
Isaac Child, Co. D, 2d Regt., killed at Antietam, Md.
Benoni H. Colvin, Co. E, 42d Regt., came home sick and died soon after.
Frederick Colvin, Co. D, 2d Regt., killed at Winchester, Va.
Joseph E. Esterbrook, Co. K, 53d Regt., died at New York.
Patrick Fitzpatrick, Co. E, 42d Regt., died at New Orleans.
Harlow Getchell, Co. C, 15th Regt., wounded at Antietam, and died in hospital.
John H. Horan, Co. E, 21st Regt., died at Newbern, N. C.
Leonard T. Hosmer, Co. E, 21st Regt., died at Washington, D. C.
Geo. B. J. Hosmer, Co. D, 2d Regt., transferred to Signal Corps; died at Newbern, N. C.
Dr. Franklin L. Hunt, of the 27th Regt., killed by guerrillas, at Washington, N. C.
Jonas C. Keyes, Co. G, 2d H. A., died in Andersonville Prison.
Charles H. Kidder, 7th Light Battery, died at Memphis, Tenn.
Thomas Lynch, Co. G, 2d H. A., died in Andersonville Prison.
Leonard F. Mahan, Co. E, 42d Regt., died at New Orleans.
Mercail Mallett, Co. G, 57th Regt., killed in the battles of the Wilderness, Va.
Lieut. Albert H. Murdock, 57th Regt., killed at Fort Steadman, Va.
Geo. B. Newton, Co. D, 2d Regt., died at Baltimore, Md.
Samuel E. Pratt, Co. A, 15th Regt., died at Yorktown, Va.
Joseph T. Smith, Co. K, 15th Regt., mortally wounded, and died at Antietam.
John B. Tallman, Co. C, 34th Regt., killed in Shenandoah Valley.
Martin N. Trask, Co. I, 25th Regt., died at Fortress Monroe.
Thomas Watson, Co. K, 2d Regt., killed at Cedar Mountain, Va.
James Welsh, of the 34th Regt., died at Florence, S. C.
Newton Wellman, Co. E, 21st Regt., died at City Point, Va.
William F. Wilson, U. S. Engineer Corps, died in hospital at Point of Rocks, Md.
Alfred M. Whyte, Co. D, 2d Regt., died of wounds, at Antietam, Md.
Nelson Wright, Co. E, 42d Regt., died at New Orleans.

FARMS.—There are in town about eighty farms of from thirty to two hundred acres each, on which the business of farming, in its various branches, is nearly the exclusive occupation of their owners; while there are about twenty smaller farms of fifteen to thirty acres each, which occupy the time of their owners only a part of the time, the business being combined with, usually, some mechanical work. A majority of the larger farmers make the production of milk their principal business. This is sold from door to door in town early each morning. Several routes are supplied daily in Worcester, while many of the large farmers at the north part of the town send their milk by railroad to Boston. But little, comparatively, of butter and cheese are made. Considerable attention is given to raising vegetables and small fruits for home and Worcester markets. The great grain staples of corn, wheat, rye and oats are not raised to as great an extent as fifty years ago.

From old records we learn that during the period from 1760 to 1820 not less than three thousand bushels of rye were annually raised in the town, with about the same quantity of corn and oats, and during the winter season much of this was taken to Boston market, where the farmers could realize $1.25 per bushel for the corn and rye. Large quantities of cider, too, were made, every family feeling the necessity of "putting in" for home use several barrels. Large quantities of this, too, were taken to market, selling at from one to two dollars per barrel. Nearly every large farmer considered that a cider-mill was a necessary

appendage to his farm. Sixty years ago there were not less than thirty of these mills in town; now there is but one. Sixty years ago grafted fruit-trees were almost unknown; now, but few apple-trees of natural fruit are allowed to grow.

HILLS.—Of the different hills in the town, "Malden Hill" is the most prominent and is much the largest and most elevated. This hill originally lay entirely in Holden, the line between Holden and Boylston running easterly of it. The early settlers of Holden gave it the name of "Mount Carmel," but in the memory of old people it has always been called by its present name. In changing the line between Holden and West Boylston, in the formation of the precinct in 1787, and the town in 1808, the line was changed and fixed on the easterly side of this hill for its entire length. Just how this hill received its name seems to have been forgotten by all of our old people.

We now offer the following history of facts, believing that it will show when and why it was done. In 1665 the Colonial authorities made a grant of a tract of one thousand acres to the town of Malden, to help support the Gospel, which is described and located as follows:

> One thousand acres of upland and meadow, about two miles distant southwesterly from the southwest corner of Lancaster Bounds, as also about a mile distant Southwesterly from the lands formerly granted and laid out unto Capt. Richard Davenport, beginning at the south end of a high, rocky, pine hill, at a little red oak marked M, and from thence a line upon an East South East point, 212 rods, unto a pine marked M, and from thence a line upon a South point 640 rods; and from thence a line upon a West North West point 370 rods; and from thence a line upon a North by East point, six degrees Easterly, 620 rods; and these four lines so run making up the full compliment of the aforesaid one thousand acres, as is more plainly described by a Plott.

In 1736 the location of this tract of land came into the courts of this county in a dispute between Malden and Shrewsbury parties, the latter contending that "Malden Hill" was the hill named, and that the tract lay southerly of its southerly point, while the Malden parties contended that it lay nearly two miles easterly of that point. In the long and somewhat bitter quarrel the name of Malden was given to the hill and also to the brook rising in Holden and flowing around its southerly end, then along its easterly side to the Quinnepoxet River, and these names have ever since attached to both hill and brook. The location of the Malden grant was decided, after the matter had been in the courts about two years, in favor of Malden. Said location will be found in another page of this history. Malden Hill is very rocky and uneven, with but little good grazing land. It contains some fine granite quarries.

"Wellington Hill" was the name given to the long hill in the southerly part of the town, extending for a distance of about two miles north and south, over the ridge of which the line dividing this town from Boylston runs. The name of "Bond Hill" has for many years been given to this hill by the people of both towns.

"Davenport Hill," in the northeastern part of the town, also lies partly in this town and partly in Boylston. The high hill in the north part of the town has been sometimes called "Carter's Hill," but is not often spoken of as having any name. A new road has recently been built, nearly over its summit, from Oakdale, opening a beautiful prospect from its location, and it is suggested that "Prospect Hill" would be an appropriate name for it. Another high hill, extending southerly from the old Common, is usually spoken of as "Keyes' Hill."

All four of these last-named hills are considered to be some of the best farming and grazing lands in town. "Pine Hill" is located in the easterly part of the town, and is a small, rocky hill, only producing a stunted growth of pine and shrub oaks. "Eames Ledge" is the name given to another rocky hill, lying directly south of the Worcester and Nashua Railroad, where said railroad was cut through the "big ledge." This was really the "high, rocky pine hill" named in the old grant of "Malden farm," in 1665.

The views from many points on these hills, into and over the valleys of our rivers, present to the eye of the beholder some very pleasing and picturesque scenes. At some points there seems to be barely room for the streams and a narrow road; then a wide expanse of beautiful intervale opens to the eye, with grand old trees here and there, and rows of buildings on their margins. These intervales are probably some of the best farming lands in the county, and in extent cover several hundred acres, the largest one being below the junction of the Stillwater and Quinnepoxet Rivers, and extending into the town of Boylston.

PLEASURE RESORT.—Pleasant Valley has been one of the most attractive and romantic places in the town to show to strangers. Situated in the southeasterly part of the town, and entirely surrounded by forests, is a small circular valley of about four acres, with hills on all sides, except at one end, where a carriage-road makes access easy; it seems like a natural amphitheatre, with a natural growth of short green grass, on a surface seemingly as level as art could make it. In spring and summer it always presents to the eye a charming and beautiful spot. A singular fact in relation to this ground is that no tree or shrub has ever sprung up and grown from it, and nothing but the same short, wild grass has covered its surface. It has ever been the resort for parties of pleasure, coming from far and near to spend a few hours in this pleasant retired spot. Many years since, when travel between Worcester and points north was done by stages, one of our genial old stage-drivers would often take his load of passengers the mile from his route to show them the beauties of Pleasant Valley. It was no doubt once the bed of a pond, and, owing to some underground leakage, was drained. In the spring of the year, and in times of great rains, quite a stream

of water runs towards it, but finds some underground passage, and never fills this basin. About a hundred rods from it, and seventy to one hundred feet lower, at the edge of the intervale, is a remarkable spring of water, nearly as cold as ice-water, and constantly flowing through quicksand at all times of the year, in a volume of force to fill a pipe of three to six inches. Whether there is any connection between the two or not may be difficult to prove; but the theory has been suggested that the water going in from above finds icy chambers beneath, melting enough to pass off through the spring below. Both valley and spring have been, since the town was settled, places of attraction, both to old residents and visitors.

Remarkable Longevity.—Mrs. Sarah Goodale was born in the town of Marlboro' in 1714, and married Edward Goodale, one of the early settlers of this town. They had five sons and one daughter—all born within twelve years of each other. The father died when about forty years of age, leaving his family in possession of a farm, with very little other property. Mrs. Goodale being a strong, robust woman, determined to keep her family together, and succeeded so so well that she was enabled to pay to each one on coming to their majority their full proportion of the value of the estate, although she herself had become the *bona fide* owner of the homestead, She had become their legal guardian, and had assumed the control of the farm and business. These children all lived to old age, and in their turn manifested the same dutiful care and respect for their honored mother, during the latter portion of her life, which she had bestowed on them while in their childhood and early years. She died here in 1810, being in her ninety-seventh year, and at that time the oldest person who had died in the town. Her children all survived her and died as follows: Moses died in 1815, aged seventy-five years; Elizabeth died in 1837, aged ninety-six years; Aaron died in 1817, aged seventy-four years; Paul died in 1828, aged eighty-one years; David died in 1832, aged eighty-two years; Peter died in 1834, aged eighty-two years. This mother and all of these children were professors of religion, and manifested through all their lives a due regard for its principles in their treatment of each other and the world at large.

At the close of the first half-century of this town's existence, in 1858, Miss Sarah Harthan was the oldest living person in the town. She was the eldest child of Micah Harthan, and was born in Lancaster in 1763, where she resided for eighteen years, then resided in Shrewsbury five years, afterwards in Boylston twenty-two years, and during the remainder of her life her residence was in West Boylston. It is a remarkable circumstance that during the first sixty years of her life she was a resident of all the four towns named, and never changed her place of abode. She died in the fall of 1858, aged nearly ninety-six years.

"Anthony Taylor, son of Eleazer Taylor, of Boylston, was born in 1749, came to West Boylston in 1808 and lived here until his death, in 1819. He was a large, stout-built man, and supposed by his cotemporaries not to be surpassed in muscular strength by any man in New England. In early life he performed several extraordinary feats, the relation of which might seem to challenge the belief of the most credulous. Yet, the credibility of those persons who witnessed and have given an account of these wonderful exhibitions of power and strength manifested and put forth by this man, render it quite certain that nothing more than the truth has been related about his great strength. One instance of his extraordinary muscular power was given while he was serving with the army at Cambridge in 1775. Approaching a field-piece, he lifted it from the ground and would have put it on his shoulder had not others interfered, both to save himself and the cannon from injury. Other accounts relative to his uncommon physical force were often cited and believed by persons of indisputable testimony." Had this great force of body been directed by a like force of mind, we should, no doubt, have now been able to record the history of a remarkable personage; but we find in the records of the town for the year 1809 that the town voted "to put up at auction the town's poor, to be taken by the lowest bidder," and "Anthony Taylor was bid off by Jonathan Plympton at one dollar and three cents per week." In 1818 the price paid to Aaron Goodale was two dollars per week. The last year of his life Anthony Taylor, with six other paupers, were all bid off by "Jacob Hinds, to be cared for, for the year ensuing, for the sum of two hundred and sixty dollars," which sum was "to include clothing and nursing," and was not "to be reduced if any of the number should die before the year's end." This practice of "auctioning off" the town's poor was followed for several years later, but for the past fifty years other and less annoying methods of arranging for their care has prevailed.

Samuel Whitney is believed by his descendants to have been the first white man that lived on the territory of what is now West Boylston. He certainly came here alone from Lexington, Mass., early in the last century, and made an opening in the northwest part of the town, on lands which, for several generations, have been owned and occupied by descendants of his, the Masons. He came here with only a dog for a companion, and using a great hollow log as the main part of his house, lived here alone for four years, excepting in the winter seasons, when he returned to his family at Lexington. He was sometimes visited by Indian neighbors, but never had any trouble with them. After being here two years, early one fall morning he imagined he could hear a voice calling pig! pig! and was so impressed by it that he took his dog and gun and, crossing the Quinnepoxet River and following a southerly course about two miles, found another white man, a Lovell, who had been living

there about six months. That morning his pig had strayed away and he had been using his voice, to its loudest extent, in calling it.

After living on his clearing alone four years, Mr. Whitney brought his family to the place and settled down for a permanent home. They had three daughters to afterwards grow up and marry, the first one to a Thomas, the second to a Whittaker, the third to a Mason, the descendants of the last living on the same spot up to the present time.

THE EARTHQUAKE.—The Great Earthquake, as it has been termed, happened late in the evening of November 18, 1755, and as it left its only traces within the limits of this town, it can be claimed as exclusively local, even although at the time of its occurrence the territory where its effects are, and long will be visible, was within the limits of Holden, and before that town's incorporation, of Worcester. "At the time of its occurrence it produced great commotion, alarm and consternation. Dwelling-houses were shaken so severely as to cause kettles and other things to rattle and make much noise, plates and other articles were thrown from shelves, and people who had retired found their beds rocking like cradles." Soon afterwards it was discovered that a large piece of land of some acres in extent, situated in the northwest part of this town (then Holden), had sunk several feet; an acre or more seems to have sunk from forty to seventy-five feet. Some accounts of the occurrence, which have been heretofore given, say "that trees and stumps were split, parts of which were found at opposite sides of the opening." A visit to the spot at the present day will give the visitor a good idea of what happened, with the extent of the convulsion. The location is on the banks of the Quinnepoxet River, about forty rods above the mills of S. R. Warfield, and near to Holden line. At this point there was a high bluff of from fifty to eighty feet high rising from the river's bank. The opening, as now seen, is but a few feet above the river's bed, but on its other side, being somewhat oval in shape, it rises abruptly in many places at least seventy feet, being as steep as the earth would naturally fall. These banks are now covered by a growth of trees of large size. A road has been made down one side of this opening, and a good growth of grass is cut in the pit each year. This earthquake was felt over a large extent of territory, from Chesapeake Bay to Halifax, but this was the only location where any of its effects were so fully manifested. It happened in the same month and year with the terrible convulsion which destroyed a large portion of the city of Lisbon in Portugal. The year following this earthquake a terrible sickness raged in this vicinity, which, at the time, was attributed to this convulsion. It was confined mostly to young people and children, a large number of whom died.

THE HARD WINTER.—The winter of 1780 has ever been spoken of as "the hard winter" by those whom some of our present citizens remember as recalling its severity. It was remarkable for the great depth of snow, and the severe cold which continued for several months, or from November until near the 1st of April. Snow had fallen early in November before the ground had frozen, and all the succeeding storms were of snow, no rain falling for a period of over five months. Towards the last of December a snow-storm commenced and lasted several days, covering rocks, fences and buildings to such an extent that no roads were opened for several weeks. No teams were used, wood for fires was cut from day to day and transported on hand-sleds, by men and boys wearing snow-shoes. This, too, was the only mode of communication between neighbors, when any heavy articles were moved; all grain to and from the mills was taken in this way—in fact, all travel was limited to snow-shoes and hand-sleds as the means of passing from one point to another.

This great accumulation of snow remained about two months, when, the weather moderating somewhat, it began to settle and eventually all vanished without any fall of rain, leaving the ground warm and dry, ready for cultivation. No records appear that give any indication that the season following was in any way a remarkable one, but, on the 19th of the following May, we have an account of a remarkable phenomenon recalled as "The Dark Day." Early in the morning of that day the atmosphere had the appearance of being filled with a dense fog of yellowish hue, rolling about in large masses, constantly rising and moving along. It was so dark at midday that it was necessary to use lighted candles while people ate their dinners. So strange and novel was the appearance on that day that many were struck with consternation, and nearly all work and business came to a standstill. The night following was an uncommonly dark one, but nothing unusual followed this phenomenon, after that one day and night.

On September 23, 1815, occurred what has been termed the "Great Blow," which proved very destructive in this vicinity, causing great damage to fruit and forest trees, buildings and fences. Fruit of all kinds was nearly all blown from the trees, while large numbers of fruit and forest trees were uprooted and destroyed. Traces of this tempest are to be seen to this day, where large trees were uprooted. It was undoubtedly the most destructive tornado which has occurred in New England since its settlement by white men, as it extended over a large portion of it.

About fourteen years since a whirlwind or tornado, starting in the southwest part of this county, swept through this town with great force, leaving a path of only a few feet in width, tearing up, twisting and breaking all trees in its course, several of which were of large size. Fortunately, no persons and only two buildings were in its path, and the buildings were only struck on one side. After passing through this

C. M. Harris

Louis M Harris

town it appeared to have spent its force, but traces of it were seen for eight or ten miles beyond the limits of the town to the northwest.

In 1790 there were four families within the limits of what is now West Boylston, and all living in the same neighborhood, whose children, in the aggregate, numbered forty-five, all of whom, with two exceptions, lived to mature life, were married and had from five to ten children each.

On the farm of the late Addison Lovell, on Malden Hill, is an apple tree grown from a twig, which, with others, was bound to the yoke of a pair of oxen which came with the first Lovell to this spot, as its first settler, over one hundred and fifty years ago The tree is still in a bearing condition.

The location of the two old grants of land made by the Colonial authorities, more than two hundred years ago, were located as follows, it being understood that, owing to the imperfect compasses used in former times, as well as the taking of difficult measurements and the disappearance of the marked boundaries, an exact location cannot be now given of these tracts of land.

Davenport Farm.—This was a tract of land of six hundred acres, granted to Capt. Richard Davenport in 1658, who was at that time in the military employment of the government, and was afterwards killed by lightning at a fort in Boston harbor. This tract was a right-angled triangular shaped lot, with its longest line extending nearly east and west on the old south line of Lancaster, about two miles, with its western end somewhere between our present stone bridge and the central bridge, and with its two shorter lines, of about four hundred and forty and four hundred and seventy rods, meeting near the present boundaries of Boylston and West Boylston, and showing that this tract covered all of the large intervale farms on the Nashua River, beginning at the west end, with the old Beaman farm, in this town, and extending easterly over the intervening farms, with the old Davenport farms, in Boylston, at its eastern extremity. After-surveys of this tract showed that it contained nearly nine hundred acres.

Malden Farm.—This was a tract granted to the town of Malden in 1665, of one thousand acres. This tract was about two miles long, two hundred and twelve rods wide at its northerly and three hundred and seventy rods at its southerly end. The tract was afterwards about equally divided from south to north by a line running on the present boundary line between Boylston and West Boylston, commencing at the corner of Shrewsbury and running northerly, over Wellington or Bond's Hill, to the first angle on the old Dunton farm, thus showing that this tract was located, one-half in the present town of Boylston, the other half in West Boylston, with a corner at its southwest angle extending into Worcester.

In looking back, at this day, to the time when these two tracts were located, with the idea that at that time both must have been in a complete wilderness, it seems wonderful that they should prove to be the best land in the region of their location. The Davenport tract covers what has proved to be intervale land, second to none in the State, except perhaps the Deerfield meadows.

The Malden grant, too, covers some of the best upland and meadow farms in this town and Boylston, both showing that the men and explorers who located these tracts were men whose instincts and sound judgments were strong ones.

BIOGRAPHICAL.

LINUS M. HARRIS.

The subject of this sketch, Linus M. Harris, the senior member of the firm of L. M. Harris & Co., was the son of Henry and Waty (Smith) Harris, and was born in Scituate, R. I., October 24, 1814. He was the eldest child of the large family of a poor man, who was only able to give him the benefit of what schooling he could get from attending the winter terms of a common country school until he was fourteen years of age, when he went into a cotton mill as "back boy," and commenced a connection with the cotton manufacture which has continued to the present day. In addition to his boyhood schooling, he attended a school the winter after his eighteenth birthday. His experience in factory life, as a boy, was commenced in the Richmond mill in Scituate, R. I., where he worked three years; then in the Sprague mill, at Smithfield, R. I., one year; then with the Blackstone Manufacturing Co., at Mendon, Mass. (now Blackstone), two years; then at Woonsocket, R. I., ten years (up to 1845), when he came to West Boylston.

While living at Woonsocket he married Miss Armilla E. Rounds at Providence, R. I., October 24, 1838, it being the twenty-fourth anniversary of his birth. Before leaving Woonsocket they had three children, all of whom died before the family came to Massachusetts. In 1845 Mr. Harris came to this town and commenced business in the Holt Mill at Harrisville, as noted elsewhere, where he remained about nine years, when he went into business with E. W. Holbrook at the Central Village, on the rebuilding of his mill in 1854. In 1865 Mr. Harris left the Holbrook Mill and resumed the principal management of the mill at Harrisville, which he still retains, together with the Whiting Mill, built a few years afterwards. Of these two mills he is an equal owner with his brother, Charles M. Harris, and brother-in-law, Alfred Whiting. He is also one of the owners in the large mills at Oakdale, known as the West Boylston Manufacturing Company, and also of two smaller mills in Holden on the Quinnepoxet River. Mr. Harris has

been a very successful man in his business, having accumulated a handsome competence, and has ever been an active and influential man in public and town affairs, serving several years on the Board of Selectmen and going to the General Court as Representative, etc.

Both Mr. Harris and his wife are still vigorous after a married life of over fifty years. Since living in West Boylston, three daughters and one son have been born to them, all of whom are living and are active, influential members of the community where they live, the youngest being now about thirty-six years of age.

CHARLES M. HARRIS.

Charles M. Harris, son of Henry and Waty S. Harris, was born in Providence, R. I., August 3, 1822. The family moved soon after to Scituate, R. I., where, when old enough, young Charles went to school about eight weeks in the summer and winter, or as long as the money raised for schools would last, eked out by the teachers being boarded around among the families who had children to send to school, the school-rooms being fitted up with oak slabs for seats, which were raised so high from the floor that the feet of the smaller children would hang several inches above it. This style of schooling continued until he was about thirteen years of age. After that time he was fortunate enough to get two short terms of school in the winter when a year or two older. This constituted all the school attendance of the subject of this sketch. At six years of age he was put into the Richmond Cotton Mill at Scituate, to work between schools, where by working from fourteen to fifteen hours a day his services were considered worth *fifty cents per week* or a trifle over *half a cent an hour*. His wages gradually increased to seventy-five cents, one dollar and one dollar and twenty-five cents per week up to the time when he was fourteen years of age, and from that time they continued to advance until, at twenty years of age, he was receiving from six to seven dollars for a week's work.

From the Richmond mill he had gone to the Sprague mill at Smithfield, R. I.; from there to the Blackstone mill at Mendon, Mass.; then to Woonsocket, R. I. In the spring of 1842 he began the manufacture of thread in company with David S. Wilder at Woonsocket, and in the fall of that year they came to West Boylston, and buying the small mill at the central village, began the manufacture of satinet warps. They also leased a mill in Holden, in which they carried on the same business. In 1845 he sold out his interest in these mills and formed a partnership with his brothers, who had bought the "Holt mill" at Harrisville. The next year he, with his brother Gideon, went to Scituate, R. I., and leased the old Richmond mill, in which he began work as a boy, where they remained about two years, when they returned to Harrisville, largely increased the capacity of the mill there and were doing a good business up to the time when the mill was burned in 1851. The mill was rebuilt, the machinery was all in and work was resumed again in a year from the date of the fire. In 1857 Mr. Harris went to Poquonnock, in the town of Windsor, Ct., and run a mill three and a half years, and from there went to Savage, Howard County, Md., and, in company with another party, run a mill one year and a half, then came back to West Boylston, having been very successful in business at each of these places.

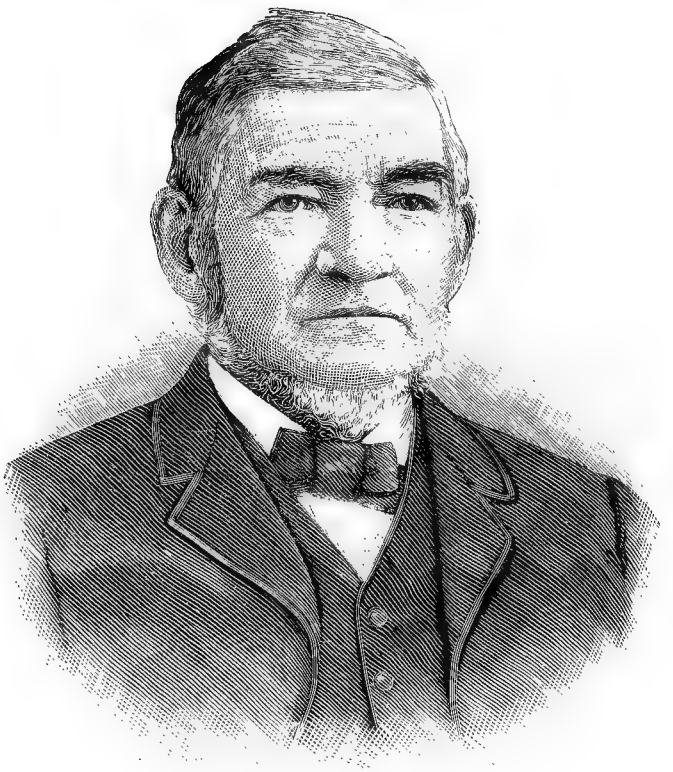
In 1861 he, with his oldest brother, Linus M. Harris, and J. H. Lane, of New York, bought the large mills of the West Boylston Manufacturing Company, at Oakdale, and he assumed the general management of the business. Here he has remained up to the present time. The history of these mills is given on other pages of this history, and does not need repeating. There is little doubt that the growth and success of the business of this company is largely owing to the business talent and large executive ability of Mr. Harris since his connection with it. In November, 1848, he married Miss Emily Dean, who is still living. They have had three children, all now living. Henry F. is a lawyer in Worcester; Charles M., Jr., is a superintendent in the mill, and Emily A. is the wife of Alonzo R. Wells.

SAMUEL R. WARFIELD.

Samuel Randall Warfield, son of Luther and Alcey Thompson Warfield, was born in Mendon, Mass., September 28, 1821. He received a good education in the common and high-schools of his native town and Millbury, Mass., his father moving to Millbury when Samuel was twelve years of age. He began work in a cotton-mill there and when twenty years of aye was a "mule fixer." Soon after he was promoted to overseer of the weaving-room. In 1851 he began business at Millbury for himself in the manufacture of thread or yarn, and continued it until 1856. In October of that year he went to Perkinsville, Vt., where he followed the same business eight years. He then went to Griswold, Ct., and remained in the same business about three years.

He bought the property in this town in 1868, his oldest son, Edwin R. Warfield, coming here to superintend the building up and starting of the works. This son failing in health, Mr. Warfield came here three or four years afterwards and has ever since remained here.

Edwin R. Warfield died November 10, 1876, aged twenty-seven years. He was a very energetic and capable man, and his loss was a sad one to his father. It interfered much with the plans he had made for the future. Those plans, however, so far as they related to the developing of the fine water-power in this town, have been since carried out, as is shown in the history of his mills on other pages of this history.



Mr. Warfield has proved himself to be a very energetic and capable man of business, and has been a very successful one. He is still hale and hearty, promising to remain so for many years to come.

He married Miss Eliza Jane Maxwell in February, 1843, who is still living. They have had four children, two of whom died while young. The fourth, Austin H. Warfield, is now about thirty-six years of age, is married, and is an active business man, associated with his father in his present business.

CHAPTER LXXXIV.

BLACKSTONE.

BY ADRIAN SCOTT, M.D.

1. PURCHASE OF THE TERRITORY.—The legal title to the soil of what now forms the town of Blackstone was passed from the aboriginal owners to people of the English name in the deed delivered to Moses Payne and Peter Brackett, of Braintree, by an Indian chief, on the 8th day of September, 1662.

To the whole of the purchase then made the name of Mendon was soon afterwards given. The town of Blackstone, the last of several towns carved, in whole or in part, out of that territory, was really marked out by the establishment of the so-called South Precinct in 1766, but it was nearly eighty years later before the town was incorporated.

It contains almost exactly one-fourth part of the land granted in that original deed, and its proportional price would be the sum of six pounds sterling, which we will trust was duly and faithfully paid to the natives in current coin of the realm of King Charles II.

2. ITS BOUNDS AND AREA.—The South Precinct of the town of Mendon was separated from the First Precinct by a vote of the General Court, November 8, 1766. The bounds are given as follows: Beginning at the southwest corner of Mendon, then on Uxbridge three miles one hundred and twenty-eight rods to a stake and stones on Capt. Daniel Taft's farm; thence turning and running east eight degrees south to stake and stones by road leading from Thomas Taft's to John Boyce's; continuing the same course to a stake and stones by road leading from Dam Swamp to Ens. Benjamin Darling's; continuing the same course to a stake and stones on the east side of Rehoboth Road, south of Darius Daniel's orchard; then the same course to a pine tree at Bellingham line, with Daniel Taft's and Joseph Day's farms on the north side of line.

The area thus included is stated to be 10,295 acres by Mr. H. F. Walling, who made a survey by order of the town in 1854. The westerly line, as stated above, is 3 miles 128 rods; the northerly, 4 miles 248 rods; the easterly, 3 miles 100 rods; and the southerly, about 4 miles 230 rods. The latter line, as part of the disputed boundary between Massachusetts and Rhode Island, has fluctuated much.

3. TOPOGRAPHY AND GEOLOGY.—The whole town lies in the valley of the Blackstone River, which flows through its southern section. Northerly from the river the surface rises - in some places with abruptness—and continues to rise beyond the town's limits. Two-thirds of its area is included in this description without much variation from the course of four or five small streams trending southerly into the river. Fox Brook, the largest of these streams, has its head-waters in several brooks issuing from the spurs of Chestnut Hill, the largest, or main stream, issuing from the extensive Pine Swamp between Caleb Taft's and the Uxbridge line. The eastern third of the town is occupied by the Mill River valley, itself a tributary of the Blackstone, but not reaching it within the town limits. This stream has also in much of its course steep, precipitous banks, the intervales being generally where smaller streams are received as tributaries. The largest and most important of these is Quickstream, which rises in an extensive swamp beyond the town limits in Bellingham. Second in size is the Hop Swamp Brook, rising in Mendon, and in its southeasterly course draining the locally famous Dam Swamp.

The town has no natural lakes or large ponds, and the area occupied by its streams is stated by Mr. Walling to be ninety acres. The highest land is found in the extreme northwest, in the hills collectively known as Chestnut Hill. More isolated are the Daniels Hill, north of the centre of the town, and Waterbug Hill, a little southwest of the centre. East of Mill River, Candlewood Hill stretches north and south a distance of about two miles. Pond's Hill overlooks the village of Waterford, and presents abrupt sides, both towards Fox Brook on the west and Blackstone River on the south.

The rocky bed underlying these hills is mainly gneiss, with some granite in the northwest. In all parts of the town granite boulders are found, and these afford material for walls. But no quarry of good granite is known to exist within the town limits. In the Mill River valley the hills in many places have the conical appearance of sand dunes near a sea-coast, and many of them are composed of quite pure white sand.

In the Mendon town records, under the year 1700, it is recorded that votes were passed in relation to iron ore and an iron mine in the southern part of the town. It is plain, however, after a careful consideration, that this must have referred to Iron Mine Hill in Cumberland. By records a little earlier and later it appears that even Woonsocket Falls were then claimed as within the town, and a similar exercise of squatter sovereignty claimed Iron Mine Hill. It does not appear that any metals have been found in the

soil of Blackstone beyond the quantity known to chemists as "traces."

4. Flora and Fauna.—The chestnut, birch, maple and walnut are the predominant forest trees in the town, although the pine swamps have been of great value in the past. Oaks of several species are found rather plentifully, and numerous other woods have representatives. The denuding of the forest surfaces, through the demand for fire-wood and lumber, has had its usual effect upon the streams and indirectly upon the fertility of the meadows and the quality of the crops grown upon them.

No larger game than the red fox now haunts our woods, although in colonial times wolves and deer were plentiful. Woodchucks and skunks are great pests to the farmers, and rabbits are still to be found in young pine and other undergrowth.

5. Soil and Productions.—The town offers a great variety of soils, from one of almost pure sand to rich, deep loam. Mill River Valley has in the northern end of the town light, sandy soil, free from stone, easily worked and giving early crops. But dry weather seriously affects and sometimes ruins crops. The lower end of this valley is now but little used as tillage land. Fifty years ago, by a system of trench irrigation, the meadows southward from the Old Forge Pond were made very productive. The central and western parts of the town present a better soil, but a very rocky one. The Chestnut Hill region, with its famous Benson Great Meadow, has some good farms, but they require on the part of their owners unremitting toil of the most arduous kind. South of the Blackstone River again the soil is lighter, but gradually grows stonier as one approaches the Rhode Island line.

The raising of cattle, hogs and sheep, once the predominant farming interest of the town, has nearly ceased. The production of milk to sell in the villages and market gardening with the same end now occupy nine-tenths of the farmers. There are a good many orchards growing fine fruit, but the number of trees is slowly diminishing. There are a few good cranberry bogs, but the crop is uncertain unless artificially protected from the frosts.

6. The Earliest Settlers.—The town of Mendon was settled under the proprietary system, each settler having his grant, his common right in all the unappropriated land, and his share when any section was divided. It is probable that the earliest settlers took up their abode here not far from the year 1700. They entered the town from two points—on the west at Chestnut Hill, whence they passed down to the Blackstone River at Millville; on the east they settled up and down the Mill River as far as Woonsocket Falls. Exact knowledge as to the earliest proprietors is perhaps unobtainable. Some who came very early, however, are mentioned in the records so definitely that we can grasp the fact.

In the Mendon records we find that Jonathan Richardson had land laid out on the lower course of Mill River in 1700 and upon Quickstream in 1702. Of this man we know nothing further, save the fact that in 1699 he received the usual bounty per head from the town of Mendon for killing five grown wolves. It is probable that this pioneer in the pleasant fields of the coming East Blackstone was accompanied by other proprietors and those who were not proprietors. Two years before, in 1698, the Rehoboth road was laid out down through the Mill River Valley from Mendon town to the Dedham line, corresponding nearly to the Bellingham line. Elm Street in our days represents this most ancient of our legal highways. By family tradition rather than by any records we know that the founders of the two families of Daniels and Thayer were fairly settled in the northeastern portion of the town about 1710, and owned and occupied the land in that section by proprietor's rights.

We find the heads of these families distinctly recorded in 1718, when the selectmen laid out a road from the Coverdale place to Hop Brook, at the present residence of Sylvanus White, forming what is now the northerly half of Blackstone Street. Eleazer Daniels, Josiah Thayer and Lieut. Samuel Thayer asked land damages on account of this new highway, and were granted the same out of common land.

Two years before this, in 1716, the town appointed a committee to lay out a road from the iron works to Dedham. These iron works were probably the forge established by Jonathan Richardson at the easterly end of the Forge Pond, on Mill River, and the road then laid out would be the Bellingham Street of the present.

With the settlement of this Mill River valley, and its reduction to fertile fields, grew up the need of a grist-mill in the neighborhood. The first mention of this mill is in 1753, when it was spoken of as something well known under the title of Cargill's Mill. James Cargill belonged to the Society of Friends, and in the lists of Quakers prepared for the town August 30, 1756, his name appears. Not far from this time the grist-mill became the property of Seth Kelly, who came to Mendon from Sandwich, in Barnstable County, and married a daughter of David Daniels, son of Eleazer, previously mentioned. This mill has since been known as Kelly's Mill, having remained in the hands of his lineal descendants. A saw-mill was added at an early date, and in the first quarter of the present century a cotton-mill was built to be run by the same water privilege. In 1809 Seth Kelly the younger and James Paine erected a wooden mill for manufacturing cotton goods on the south side of Park Street, just below the old forge. About 1823 was built the machine-shop of Paine & Ray, on the Quickstream, on the location of the satinet-mill at present owned by Mr. Perrin. Some four or five years later Caleb Colvin built a small cotton-mill of brick, and Messrs. Paine & Ray one of wood, locally

known as the Squat Mill, near the junction of the Quickstream with Mill River. From about 1825 to 1835 this portion of the town was blessed with great business activity and success. Colonel Joseph Ray owed his military title to the fact that he was colonel of a militia regiment composed of companies from Mendon, Uxbridge, Milford and Douglass.

The first post-office in what is now the town of Blackstone was established in 1822 at Five Corners, with Samuel Allen as postmaster, and with the name of South Mendon post-office. Daniel Kelly was soon after made postmaster, and the office was transferred to his house at the foot of the Handy road. Upon Mr. Kelly's death, in 1826, Elbridge G. Daniels was appointed postmaster, and held the position until 1850, the post-office being kept in his house opposite the Coverdale stand. The name of the office was changed to North Blackstone in 1845.

The people of the Mill River section of the Mendon South Parish seem to have been largely Anabaptists and Friends. Until the beginning of the present century the latter had attended the meeting in Mendon village, where the Friends built a meeting-house in 1729. In 1799 Samuel Smith, a well-to-do farmer belonging to the society, conveyed a piece of land to trustees for the erection of a meeting-house on the southern margin of his farm. Here, in 1812, was erected the building still standing, and meetings twice in the week were held here with the greatest regularity for many years. This meeting absorbed the membership from Mendon Meeting when the latter was discontinued in 1841. The Anabaptists were associated with others of that view in the town of Bellingham, and never erected any house in East Blackstone.

Turning now to the westerly side of the town, we find that, traditionally, at least, the Southwick family is the oldest of the white settlers within the town's limits. That name is intimately associated with those of Aldrich and Taft in South Uxbridge, and undoubtedly families of those three names owned land within our limits before the new settlers came down from Mendon way. South of the Blackstone River the Mendon proprietors, about 1700, found themselves in conflict with a proprietor, acting under authority from the Providence Plantation, of the name of Samuel Comstock. The Southwicks, it is presumed, were settled upon grants of land received from him.

North of the Blackstone, and at Chestnut Hill, the earliest names seem to be those of Benson and Darling. In the village of Millville, encroached upon by Main Street, just beyond the residence of Willard Wilson, is a neglected burying-ground, containing seven tombstones, whose inscriptions are still legible in whole or in part. These bear the names of Benoni Benson, died in 1761, aged 71 years; Abigail Benson, died in 1751, aged 32 years; Hannah Goldthwaite, died in 1800, aged 70 years; John Goldthwaite, died in 1800, aged 69 years; John Darling, died in 1760, aged 75 years; Daniel Darling, died in 1745, aged 64 years; ——— Darling, died in 1746.

These are said to be the oldest inscriptions upon gravestones in the town, and point to a settlement early in the eighteenth century. From the Mendon records, under date of May 16, 1732, we learn that Samuel Thompson then owned a grist mill on the island, at what is now Millville. He bargained with the town to maintain the bridge from the island to the south bank of the Blackstone River, provided the town would build and maintain the bridge on the north side. From this will date the first lay out of Central Street, in Millville. Towards the close of the century a fulling-mill was built here, and in 1814 Esek Pitts built the first woolen-mill ever erected upon the Blackstone River. The Island Mill was erected in 1835. The Stone Mill, destroyed by fire in 1874, and since partially rebuilt, was erected by Collins Capron in 1825. The entire river privilege was bought out by Welcome Farnum in 1845, and the brick mill was added by him directly after to the combination already existing. The forging of axes and scythes was a Millville industry early in the century.

A post-office was first established in Millville in 1827 and Willard Wilson was postmaster at three different times, viz.: 1827–42, 1845–49, 1853–61. Preston Warfield was the postmaster in 1842–43, and George Staples, 1843–45. Preserved L. Thayer was twice postmaster, 1849–53 and from 1861–73.

The first church erected in Millville appears to have been the one on Central Street, of which the basement is now occupied as a store by Thomas T. Smith. It was built in 1833 by the Methodist Reformed Church Society. In 1838 a second church was erected by the Presbyterians on Bow Street, but the society was short-lived and the church building became the property of the Methodist Episcopal Church about 1850.

It must be remembered that the original settlers of this section and their descendants were in general either Friends attending the South Uxbridge Meeting, or Presbyterians attending the Chestnut Hill Meeting. The latter was the religious centre of the South Parish, incorporated in 1766. Its substantial wooden meeting-house, built in 1769, is still standing in a well-preserved condition. On the 14th September, 1768, Rev. Benjamin Balch was settled as its pastor; but owing to disputes with his people about the "provisions and other necessaries of life," especially fire-wood, included in the loose end of the arrangement for his salary, he fell into the contempt of his parishioners and fled in the night, March 27, 1773, to the town of Dedham. No settled pastor was had after him until the Rev. Preserved Smith came in 1805. He remained seven years and his memory is blessed. The society became extinct before the Millville Church was built.

The valuable water-powers at Millville and Woon-

socket had been occupied and used for nearly a century each before a yet more valuable one, intermediate between them, was taken advantage of and developed by the Blackstone Manufacturing Company. This company, consisting of Nicholas Brown and Thomas P. Ives, the surviving partners of the old-time commercial firm of Brown & Ives, with Samuel Butler, Cyrus Butler and Seth Wheaton, purchased some two hundred and sixty acres of land on both sides of the river about the year 1804. These men were all residents of Providence, R. I., and had made fortunes in commerce before turning their attention to manufacturing. The section of land thus purchased was practically uninhabited, and the first building erected by the new owners of the soil was a large building to afford shelter and cooking facilities for the workmen, known as the Cook House. It was long since demolished, but stood somewhat north of the present Arcade Building. Work was pushed upon dam, mill and tenement houses, but it was not until 1809 that the mill was completed and work was begun. At first and for a good many years the cotton was spun at the mill and the weaving was done on hand-looms in the lonely farm-houses scattered through the surrounding country.

A respected fellow-townsman, whose memory of Blackstone Village dates back to the year 1820, gives the following description of it as it was at that date. A street, corresponding to our present Main Street, crossed the mill-trench to the north of the site of the iron bridge, passing through the lower ground. The high bluff, now known as the New City and the High Rocks, was common land crowned with a thick growth of oak wood, but having no houses. Westward of our Mendon Street, from the company's barn northward to the tavern stand at the four corners, were very rough rocky pastures and wooded swamps. Eastward were heavy woods close up to the road, full of game in those days, wood pigeons, partridges, rabbits and gray squirrels. Yankee Yard was then an open lot without a house. Back Street (now Middle) had eight houses and Mill Street (now Church) was pretty nearly as now, save that no church was there nor Arcade, the site of the latter being a sand-bank. Farther down, from the site of Masonic Hall eastward to Fox Brook, Main Street became a mere cart-path through swamp and woods. The Rhode Island side of the river was reached over a wooden bridge occupying the site of the present one on Mendon Street in the rear of Blackstone Mills. As to the mill itself, only the old, or No. 1 Mill of the present buildings, existed. Where now stand the stone mills of later date were then several wooden buildings, containing a grist-mill, saw-mill, blacksmith-shop and machine shop with a wood-shop above it. Hereabouts stood also a gambrel-roofed house occupied as a residence by superintendents and overseers. This was afterwards moved to the corner of Mendon and Canal Streets and is now the boarding-house. A little up the intervale stood a house where the cloth was bleached and calendered, while the old brick tenement house with wooden extensions, north of Main Street and beside the New York and New England tracks, was built and used for years as a dye-house, its location being determined by a fine spring of water in the rear of it. On the ground now occupied by the tracks of the Providence and Worcester Railroad, from the counting-room towards the iron bridge and on that occupied by the Blackstone Station, stood a row of buildings. First, a stone boarding-house nearly fronting the present counting-room site; secondly, a stone store almost on the site of the railroad station-house; thirdly, a stone store-house; and fourthly, quite up under the bluff, were sheds for horses and the hand fire-engine. This row of buildings has entirely disappeared, but they played a very important part in the village life of 1820. The store especially was a depot of supplies for the country round about. Blackstone had its hotel at that date in the second house above the Arcade, on what is now called Church Street, and a landlord in the person of one William Bussey. The Cook house was occupied by one Southworth at this time, who made shuttles there. The old vestry building, now revamped to do service as a public library building, was both church and school-house. The school was kept in session for forty weeks in the year, the long winter term of sixteen weeks always being taught by a master. For text-books a full equipment numbered only a Webster's Spelling-Book, a Columbian First Class Book, a Daboll's or Adams' Arithmetic, Morse's Geography (abridged), Murray's English Grammar and a New Testament. In the average New England winter the Blackstone Company used to have much trouble in keeping its great stone mill warm, although four-foot wood was crowded into its numerous fire-places without stint. A trial of box iron stoves gave not much better results, and the problem was not settled until Lehigh coal came to the rescue. The superintendent was a man named Tripp, who had lost the sight of one eye, a driving business man, well-liked by the mill-help. As superintendents' names we find Tripp's succeeded by Whipple, Waterman and Hartshorn down to 1833, when Holder Borden came under the new title of agent of the Blackstone Manufacturing Company. He was succeeded by Silas H. Kimball in 1834, who remained in charge until 1853, and was succeeded by Henry C. Kimball, his son, the present agent. Four large additions to the mill-buildings, forming by themselves a connected group apart from the No. 1 Mill, were erected in 1841, 1845, 1847 and 1854 respectively.

In 1820 no village existed in what we call Waterford. Only three farm-houses were to be found in all that section—Peter Gaskill's (now David's), Cogswell Chase's, not far from the present residence of Daniel Chase, and Elisha Gaskill's, just eastward of Chase's, near the brook. Pond Hill was covered with a heavy forest growth, predominantly pine, in which the wild pigeons found a congenial home. The snaring of

pigeons in the season for the market was an important business with Peter Gaskill, who even in those days was not unmolested by mischievous boys.

In 1825 Welcome and Darius D. Farnum built a satinet mill which in local terms was afterward known as Waterford No. 3. This mill was an extremely profitable investment from the start. The present No. 2 Mill was built in 1828 to supply it with cotton warps, and was used for that purpose for ten or twelve years. No. 1 Mill, just across the town and State line, was built in 1835. The erection of these mills and their steady profitable manufacture of woolen goods soon produced a village of wage-workers in their immediate vicinity. Just at the time the Farnums began their local enterprise the canal from Providence to Worcester was being built. The only mention of this canal in the Mendon records is under date March 6, 1826, when it was "Voted that Washington Hunt be an agent to call on the Blackstone Canal Company to make good the damage done to the road between Fox Brook and Rhode Island line." The growth of Waterford village was rapid. A post-office was established there in 1831 with James Wilson, Jr., as postmaster. He was succeeded in 1833 by Darius D. Farnum, and the latter by Welcome Farnum in 1841. The office was discontinued in 1850, when the villages of Blackstone and Waterford, having coalesced by natural growth, united in a post-office on the "Square." Blackstone village had its first postmaster in 1825 in Daniel Kelly; its second in 1831 was James S. Warner, and its third in 1837, and up to the union, John Cady.

In 1822 there was organized the Mendon Free-Will Baptist Church of Christ, which held its meetings in private houses and the old vestry at Blackstone until the building of the Blackstone Church in 1836, when it held its meetings for some four years in that building. Finally in 1841 this society erected its own home in the Waterford Church, at the corner of Main and Blackstone Streets. Its first regularly settled pastor was Elder Maxcy W. Burlingame, who remained with the society from 1831 to 1846. In 1845 it was re-named the Free-Will Baptist Church of Waterford.

The old vestry at Blackstone has been twice mentioned. This building, erected by the Blackstone Manufacturing Company some time previous to 1820, was used for many years as both school-house and church. In 1836 the company built a fine wooden church building, which was used by the Waterford Society for several years. In 1841 the Blackstone Congregational Church was organized with Rev. Michael Burdett as its first pastor and he remained with the society until 1852. The Blackstone Company has steadily sustained this church with liberal assistance, giving the use of its building to the society and maintaining it in repair.

Under date of August 22, 1791, the Mendon records contain the report of a committee of ten who had been appointed to redistrict the town into school districts. This committee reported the bounds of thirteen districts, of which seven appear to have been in the South Parish. The following are the words of the report defining what is now the Five Corner District: "Beginning at the Wid. Margaret Daniel's, excluding her, thence east on the Mill River to where David Handy lives, including him, thence to Hop Brook bridge (so called) on Smithfield road, thence to Benjamin and Nicholas Thayer's, including them, thence northward to the first bound." The East Blackstone and the Harris Privilege Districts were combined as follows: "Beginning at Hop Brook bridge, thence to Anthony Chase, including him, thence to Cumberland line, thence to Bellingham line, thence to Jotham Pickering's, including him, thence to Ichabod Pickering's, including him, thence to Seth Kelly's, including him, thence to first mentioned bound." The Waterford and Blackstone Districts were defined thus: "Beginning at George Gaskill's, including him, thence to Cogswell Chase, including him, thence up stream to the Great River until it comes south of Matthew Darling's house, thence to Jacob Aldrich's, including him, thence to Gideon Thayer's, excluding him, thence to the first-mentioned bound." Millville District was divided in two by the Blackstone River. The southern section is bounded: "Beginning at Uxbridge line, where it crosses the Great River, thence down stream the Great River to the Colony line, thence west on said Colony line to Uxbridge line, thence on Uxbridge line to the bound first mentioned." The northern section was bounded: "Beginning at Uxbridge line directly west of the Widow Warfield's house, thence to Benjamin Blake's, excluding him, thence to Matthew Darling's, including him, thence south to the Great River, thence up stream said river till it comes to Uxbridge line, thence to first mentioned bound." The Chestnut Hill District, less extensive than at present, was bounded: "Beginning at Nathaniel Taft's, including him, thence to Col. Joseph Chapin's old house, including him, thence to Uxbridge line to Jacob Taft's, including him, thence to Levi Young's, including him, thence to Jesse Tourtelotte's, including him, thence to first mentioned bound," which appears to be a section of the North Parish. Now Mendon: "Beginning at Timothy Alexander's, including him and Simon Alexander, thence to David Legg's, including him, thence on Uxbridge line until it comes directly west of the Widow Warfield's house, thence to Asa Blake's, including him, thence to Benjamin Blake's, including him and his son, Zaccheus, thence to the first mentioned bound." Between the Five Corners District and the district just described was another district now divided between them: "Beginning at Damp Swamp road, where the Parish line crosses, thence to Timothy Alexander's, excluding him, thence to Benjamin Blake's, excluding him, thence to the road south of said Benjamin Blake's house, thence to Gideon Thayer's, including him, thence east to Hop Brook bridge, thence up

stream said brook to the first mentioned bound." As thus defined the school districts remained until September 2, 1811, when the town accepted the report of a committee, advising the union of the two sections at Millville into one district, and the constituting of the village property of the the Blackstone Manufacturing Company a new district. The first part of this change did not prove acceptable, for on the 5th of June, 1812, it was "voted to set off all the inhabitants on the west side of Blackstone River, except Esek Pitts, Daniel Southwick and Nathaniel Capron, as a school district." On the 28th of June, 1824, the school districts were again defined, but substantially as already described. Prudential school committees were first chosen on 25th of August, 1827, and on that date the number of districts was unchanged, but at their election, April 15, 1833, two new districts are added—Pickering's, or Harris Privilege, and Waterford. A few years later we find the whole number of districts in the South Parish to be eleven, and with that number the town of Blackstone began its corporate existence. Both Chestnut Hill and the Five Corners had school-houses shortly after 1790.

THE DIVISION OF THE TOWN OF MENDON.—The question of the division of Mendon into two towns makes its appearance in a petition to the selectmen late in the year 1815. A town-meeting was desired—1. To see if the inhabitants will vote to have the South Parish set off into a town by itself. 2. To choose a committee to agree upon the division line of said town. 3. To act upon any other business relative to said division that the town shall see fit. Signed by John Pond, Henry Thayer, John Thompson, Smith Daniels, Elisha Thompson, Lewis Allen, Daniel Darling, Timothy Chase, Nicholas Thayer, Luther Warfield. A warrant drawn upon this petition called a town-meeting at the South Parish (Chestnut Hill) meeting-house on the 1st day of January, 1816, and on that day Joseph Adams was chosen moderator, and the proceedings were summed up in the one line of the clerk's record: "Voted to adjourn this meeting without day."

At this time Blackstone Village was beginning to exist, and its people felt it a hardship to be obliged to travel six or seven miles to reach the town-meetings when held in Mendon Village. On the other hand, the development of the new village called for increased expense upon bridges and highways, as well as a new school. Thus, in the first ten years of this century, the town of Mendon raised an average of $580 a year for the repairs of bridges and highways. In 1810 it was $700, in 1812, $1000, and in 1816, $1200, and the average for the second decade was $930 a year. Similarly during the first decade an average of $460 was yearly appropriated for schools, and in the second $620. In 1820 the appropriation was $800, and it did not drop below that figure in the following years. When Waterford Village started into existence in 1828 the school money was raised to $1000. To the people of the North Parish this swelling of the taxes was unwelcome because the money raised extra went to the southern part of the town. From 1820 to 1840 the Mendon records show almost every year's action taken at town-meeting in relation to laying out new roads, relaying old ones, or building bridges in the South Parish. Sometimes this action was negatived. The older settled portion of the town frequently put a veto upon the schemes for improvement proposed by its growing southern half, and, when it did so, murmurs of discontent and threats of secession would arise.

One improvement long struggled for was the section of Mendon Street between the town-house and the Samuel Verry homestead. For residents upon what is now known as Milk Street there was no means of reaching Blackstone village except by coming east by the Five Corners or by going over Waterbug Hill. On the 5th of May, 1823, a committee of three was appointed to consider and report on a road between the two points named. At an adjourned meeting on the following 2d of June the road was rejected. It came up with ill fortune time after time, until on April 7, 1828, when it was "voted to accept of a road laid out near Nathan Verry's house to near John Mann's house (tavern), provided the petitioners build the road and pay all land damages for the sum of three hundred dollars." From this hard bargain the town somewhat relented, for on May 4, 1829, an extra one hundred dollars was voted for completing this road. When the county road was in contemplation from the Uxbridge line to Blackstone Mills, at a town-meeting May 16, 1825, Warren Rawson was chosen an agent to oppose the new road "in every stage of it." This struggle to preserve the old order of things on the one hand, and on the other to create a new market and a new centre of human interest, could have but one issue. But it was long delayed and the fight had many curious episodes. On the 26th of September, 1823, a town-meeting warrant had the article, "To see if the town will vote to be divided into two separate towns," and the vote as recorded was forty-five yeas and sixty-two nays. On the 1st of March, 1824, a similar article was dismissed the warrant without a test vote. September 12, 1825, it was voted to choose a committee of ten persons, five from each parish, to take into consideration and consult on measures relative to a division of the town and make report at the next town-meeting. On the part of the South Parish was chosen Ichabod Cook, Asa Kelly, Elijah Thayer, Nathan Verry and Esek Pitts. The appointment of this committee caused great excitement, and town-meetings were held October 3d, November 28th and December 9th, remonstrating against division, appointing committees to oppose division before the General Court, and a committee "to take into consideration the inconveniences complained of by a portion of the inhabitants in regard to the at-

tendance upon town-meetings and the transaction of municipal business." Finally, at a meeting held December 15th, the committee appointed September 12th reported against division, and the report was accepted, one hundred and eighty-three yeas to seventy-eight nays. Meanwhile, June 30th of this same year, Seth Hastings and one hundred and eighteen others had put in a petition that Mendon North Parish be incorporated as a new town; and on the 19th, 20th and 21st of October, 1825, a special committee of the General Court visited Mendon to give the subject a hearing. When this committee reported to the Committee on Towns, February 7, 1826, the report recommended that the petition be granted. Meanwhile the opponents of division had sent in four petitions against it, with the names of Joseph Adams, James S. Warner, Rufus Aldrich and Jesse Tourtelotte heading them respectively, and containing a total of about two hundred and forty names. In the records of Massachusetts General Court for 1826 is the following curious record:

COMMONWEALTH OF MASSACHUSETTS }
In Senate, June Session, 1826. }

Upon the suggestion of the Committee on Towns that the Petition of Seth Hastings and others for a new town, cannot be found, it was Ordered, that the Committee have further time allowed them until the next Session of the Legislature to report on the subject matter of said Petition and that the Petitioners have leave to file a new Petition in the meantime.

Attest: PAUL WILLARD.

The friends of division did not hesitate to declare there had been foul play on the part of their opponents, and that the petition of Seth Hastings had been stolen. But the outcome was so ludicrous, and the majority of the people so strongly opposed to dividing the town, that the petition was not filed anew. In the spring town-meetings of 1827 the matter was discussed somewhat and then allowed to die a natural death. The quarrel went on, however, in regard to new roads, the place of holding town-meetings and other subjects of public policy. The town-meeting question was compromised by holding some of the meetings at the Chestnut Hill meeting-house, some at the Coverdale tavern, and the more important ones at the old meeting-house in Mendon village. When the latter building was sold and demolished in 1843, meetings were voted to be held at Marsh's Inn instead.

A new disturbing question arose the next year, when it was voted to build a town-house. Naturally, both ends of the town wanted it, but for it to be located in either end would entail great trouble and expense in reaching meetings, upon a large proportion of the voters. The centre of the town was still a wilderness of forests and swamp,—the Dam Swamp heretofore mentioned. However, at a meeting on December 2, 1843, it was "voted that the town-house be built in Nicholas Thayer's pasture, where a road from Samuel Very's cider mill will communicate with a road from Artemas Thayer's road to Millins Taft's." This location would have necessitated building two new roads in order to reach the new town-house; so some half-hour later it was reconsidered, and then "voted, that the town-house be located at, or near, the corner of the roads by Samuel Very's cider mill." At subsequent meetings the same year this vote was attacked, and finally, when it came the turn to hold a meeting at Mendon village, the action taken December 2d was annulled. With the new year the fight was renewed, and the frequent town-meetings held in different quarters of the town were a series of farces, each reconsidering what its predecessor had done, and annulling it. Before the middle of 1844 petitions were again in circulation, praying for a division of the town. The order of notice from the General Court was read before a town-meeting held January 30, 1845, and the meeting voted 239 to 168, not to oppose the division.

Welcome Staples, the town's representative to the General Court, was instructed to vote for division, and Washington Hunt, John G. Metcalf, Aaron Burdon and Henry A. Aldrich were chosen agents to defend the petition before the Committee on Towns. The body of the petition was as follows:

The petition of the undersigned, qualified voters in the town of Mendon, in the county of Worcester, respectively represent that the population of the town, by the last census, was 3,524, since which time it has greatly increased; that the town is divided into two parishes, viz.: the First, or North Parish, and the Second, or South Parish, by a territorial line running nearly east and west; that the principal portion of the population is located at the extreme north and south parts of the town; that the town has no town house nor any convenient place near the centre of the town to hold town meetings or to transact town business; that the town is well located to divide into two towns, there being a thin population along the dividing line of the parishes, and a range of hills and wild, uncultivated land; that the inhabitants of the two parishes have different interests and are engaged in different occupations and that it will greatly accommodate the inhabitants if the town was divided into two towns.

The petition was signed by Joseph G. Davenport and 766 others. Against the division a counter-petition was filed, the body of which was as follows:

The undersigned, freeholders and legal voters of the town of Mendon, do respectfully and urgently remonstrate against the division of the town of Mendon into two towns by your honorable body on the petition of Joseph G. Davenport and others, or on any other petition, present to your honorable body the following reasons for so remonstrating:

1. The geographical dimensions of the town is not above the average of towns in our county of Worcester, being 21,060½ acres within its claimed boundaries.

2. Rhode Island claims a part of our territory, and which claim is now pending for adjudication in the Supreme Federal Court.

3. The division of the town will cause great inconvenience in the School Districts.

4. The town has an almshouse establishment amply sufficient for the town, as it now is, with paupers, which may lead to expensive and vexatious litigation if the town is divided.

5. The petitions have been prematurely presented to your honorable body, as we understand the Revised Statutes. There has never been any notice served upon this town up to this day. Some of the petitioners for a division (we understand) have stated that unfair means were used to obtain their signatures. Almost all our transient male population (if our information is correct), from twenty-one years upwards, have been induced to petition for a division of the town, and whether they are all voters is very questionable; and we think that more than one-third of the population of Mendon are transient people, leaving a large propor-

tion of the freeholders to defend themselves against a measure in which these can have but little interest.

This petition of remonstrance was signed by Obadiah Wood and three hundred and thirteen others.

A bill was reported by the Committee on Towns, February 26, 1845, went through the usual stages and became a law by the signature of the Governor, March 25, 1845:

AN ACT TO INCORPORATE THE TOWN OF BLACKSTONE.

Be it enacted, &c., as follows:

SECT. 1. All that part of Mendon, in the county of Worcester, which lies south of the line dividing the South Precinct from the First Precinct in said town, as established by an act of incorporation in the year one thousand seven hundred and sixty-six, shall be, and the same is hereby incorporated into a separate town, by the name of Blackstone; and the said town of Blackstone is hereby vested with all the powers, privileges, rights, and immunities, and subject to all the duties and requisitions to which other towns are entitled and subjected by the Constitution and laws of this Commonwealth.

SECT. 2. All the real and personal estate belonging to and held in common, by the inhabitants of the present town of Mendon, shall be sold, and the proceeds thereof shall be applied to the payment of the debts and charges now due and owing from the town of Mendon; and the surplus, if any, shall be divided between the said towns of Mendon and Blackstone, according to the valuation next preceding the passage of this act; and if the said proceeds, together with the money now in the treasury and available debts due the town, shall be insufficient to pay the debts and charges aforesaid, said town of Blackstone shall pay her proportionate part, according to the valuation aforesaid.

SECT. 3. All persons legally settled in the present town of Mendon who are now, or who may hereafter become chargeable as paupers, and all persons who may hereafter become legally settled in either of said towns of Mendon and Blackstone and become chargeable as paupers, shall be supported by that town within the territorial limits of which they may have gained a legal settlement, or in which their settlement may have been perfected.

SECT. 4. The inhabitants of the town of Blackstone shall be holden to pay all State, county and town taxes legally assessed on them to the treasurer and collector of the town of Mendon; and all moneys now in the treasury of said town, or that may hereafter be received from taxes now assessed, or directed to be assessed, shall be applied to the purposes for which they were raised and assessed, the same as if this act had not passed.

SECT. 5. The town of Mendon shall pay to the town of Blackstone a just proportion of the Surplus Revenue of the United States, received by the town of Mendon, to be apportioned according to the census taken by authority of the State, in the year one thousand eight hundred and thirty-seven, in pursuance of "An Act concerning the deposit of the Surplus Revenue," and the town of Blackstone shall receive, in payment of their proportion, any bonds and notes secured by mortgage on real estate within the limits of said town of Blackstone; and the said town of Blackstone shall be holden to refund to the town of Mendon the proportion of said Surplus Revenue so to be received by them whenever the town of Mendon shall be required to refund the same to the Commonwealth.

SECT. 6. The said town of Blackstone shall remain a part of the town of Mendon for the purpose of electing a representative to the General Court, to which the town of Mendon is entitled, until the next decennial census of the inhabitants shall be taken, in pursuance of the thirteenth article of the Amendments of the Constitution. And the meeting for the choice of such representative shall be called by the selectmen of Mendon; and the warrant shall specify ten o'clock in the forenoon as the time when the polls at such elections shall be opened; and the same shall be opened accordingly, and be closed by one o'clock in the afternoon of the same day.

SECT. 7. The selectmen of Blackstone shall make a true list of persons belonging to said town qualified to vote at every such election, and the same shall be taken and used by the selectmen of Mendon for such election, in the same manner as if it had been prepared by themselves. Such meetings shall be held in the towns of Mendon and Blackstone respectively, in alternate years, commencing with the town of Blackstone; and the selectmen of Mendon shall appoint such place for meeting to be held in Blackstone as the selectmen of Blackstone shall, in writing, request.

SECT. 8. Any justice of the peace within and for the county of Worcester is authorized to issue a warrant, directed to some principal inhabitant of said town of Blackstone, requiring him to notify and warn the inhabitants thereof, qualified to act in town affairs, to meet at such convenient time and place as shall be appointed in said warrant, for the choice of all such officers as towns are, by law, required to choose in the months of March or April annually.

SECT. 9. This act shall take effect from and after the passage of the same. Approved by the Governor, March 25, 1845.

A true copy.

Attest, JAMES P. HAYWARD, *Town Clerk.*

THE TOWN ANNALS.—1845.—The first town-meeting of the new town was called by Dan Hill, a justice of the peace, on the 27th March, 1845, two days after the Governor's signature was affixed to the act of incorporation, in a warrant directed to Washington Hunt and giving warning only of a choice of town officers. At the meeting, which was held April 5th, in the meeting-house at Chestnut Hill, at one o'clock in the afternoon, Jared Benson was chosen moderator, and the following annual officers were elected: Town Clerk, James P. Hayward; Selectmen, Emory Scott, James Comstock, Jared Benson, Daniel Southwick, Hezekiah Harrington; Assessors, Welcome Thayer, Daniel S. Southwick, Jared Benson, Jr.; Overseers of the Poor, Willard Wilson, Samuel Verry, Caleb Taft; School Committee, Louis Cook, Orrin Sargent, Earl Joslin; Constable, Rufus Hayward; Treasurer, James P. Hayward. This meeting was adjourned to April 19th, at the same time and place, when, under a new warrant, twelve hundred dollars were appropriated for schools, six hundred dollars for support of the poor, six hundred dollars for town incidentals, and eight hundred dollars for highways and bridges. Laban Bates was chosen assessor in place of Welcome Thayer, excused. Voted to repair highways by allowing each man ten cents per hour, oxen and cart ten cents per hour, for plough five cents per hour. Voted to choose a committee, one from each original school district, to report at an adjourned meeting what alterations in the school districts are necessary. Laban Bates, of 5th; Emory Scott, of 6th; Horace Benson, of 9th; Caleb T. Wilson, of 10th; Samuel Verry, of 11th; Peter Gaskill, Jr., of 12th; Lyman C. Curtis, of 13th; Hezekiah Harrington, of 14th; Libbeus L. Wood, of 15th; Enos Hayward, of 16th, and Eli Kelly, of 18th, were chosen said committee. Rufus Hayward bid off the collection of taxes at auction for seventeen dollars. It was voted not to choose any tythingmen, that the selectmen should be the Board of Health, and that this meeting adjourn to April 26th, at two in the afternoon, at Henry Coverdale's house. There voted to purchase Millens Taft's farm for the poor of Blackstone at three thousand dollars. Very little else was done at this meeting and it was adjourned to May 3d, when the committee on school districts made a report, which was accepted, and the following prudential committee was chosen. No. 1 (Chestnut Hill District), Horace Benson; No. 2 (Verry District), Millens Taft; No. 3 (Five Corners District), Eben-

ezer Chase; No. 4 (Upper Canada District), William A. Kelly; No. 5 (Lower Canada District), Lyman Paine; No. 6 (Pickering District), Libbeus L. Wood; No. 7 (Waterford District), Welcome Farnum; No. 8 (Blackstone District), Silas H. Kimball; No. 9 (Town-House District), George W. Hunt; No. 10 (North Millville District), Newbury Darling; No. 11 (South Millville District), Lyman C. Curtis.

It was getting to be a troublesome matter for all the voters to travel either to the extreme northeast corner (Coverdale's) or the extreme northwest corner (Chestnut Hill) to a town-meeting every week, so at a meeting called at the Verry Tavern, so called, on the 7th of June, it was voted to choose a committee to take into consideration and report at this meeting the location and size of a building for a town-house. Dan Hill, Dr. Abel Wilder, Willard Wilson, Jared Benson and Francis Kelly were chosen and forthwith reported, "that it is expedient to build the house seventy feet by fifty, with about eighteen feet posts, and that it be located on such spot of ground, near the Verry Tavern, as is suitable and can be obtained on fair terms." This report was accepted, and Dan Hill, Washington Hunt and Jared Benson were chosen a committee to build.

Another meeting was immediately called for the purpose of reconsidering, but it failed of its purpose, and the present town-house was at once built. It was completed in season to be used the 10th November, following, at the annual election of State officers.

The Surplus Revenue of the United States received through the town of Mendon, and amounting to $4,-803.45, was disposed of by voting to loan it on security satisfactory to the selectmen.

The selectmen during the year erected stone-bounds on the westerly side of each highway, between Mendon and Blackstone, and perambulated the bounds with the selectmen of Uxbridge, Mendon and Bellingham.

The assessors for 1844 in Mendon, through Preserved S. Thayer, reported the valuation and polls in the South Parish as follows: Real estate, $548,299; personal estate, $366,025; total, $914,324. Polls, 696.

The assessors for 1845 in Blackstone reported for that year: Real estate, $635,660; personal estate, $442,286; total, $1,077,946. Polls, 792. Rate on $1000 was $2.60. Poll-tax, 68 cents.

On November 10th, before voting for State officers, the voters of Mendon and Blackstone, in the latter's new town-hall, balloted for Representative. Rufus Hayward, of Blackstone, had 163; Alanson S. Freeman, of Mendon, had 96; Charles L. Harding, of Blackstone, had 75; scattering, 6; and there was no choice.

November 24th, a second meeting was held for choice of Representative. Rufus Hayward had 191, Alanson S. Freeman had 96, Charles L. Harding had 22, scattering 27, and Rufus Hayward was elected.

1846.—Town Clerk, James P. Hayward; Selectmen Emory Scott, Daniel Southwick, Moses Daniels, James A. Baldwin, Samuel Thayer; Assessors, Preserved S. Thayer, Arthur Cook, Jr., Millens Taft; Overseers of Poor, Willard Wilson, Caleb Taft, Hiram Metcalf; School Committee, Arthur Cook, Jr., Horace Thayer, Dan A. Comstock; Town Treasurer, James P. Hayward.

The annual March meeting passed a resolution in favor of the Boston and Southbridge Railroad, then petitioned for before the General Court.

The stone arch bridges over the canal at Millville and over Fox Brook, at Waterford, were built this year.

Rev. Benjamin D. Peck was settled pastor over the Waterford Free-Will Baptist Church, where he remained about two years.

On the 9th November the voters of Mendon and Blackstone were to meet in Harrison Hall, Mendon, to elect a representative to General Court. The Mendon voters opened the polls promptly at 10 A.M., cast their ballots and closed the polls before the majority of the Blackstone voters arrived. There was no choice. The Blackstone men organized a new meeting and elected Dan Hill; but he was refused a seat in the General Court, and the two towns went unrepresented that session, as Mendon refused to call another meeting for an election. In the opinion of Mr. Dan Hill and most of the Blackstone people, this manœuvre was in the interest of a railroad company proposing a terminus in Woonsocket, R. I., instead of Blackstone.

The Blackstone River Lodge of Odd Fellows, No. 106, was organized.

1847.—Town Clerk, James P. Hayward; Selectmen, Dan Hill, Caleb Thayer, Rufus Hayward, Stephen J. Sherman, Samuel Chase; Assessors, John Cady, William Legg, Ebenezer Chase; Treasurer, James P. Hayward; School Committee, Arthur Cook, Francis S. Weeks, Rev. Benjamin D. Peck; Overseers of Poor, the selectmen.

The town unanimously voted resolutions to be presented to the General Court in favor of the railroad from Boston to pass through Blackstone Village, and appointed Dan Hill its agent to present it.

At the April meeting Emanuel N. Paine was chosen selectman in place of Caleb Thayer, and Preserved S. Thayer assessor, in place of William Legg, declined to serve.

At the April meeting there was an article "to see if the town will consent to an alteration, or new location, of the county road in the village of Millville over a portion of an ancient burial-ground near the residence of Willard Wilson." And the town voted that this article "be referred to the selectmen to examine, and grant the request of the railroad company, if they see fit." The railroad here referred to was the Providence and Worcester, which put its first train through the 17th of September following.

The Blackstone (No. 4) Mill and the Lincoln House

were built this season, which was further rendered notable by the settlement in town of Paul P. Todd, the eminent attorney and legal adviser.

A Methodist Society was formed at Waterford, with Jeremiah N. Hanaford as pastor, and meetings were held for about two years in "Odd Fellows' Hall," now the residence of Thomas Campbell.

1848.—Town Clerk, James P. Hayward; Selectmen, Dan Hill, Emanuel N. Paine, Hezekiah Harrington; Assessors, Arthur Cook, Willard Wilson, Lyman Paine; Overseers of the Poor, Millens Taft, Lyman Paine, Whitney Alexander; School Committee, Rev. Benjamin D. Peck, Arthur Cook, Thomas Davis; Treasurer, James P. Hayward.

Early in the year (January 10th) the town voted "That the Selectmen be authorized to loan $700 of the 'Surplus Revenue' money for one year, without interest, to Oliver Johnson, of New York (or to some other person whom they may deem suitable), to enable him to procure a printing-press and appurtenances for publishing a newspaper in this town. And for security they are to take a mortgage on said press and appurtenances. It being understood that the paper is to be conducted independent of party, both in politics and religion." The paper thus inaugurated under town auspices was a weekly four-page paper, called the *Blackstone Chronicle*, first issued February 26th. It failed before the 1st of the following October, and the town had to take the press and type.

Canal Street was laid out by the selectmen October 13th, accepted by the town October 21st, and was built at once by Welcome Farnum. Federal Street was laid out by the selectmen October 21st, and was accepted by the town November 7th.

The union meeting of the two towns to elect a Representative to the General Court again failed to make any choice November 13th, as did also a second meeting November 27th, although at the latter meeting the Blackstone voters combined on Samuel V. Stone, and gave him 245 votes in a total of 499.

Rev. Benjamin D. Peck, removing from town, was succeeded in the Waterford Parish by Rev. Thomas Brown, and on the School Committee by Rev. Michael Burdett.

1849.—Town Clerk, James P. Hayward; Selectmen, Millens Taft, Lyman Paine, Daniel Southwick; Assessors, Arthur Cook, Richard Battey, Joseph Southwick; Overseers of the Poor, Whitney Alexander, Richard Battey, James Comstock; School Committee, Thomas Davis, Dr. Moses D. Southwick, Arthur Cook; Town Treasurer, James P. Hayward.

At a thinly attended town-meeting, held May 19th, the school district system was abolished, and votes passed looking to the purchase of school-houses from the districts, and the building of new houses by the town. This radical step was reversed at the adjourned meeting, August 18th.

The St. John's Protestant Episcopal Church was organized May 14th at Millville, with Rev. John W. Birchmore as pastor. Some trouble having arisen in the Methodist Reformed Church in the same village, certain members withdrew, and called Rev. Daniel Fillmore as minister.

The meeting, November 12th, to elect a representative to the General Court, resulted in no choice, and again the two towns were unrepresented.

The Blackstone Savings Bank was incorporated April 20th, but failed to do any business. The Worcester County Bank was incorporated May 1st, with a capital of one hundred thousand dollars, by Welcome Farnum, Silas H. Kimball and Dan Hill. It was located for many years in Blackstone Block, a large brick structure erected this year by Welcome Farnum.

On the 15th of May the long-awaited first train over the Boston road arrived in Blackstone from Walpole. The road was then known as the Norfolk County Railroad, and its completion had been due almost solely to the iron will of Welcome Farnum.

Napoleon J. Smith put out his shingle in the village as attorney, and remained some two years.

1850.—Town Clerk, James P. Hayward; Selectmen, Emory Scott, Jared Benson, Jonathan F. Comstock; Assessors, Arthur Cook, Jared Benson, Jr., Rufus A. Benson; Overseers of the Poor, Caleb Thayer, Millens Taft, James P. Hayward; School Committee, Dr. Moses D. Southwick, Emanuel N. Paine, Daniel Wheelock; Treasurer, James P. Hayward.

School Districts Nos. 10 and 11, the two sections of Millville, were joined this spring into one district, No. 10. This district then proceeded to build a new brick school-house on Central Street, now owned by the town.

The liquor question puts in its first appearance in Blackstone town-meetings, and Millens Taft, Frederic M. Ballou and Jared Benson, Jr., were chosen a committee to enforce the license law of the Commonwealth.

The small-pox broke out among the people working in Eli Kelly's factory at Upper Canada (East Blackstone), and the town voted a general vaccination, a hospital and a quarantine of the sick.

St. Paul's Church was founded in the autumn, the first place of worship constructed by the Roman Catholics in the town, although for more than fifteen years previously services had been held in private houses. Rev. Charles O'Reilly was its first priest.

St. John's Protestant Episcopal Society saw the corner-stone of its beautiful stone edifice laid by Bishop Eastburn July 16th.

The Methodist Episcopal Church of Millville was organized March 3d.

Rev. Martin J. Steere was installed as pastor at the Waterford Church.

The North Blackstone post-office was removed to Lower Canada, and Moses Kelly became its new postmaster.

Bridge, Waterford and Cross Streets were laid out and accepted August 31st. The two latter form our present Market Street.

Park Street was accepted October 26th.

Caleb Thayer was chosen Representative to General Court November 25th.

1851.—Town Clerk, James P. Hayward; Selectmen, Laban Bates, Henry S. Mansfield, Jr., Richard Battey; Assessors, Emanuel N. Paine, Frederic M. Ballou, Moses D. Southwick; Overseers of Poor, Whitney Alexander, Lyman Paine, Ariel Thayer, Jr.; School Committee, Dr. Moses D. Southwick, Martin I. Steere, Thomas Davis; Treasurer, Alexander Ballou.

Representative Caleb Taft was instructed to vote against a division of the county of Worcester, which matter was being agitated.

Lincoln Street, from Fletcher's store to the Jacob Southwick house, was laid out wider by the selectmen and was accepted April 7th.

The Fugitive Slave Law of 1850 awakened the following protest, written by Daniel Hill, Dr. Moses D. Southwick and Thomas Davis, and adopted by the town April 7th:

Resolved, That we adhere to the doctrine that "all men are born free and equal," not because it is a sentiment, solemnly declared by our fathers, in defence of which they pledged "their lives, their fortunes and their sacred honor," but because it is, as declared by them, a self-evident truth, applicable to every age and to every race; and those, and those only, who have sacrificed their convictions on the altar of ambition or self-interest, would deprive the African of this God-given birthright.

Resolved, That the Fugitive Slave Law, recently enacted by Congress, is not only contrary to the fundamental principles of our government, but it is an act which attempts to transform us into slave catchers, requiring us to sacrifice the noblest feelings of our nature, which prompt us to aid the weak rather than the strong, and by no means to strengthen the arm of the oppressor.

Resolved, That the attempt to justify this Law on the plea that it is necessary to preserve the union of these States, is but declaring that this Union cannot exist on the principles of Justice, Humanity and Righteousness (and therefore is not worth preserving), a declaration which we are unwilling to admit.

Resolved, That so great and indiscriminate is our abhorrence of slavery, if one who had basely sold himself to Southern slave holders should escape from his keepers and seek our protection, we could not so far "conquer our prejudices" as to "perform the disagreeable duty" of rendering aid in returning him into bondage.

Resolved, That we regard it as the duty of the Legislature of this Commonwealth, now in session, to pass an act, without further delay, securing to all persons, claimed as fugitives from labor, "the privilege and benefit of the Writ of Habeas Corpus" and the "right to a trial by Jury," and in all Constitutional ways protecting them against the atrocious provisions of this abominable Fugitive Slave Law.

Resolved, That a copy of these resolutions be transmitted to our Representative in the General Court, with a request that he present them to that body.

"Our Representative," Mr. Caleb Thayer, was at that time balloting in the Legislature for Charles Sumner as Senator in the National Congress, a result secured on the twenty-sixth ballot. This was the time of the famous coalition between the Democrats and Free Soilers. A largely attended Teachers' Institute was held in April.

St. Paul Street was laid out October 4th, and accepted by the town November 10th.

Laban Bates was chosen Representative to the General Court at the meeting, November 24th.

James Mason having mysteriously disappeared from Waterford, a town-meeting was held December 9th, and a reward of fifty dollars offered for the recovery of his body, and five hundred dollars for evidence convicting any one for taking his life.

Napoleon J. Smith took down his shingle in Blackstone village as attorney-at-law, and William L. Southwick first put his out.

Rev. Nelson Goodrich succeeded the Rev. Mr. Fillmore as pastor of the Methodist Episcopal Church at Millville.

1852.—Town Clerk, James P. Hayward; Selectmen, Laban Bates, Richard Battey, Henry S. Mansfield; Assessors, Willard Wilson, Richard Battey, Welcome A. Thayer; Overseers of the Poor, "Voted not to choose any Overseers of the Poor;" School Committee, Martin J. Steere, Thomas Davis, Dan A. Comstock; Treasurer, Alexander Ballou, in place of James P. Hayward, excused.

At the April meeting Dr. Moses D. Southwick was chosen to the Board of School Committee in place of Dan. A. Comstock, excused, and to the Board of Assessors in place of Willard Wilson, excused. Dan Hill and Aaron Burdon were chosen additional assessors. The County Commissioners had re-located the County road (Main Street) over the Blackstone Company's mill trench and the Providence & Worcester Railroad, and the town opposed the re-location.

Rev. Martin J. Steere was chosen Representative to the General Court at the adjourned meeting, November 22d.

Rev. Michael Burdett closed his connection with the Blackstone Congregational Church February 10th, and Rev. Joseph W. Backus was ordained as his successor September 29th.

Rev. John E. Gifford became pastor of the Methodist Episcopal Society of Millville, and in the same, village Rev. Spencer M. Rice became rector of St. John's Protestant Episcopal Church, May 17th.

St. Paul's Church was completed in its original form and dedicated by Bishop Fitzpatrick.

1853.—Town Clerk, James P. Hayward; Selectmen, Millens Taft, John C. Scott, Lyman Paine; Assessors, Willard Wilson, Ara Paine, Welcome A. Thayer; Overseers of Poor, Richard Battey, John G. Gatchell, Albert Fairbanks; School Committee, Spencer M. Rice, Rev. Joseph W. Backus, Dr. William M. Kimball; Treasurer, Andrew Comstock.

Willard Wilson was elected delegate to the State Constitutional Convention. Dr. William M. Kimball having declined to serve on School Committee, Francis Kelly was elected.

With the increase of population came an increase in the number of grog-shops, and the constables were directed to prosecute those who violated the law. A lock-up was now first voted.

The Blackstone Manufacturing Company, February

14th, gave a bond to the town to keep in repair the western abutment of the New City bridge for ten years, the town on its part withdrawing opposition to the re-location of the County road (Main Street) at that point.

On April 4th an article in reference to a map of the town was referred to the selectmen. This must refer to the map "Surveyed by Order of the Town, by H. F. Walling, 1854," a very accurate map.

After three separate attempts to elect a Representative to the General Court there was no choice, and the town was not represented in the Legislature of 1854. The law requiring only a plurality for election was passed in 1854, and thereafter there was no further trouble on this score.

Darius Bennett was made postmaster of the Blackstone office and remained therein until 1861. Willard Wilson for the third time became postmaster at Millville.

The Blackstone River Bank, of Millville, was incorporated March 30th by Edward S. Hall, Charles E. Hall and Spencer M. Rice, with a capital of one hundred thousand dollars, but it never materialized.

The Union Hotel was built and gas main laid from Woonsocket to Blackstone Village.

1854.—Town Clerk, James P. Hayward; Selectmen, Millens Taft, Eleazer W. Barrows, Seth T. Aldrich; Assessors, Dan. Hill, Emanuel N. Paine, Dan. A. Comstock; Overseers of the Poor, James P. Hayward, Richard Battey, Asa Paine; School Committee, Rev. Joseph W. Backus, William B. Rice, Rev. Edmund M. Tappan; Treasurer, Moses Farnum (2d).

In February the town voted a remonstrance against the Charles River Railroad (eventually Woonsocket Division, N. Y. & N. E.), and sent Dan. Hill to present it to the Legislature. Just at this time Welcome Farnum was making his last desperate endeavor to push through to New York City a western extension of his Norfolk County road. He succeeded—and failed; not through lack of wisdom in making a wise plan, but through the business stringency now beginning, which culminated in 1857, and the failure of promised assistance from others at this critical juncture.

Dan. Hill was excused from acting as assessor, and William Cook was elected. By a vote of 119 to 82 was adopted an act of the General Court of 1854 establishing a Police Court.

Dr. J. C. Rutherford was appointed physician to the Board of Health (Overseers of the Poor) at a salary of five dollars per annum.

Silas A. Burgess, Esq., opened an office at Blackstone for the practice of law.

John S. Haradon was elected to the General Court as representative November 13th.

Blackstone No. 5 Mill, the last of the large additions, was built this year.

Rev. Edmond M. Tappan succeeded Martin J. Steere as pastor of the Waterford Free-Will Baptist Society.

By the failure of Mr. Farnum, the Millville manufacturing interests on the Blackstone passed into the hands of Edward S. and Charles E. Hall.

The St. John's Episcopal Church was consecrated December 7th.

1855.—Town Clerk, James P. Hayward; Selectmen, John C. Scott, Rufus A. Benson, Lyman Paine; Assessors, William Cook, James B. Hall, Joseph G. Ray; Overseers of the Poor, Willard Willson, John B. Salisbury, Welcome A. Thayer; Town Treasurer, Eleazer W. Barrows; School Committee, Rev. Edmund M. Tappan, Dr. George E. Bullard, Alexander Ballou, Jr. Dan. Hill was justice of the Police Court.

A war had now broken out against the Police Court, and at a meeting February 1st Lyman Legg was chosen agent to secure a repeal of the act establishing it.

It was voted to purchase five hundred of Mr. Walling's map and that each tax-payer might have one for sixty cents. This was all reversed at another meeting on the 8th. It would appear that very few of Mr. Walling's maps were actually circulated in the town. After two more meetings the town voted Mr. Walling two hundred dollars for publishing the map.

John Cady was appointed liquor agent under the new law, and Dr. George E. Bullard another. The latter settled in town this year.

Henry S. Mansfield was chosen representative to General Court.

March 18th, Rev. Joseph W. Backus resigned his ministry at Blackstone, and was succeeded in September by Rev. Thomas E. Bliss. Rev. John A. M. Chapman was assigned to the Millville Methodist Society, and Rev. Alfred B. Goodrich was called to the St. John's Society.

The Blackstone Library Association was organized October 4th at the house of Mr. Welcome Farnum, whose wife, sister to the historian, George Bancroft, took great interest in the matter, and secured many valuable donations from literary friends of her brother. The original list of officers was as follows: President, Thomas Dermot; Recording Secretary, James K. Comstock; Librarian, George B. Allen.

A visit of a special committee of the Legislature sent out to examine and report upon the condition of the Boston and New York Central Railroad put up for dinner at the Union House April 17th, and scandalized the natives by bringing with them "36 bottles Extra Champagne Wine and 48 bottles of Brandy."

1856.—Town Clerk, James P. Hayward; Selectmen, Lyman Paine, Joseph Southwick, Seth T. Aldrich; Assessors, James B. Hall, Arthur Cook, Albert Gaskill; Overseers of the Poor, Willard Wilson, John B. Salisbury, Welcome A. Thayer; School Committee, Rev. Edmund M. Tappan, Dr. George E. Bullard, Rev. Thos. E. Bliss; Treasurer, Walter Thorpe.

The Police Court was abolished April 1st.

The rapid growth of the three villages—Waterford, Blackstone and Millville—had strained the old arrangements for schooling children, both in respect to rooms and the amount of money. The Blackstone Manufacturing Company had erected an elegant building with four school-rooms the year preceding, and given its use to the district. The rural districts had dwindled in population until several of them numbered scarcely more than a dozen children of school age. It cost as much for each of these schools as for one in the village with sixty to eighty pupils. To remedy this inequality, it was proposed to reduce the number of districts, and a committee was appointed to report upon the feasibility of doing so.

Emanuel N. Paine was elected Representative to the General Court.

The Waterford stone dam, near the Union House, was built by Daniel F. Simmons. The dam, together with the abutments, is one hundred and sixty feet long, of solid masonry, faced and capped with wrought stone.

At the first anniversary meeting of the Blackstone Library Association the officers reported fifteen hundred volumes secured, "only about 100 volumes belonging to the department of novels and tales." Lectures were given during the fall and winter under the auspices of the association, amongst the lecturers being Wendell Phillips, Ralph Waldo Emerson, Rev. Theodore Parker, Rev. Thomas Starr King and others.

The Blackstone Athenæum, a rival library association, was organized February 26th. Rev. Asa U. Swinerton was assigned to the Methodist Society, Millville.

The Blackstone River Lodge of Free and Accepted Masons organized under dispensation January 1st.

1857.—Town Clerk, James P. Hayward; Selectmen, John C. Scott, Andrew Comstock, Caleb Colvin; Assessors, Arthur Cook, Estus Lamb, Joseph Tucker; Overseers of the Poor, Willard Wilson, John B. Salisbury, William A. Dodge; School Committee, Rev. Edmund M. Tappan, Rev. Thomas E. Bliss, Dr. George E. Bullard; Treasurer, Charles W. Baker.

Estus Lamb having declined to serve as assessor, David Brayton was chosen. The committee in charge of re-districting the town into school districts made a radical report, reducing the number of districts to five. This report was at first accepted, and then, at a subsequent meeting, reconsidered and rejected.

Samuel Thayer, Jr., was chosen Representative to the General Court. Rev. William N. Morrison was assigned to the Millville Methodist Church. Rev. Charles O'Reilly, of the St. Paul's Church, died in September, and was succeeded by Rev. Edward J. Sheridan.

1858.—Town Clerk, James P. Hayward; Selectmen, Richard Battey, Welcome Thayer, John B. White; Assessors, Arthur Cook, Daniel N. Chase, William Legg; Overseers of Poor, James P. Hayward, Caleb Taft, Channing Smith; School Committee, Arthur Cook, for one year, William L. Southwick, two years, Moses D. Southwick, three years; Treasurer, Moses Farnum.

Channing Smith having declined to serve as overseer, Ebenezer Chase was chosen. The Blackstone Manufacturing Company had brought suit against the town for over-assessment, and Dan Hill was appointed general agent by the town to defend the suit. An article to see if the town would establish a high school was dismissed. John B. White was chosen Representative to General Court. Rev. Justus Erskine succeeded Rev. E. M. Tappan at Waterford Baptist Church. Willard Wilson became trial justice.

About the middle of May Rev. B. G. Northup, agent of the State Board of Education, lectured in the New City School-house, afternoon and evening, to teachers. The afternoon lecture covered methods of instruction, dwelling especially upon President Dwight's advice to the young man to "open his eyes." The evening lecture was upon the subject of moral and intellectual culture.

Early in May occurred a great strike among the operatives of the Waterford woolen-mills. The Nos. 1 and 2 Mills were run at this time by Evans, Seagrave & Co., and the No. 3 Mill by Bradford & Taft. The two former had been stopped all winter, but the latter had run steadily, being the one bright spot in the hard times of the past year. The strike, which was general in the three mills, was caused by a reduction of 20 per cent. in the rate of wages.

The papers in Massachusetts discussing large trees gave, after due inquiry, the precedence to Blackstone. The largest tree in the State at that time was supposed to be the elm standing near the Nicholas Thayer homestead. The trunk measured 22 feet about near the ground, and 20 feet around 10 feet above the ground. It spread from the trunk with seven large branches, giving a shade 125 feet in diameter.

1859.—Town Clerk, James P. Hayward; Selectmen, Emanuel N. Paine, William Kelly, Mowry Lapham; Assessors, Arthur Cook, Sylvanus H. Benson, Joseph G. Ray; Overseers of Poor, John B. Salisbury, William Sargent, William A. Kelly; Treasurer, Moses Farnum; School Committee, Joseph Thayer, for three years.

Silas A. Burgess was chosen selectman and Richard Battey assessor in place of William Kelly and Joseph G. Ray respectively, as the latter did not take the oath of office. District No. 2 was annexed to No. 9. Joseph G. Ray was chosen Representative to the General Court. At this time Blackstone by itself formed the Twenty-first Worcester District.

About the middle of May occurred the sad casualty by which Miss Georgiana Brown, of Pawtucket, a teacher in the New City School, and Miss Frances Cady, only daughter of Mr. John Cady, formerly

postmaster, were drowned by going over the Blackstone dam while out boating with Mr. Walter Thorpe.

Some time in March a rabid dog owned in Concord, Mass., passed through the village, biting numerous other dogs and two or three persons. About the 10th of April a boy named Thomas Quinlen, fourteen years old, one of those bitten, died with all the symptoms assigned to hydrophobia.

During the year Mr. Freeman Hurd was engaged in building the Edward Harris New Privilege dam across Mill River in the southeast corner of the town, flowing many acres of meadow land in Blackstone.

Rev. William H. Bowen became pastor at Waterford Baptist Church, and Rev. Charles A. Merrill was assigned to the Methodist Episcopal Church at Millville.

1860.—Town Clerk, Dr. George E. Bullard; Selectmen, Richard Batty, Mowry Lapham, Joseph G. Ray; Assessors, Arthur Cook, David Brayton, Sylvanus H. Benson; Overseers of the Poor, William A. Kelly, Lyman Legg, Hiram Daniels; Treasurer, Moses Farnum; School Committee for three years, Henry C. Kimball. James P. Hayward was chosen assessor in place of David Brayton, who declined serving. Mr. Hayward also declining, and Arthur Cook failing to take the oath, the latter was re-elected and Marius H. Warfield was chosen. Mowry Lapham resigned in September and Millens Taft was chosen selectman for the unexpired term. Charles H. Fletcher was chosen Representative to the General Court. February 22d, Rev. John V. Lewis became pastor of St. John's Society at Millville.

The Blackstone Block was built by Welcome Farnum in 1849. In planning a building for the Worcester County Bank, for which a charter had been procured, Mr. Farnum, with his characteristic enterprise, concluded to put up this large block, containing stores, offices and a large hall for public meetings and entertainments. His original plan was to locate it on Main Street and to have a building just one hundred feet in length; but failing to make satisfactory terms for the purchase of a lot, it was placed upon its present site, where the size of the lot limited the building to eighty-two feet. This block was subsequently mortgaged to Edward S. Hall, of Millville, and after Mr. Farnum's failure was transferred to Joseph Almy, of Slatersville. In 1859 it was sold at auction and purchased by Dan Hill, who deeded it to Albert Gaskill in 1863. In 1870 he sold it to Charles A. Pierce, and the latter disposed of it in November, 1874, to Mr. William Keely, in whose possession it has since remained.

1861.—Town Clerk, Dr. George C. Bullard; Selectmen, Emory Scott, John C. Scott, Daniel N. Chase; Assessors, Millens Taft, Libbeus L. Wood, Willard Wilson; Overseers of the Poor, Rufus Hayward, John G. Gatchell, Lyman Legg; Treasurer, Richard K. Randolph; School Committee for three years, Henry S. Mansfield; for one year, William L. Southwick.

The people living in the old Second School District being aggrieved at the vote annexing them to No. 9, secured at a special meeting, February 9th, a re-division assigning three families to District No. 3.

The first evidence in the town records of the existence of Civil War occurs in the warrant drawn April 23d, in which occurs an article "To see if the town will vote to appropriate any money in aid of citizens of this town who may volunteer their services to the United States to suppress rebellion or invasion, and who shall be called into active service for said purpose and to aid the families if in destitute circumstances, or to act in any way relative to the same."

At the meeting held May 1st it was voted to adopt the following resolutions offered by Dan Hill, Esq.;

The President of the United States having called upon all good citizens to aid him in his efforts to enforce the laws and suppress an insurrection which threatens to overthrow the Government: We, the citizens of Blackstone in Town Meeting assembled, deeply impressed by the perils that beset us, but with unfaltering confidence in God and the Right:—Inspired by the cherished memory of the heroic deeds and manly sacrifices of our patriotic Fathers, and impelled by a solemn sense of duty which we owe to our posterity, no less than to ourselves—declare our readiness to aid, to the full extent of our ability, in sustaining this Government and in crushing the rebels that assail it. And we hereby "pledge our lives, our fortunes and our sacred honor," that, come weal or come woe, we will never prove recreant to the Government to which we justly owe allegiance, and from which we derive so many blessings—a Government which is the only formidable foe of Despotism and Tyranny, and the last hope of Civil and Religious Liberty in the World. In this "irrepressible conflict" between Freedom and Slavery, every pulsation of our hearts is for Freedom, and in her sacred cause we are ready to give battle—our watch-word "The Government and the enforcement of the laws,"—our banner the Stars and Stripes.

Upon the firing upon Fort Sumter immediate steps had been taken to raise a company, and after several exciting meetings, a company of ninety-six, afterward known as Company K, Fifteenth Regiment Massachusetts Volunteers, was enlisted and drilled under command of Captain Moses W. Gatchell, with Edwin B. Staples, first lieutenant, and Caleb H. Arnold, first sergeant. The men were mustered in July 1st, the officers August 1st, and the regiment was sent to Maryland, where it was placed on the right wing of the Army of the Potomac. October 21st, at the battle of Ball's Bluff, Captain Gatchell and three privates in the company were killed. Lieutenant Staples resigned the following year to accept a position in the Fourth Regiment Massachusetts Cavalry, in which he gained the rank of major. Caleb H. Arnold became second lieutenant of Company K, January 3, 1863, and died of wounds received at the battle of Gettysburg, July 20, 1863. Mellville Howland, acting as first sergeant and lieutenant, died in Maryland, August 28, 1862, and Thomas Furnald, succeeding him as first sergeant, was killed at the battle of Antietam, September 17, 1862, as were six others in the company. George W. Bolster became second lieutenant June 9th, and first lieutenant November 7, 1862, and resigned March 18, 1863.

A large number of Blackstone men enlisted in

companies raised in Woonsocket, and served in various Rhode Island regiments as well as in other Massachusetts regiments than those named.

Owing to the change in administration, Darius Bennett, the postmaster at Blackstone, was supplanted by Sylvanus H. Benson, and Willard Wilson, at Millville, by Preserved L. Thayer.

Rev. George M. Hamlin was appointed to the Methodist Society at Millville.

1862.—Town Clerk, George E. Bullard; Selectmen, John C. Scott, Emory Scott, Joseph G. Ray (this board also acted as Assessors and Overseers of the Poor); treasurer, Richard K. Randolph; School Committee, Frank Kelly, three years, John V. Lewis, two years, Dr. Wm. H. Kimball, one year.

The earlier meetings of this year were mainly taken up with discussions of the manner in which aid should be given the families of soldiers now in the service. July 17th was held a meeting to take measures to raise forty-two volunteers under the call of President Lincoln. This was just after the failure of General McClellan on the Virginia Peninsula, and extra inducements were needed. The town voted to call in and place on deposit in the Worcester County Bank three thousand one hundred and fifty dollars of the "surplus revenue," and that every man volunteering before August 10th should be paid a bounty of seventy-five dollars. The matter was the subject of two more meetings, the bounty for men enlisting for three years being made three hundred dollars, and for those enlisting under the new call for nine months a bounty of one hundred dollars was voted.

Joseph G. Ray having moved out of town, Estus Lamb was elected August 30th to the Board of Selectmen. Channing Smith was chosen Representative to the General Court.

Captain Daniel W. Kimball, Company K, Fifty-first Regiment Massachusetts Volunteers, had enlisted sixty men, and wanted overcoats for them, which the town voted November 5th, appropriating ten dollars apiece, and John S. Needham to furnish them. The Fifty-first was a nine months' regiment.

August 23d, Rev. George M. Hamlin and Dan Hill were appointed to the Board of School Committee in place of Rev. John V. Lewis resigned, and Dr. Wm. M. Kimball declined to serve.

Rev. J. A. Howe was called to the pastorship at Waterford, and Rev. George Rumney to St. John's Society at Millville, in place of Mr. Lewis. In June Rev. John E. Edwards was called to the Blackstone Society.

1863.—Town Clerk, James K. Comstock; Selectmen, James P. Hayward, Lewis W. Taft, Sylvanus H. Benson; Assessors, William A. Northup, Lyman Paine, John C. Hobbs; Overseers of the Poor, Hiram Daniels, Andrew Kelly, Channing Smith; Treasurer, Moses Farnum; School Committee, Le Roy Chilson, three years, Edwin Jenckes, one year.

James P. Hayward declined to serve, and William A. Northup was elected selectman. Lyman Paine declining to serve as assessor, Arthur Cook was chosen. Charles A. Wright became trial justice.

Early this year broke out the "Hickey Hall" school war, waged by Dan Hill of the General School Committee against the Blackstone Manufacturing Company. The bitter conflict ended with the company still in possession of their own school-house, and the committee letting their wrath coruscate in a most unique annual report.

The subject of State aid to the families of soldiers and sailors came up from time to time, and was settled on the liberal side. Limited at first to families of volunteers, residents of the town, in the army, it was extended to volunteers in the navy, to the families of drafted men, to those not residents in the town, and was made perpetual to the families of those killed, or who died in the Union service.

James K. Comstock was chosen Representative to the General Court. Rev. Lewis B. Bates was appointed to the Methodist Church, Millville. The Kelly cotton-mill at Upper Canada (East Blackstone), hitherto used to manufacture bagging, was converted into a woolen-mill.

Tuesday, July 21st, arrived home Company K, Fifty-first Massachusetts Volunteers, Captain Daniel W. Kimball, and they were given an ovation. They had served at Newbern, N. C., on the Virginian Peninsula and, during their last month, with the Army of the Potomac in Maryland. On Wednesday, July 22d, the company re-assembled to attend the funeral of Lieutenant Caleb Arnold, Company K, Fifteenth Regiment, who had died of a wound received at the battle of Gettysburg.

1864.—Town Clerk, James K. Comstock; Selectmen, Sylvanus H. Benson, John S. Needham, Andrew Kelly; Assessors, Arthur Cook, Silas A. Burgess, Estes Burdon; Overseers of the Poor, Hiram Daniels, Channing Smith, Clovis L. Southwick; Treasurer, Moses Farnum; School Committee, Rev. J. Erskine Edwards.

April 16th the town voted to borrow $7500 to be applied by the selectmen as bounties of $125 apiece to the men volunteering to fill the town's quota under the calls of the President, dated October 17, 1863, and February 1, 1864. Sylvanus H. Benson had been made recruiting officer for the town at $3 per day, and his energetic labors kept the town's credit pretty well up with the various calls, and earned him the sincere gratitude, in this respect, of his fellow-townsmen.

Night police were enjoyed by the village people from shortly after the March meeting until May 21st, when the police were ordered paid up and discharged by the town. At this meeting too, it was voted "that the clergymen, lawyers, doctors and selectmen of this town, irrespective of denomination, be appointed a committee to use to the utmost extent their powers of moral suasion to do away with the sale and consumption of intoxicating liquors."

July 14, 1864, the President called for more soldiers, and Blackstone's quota was fifty-six, of which only ten were already secured. The town voted, August 19th, $5750, in order to give each of the remaining forty-six a bounty of $125. H. K. Merrifield opened a law-office. John S. Needham was elected Representative to the General Court. Dr. Moses D. Southwick was also elected Senator for the Southeast Worcester District. Arthur Cook was appointed trial justice. Rev. E. W. Porter began his first ministry at Waterford this year. The Kelly & Paine cotton-mill in East Blackstone, owned and run by Andrew Aldrich, was burned in March. Waterford No. 1 was burned this year, causing great loss to the wage-workers of that village.

February 6th died Dr. Abel Wilder, for more than forty years engaged in the practice of his profession in this community. Dr. Wilder was born in Ashburnham, Mass., June 24, 1786. He was the seventh son in a family of twelve children and was brought up to hard work on the farm until he was fifteen, when he was apprenticed to shoemaking. After he was twenty-one he set himself to acquire an education, and when twenty-four he began studying medicine, attending lectures at Dartmouth College, and supporting himself by teaching school. He began his practice in Winchendon and married there. He went to Swansey in 1815, removed to Walpole in 1819, and came to Blackstone in 1823, where he remained until within a few months of his death, which occurred at the home of his son in New York. He had a family of twelve children, eight of whom survived him.

February 7th died Dr. Horatio Stockbridge, in the seventy-sixth year of his age. He was the son of Hon. David Stockbridge, of Hanover, Mass., where he was born. The family descends from John Stockbridge, who came from England in the ship "Blessing" in June, 1635, and settled in Scituate, Mass. In 1804, at the age of sixteen, he was sent to Harvard, College and remained two years. He studied medicine with Dr. Freeman Foster, of Scituate, and Dr. James Mann, of Wrentham. He first practiced in Berwick, Maine, afterwards in Medway, Mass., and came to Blackstone in 1819. Here he remained until 1833, when he opened his long famous apothecary shop in Woonsocket. His son Horatio Stockbridge survives him.

April 16th died in Mendon, where he had but recently moved, Dan Hill, a native and, save a few months, always a resident of Blackstone, whose life for a long period of years was closely identified with the history of the town. As a member of both branches of the State Legislature, as justice of the Police Court, and in the various offices and agencies which the town could bestow, he always commanded respect, not only by his marked abilities, but his unswerving integrity and uprightness of purpose.

1865.—Town Clerk, James K. Comstock; Selectmen, Andrew Kelly, John S. Needham, Arthur Cook: Assessors, Arthur Cook, William A. Cole, Estus Burdon; Overseers of Poor, Hiram Daniels, Channing Smith, Clovis L. Southwick; Treasurer, Richard K. Randolph; School Committee, Ellis T. Haywood.

At a meeting January 21st the town voted $4,250 to be divided in bounties of $125 to each of the thirty-four men in the town's quota under the call of the President, December 19, 1864.

April 3d it was voted to establish a High School forthwith, and that the School Committee procure a suitable room for such school. That Henry C. Kimball, Laban Bates and Millens Taft be a committee on building a High School-house, and that it be located on or near the corner of Church and Mendon Streets, in Blackstone village, provided the Blackstone Manufacturing Company will give the lot to the town for this purpose. The High School was begun in September in the grammar school room of the New City building, with Daniel A. March, a graduate of Amherst College, as principal. It was also voted to redistrict the town according to the plan submitted by the School Committee, which reduced the number to eight by dividing No. 4 between Nos. 5 and 3, and re-numbering so that Chestnut Hill was No. 1; Five Corners, No. 2; East Blackstone, No. 3; Pickering, No. 4; Waterford, No. 5; Blackstone, No. 6; Town House, No. 7; Millville, No. 8.

Estus Lamb and Henry S. Mansfield were added to the committee on the High School building. C. G. Keyes, Esq., opened a law-office in the Arcade. Hiram Daniels was chosen Representative to the General Court. James K. Comstock was appointed postmaster at Blackstone Post-Office. Jerome B. Bolster took an office at Blackstone as attorney-at-law.

May 23d, Bernard Creighton, of Waterford, brought home a sick daughter from Dedham, who proved to have the small-pox. From large exposure twenty-three cases resulted, with seven or eight deaths.

The Waterford No. 1 Mill was rebuilt three hundred and fifty feet long and fifty feet wide.

1866.—Town Clerk, James K. Comstock; Selectmen, Estus Lamb, Henry C. Kimball, Silas A. Burgess; Assessors, Estus Burdon, Hiram Daniels, Clovis L. Southwick; the latter declined, and William A. Cole was chosen; Overseers of the Poor, Clovis L. Southwick, Lewis W. Taft, Moses A. Daniels; Treasurer, Moses Farnum; School Committee, Jerome B. Bolster.

Voted to accept of the list of by-laws in relation to truancy offered by Silas A. Burgess, Esq. Estus Lamb and Henry C. Kimball having declined to serve as selectmen, Millens Taft and Libbeus L. Wood were chosen. The committee on building a High School-house reported a plan of building, and the proposal of the Blackstone Manufacturing Company to give the town a lot so long as certain conditions were fulfilled. The report and proposal were both accepted, and six thousand dollars was appropriated for the building, which was continued in the charge of the same com-

mittee of five. Ellis T. Hayward having resigned from the School Committee, Dr. Moses D. Southwick was chosen. About three weeks later, April 21st, an attempt was made to reverse the town's previous action in regard to High School building, but without success. The "Harris Road" (the southern half of present Farm Street) first came under discussion at this meeting, and Francis Kelly, Millens Taft and William G. Hadley were appointed a committee on the part of the town to build the road. The order of the County Commissioners upon the road occupies the first twenty-one pages of Vol. 3, Town Records. May 19th, the town resolved vigorously against the road and instructed its committee to fight for a reversal of the County Commissioners' decree.

Rev. William Kellen was appointed to the Methodist Society at Millville.

John S. Needham was chosen Representative to the General Court.

By the lamented death of Jerome B. Bolster, October 27th, there was a vacancy on the Board of School Committee, which was filled by the appointment of Rev. E. W. Porter.

In the month of March, Patrick Hughes disappeared, and three weeks later his body was found in the Blackstone River. Foul play was suspected, but not proved.

1867.—Town Clerk, James K. Comstock; Selectmen, Henry K. Merrifield, Stephen S. Benson, Welcome A. Thayer; Assessors, Estes Burdon, Robert J. M. Chase, Lyman Paine; Overseer of the Poor, Clovis L. Southwick, Edmund O. Bacon; Treasurer, Moses Farnum; School Committee, William A. Cole, 1 year, Henry C. Kimball, 2 years, Sylvanus H. Benson, 3 years.

Voted to abolish the school districts. This vote led to a series of votes at the following meeting, April 6th; the most important in the whole history of the town. It was ordered that the Blackstone Manufacturing Company's school-house at the New City be purchased, that steps be taken to build a new school-house at Waterford, that all the school property of the districts be appraised and paid for by the town, and that $5000 more be appropriated to complete the High School-house.

The New City School-house was appraised at $12,-500; Chestnut Hill, $1400; Verry, $50; Five Corners, $300; Lower Canada, $1400; Pickering, $100; Town House, $150; Millville, $8000,—total, $23,900. The town books do not afford data for stating the cost of the Waterford school-house. This year the first iron bridge at the New City was built and the stone-arch bridge on Lincoln Street, over Fox Brook. The "Harris Road" was fought, but in vain. The town had to build it. The selectmen, contrary to custom, made no report of the indebtedness of the town March 1, 1868. It is probable these various undertakings were in such stages, that it was impossible. On March 1, 1867, it was $25,586; March 1, 1869, it was $68,316,—an increase of $42,730 in two years' time.

September 9th, Rev. E. W. Porter was appointed to the School Committee in place of Henry C. Kimball, resigned.

Moses Farnum was elected as Representative to the General Court.

Rev. Henry W. Conant was appointed to the Methodist Society, at Millville.

Henry K. Merrifield, Esq., succeeded Arthur Cook as trial justice, and held the position for six months, when he resigned to accept a position in an insurance office in Worcester. He was succeeded by Theodore S. Johnson, Esq., of Worcester.

Jeremiah Gatchell was appointed postmaster at Blackstone P. O.

1868.—Town Clerk, James K. Comstock; Selectmen, George E. Bullard, Millens A. Taft, Daniel S. Southwick; Assessors, Lewis R. Daniels, Jeremiah Gatchell, Alexander Blanchard; Overseers of the Poor, Willard Wilson, Stephen Tucker, Lawrence Boylan; Treasurer, Moses Farnum. Alexander Blanchard declined to serve, and Willard Wilson was chosen. School Committee, William A. Cole for three years; Samuel Thayer, Jr., for one year.

March 2d, when most of the above officers were chosen, was an extremely bleak and snowy day. Whether owing to the storm, or to dissatisfaction with the management of town affairs, the result was the placing in office of men for the most part of the opposite politics of those who had controlled the town for some years. The selectmen having, under a vote of the town, contracted with George M. Blanchard to build a stone lock-up, and the town having rescinded its vote, the lock-up was not built, but the town paid rather more than its cost would have been in the way of damages and costs to Mr. Blanchard. Forty-two thousand dollars of the town debt was funded with the State treasurer, under vote of November 4th.

Rev. M. E. Phetteplace was called to the Baptist Society at Waterford, and Rev. Frederick C. Newell was appointed to the Millville Methodist Society. A missionary effort for several months in East Blackstone, by Joseph Miett, of Woonsocket, led to the appointment of Rev. Thomas B. Gurney to that field.

August 9th died Rufus Hayward, a native of Mendon but a resident of Blackstone the greater part of his life, and thoroughly identified with the political history of the town. For many years he was the leader of the Democratic party in the town. He was an active politician, a man of genial temperament and a kind neighbor. He had filled various town offices, and was once elected to the General Court as Representative. He was found dead in his bed at the Lincoln House, having probably died of apoplexy. During this year work was prosecuted on the road-bed of the Boston and New York Railroad, and there was an unusual number of fatal accidents on the tracks.

1869.—Town Clerk, Jeremiah Gatchell; Selectmen, George E. Bullard, Louis R. Daniels, Daniel O'Sullivan; Assessors, Jeremiah Gatchell, Willard Wilson,

John C. McCarthy; Overseers of the Poor, John G. Gatchell, Joseph Byrne, Samuel Verry; Treasurer, Moses Farnum; School Committee, for three years, Samuel Thayer, Jr. Willard Wilson having declined to serve as assessor, Americus Welch was chosen. Samuel Verry having declined to serve, and Joseph Byrne having removed from town, Millens A. Taft and Bezaleel Richardson were chosen overseers of the poor.

A new school-house was built at the Five Corners. May 24th the County Commissioners laid out that part of St. Paul Street extending from Canal Street to the Rhode Island line under the tracks of both railroads. Pearl Street, in Millville, was laid out at this time with mutual asseverations of interest on the part of town and railroad in its behalf. The "Hiram Daniels road" (section of Mendon Street from Milk Street to Asylum Street) first appeared in town affairs November 2d, when a committee was appointed to oppose it before the County Commissioners.

Blackstone failed to secure the election of a Representative to General Court in the election this fall.

March 31st Junius Bates was appointed postmaster at the Blackstone office. April 24th the Methodist Episcopal Society of East Blackstone was organized, and a church, costing about $3500, was erected during the summer. The organization of the Quickstream Lodge of Good Templars on March 22d afforded a powerful auxiliary to the church continuing to the present time (January 1, 1889).

Edmund O. Bacon, late landlord of the Lincoln House, was appointed one of the deputy sheriffs of Worcester County at the beginning of January. The firm of Bates & Comstock (Laban Bates and James K. Comstock), who had been engaged in the grocery business in Blackstone Block for twenty years, sold out in May to John W. France.

A new depot was built at Waterford as a Union station for both railroads. In November the small-pox was again introduced into Blackstone and resulted in forty cases and eight deaths.

1870.—Town Clerk, Jeremiah Gatchell; Selectmen, Darius Bennett, Owen Bradley, Micajah Fuller; Assessors, Daniel N. Chase, Maurice Cary, Louis R. Daniels; Overseers of the Poor, John G. Gatchell, Samuel Thayer, Sr., James H. Boyle; Treasurer, Moses Farnum; School Committee, for three years, Michael Fagan.

The new school-house at the Town House was built. This provided all the eight districts with good houses except No. 4,—"Pickerings." An article in the April warrant to repair or to rebuild in No. 4 simply secured a vote to repair,—an injustice which the town has not yet (1888) reversed in its treatment of this district.

April 30th the town resolved against the "Hiram Daniels Road," and appointed a committee to oppose it. It is difficult to understand why this road created so much opposition. The construction of five or six miles more of such road, in certain lines, would enable the town to close up nearly double that length of poor road difficult to keep in repair. August 2d, 20th, 30th, three town-meetings were held in regard to increasing the number of school-rooms at Blackstone and Waterford, and using the upper story of the High School-house as a library and reading-room. At the third meeting the whole scheme was negatived. Lyman Paine was chosen representative to the General Court.

The Blackstone River Lodge built the Masonic building on Main Street, at a cost of eight thousand dollars. It was dedicated Washington's Birthday by a fair and ball. The building is sixty feet deep by thirty-two feet wide, and two stories in height, the end fronting the street. The heavy stone arches on the Boston Road in Waterford village were completed during the year after several intermissions in the work.

The Blackstone Valley Lodge of Good Templars became extinct in June. Rev. T. H. Bannon, of the St. Paul's Society, falling into poor health, he resigned, and in October Rev. William A. Power was installed. Rev. James H. Cooley was assigned to the East Blackstone Methodist Episcopal Society, and Rev. Thomas S. Thomas to that of Millville. Rev. James Rand was called to Waterford Church.

A lock-up was finally instituted in August in the Union House basement.

1871.—Town Clerk, Junius Bates; Selectmen, Darius Bennett, Micajah Fuller, Owen Bradley; Assessors, Jeremiah Gatchell, Louis R. Daniels, David M. Gaskill; Overseers of the Poor, John G. Gatchell, Samuel Thayer, Sr., Estes Burdon; Treasurer, Moses Farnum; School Committee, for three years, William A. Cole. April 3d, Louis R. Daniels and David M. Gaskill having declined to serve as assessors, Patrick Kennedy and Americus Welch were chosen. John G. Gatchell and Samuel Thayer, Sr., having declined to serve as overseers, Stephen Tucker and James H. Boyle were chosen. It was voted to increase the School Committee to six, and John Worrall was chosen for three years, Welcome A. Thayer two years, and Horace H. Benson for one year. The latter having declined, Samuel S. White was appointed.

Blackstone sent no representative to General Court this year. Silas A. Burgess, Esq., was appointed trial justice in August, T. S. Johnson having resigned to accept the position of clerk of the Municipal Court at Worcester.

Rev. Samuel E. Evans was appointed to the Methodist Society at Millville. In April the Blackstone Library Association and the Athenæum held a union meeting, and effected an organization under which their libraries, conjointly numbering nearly three thousand volumes, were united and placed together in the Arcade. The last week in July the house and barn of Mr. Bernard Hoye and the barn of Mr. L. S. Penniman were destroyed by fire, causing a loss of

some five thousand dollars. The fire was checked by the powerful force-pump of Waterford No. 3 Mill, then run by Needham & Mason. All these buildings were promptly rebuilt.

The first week in August died Varnum Bartlett, a native of Cumberland, R. I., but a resident of Blackstone for a quarter of a century, and his shoe-store on Main Street was one of the old landmarks of the town. His honest dealing secured a large patronage in trade, and he was a successful business man of the old school.

A lively interest in temperance work prevailed during the year among the several societies, religious and lay. In October the St. Paul's Temperance Society celebrated the anniversary of the birth of Rev. Father Matthew, and by the interest aroused largely strengthened its membership.

1872.—Town Clerk, Junius Bates; Selectmen, Henry S. Mansfield, Samuel S. White, Augustine H. Rankin; Assessors, F. Myrick Thayer, Americus Welch, Robert J. M. Chase; Overseers of the Poor, Caleb S. Taft, Darius Bennett, Michael Rowan; Treasurer, R. K. Randolph; School Committee, Henry C. Kimball, Louis A. Cook, for three years, John S. Needham, two years, Alvin C. Robbins, one year.

April 15th, F. M. Thayer and R. J. M. Chase having declined to serve as assessors, Jeremiah Gatchell and John S. Needham were elected. It was voted to choose Road Commissioners, and there were elected, Andrew Kelly, for three years, Samuel S. White, for two years, Henry S. Mansfield, for one year.

John C. Scott was elected representative to the General Court. The new Board of Road Commissioners laid out a continuation of Main Street from New City iron bridge over the Blackstone Dam to Millville, passing near the houses of George Hanney and James Pitts to Central Street. This was accepted and ordered built and then the acceptance was revoked.

Rev. Samuel D. Church was called to the pastorship of the Waterford Society. Rev. Walter J. Yates was appointed to the Methodist Society at Millville, and the Rev. E. N. Maynard at East Blackstone. Rev. Edward H. True became rector of St. John's Parish, Millville.

August 1st, the Second District Court of Southern Worcester, embracing the towns of Northbridge, Douglas, Uxbridge and Blackstone, took the place of the trial justice courts, with Arthur A. Putnam, Esq., as justice. It holds sessions every week-day alternately at Blackstone and Uxbridge—Mondays, Wednesdays and Fridays at Blackstone; Tuesdays, Thursdays and Saturdays at Uxbridge. The court has jurisdiction in all civil actions where the amount does not exceed three hundred dollars, and a trial by jury may be had on the demand, in writing, by either party.

1873.—Town Clerk, Aaron S. Esty; Selectmen, Jeremiah Gatchell, Lawrence Boylan, Albert Smith; Assessors, Americus Welch, Millens Taft, Michael Rowan; Overseers of the Poor, Micajah Fuller, Daniel Hefferman, F. Myrick Thayer; Treasurer, Austin A. Wheelock; School Committee, Horace A. Benson, Dr. Robert Booth, for three years, Welcome A. Thayer, one year. It was voted to abolish the Board of Road Commissioners. Millens Taft having declined to serve as assessor, Daniel Wheelock was chosen. Town by-laws, offered by A. A. Putnam, Esq., in regard to obstruction of sidewalks, disturbance in streets, fast driving, etc., were adopted and were subsequently approved by Judge Devens, of the Massachusetts Superior Court, as required by law. The sum of one hundred dollars was now first voted to be placed at the disposal of "Gatchell Post, G. A. R.," for the suitable observance of Memorial Day. The "Hiram Daniels road" first ordered by the county commissioners January 4, 1871, had been so far successfully resisted because the lay-out crossed the Town Asylum Cemetery. The commissioners now executed a flank movement and issued a decree, June 9, 1873, and the road was built by a contractor.

On the evening of October 16th occurred the great fire in Wilder's Lane, which destroyed eight dwelling-houses and several barns. The Woonsocket steam fire-engine prevented a more extensive conflagration by its opportune arrival. Several meetings were now held to secure fire apparatus, but there was no result. Eighteen families were rendered homeless, and altogether some fifty families moved their household goods at considerable loss, so that this fire caused a widespread feeling of insecurity.

Albert Smith was elected Representative and Jeremiah Gatchell Senator to the General Court. Lyman Legg was appointed postmaster at Millville. Rev. Albert W. Moore was called to the vacant pulpit at Blackstone, January 22d. Deacon Daniel Gunn died February 21st, aged sixty-five years. He was born February 6, 1808, at Swanzy, Vermont, and came to Blackstone in 1833, where he resided until his death. He was an ardent and devoted member of the Waterford Church. The Worcester County National Bank removed to Franklin in August.

1874.—Town Clerk, Aaron S. Esty; Selectmen, Jeremiah Gatchell, Matthew Faulkner, Albert Smith; Assessors, Americus Welch, Philip Nulty, Millens Taft; Overseers of the Poor, Micajah Fuller, Richard Newsome, William G. Miller; Treasurer, Austin A. Wheelock; School Committee, Welcome A. Thayer, John P. Needham, three years each.

There was considerable agitation during the year for a new town hall, to be located at the village. One proposition was to purchase "Block Hall." Nothing was accomplished, however, in this direction, the committee reporting through its chairman, John S. Needham, "in view of the present depressed state of business the committee recommend a postponement, but not an indefinite postponement of the subject."

The town having paid no attention to the decree of the County Commissioners in relation to the "Hiram Daniels Road," they had built the road, and now served notice upon the town to pay the expenses and charges of completing, amounting to $5505, into the county treasury. This the town voted to do, October 3; then also voted "that a committee of three be appointed to take into consideration the matter of inducing capitalists or mechanics to locate in this town." The committee was Jeremiah Gatchell, Daniel Simmons, John C. Scott.

Albert Smith and Jeremiah Gatchell were again elected Representative and Senator respectively, to the General Court.

Thanksgiving morning, November 26th, a fire destroyed the barn, paint, wheelwright and blacksmith shops, and the dwelling-house of Micajah Fuller, the barn and greater part of the Lincoln House, owned by Martin Jenckes. As in the preceding year, the Woonsocket steam fire-engines came to the rescue. At a meeting, December 9th, it was voted to have a steam fire-engine, and five thousand dollars was appropriated for its purchase.

In February a disastrous fire in Millville destroyed the large stone woolen-mill. The satinet-mill at Upper Canada, run by John C. Scott, was burned this year.

1875.—Town Clerk, Junius Bates; Selectmen, Henry S. Mansfield, Patrick Kennedy, Samuel S. White; Assessors, Americus Welch, William A. Cole, John Gallagher; Overseers of the Poor, Micajah Fuller, Alonzo W. Southwick, Dennis McMullen; Treasurer, John S. Needham; School Committee (for three years), Alvin C. Robbins, Andrew Kelly.

John S. Needham having declined to serve as treasurer, Daniel Wheelock was chosen. The steam fire-engine company of the town was organized. The town accepted the selectmen's lay-out of Farnum Street, September 18th. Patrick Kennedy was chosen Representative. Rev. Edwin G. Babcock was assigned to the Methodist Society at Millville, and Rev. William R. Mays to East Blackstone. Under the kindly influence of Rev. William A. Power was formed, in St. Paul's Society, the Young Men's Catholic Union, a literary society, which long held weekly meetings, and collected a considerable library.

Mr. John Needham, after twenty-three years' residence in town, having removed to Lawrence, Mass., to become superintendent of the Washington Mills in that city, the Rev. S. D. Church was chosen to fill the vacancy on the Board of School Committee. In May John L. Utley opened a law-office in Blackstone. Myron Daniels was appointed postmaster at East Blackstone. June 9th died Dr. Moses D. Southwick. He was born in Mendon, July, 1805, on the farm of his father, George Southwick, where his early life was spent. By teaching school he won his way through Brown University, graduating in 1828, and Bowdoin Medical College in 1831, having read medicine with Dr. Usher Parsons, of Providence, R. I. He practiced a short time in Bellingham, but soon (1834) removed to Millville, where he spent the rest of his life. He was a man of sterling character, of vigorous powers of mind, well-balanced, and of remarkably even temperament.

1876.—Town Clerk, John Nugent; Selectmen, Americus Welch, Patrick Kennedy, Matthew Faulkner; Assessors, Americus Welch, James Dollard, Patrick Baxter; Overseers of the Poor, Micajah Fuller, Willard Bennett, Richard Newsome; Treasurer, Horatio Stockbridge; School Committee, James Dollard, three years; Austin A. Wheelock, one year.

Francis N. Thayer was chosen Representative to the General Court. The town now voted to reduce the Board of School Committee to three members again.

In December Rev. Theodore G. Wilder was called to the Waterford Baptist Society, and May 21st Rev. George F. Walker to the Blackstone Church. Rev. William H. Turkington was appointed to the Methodist Society, Millville, and Rev. N. G. Axtell to East Blackstone. Rev. John D. McConkey took charge of St. John's Parish October 14th. Francis N. Thayer, a native of the town, having been admitted to the bar of Worcester County, opened an office in Blackstone Village.

Rev. S. D. Church closed his pastoral labors at the Free Baptist Church, in Waterford, on Sunday, June 4th. He returned to the church in Taunton, Mass., where he first entered upon his pastoral duties and where he then served for six years. Mr. Church was a devoted student, a man of excellent abilities and attainments, and as a Hebrew scholar ranked high in his denomination.

Early in the year was completed Institute Hall, a large and handsome edifice, near the St. Paul's Church, devoted to the social and educational interests of its people. The building is of wood, eighty feet long by forty-five feet in width, and two full stories in height above the basement.

1877.—Town Clerk, John Nugent; Selectmen, Americus Welch, Thomas T. Smith, Daniel Wheelock; Assessors, Americus Welch, William L. Reade, Olney L. Pickering; Overseers of the Poor, Micajah Fuller, Richard Newsome, Alonzo Southwick; Treasurer, Joel Hervey; School Committee, Henry C. Kimball, three years.

This spring the town was seized with one of its periodical spasms of small economy and fixed the price at which its servants must work. This process involved the choice of a new tax collector and the consequent loss to the town within two years of several thousand dollars. It was voted that the School Committee shall appoint a superintendent of schools, and that board appointed Alvin C. Robbins. The committee appointed to secure the settlement in town of additional manufacturing enterprises were active during the year, and the valuable water privilege at

Millville, on the Blackstone River, was sold by its Worcester owners to the Woonsocket Rubber Company, of Woonsocket, R. I., and the Lawrence Felting Company.

Rev. R. D. Dyson was appointed to the Methodist Society at Millville and Rev. Charles Nason to the East Blackstone Society. The Mansfield Scythe Factory, built in 1871, off Central Street, Millville, was purchased by Messrs. Booth & Kidd and converted into a woolen-mill with four sets of machinery. Dr. Frank J. King opened his office in Millville in August.

The last week in October the Waterford No. 3 Mill was totally destroyed by fire. This mill was the oldest of the Waterford Mills, having been built by Welcome Farnum in 1825. The loss of this mill was a serious drawback to the town and resulted in the removal of many industrious families and good citizens elsewhere.

1878.—Town Clerk, John Nugent; Selectmen, Americus Welch, Terrence McGinley, Michael Tuite; Assessors, Americus Welch, Patrick Baxter, Dennis J. Connors; Overseers of the Poor, Micajah Fuller, Peter McCooey, William F. Byrne; Treasurer, Austin A. Wheelock; School Committee, for three years, Adrian Scott.

April 1st, it was voted, "that the assessors be instructed to abate all taxes assessed on the real estate of Messrs. Cook & Banigan, for the term of five years from the date of their purchase in the village of Millville, except upon the valuation upon said real estate of that date." This vote was passed in behalf of the improvements made at Millville by the Lawrence Felting Co., consisting of the Felting Mill and its adjuncts, machinery, &c.

At this meeting the following resolutions were passed:

Resolved, That the inhabitants of the Town of Blackstone, in town-meeting assembled, receive with regret the information of the death of our respected former fellow-citizen, Sylvanus H. Benson.

Resolved, That we deem it our duty to express in our name our regard for the various important public services which distinguished his official life and to mark with appropriate honor the points of his character and the integrity of his administration of the several departments which have been intrusted to his care. These entitle him to the affectionate remembrance of the inhabitants of this Town and an honorable place in the history of its public servants.

Resolved, That the Town Clerk be requested to transmit copies of the foregoing resolutions to the family of our deceased friend and to have the same placed npon the records of the Town.

September 27th the town voted to fund the town debt by establishing a Sinking Fund. Commissioners were elected as follows: Jeremiah Gatchell, for three years; Lawrence Boylan, for two years; Henry S. Mansfield, one year.

Frederic Thayer was chosen Representative to the General Court.

Rev. John H. Sherman was appointed to the Methodist Society at Millville.

Rev. Jesse C. Heald was called to St. John's Society July 1st.

Channing Smith died August 29th, in the eighty-first year of his age.

1879.—Town Clerk, Daniel Wheelock; Selectmen, Americus Welch, Terrence McGinley, Frederick Thayer; Assessors, Americus Welch, Mathew Marty, James A. Kidd; Overseers of the Poor, Andrew Kelly, Francis N. Thayer, Lawrence Gibney; School Committee, Augustus Wilcox, three years,—Dennis McCaffrey, one year, to fill vacancy caused by the resignation of Henry C. Kimball; Treasurer, Leonard T. Gaskill.

The proceedings of the previous September, in regard to the Sinking Fund, not appearing upon the records in sufficient form, were void. The town, therefore, again passed its vote establishing a Sinking Fund, ordering the assessors to assess each year one and one-half mills on each dollar of taxable property, and elected Jeremiah Gatchell for three years, Henry S. Mansfield for two years and Rice A. Brown, Jr., for one year, Sinking Fund Commissioners.

The revised Truant Laws offered by Adrian Scott, chairman of the School Committee, were accepted and adopted by the town and were approved by the Superior Court, Francis H. Dewey, Nov. 15th.

A committee was appointed to name the public roads and streets in the town. The committee reported, November 4th, forty-four public and two private ways with names, and the report was adopted.

Agitation was begun of the question of enlarging the Town Asylum, and it was referred to the Overseers of the Poor.

Major Edwin B. Staples died October 20th, at Sarasota, Florida, whither he had gone for his health.

Edward B. Savage, Esq., attorney-at-law, opened a law-office in the Union House in September.

Mr. Francis Kelly died the latter part of August, in the seventieth year of his age, at Dorchester, Mass., where he removed some three years previous. He was a native of Bellingham, but came to Blackstone when a young man and resided in this town over forty years. His life-long occupation was teaching. He had an aptitude for teaching, and his schools were characterized for good order and discipline, a systematic pursuit of studies and a strict attention to the rules and duties of the place. He filled many important town agencies.

1880.—Town Clerk, John Nugent; Selectmen, Americus Welch, William J. Bowes, Lawrence Donlon, Jr.; Assessors, Americus Welch, George Williams (1st), Louis R. Banigan; Overseers of the Poor, Daniel Heffernan, James H. Boyle, Andrew Kelly; Treasurer, Lawrence Boylan; School Committee, Dennis McCaffrey (for three years), Samuel S. White (for two years, to fill a vacancy caused by removal of Augustus Wilcox).

"Voted that all persons building in the town for manufacturing purposes will be abated their taxes for the term of five years, provided the amount of said investment be not less than $50,000." Under

this vote the Woonsocket Rubber Company began, in 1882, their large factory, upon which taxes were abated from 1883 to '88.

The new Almshouse was the subject of two meetings during the spring, and was eventually built on the old road opposite the old house, instead of upon the new section of Mendon Street, where it would have been much more accessible and in a much more sightly location.

Rev. George F. Walker having resigned his charge at the Blackstone Church, the society remained without a settled pastor for several years.

Rev. Lewis Dexter was settled at the Waterford Church.

A new church, known as St. Augustine's, was built at Millville by the Roman Catholic Society of that village, which continued under the charge of Rev. William A. Power, of Blackstone.

Lyman Legg having been removed from the Millville post-office, Matthew Blanchard was appointed postmaster.

1881.—Town Clerk, John Fay; Selectmen, Americus Welch, William J. Bowes, Lawrence Donlon, Jr.; Assessors, Americus Welch, Michael Tuite, George Baxter; Overseers of the Poor, Daniel Heffernan, James Meagher, John Clark; Treasurer, Austin A. Wheelock; School Committee, for three years, Adrian Scott.

The school-house at Millville was enlarged during the summer. The school-house in the Pickering District becoming untenable, the school was suspended after the spring term. During the summer the iron bridge at the New City began to give signs of weakness, and August 22d a committee of five was appointed to contract for a new bridge. The Providence and Worcester Railroad having refused to bear its proportion of the expense, a committee of three was appointed November 11th to ascertain that company's liability. The contract of the company with the town upon the construction of the first iron bridge, in 1867, as well as all other records bearing upon the subject, were submitted to Francis P. Goulding, Esq., of Worcester, and Judge E. Rockwood Hoar, of Boston, who gave it their opinion separately that the railroad company was chargeable. The attorney for the company, having reviewed these opinions, gave his assent thereto, and the company eventually helped pay for the new iron bridge.

Americus Welch was chosen Representative to the General Court.

Rev. Wilbur S. Smithers was assigned to the Methodist Society at East Blackstone.

1882.—Town Clerk, William F. Byrne; Selectmen, Americus Welch, Louis R. Banigan, Lawrence Donlon, Jr.; Assessors, George Williams, John J. Heffernan, John Conway; Overseers of the Poor, Daniel Heffernan, Patrick Baxter, Francis McManus; Treasurer, Austin A. Wheelock; School Committee, for three years, Horatio Stockbridge.

Street-lights, to the number of thirty, were first voted July 28th.

The New City iron bridge was erected, and a relay of South Main Street was made by the selectmen.

Americus Welch was again elected Representative to the General Court.

Early this year the proprietor of the *Franklin Sentinel* at Franklin, Mass., undertook to revive the *Blackstone Valley Chronicle* by printing a Blackstone edition of his paper, with Edward Savage, Esq., as local editor.

1883.—Town Clerk, William F. Byrne; Selectmen, Americus Welch, Louis R. Banigan, George F. Creighton; Assessors, Americus Welch, James A. Kidd, Edward McCooey; Overseers of the Poor, Patrick Kennedy, James H. Boyle, George Williams; Treasurer, Austin A. Wheelock; School Committee, for three years, Orlando Scott. November 6th Francis McManus was chosen in place of James H. Boyle, deceased.

March 12th the town adopted a town seal as follows: "Voted, that the Town adopt as a design for a Town Seal, a shield, one-half of which shall contain the coat-of-arms of the Blackstone Family, the other half contain the representation of the tower of the old Blackstone Mill. Below this, upon a scroll, the Blackstone motto, '*Do well and doubt not*,' with flowers; and above the shield a scroll with the date of the Town's incorporation, 1845; and upon the margin shall appear, 'Nepmug Country until 1667; Mendon, 1667;' and directly above the shield, in the margin, 'Blackstone.'"

The New York and New England Railroad removed its unsightly wooden bridges over Main and Canal Streets, and substituted iron bridges during the fall and winter. Under a decree of the County Commissioners, the company was allowed to erect piers between sidewalks and roadways upon both streets.

Rev. A. A. Briggs was appointed to the Methodist Society at East Blackstone.

December 10th the village of Blackstone was startled to learn that Dr. William M. Kimball had been found in his office in an apoplectic shock and unable to speak. He lived about two days, but did not recover the power to speak. Dr. Kimball was born in Southbridge, studied with Dr. Miller, of Providence, and attended lectures at the Berkshire Medical School and at Harvard Medical School, graduating from the latter. He settled in Blackstone in 1840.

1884.—Town Clerk, William F. Byrne; Selectmen, Americus Welch, Louis R. Banigan, George F. Creighton; Assessors, John F. Campbell, Orlando Scott, Edward McCooey; Overseers of the Poor, Daniel Heffernan, Francis McManus, George Williams; Treasurer, Austin A. Wheelock; School Committee, for three years, Adrian Scott. November 4th Edward R. Thompson was chosen in place of Daniel Heffernan, deceased.

April 7th it was voted to build a new bridge over the

Daniel S. Southwick

Blackstone River, near the Union House, and twelve thousand dollars was appropriated therefor. October 7th the County Commissioners re-located South Main Street and awarded land damages.

Daniel Wheelock was chosen Representative to the General Court.

Rev. William J. Alger became rector of the St. John's Parish, Millville, in place of Rev. Jesse C. Heald, who removed to Tariffville, Conn.

Rev. Michael Kittredge was placed in charge of the St. Augustine Society.

Rev. A. J. Church was assigned to the Methodist Society at East Blackstone.

Rev. Leroy M. Pierce was settled at Blackstone Church.

1885.—Town Clerk, William F. Byrne; Selectmen, Americus Welch, Patrick O'Donnell, John J. Dorsey; Assessors, John F. Campbell, Orlando Scott, Edward McCooey; Overseers of the Poor, Patrick Kennedy, Francis McManus, George Williams (1st); Treasurer, Austin A. Wheelock; School Committee for three years, Horatio Stockbridge.

April 6th, it was voted to have Road Commissioners, and the ballot taken elected Peter Maloney, for three years, Cornelius R. Day, for two years, and Americus Welch, one year. It was also voted to adopt the system for keeping town accounts and printing town reports offered by Americus Welch. The grade of that portion of South Main Street recently re-located was fixed, and the width of the sidewalks was established at two-elevenths of the established width of each street, equal to nine feet upon Main Street, and all roads three rods wide.

This year was rendered memorable by the famous strike at the Millville Rubber Works, the disastrous effects of which upon the prosperity of the village and the town are not yet entirely overcome. The strike began the latter part of June, and lasted several months. In September the attitude of the strikers was so threatening, when the company substituted new help, that the selectmen judged it prudent to bring down a company of Worcester city police.

Rev. Edward P. Phreaner was appointed to the Methodist Society at Millville.

The different temperance organizations in town, united with the clergy, and a strong public sentiment that the liquor dealers were acting unscrupulously in selling to minors, on Sundays, etc., gathered force during the winter and manifested its strength at the ensuing annual election.

Matthew Blanchard, the postmaster at Millville, having died suddenly in January, his wife was appointed, and still holds the position (January 1, 1889).

William Byrne was appointed postmaster at Blackstone in August, in place of Junius Bates, and Caleb Colvin at East Blackstone in place of Myron Daniels.

1886.—Town Clerk, Michael Carroll; Selectmen, Adrian Scott, Patrick Kennedy, James P. Mulvey; Assessors, John F. Campbell, Orlando Scott, Edward McCooey; Overseers of the Poor, Daniel W. Heffernan, Francis McManus, John P. Maloney; Treasurer, Austin A. Wheelock; School Committee for three years, George K. Marshall; Road Commissioner, Salmon Blanchard.

Prospect Street was laid out by the Road Commissioners, accepted by the town and ordered built. The following resolution, offered by Hon. Jeremiah Gatchell, was read and adopted: "Resolved, That the Boards of School Committee and Selectmen be requested to arrange a system of payment of the salaries of the teachers of the several schools in town, by which they may receive their salaries in regular monthly instalments."

Since March, 1886, in consequence of the above resolve, the teachers in the public schools have been paid monthly while schools were in session.

Forest fire wards were first appointed July 3d, under the law of 1886, and Louis R. Daniels, William A. Aldrich and John Dollard constitute the board.

The northerly abutment of the Central Street wooden bridge, Millville, having partially fallen in, a heavy masonry abutment was built during the fall and winter under the charge of Cornelius R. Day, chairman of Road Commissioners.

The County Commissioners re-districted Worcester County and placed Blackstone with Mendon, Milford and Hopedale in the Eleventh District, with two representatives. Both representatives were chosen from Milford this year.

November 15th, Daniel W. Heffernan having removed from town, Patrick Kennedy was chosen chairman of the Overseers of the Poor.

The *Blackstone Valley Chronicle* again came to an end about April 1st, the new series reaching Vol. V., No. 13, before its final demise.

Rev. Mr. Woodward was assigned to the Methodist Society at East Blackstone.

The town at its annual March election voted on the question of license to sell intoxicating drinks—"Yes," 259, "No," 369, and no licenses were issued, not to apothecaries even.

1887.—Town Clerk, Michael Carroll; Selectmen, Adrian Scott, John W. Cannon, James P. Mulvey; Assessors, John F. Campbell, James P. Mulvey, Joseph Byrne; Overseers of the Poor, Patrick Kennedy, Thomas Downey, Patrick R. Shea; Treasurer, Austin A. Wheelock; Road Commissioner for three years, Patrick Haggerty; School Committee for three years, Adrian Scott; for one year (to fill vacancy caused by the resignation of Horatio Stockbridge), Rev. John D. McGann.

June 18th, John F. Campbell was elected chairman of the Board of Selectmen in place of Adrian Scott, resigned.

Thomas McCooey was elected representative to the General Court.

January 4th was organized East Blackstone Grange, Patrons of Husbandry, No. 137, of Massa-

chusetts, with twenty-seven charter members. Its meetings were held weekly during the year at Coverdale Hall, corner of Elm and Blackstone Streets, and at the close of the year it numbered nearly seventy members.

Rev. E. W. Porter began his second ministry at the Baptist Church in Waterford.

The town at its annual March meeting reversed its position upon the liquor license question, the vote being "Yes," 337; "No," 145.

1888.—Town Clerk, Michael Carroll; Selectmen, Patrick Kennedy, John Conway, Thomas McCaffrey; Assessors, John F. Campbell, Robert Miller, Joseph Byrne; Overseers of the Poor, Patrick Kennedy, Patrick R. Shea, Thomas Downey; Treasurer, Lawrence Boylan; Road Commissioner for three years, Michael A. Bradley; School Committee for three years, Joseph Byrne.

April 2d it was voted that a committee of three be appointed to purchase a lot of land as a site for a new school-house in Millville. May 2d, four thousand dollars was appropriated for a lot and building, and a lot having been secured by gift from the Lawrence Felting Company, a school-house with two rooms was erected and furnished in season for two schools to be held therein, December 1st.

The Blackstone Library and Athenæum Association, having been dormant for some years, a proposition on the part of the majority of its stockholders, that the town take the books as the nucleus of a public library was accepted, as was also the offer of the Blackstone Manufacturing Company of the old vestry building as a library room, rent free for ten years.

The lay-out of Preston Street, Millville, as made by the road commissioners, was accepted, and the road ordered built May 2d. The stone arch over Fox Brook, Main Street, Waterford, was widened and sidewalks built during the fall. May 2d it was also voted to divide the town into voting districts, but when the selectmen had established the bounds the town did not accept the same.

Thomas McCooey was again elected representative to the General Court.

St. Augustine Church was greatly enlarged and beautified during the fall to accommodate its increasing number of communicants.

Rev. James H. Nutting, of Woonsocket, was assigned to supply East Blackstone Methodist Society.

The Baptist Society at Waterford thoroughly renovated its church building this summer, and greatly increased its interior beauty and convenience.

BIOGRAPHICAL.

DANIEL S. SOUTHWICK.

Mr. Southwick was born in Blackstone, Mass., March 25, 1805. He was left an orphan at an early age and went to live with his uncle, Jacob Southwick, where he remained until his uncle's death. Daniel having reached the age when it became necessary for him to think of learning a useful trade, found employment with Alexander Wilson, one of the old time scythe-makers. This was the time when numerous small scythe-shops were scattered over the county. So well satisfied was Mr. Southwick with his employer that he remained with him twenty years. At the age of twenty-eight he built the home where he resided until his death, February 17, 1886. During his lifetime he held many important offices in his town and was ever faithful to all trusts reposed in him. The friendless poor, the unfortunate and those in any trouble, ever found in him a sympathizing friend. In all matters of business he was prompt and punctual, his word was as good as his bond, and throughout a long life he maintained this character. He married Sally Wilson January 28, 1832. In his family relations he was the loving husband and the kind father. In the community in which he lived he was a respected citizen, and there having rounded out the three-score years and ten allotted him, he passed to his reward, leaving a widow, two sons, two grandchildren and one sister.

JAMES C. SOUTHWICK.

James C. Southwick, the son of Daniel, grandson of John, and great-grandson of Jonathan, is a direct descendant from Lawrence, the Pilgrim, who came from England to America in 1627, and probably settled in Salem, although his name does not appear on the records until 1639, when he and his family were admitted to membership in the First Church of Salem, and land was given him by the town on which to carry on the business of manufacturing glass and earthen-ware. The subject of this sketch was the only son in a family of seven children, five of whom are now living. He was born in Mendon (now Blackstone), December 12, 1824, on the homestead which has been occupied by the three preceding generations. In early life he attended the district school in his native town, and supplemented his education at Scituate, R. I., and at the Worcester Academy.

When a young man he purchased a farm adjacent to the old homestead, which he carried on until the decease of his father, when he bought the latter place, which he still occupies. Mr. Southwick is a progressive agriculturist, and has all the modern appliances for farm work. In his religious views he is liberal, believing in deeds rather than creeds. September 18, 1845, he married Elizabeth F., daughter of Wilder Holbrook. They have had four children, viz.: Medora E., born June 17, 1847, who married Josiah B. Davis, of Blackstone; Eva A., born August 14, 1852, who married Charles H. Buffum, of Oxford, and died May 31, 1883, three years after her marriage; De Etta, born February 28, 1859, who

James C. Southwick

died August 7, 1860; Wilder D., born April 19, 1866. The latter having completed a course of study in the American Veterinary College, at New York, received his degree in 1887, and is now practicing as a veterinarian in Woonsocket, R. I.

CHAPTER LXXXV.

SPENCER.

BY J. W. TEMPLE.

HISTORY WHEN A PART OF LEICESTER. — As Spencer was originally a part of the town of Leicester, its early history would be incomplete without speaking briefly of the mother township, from its purchase until the separation between it and Leicester took place. In the latter part of the seventeenth century certain gentlemen, known as "proprietors," purchased large tracts of land within what is now Worcester County, to settle "plantations" thereon, and it is reasonable to suppose, as a speculative venture also. These purchases were made upon conditions that a "certain number of families, within a certain number of years, shall there be located, and a sufficient quantity of land thereof shall be reserved for the Gospel ministry and a school." In this manner, and upon like conditions, was purchased a "tract of land, eight miles square, lying near the new town of the English, called Worcester, to be called Leicester and to belong to the County of Middlesex." The deed of this tract was from the heirs of Oraskaso, "sachem of a place called Tontaid," and was dated the twenty-sixth day of January, Anno Domini one thousand six hundred and eighty-six.

This, then, was the first step taken towards settling this wilderness, and the history of Spencer must necessarily date from this purchase, although it was fifty years or more before the division was had which made it a separate and distinct town.

For more than a quarter of a century there was nothing to encourage the "proprietors" to go forward, settle and develop the tract, as the depredations by the Indians in the surrounding towns were of such serious nature that a postponement of the project seemed the only alternative. A few years previous to this purchase, King Philip and his warriors were raiding the territory in this immediate vicinity, murdering the inhabitants, laying waste the towns or causing them to be abandoned, through great fear; and since these incursions were more or less frequent until 1713, it remained a wilderness up to this date, without a "single white inhabitant."

At the conclusion of peace, in 1713, another and successful attempt was made to put the original plans into execution. Inasmuch as the "proprietors" had not been able to fulfil their part of the contract, viz., to settle the number of families in the time required according to conditions imposed by the General Court, their right to proceed further without permission from the said General Court had lapsed. Accordingly, as early as possible after this period, application was made to this body for carrying into effect the spirit and letter of the first-named agreement, and consent obtained. This they did by a petition, praying a "confirmation of the said tract to them and their associates," and their prayer was granted upon conditions similar to those made in the previous contract.

An early meeting of these gentlemen was called to enter into and consummate arrangements for settling a part of this grant, and it was decided that the East half should be used for this purpose, while the West half should be retained by the "proprietors." Thus, early in the history of the town, the two sections came to be known as the East, or settlers' half, which is now Leicester, and the West, or proprietors' half, now Spencer.

A survey was made of the East half, house-lots were laid out and inducements to settlers were offered similar to those in other localities, viz.: that one shilling an acre, a nominal price, should be charged, "provided the purchaser should agree to settle a family thereon within three years from the date of purchase." As a further inducement, every house-lot should be supplemented with an additional one hundred acres in some other part of the town, for every ten acres of house-lot. Thus, by paying forty shillings, the purchaser became possessor of four hundred and forty acres of land. These lots were made accessible by public highways, running north and south, east and west, abutting upon each. Lots were also set apart for the Gospel ministry and school purposes agreeable to the original contract. With fair prospects now of a more lasting peace between settlers and Indians, the proprietors again indulged the hope of locating a settlement here that might yet rival, in population and business enterprise, many of the older towns in the county.

Yet, a decade passed before the number of families necessary to the carrying out of the original conditions were located, but within twenty-five years from the planting of the first habitation "the town had increased rapidly in population and wealth." The entire interest of the proprietors now being transferred to the West half, early preparations were made by them for further development of these lands and favorable inducements offered to settlers for this purpose. They caused a survey to be made of the tract, dividing it into eighty lots of two hundred and fifty acres each, and two of these lots were set apart for ministerial and school purposes. They also entered into an agreement with the purchasers, that "as soon as twenty-five families were settled within the limits of the said eighty lots, the proprie-

tors, as an encouragement to the settlement of religion among them, will advance and give the sum of forty pounds towards building a meeting-house."

FIRST SETTLERS.—Later these original lots were sub-divided, and the first one of them sold was in 1717, to Nathaniel Wood, containing one hundred acres, and was situated near the Brookfield line, on the old County Road. Up to 1725 but two other lots had been sold to families who had located thereon, viz., to Samuel Bemis and John Graton. The land of the former adjoined that of Nathaniel Wood, while that of the latter was situated in the southeast part of the plat or near the "Styles reservoir," now so called.

The process of settling this half was a slow one, and as late as 1740 it contained probably not more than one hundred and fifty inhabitants. For more than twenty years these sturdy pioneers struggled manfully against poverty and want without complaint in regard to their condition, but there was a growing feeling that they had been neglected, on the part of the town authorities in repeatedly refusing to grant them "roads for their better accommodation." Both church and school were located in the east half, and although they contributed by tax towards their support, yet, practically, they were deprived the benefit of them. The records show that when they asked that "roads might be laid out, at the just expense of both parts of the town, so that the inhabitants might get to meeting," the request was not only refused, but was "regarded as an injustice." The need of roads appeared to be a constant source of grievance to these people, and up to 1736 little or nothing had been done in this direction to relieve their pressing wants. Under these circumstances the minister and highway tax had become burdensome to them, and it is not surprising, perhaps, that they should early seek some measure, or measures, that would, sooner or later, relieve them from such an embarrassing position. At this time the town was about to settle a minister and provide for his support; therefore a tax of one penny per acre was laid upon all the lands of the proprietors and individual settlers. This act was so unsatisfactory to the people of the west half that they forwarded a petition to the General Court, asking that they might be exempt from paying this tax "unless their proportion might be applied towards the support of preaching among themselves." The House of Representatives was inclined to grant the request, but the Council opposed the petition, alleging an "error in directing the petition, &c.," which was in all probability a pretext only, as upon this and other subsequent occasions they too plainly indicated that they had little or no sympathy in common with the people. The petitioners had entertained strong hopes that this request would be favorably considered by the proper authorities, and that, ere long, the difficulties in regard to both meeting and minister would be obviated. In this they were disappointed. But the dawn of a brighter day awaited them, for closely following this event the proprietors came to their assistance with pecuniary aid and a Mr. Cunningham donated them land for a meeting-house and other purposes, which in time was erected, and by these gifts they early came into possession of a place of worship and minister.

Now that this institution had become a fixed fact for this part of the town, and consequently a centre around which a settlement might sooner or later develop, it was not a surprise to the people of the "settlers' part" that a division of the town should be seriously agitated. Whatever might have been said by the people of the west half about distance from the church or school or bad or no roads, their objective point was undoubtedly that they be "set off" into a new town. The first move in this direction was in 1741, when a petition was presented to the town, in town-meeting, asking that they be made a separate and distinct town, and there seemed to be no objection to granting this request. Stimulated by this success, a petition was now prepared and forwarded to the General Court, asking that a legal division might be had, and a bill favorable to the petitioners passed both Houses, but when it came to the Governor —Shirley—for his signature he refused it. This action was disappointing to both sections, as each had now come to feel that the interests of the whole would be best subserved by a separation. With this feeling now dominant, it is singular that so important a matter should be allowed to rest, but for nearly three years following there is no record showing to the contrary, and the supposition is that no further action was taken during this period. But early in 1743 the subject was again agitated with renewed enthusiasm. It was then decided that a committee of both proprietors and settlers request of Governor Shirley a personal interview "that they might lay their case before him in a more friendly way," and induce him, if possible, "to reconsider his recent decision." But their efforts were fruitless, and His Excellency could not be induced to change his former opinion, much less consent to any measure or bill to form a new and distinct town. At this juncture, in his judgment, it was not politic to do so. This action of the Governor's towards these people was a very unpopular one for him, and did much to strengthen the feeling of dislike that was taking root in their hearts for royalty, whether in Governor or subordinates.

It was thought that further effort looking towards separation must be abandoned for a time until a new expedient presented itself, which, if successful, might be made an entering wedge in the near future for more satisfactory results. It was that application be made to the General Court to be created into a precinct, as this would give them an ecclesiastical government at least, independent of the east half. Accordingly, on the 31st day of May, 1744, Mr. James Ormes was chosen to present a petition to this body, representing "that the difficulties which moved him

to apply, that they should be a distinct township, do still subsist, and may in a great measure be removed by their being made a precinct." In this they were successful, and an act of incorporation, as such, was granted the 18th of June following.

PRECINCT.—In compliance a warrant was issued, calling a meeting of the "Freeholders and other Inhabitants of the Precinct, or Parish, Qualified by Law to vote in Town affairs, which as yet has never been had," and on the 10th of September, 1744, the following precinct officers were chosen, viz.: Jonathan Lamb, moderator; John Stebbings, clerk; Samuel Bemis, John Newhall and James Willson, assessors; David Adams, collector; David Allen, treasurer; Samuel Bemis, John Cunningham, Jonathan Lamb, John Stebbings and James Willson, committee for calling precinct meetings. From this date and until April 12, 1753, all calls for parish meetings were dated "Leicester West Parish," etc.

The advantage derived by this new order was to give them the liberty of action in parish matters, as they could now choose officers to regulate their church affairs, but in all things else they were subject to the town, as heretofore.

The perplexing question of better roads was yet a matter of serious consideration, and five years after the above proceedings an earnest appeal was made to the selectmen "to lay out suitable roads for their accommodation," and while this request was not now considered unreasonable, inasmuch as the town had expended considerable money for the same purpose in the East half, yet they were not disposed to grant the request. Further appeals to the town authorities were regarded useless, but still believing their claims to these improvements to be valid, they resolved to take their case before the Court of Sessions for adjudication. They, therefore, petitioned this body, asking "that they cause certain roads to be laid out." The selectmen were cited to appear and "show cause why this request should not be granted," and the town chose a committee of citizens to appear with the selectmen in support of their position. The case, however, did not reach the court, as before the day appointed for a hearing a compromise had been arranged between the parties, the result of which was that before the close of the year eleven of the much-needed roads were laid out and constructed. This was very satisfactory, as the roads contributed largely to the comfort and convenience of the West Parish, but the feeling still existed that the differences between the two sections were again liable to arise under the same régime, and that the proper remedy, under the circumstances, would be found in a division of the town. This view of the matter was now entertained by the East Parish, and they not only gave their consent to a dissolution, but expressed a desire to unite with the West Parish and work harmoniously together to accomplish that purpose. Accordingly, on the 22d of November, 1749, the following petition was presented to Acting Governor Phipps, viz.:

Petition to the Honorable Spencer Phipps, Lieut. Governor, by the subscribers, a committee of the town of Leicester, stating that the inhabitants of the westerly part of said town have built a meeting-house, and settled a minister, and stating further, that about Eight years ago, moved to the town of Leicester to be set off and made a distinct town, which was readily granted, whereupon application was made to the court, about three years afterwards, for the same, but instead of being made a town, was made a Precinct only, which was very grievous to both, nor had the town any opportunity given them to offer any reasons to the Honorable Court to the contrary, although they have many to give, and one was that the west part called upon the selectmen of Leicester to lay out roads for them, upon the joint expense of both parts of the town, so that the inhabitants of the west part might get to meeting, &c. They further state that when the lands of the easterly part were laid out, sufficient land was appropriated for roads, but when the west part was divided, it was laid out into lots, and no land left for roads, and now the east part was called upon to be at their proportion of the expense, which they considered unjust. That the inhabitants of the west part preferred a complaint to the court of sessions, for a committee to lay out roads for their accommodation. They therefore pray the Court to erect the west part of Leicester into a distinct and separate town, &c.

DANIEL DENNY,
STEWARD SOUTHGATE,
JOHN BROWN.

The matter was now pressed upon the General Court by the people of both sections, and as a result, this body, as it had done on two former occasions, passed a bill in compliance with the request as set forth in the petition, but again His Excellency vetoed it, giving as his reasons for doing so, that he would not consent to this or any other bill "unless provision be made that the number of representatives be not thereby increased, or a clause suspending the execution of the act until His Majesties pleasure shall be known thereon, be inserted in the said act." This shallow message exasperated the House, as the only conclusion to be reached by them was, that their combined judgment in this matter was entitled to little or no weight by him, or that he had not manliness enough to assert the authority vested in him until he should first learn "His Majesties pleasure" thereupon.

This position of the Governor did not, however, change the sentiment of the House in relation to the equity of the prayer of the petitioners, and they at once addressed a communication to him setting forth their views in regard to the relations of His Majesty to his subjects, also stating that "the number of Representatives the town of Leicester, by charter and laws of the Province, are entitled to is not enlarged by this bill," and in closing, they "flatter themselves that your Honor will give his consent." But His Excellency was immovable, and this appeal had no effect. This, and the previous experience of the people in this direction, taught them that the House of Representatives was the only branch of the government that had a common feeling with them, and this was accounted for because it was made up *of* the people, and *for* the people, and they could better appreciate their condition and necessities. Notwithstanding this last attempt resulted in failure, they

were not discouraged, as the cause for which they were laboring was as vital to them now as ever, and there was no good reason why they should, at this time, retreat from the position taken. They did, however, allow it to rest for three years, at the end of which time it was renewed with their old-time energy. A parish meeting was called March 6, 1753, and a committee, consisting of Benjamin Johnson, Lieutenant John White and Deacon John Worster, was chosen to again petition the General Court to be incorporated as a separate town. The action of the House of Representatives, on this occasion, was endorsed by the Council, but again the result was a failure for want of His Excellency's signature, although an act was finally passed, which received his consent, erecting the precinct into a separate and distinct district, to be known as Spencer, "with all the powers, privileges and immunities that towns in the Province may enjoy, that of sending a Representative to the General Assembly only excepted," but giving the said district "full liberty and right to join with the town of Leicester in choosing a representative," they paying their proportional part of the expense of the same. This, then, was another step secured towards the one great object and aim of these people, yet it did not, by this act, dissolve entirely the relations existing between Leicester and Spencer. There were other districts in the province, similarly situated, subject to the same restraints, etc., which remained in force until 1775, at which time they were removed. In 1780 the "right" of representation was guaranteed under the Constitution.

Town Origin.—The birth of the town then, really, dates from this act,—although by it, it did not attain the full dignity of a township, owing to the terms imposed. By this act one Thomas Steel, Esq., was "empowered to issue his warrant, directed to some principal of said district, requiring him to notify and warn the inhabitants of said district to meet at such time and place as shall be therein set forth, to choose all such officers as shall be necessary to manage the affairs of said district." In accordance with this authority, in him vested, he issued his warrant to Captain Benjamin Johnson, and a meeting for the above purpose was called, at which the following officers were elected, as directed by the law, viz.: Captain Benjamin Johnson, moderator; Captain Benjamin Johnson, town clerk; Deacon John Worster, John Cunningham, John Muzzy, Deacon James Willson and Captain Benjamin Johnson, selectmen; Captain Benjamin Johnson, treasurer; Samuel Bemis and James Ormes, constables; the selectmen were voted assessors; Ensign John Stebbings, Samuel Garfield, John Prouty, Caleb Bridges and Robert Griffin, highway surveyors on the north side of the county road; Jacob Stoddard, Jonathan Lamb and David Adams, highway surveyors on the south side of the county road; James Richardson, highway surveyor on the county road; Joshua Draper and Benjamin Woodard, hogreeves; Deacon John Worster and Thomas Bridges, fence-viewers; Israel Holton, sealer of leather; Lieutenant John White, sealer of weights and measures; John Draper and Jacob Stoddard, tythingmen. One of the first acts passed by the district was to "allow Lieut. John White the sum of £2 13*s.* 4*d.* for his services in going to the Grate and General Corte in order to git us to be a District."

The town was never made such by any special act of incorporation, but it became one, virtually, by an act of August 23, 1775, which made all places, incorporated originally by the name of districts, "towns, to every intent and purpose whatsoever." Agriculture was the only occupation known to these people, at this early period, and the cutting away of the forests, sowing and gathering the fruits of the ground, were the only sources of revenue with which to meet the wants of the family and various taxes. The plow, hoe and other like implements assisted largely in supplying the scanty food, while the spinning-wheel and loom, with industrious hands to guide them, furnished the family clothing "fit for mill or meeting." The district at this date, 1753, numbered about five hundred inhabitants.

Location.—The town lies south of the centre of the county, and about midway between the eastern and western boundaries. On the north are the towns of Oakham and Paxton, on the east Paxton and Leicester, on the south Charlton, and on the west Brookfield and North Brookfield. It is quite regular in shape, forming nearly a parallelogram, being about eight miles long by about four miles wide, and containing thirty-two square miles, more or less, or rising twenty thousand acres.

Situation.—It is pleasantly situated upon the "Great Post Road," running from Worcester to Springfield, twelve miles from the former and thirty-six miles from the latter. Its villages, aside from the main or central one, are Hillsville, northwest; Upper and Lower Wire Villages, northeast; and South Spencer, southwest.

Ponds, Reservoirs and Streams.—It is fairly well watered by ponds, reservoirs and small streams. Among the latter, the principal one, known as Seven Mile River, enters the town at its north boundary, and, emerging from the Browning Pond, takes a southwesterly course through the town. It is swollen to a river of moderate dimensions before reaching Podunk Pond, in the town of Brookfield, and thence its waters pass into Long Island Sound, by way of the Connecticut River. In addition to the water it receives from its main supply, it is fed by numerous small brooks, and a principal tributary called Turkey Hill Brook.

This stream enters the town at its northeast corner, its source being Turkey Hill Pond, lying in Paxton and Rutland. It runs in a southwesterly course, and makes a junction with the Seven Mile River near the old "Daniel Whittemore" place, so-

called. A small stream which takes its rise in Shaw Pond, Leicester, connects with the Turkey Hill Brook near the main mill of the Spencer Wire Company, upon which stream the extensive works of this company are situated, the same being about two and a quarter miles northeast from the post-office.

Another small stream passes through the centre of the village, and connects with the Seven Mile River at the "Great Meadows," its source being Whittemore, or Moose Pond. A tributary from the south is Cranberry Meadow Brook, which rises in Cranberry Meadow, and flows north, through "Howes Pond," connecting with it a quarter of a mile north of the South Spencer Station, on the Boston and Albany Railroad. The streams, or brooks, in the southeast part of the town flow in this direction, and eventually reach the Blackstone River, which runs to Narragansett Bay. Although most of these streams are unimportant, yet in "ye olden tyme" they furnished the power for various small mills and factories located upon them, for grinding grains, manufacturing powder, wire, hoes, scythes, etc.

The principal body of water (natural pond) within its borders is the Whittemore or Moose Pond. It is situated in the centre of the township, and covers about eighty acres of land, is very pure and wholesome water, being fed almost entirely by springs, and yields in the winter a harvest of excellent ice for summer consumption. In winter, also, it is a fine sporting field for persons of piscatorial habits, as it contains hard, luscious pickerel, that sustain a wide reputation. Brooks and Browning Ponds, lying on the north, are quite large bodies of water, but they are principally in the towns of Oakham and North Brookfield. There are two large reservoirs—one the "Sugden," lying wholly in Spencer, and situated near the Upper Wire Village, and the other the "Styles," situated at the southeast corner of the town, and lying one-half in Spencer and one-half in Leicester. Cranberry Meadow and Burntcoat Ponds cover over a considerable territory, the former lying between Spencer and Charlton, and the latter three-fourths in Leicester. The other ponds, or small reservoirs, contain water enough to make them an important auxiliary to steam, and are made fairly remunerative when used in this connection.

Soil.—The soil, when properly cultivated, yields abundant crops of grass, grains, potatoes, &c., and compares favorably with the average farming lands of the county.

Surface.—The surface is very irregular, but not abrupt, is diversified by hills and valleys, some of the hills forming the highest points of land between Springfield and Worcester, on the line of the Boston & Albany Railroad, and are very symmetrical in form. They overlook a large extent of country to the north, west and south, and from the summit of some of them the eye takes in an extended sweep of country, dotted with houses, ponds, streams, valleys, other hills and distant spires, in neighboring towns, all combining to form a scene not to be surpassed in the country.

Geological. — The geological formation of the town consists mostly of gneiss rock; mica and chlorite slate are found, and the rock is generally unfit for building purposes. The highest ledges retain a horizontal position, while in the low river bottoms they are tilted about one-third, showing that the disturbing force has been a sinking, rather than an uplifting one. Trap prevails to some extent in the north part; the boulders correspond with the native ledges, and scratches of glaciers are found.

The Village.—The village spreads out over a very uneven surface. The original streets are crooked and narrow, but in the more modern portions they are laid out with more regularity, wider and more convenient for travel and business.

Railroads.—The railroad accommodations are limited to one line, viz.—the Boston and Albany, which is located two and one-quarter miles from the business centre, the station being at South Spencer. This was a long distance to transport the large number of passengers and amount of freight laid down at this depot, and numerous coaches and heavy teams were constantly employed for this purpose. In 1870 a route was surveyed from the Boston and Albany Railroad at South Spencer to the central part of the village, and in 1872, at a town-meeting, the town was called upon to subscribe to the capital stock in a railroad to connect these two points; but at this meeting it was voted "to pass over the article." Various surveys were now made, covering this and other routes, but the matter was not brought before the town again until April 7, 1877, when the article was again passed over. Several more meetings were held for this purpose, but with like results, until, at a meeting April 3, 1878, the town voted to subscribe to two hundred and fifty shares (twenty-five thousand dollars) of the capital stock in said road, which action caused the road to be forthwith constructed, greatly to the relief of the increasing traffic and to the convenience and comfort of the traveling public.

Meeting-Houses. — *Congregationalists.* —The *first* care of the settlers here, as elsewhere, was to arrange for such shelter as would meet the wants of their families; then, as they invariably carried their religion with them, it became their next duty to provide for a meeting-house and minister, that their spiritual wants might be properly cared for. April 2, 1739, Samuel Bemis and John Stebbings were chosen a committee by the settlers of the west half to proceed to Boston for the purpose of meeting the proprietors, then and there, "to come into some arrangement about the building of a meeting-house and having the gospel preached to them." At the meeting held for the purpose it was voted "to lay a tax of three pence per acre on their lands the following year, and two pence per acre for the next two years, to assist the settlers in building a good, substantial meeting-house, forty-

five foot in length and thirty-five foot in width, and towards the minister's support." As a further assurance that the undertaking should be a success, Nathaniel Cunningham, of Cambridge, donated to them by deed, February 26, 1740, two acres of land "for the accommodation of a meeting-house, a training-field and such other public uses as the town shall direct, forever." In all probability they were about erecting this house in the year 1743, although the records do not indicate that such was the case, as on the 30th of November of that year it is recorded that the proprietors held a meeting at which a report of the parties who contracted for the building of the same was considered by them. That the house was occupied when in a very crude condition, the records, further on, give conclusive evidence. It was covered with rough, unplaned boards, having a ground floor and loose flooring for the galleries, the inner walls unfinished, the interior lighted by a few small windows, the glass set in leaden sash. Yet, notwithstanding it was a rude and uninviting structure, it afforded the inhabitants shelter from the sun and storm, and furnished them an altar around which they could gather for religious worship and instruction.

It became necessary now to make some arrangements for seats, or pews, and on the 7th of November, 1744, a meeting of the inhabitants was called, "to see if they would come into any method in order to build the body of seets," and also "to see what method they will come into to dispose of the pews." The "body of seets" was located in the centre of the house, on either side of the centre aisle. The wall-seats, on the west side of the house, were for the elderly men without pews and those on the east side for the elderly women without pews. The galleries were for the younger people and the sexes were separated in the same manner as below. At the last meeting a "comity" was chosen to build the "body of seets" and to "mark out, Dignify and set a prize on the pew spots." This work having been completed, the following plan was adopted for disposing of the "spots," viz.: "The man that shall be highest in valuation of real-estate shall have the first choice, and the next in succession until the pews are all taken up." According to this plan Samuel Bemis was entitled to the first choice, and it was voted that "he have the Pew Spot on the Rite hand side of the Coming in of the South Doore, prize £5 0*s.* 0*d.*; Left. Jonathan Lamb shall have the Pew Spot on the easte end of the polpet ajoining thereunto, prize £4 0*s.* 0*d.*" And so on until twelve spots had been assigned and located. The sum of two pounds was the lowest price paid.

One year later the sum of £25 was voted "to defray the charges of building a polpet, Deacon's seet, body of seets and ministerial pew." For nearly five years the "doors" had been without proper fastenings, and on the 28th of March, 1748, a committee of three, viz.: Lieutenant White, Deacon Worster and Daniel Knapp, was chosen "to procure a Lock and Key for the meeting-house Doore, at the cost of the Parish."

From this time until March 2, 1767, the subject of finishing the building had been discussed and voted upon at nearly every district meeting held, and small sums of money appropriated to finish or improve some part of the same, and at a meeting held this day it was voted to raise the sum of £50, "to finish the meeting-house decently." This sum, however, was never raised, but four years later, or at a meeting held February 13, 1771, it was decided to build a new house, the size of which should be fifty-six feet in length and forty-seven in width, "and upon the spot where the old one now stands." After the usual preliminaries had been arranged and details decided upon, as far as possible, the contract was awarded to Daniel Baldwin, "to build it in a proper manner," for the sum of seven hundred pounds, he taking the old building as part pay. As he declined to take the responsibility of raising the new one, the selectmen were made a committee to attend to it, with authority to expend an amount which had been appropriated for that purpose, and in their report to the town they certify that it was expended for "Liquor, ropes and other things." The house contained sixty-eight pews, forty-six being located on the floor and twenty-two in the galleries, and the same system was adopted for disposing of them as in the previous house. The appraised value of these pews was fixed at five hundred pounds. In 1801 a tower and cupola were added to the house, and three hundred dollars was voted for that purpose. This improvement suggested a bell, and the sum of $426.87 was secured by private subscription for one, and in town-meeting it was voted "that the names of the generous subscribers be entered upon the town records."

Up to 1821 no means had been provided for warming the meeting-house, but this year it was decided to introduce stoves, "under the inspection of the selectmen." For two years their experience with this "innovation" was not wholly satisfactory, because of the propensity of these stoves to smoke, and a committee of three was accordingly appointed "to take into consideration the subject of stove-pipe, or funnel, in the meeting-house . . . to remedy their smoking." This committee attended to their duty and recommended alterations "at the outlet by carrying the funnels out at the east and west windows."

In 1838 this meeting-house was repaired by turning a quarter around and fronting it to the south, with new inside finish, new pews, etc., making it to conform, as nearly as possible, "to the meeting-house recently fitted up in Paxton." It was completed and dedicated on the 14th of November of this year. May 1, 1843, during a high wind, the spire of this church was blown off, and passing down through the roof, damaged the ceiling and interior to some extent. On the 1st of January, 1862, it was entirely destroyed

by fire, and from this period, until a new house was erected, religious services were held in the Town Hall. Preparations were at once made to rebuild, and on the 8th of April, 1863, the new edifice was dedicated.

On the ground floor of the new building was the vestry, and on the second floor the audience room. In 1881 this vestry was enlarged, a church parlor and kitchen were fitted up for the convenience of church and society gatherings and other parochial purposes. In 1885 it was generally felt that this building had become inadequate to the growth of the church and society, and it was proposed to enlarge the audience room and change the entire arrangement, providing the alterations could be done without expense to the society. Individuals responded generously by subscriptions to carry out the plans suggested, and an addition of twenty feet was made to the north end of the building. The organ and singers' seats were placed in the rear of the pulpit, the pews were rearranged, the walls beautified by fresco decorations, and gas, public water and steam-heating apparatus were introduced. It was re-dedicated December 22d of this year. These alterations transformed the building into an attractive edifice both inside and out, and by these changes the proportion of the whole structure was greatly improved. The front and steeple are of a mixed order of architecture, bold in outline and projection, and from base to pinnacle the symmetry is well preserved.

The late Isaac Prouty, while living, expressed a desire that the church building might, sooner or later, be remodeled, and that he would subscribe the sum of five thousand dollars towards the payment of the same. The work now having been completed, his heirs, in accordance with his wish, presented this amount to the subscription fund, with a request that it be received as a "memorial of him."

Singing.—From the days of our forefathers, singing has been considered an exercise in the service of the church, next in importance to the "preaching of the Word," and in its rendering was regarded by them as *de*votional. If, during the last half of the nineteenth century it has become *e*motional, it certainly is not the fault of the forefathers.

In the early days the deaconing of the hymn or psalm was a necessary custom, as but few, joining in the exercise of song, possessed the hymn or psalm-books; consequently, the service was of a purely congregational nature. In 1782 an attempt was made to place singing seats in the gallery of the meeting-house, "that the singers may sit together," but just what time they were allowed to "sit and sing together" is not recorded. The chorister, in those days, held that position by the united vote of church and congregation, and the first to occupy that position was Dr. Ormes, in 1770. The next was John Muzzy, Jr., in 1775, and, in 1782, Lieutenant Jonas Muzzy, with Mr. Oliver Watson as assistant.

The first hymn-book that came into general use was the "Watts' Psalms and Hymns," adopted in 1769, after an animated controversy of ten years or more, and it remained in use until 1862. It was exchanged for the "Sabbath Hymn-Book," which was used until 1885, when the "Laudes Domini" took its place.

The first instrument introduced into the choir was the bass viol in 1829, and was played by O. S. Worthington and others, and the next was the double bass, played by William G. Muzzy. Then followed the violin, flute and other instruments, and, later on, the reed and pipe-organ. In 1863 the latter, a two-bank organ with twenty-eight stops, was purchased of William A. Johnson, of Westfield, Mass., the maker of it, and, in 1887, at the remodeling of the church, it was taken down by G. H. Ryder & Co., of Boston, and enlarged by the addition of five new stops, and otherwise improved in power and general appearance. The singing, up to and at the present time, is by a volunteer choir.

Universalists.—In 1808 the citizens of Spencer were asked to remonstrate against certain towns (including Spencer) being incorporated into a religious society to be called the "Universal Society;" but in town-meeting they voted "to take no action relating to the subject." Some of the inhabitants were, however, agitating the advisability of a separation from the established church, but no decided move in this direction was taken until 1820. This year David Adams gave notice that he had become a member of the "Second Universalist Society in Brookfield and Charlton," and before the close of 1821 forty-three persons had withdrawn to join this and a Baptist Society about to be formed in this town. This year, also, the town and parish had so far become separate and distinct bodies, as to cause the making and collecting of the ministerial tax to be done by the Congregational Society.

In 1830 a Universalist Society was incorporated with ten members, and in 1833 a meeting-house was erected, in which services were held until 1840. The society, from this time, gradually decreased in numbers, until it ceased to exist, and the house and church property were disposed of.

This building stood upon the west corner of Main and Wall Streets, and twenty years after it was abandoned for church purposes it was converted into a boot-factory. For many years it retained its original outward appearance, until, finally, such additions were made to it, that it entirely lost its identity. From about 1875 occasional meetings of this denomination were held in the town hall, but in 1881 the society was reorganized under the general statute of this State, and at a meeting on the 26th of October of this year they adopted a constitution and by-laws and voted "to purchase land and build a church." This edifice was erected in 1882 and dedicated February 20, 1883, with Rev. F. A. Bisbee as pastor.

Externally, this is an attractive brick structure

while internally it is very complete in its modern arrangements, which consist of a commodious audience-room, chapel and church parlors upon the ground floor. Upon the basement floor is a spacious room for entertainments and church gatherings, with a kitchen conveniently connected and abundantly supplied with all the conveniences required in this department.

Methodist.—In 1840 a few families, representing the Methodist faith, assembled themselves together and held public religious meetings in the audience-room of the Universalist meeting-house. In 1841 a society was organized in conformity with the rules of this denomination, and made use of the town hall for holding meetings for nearly six years. In 1847, to accommodate their increasing numbers, they purchased land and erected a very substantial church building with belfry and spire. It contained a vestry upon the first floor and audience-room upon the second. In 1872–73 the house was remodeled by making additions upon either end, repainting and frescoing both audience-room and vestry and adding parlors, kitchen and other ante-rooms. It has a large membership.

Baptists.—The formation of the Baptist Society January 30, 1819, resulted from a division of the Baptist Society in Leicester, which took place in 1818. Their meeting-house was erected in the northeast part of the town (called North Spencer) in 1820. There was preaching at this house, at intervals, up to 1840, but their membership diminished so rapidly after this date that stated services were wholly abandoned. In 1878 the society was reorganized with twenty-one members, holding services in a small hall in the town-house at first and later in a private hall fitted up for the purpose, until in 1885 a new brick church building was erected. The size of the audience-room, 39 x 49 feet, with a seating capacity of 330; the vestry, 39 x 40 feet; parlor, 17 x 20; and kitchen, 12 x 17. The ceremony of the laying of the corner-stone was held on the 7th of September, 1885, and on the 21st of June, 1887, the church was formally dedicated.

St. Mary's (Roman Catholic).—In 1845 a few scattering families of this faith worshipped at rare intervals, in the houses of private individuals. In 1851 this, with several other parishes, was placed under the charge of a clergyman, and in 1853 the parish had grown numerically sufficient to warrant the building of a church, and one was completed this year. It was a handsome frame building, with tall spire and bell. In 1855 the parish was attached to an out-mission to Webster, and so remained until 1857, when it was placed under the charge of the Jesuit Fathers, resident of the Holy Cross College, Worcester. This year the Catholic population numbered less than one-fifth the inhabitants of the town, but thirty years later those who affiliated with this church numbered about five-eighths of the whole. In 1871 they were given a resident pastor, in the person of Rev. Julius Casson. He died in July, 1879, and was succeeded by Rev. Thos. D. Beaven, and in 1883 Rev. Bernard S. Conaty came as assistant pastor. In November, 1888, Father Beaven was assigned a charge at Holyoke, Mass., and a few weeks later Father Conaty was transferred to Springfield, Mass. In 1883 they began the building of a new brick church edifice, and dedicated it in 1887, as the Church of the Holy Rosary. The general style is cruciform, and outwardly it is a stately and beautiful exemplar of church architecture. The nave is one hundred and forty-five feet in length, and the transept eighty-eight feet, and the interior decorations are a high order of ecclesiastical art. The windows are a prominent feature in these decorations, and the fifteen, in the chancel and aisles, represent the Fifteen Mysteries of the Rosary. The two large transept windows, thirty by twelve feet, are fine works of art. In 1886 the growth of the church occasioned the separation of the English and French-speaking portions of the parish, and the Old St. Mary's was set apart for the latter, under the charge of Rev. C. R. Veins, pastor, and Rev. J. A. Manceau as assistant. In December, 1888, Rev. G. R. Dolan was transferred from Springfield, Mass., to the charge of the new church.

Ministers.—The fact that the inhabitants of the west half could not easily enjoy the privileges of the sanctuary had an important bearing upon their early efforts in securing for themselves a place of worship and a gospel teacher. About the time the frame of the first meeting-house was erected, the Rev. Joshua Eaton began preaching as a candidate for minister, to be settled over them, and on the 17th of May, 1744, a church was formed and a covenant subscribed to, between himself as pastor and certain of the inhabitants. Shortly after this compact he received an invitation from the church and people "to become our Gospel Minister," which was accepted by him, and on the 7th of November following he was duly ordained as such. The following pastors represented their respective churches at this service, viz., Rev. Mr. Prentice, of Grafton; Rev. Mr. Hall, of Sutton; Rev. Mr. Cheney, of Brookfield; Rev. Mr. Goddard, of Leicester; Rev. Mr. Webb, of Uxbridge, and Rev. Mr. White, of Hardwick. This was then designated as the "Second Church of Christ in Leicester." The terms of settlement gave to the minister "all the land-tax, an additional sum by subscription and £150, old tenor" (equal to $66.67), as salary, and this sum was to be increased by £5 each year until it reached £200 annually. As the currency depreciated this sum was increased, until in 1766 it was made about equal to $244, where it remained until his death.

Mr. Eaton was a native of Watertown and a graduate of Harvard University in 1735. After two years of law study he practiced at the bar about five years, then began the study of theology and fitted

Thos. D. Beaven

himself for the ministry. He remained in charge of this parish until his death, which occurred April 12, 1772. "He was greatly beloved by his people, tender and sympathetic in his nature, plain and practical in all his preaching," and although the profession of law presented more worldly attractions, yet he felt that the ministry was his calling and that he would not "return to the practice of the law, with its tumult, dissipation and snares that attend court, on any consideration." The parish was now obliged to resort to candidates, and after six Sabbaths' trial, the Rev. Joseph Pope, of Pomfret, Conn., was invited to occupy the pulpit with a view to settlement. His manner and preaching soon won the hearts of the people and they heartily concurred with the church in calling him to become their pastor, and at a meeting, February 15, 1773, the district so expressed themselves. They agreed that his settlement should be the sum of £133 6*s.* 6*d.*, lawful money, and that they would pay one-half at the end of the first year, and the balance at the close of the second year, with a stated salary of £67 ($244) annually, "so long as he shall continue in that office in this place," and his ordination took place the 20th of October following. A committee was chosen "to provide entertainment for the Council, Gentlemen of Liberal Education and Mr. Pope's relatives and friends," but Dr. William Frink, a parishioner, relieved the committee of that duty, as the following note explains:

Gentlemen Freeholders of Spencer, Greeting—You are welcome to the entertainment which the council had at my house on the 20th day of Octr. last.

I am your honorable servant,

WILLIAM FRINK.

A vote of thanks was presented to him, by the inhabitants, for "so great a favor."

Mr. Pope's pastorate was one of kindness and brotherly love for all his people, and during the long and wearisome years of the Revolution the attachment between pastor and people never abated, but it continued warm and abiding until he was separated from them by death. Whether or not it was the custom of these people that the public meeting should be opened with prayer, the first and only record of that exercise was at an annual meeting held March 5, 1781, when Mr. Pope was sent for "to open the town-meeting with prayer."

Mr. Pope married Miss Anna Hammond, of Newton, who survived her husband thirty-three years, living to the great age of one hundred and four years, six months and twenty-eight days, "Honored and beloved by all, cheerful in her old age, and a beautiful illustration of that perfect peace vouchsafed to those whose souls are stayed on God."

As a scholar Mr. Pope was more than a peer of the profession of those days. He enjoyed the confidence and esteem of all within the limit of his acquaintance, and after a faithful service of forty-six years, as pastor, his health failed him, and it was the unanimous wish of the people that a colleague be settled with him. The Rev. Stephen Crosby, of Thompson, Conn., came to preach, as a candidate to fill this position, and at the expiration of ten Sabbaths he received a unanimous call to become the junior pastor, and accepted the same. His salary was fixed at six hundred and fifty dollars per year, "as long as he should remain in that office, and should regularly supply the pulpit in this place." Notwithstanding the unanimity in which the call was made, there appears to have arisen a difference of opinion in regard to the construction of the terms of settlement, which caused some unfriendly feelings. However, the majority sustained Mr. Crosby in his version of it, and on June 19, 1819, he was duly ordained.

Although there was no outbreak to disturb the harmony between pastor and people during the following four years, yet it was apparent that the majority were feeling not a little disturbed at the persistent and selfish manner in which he insisted upon his interpretation of the contract with the parish. For two years a spirited correspondence passed between the minister and parish; committees were chosen, requesting "Mr. Crosby to alter the contract between him and the people;" votes were taken upon propositions suggested by him, which were generally unfavorable to his view of the question; yet he protested against dissolving the compact. But on the 30th of May, 1825, a council was convened to consider the situation, and they were unanimous in their opinion that his pastorate should cease, and he was accordingly dismissed.

Mr. Crosby received his education at Brown University, Rhode Island, and Union College, Schenectady, N. Y., and graduated in 1817. He studied theology under Doctor Knott, president of the latter college.

Nearly a year now passed without any stated supply in the parish, but during this time the Rev. Levi Packard, of North Bridgewater, Mass., had occupied the pulpit as candidate for that place. He was so well liked by both church and people that a call was extended to him April 3, 1826, to settle with them as their minister. The terms proposed by the church and parish were, "that the contract should be dissolved, after six months' notice, by either party, and a salary of five hundred and fifty dollars per annum." With a slight modification in them, which was agreeable to the parish, Mr. Packard accepted. The change in the conditions was, "that the salary should be four hundred and seventy-five dollars per annum and a respectable dwelling-house for himself and family during his continuance with the society as minister." Arrangements were at once made for his ordination, which took place June 14, 1826. Previous to this, on the 18th of May, of this year, a lot had been selected by a committee of the town and a vote passed to build a parsonage. When completed this dwelling cost two thousand

dollars, and was the same building and premises owned and occupied by the late Isaac Prouty. On the 3d of May, 1847, Mr. Packard purchased this property of the town.

He was a man of more than ordinary ability; a kind neighbor and citizen. He was ambitious to see the society over which he had charge prosper in increasing numbers and devotion to the Master. Whenever the times pressed heavily upon the parish he was quick to comprehend the situation and liberally remitted portions of his salary, and this considerate generosity was duly appreciated.

Being of the "Old School," he was stern in his conviction of duty as he understood it, and perhaps was judged too harshly for the bold stand he took in sustaining it. On account of a conflict of opinion between the principles which he maintained and more modern ones, entertained by the younger members of both church and parish, on the 3d of September, 1853, he asked that he might be dismissed from the pastorate. He was a graduate of Brown University in 1821, and completed his theological education with Rev. Joseph Ide, of Medway, Mass. His pastorate continued over this people twenty-seven years.

The Rev. Stephen G. Dodd, of Milford, Conn., supplied the pulpit after it was vacated by Mr. Packard, and in due time received a call from the church, in which the parish concurred, to become their pastor. With his salary, a parsonage was to be furnished, and, in case of dissatisfaction by either party, six months' notice was necessary to terminate the relations. These terms and conditions being satisfactory to the parties interested, he was installed August 23, 1854.

Mr. Dodd was not a brilliant man, in the common acceptation of the term; but his kindness of heart and sympathetic disposition won for him the most profound respect. Even in his temperament, gentle in his manners and possessing an unusual degree of forbearance, he secured to himself lasting friends, both among his parishioners and the people of the town. His services ended October 1, 1860, and he was dismissed by Council June 5, 1861. His pastorate extended over a term of six years. He was a graduate of Princeton College, New Jersey.

A call was now extended to Rev. T. T. Waterman, of West Killingly, Conn., to fill the vacancy caused by this resignation, and accepted by him. His terms of settlement differed from the preceding only that *three* instead of six months' notice be given in case of dissatisfaction. His installation took place immediately following the ratification of the resignation of Mr. Dodd, and by the same council.

Mr. Waterman was an older preacher than the former pastor, and consequently came to the duties incumbent upon him with ripe experience and a thorough knowledge of the relations which should exist between pastor and people. He was enthusiastic in his preaching, presenting his subject with ardor and his prayers were fervent, with a flow of word and soul which were, at times, eloquent.

In closing his labors he made no communication to the church, resigning his office as pastor; therefore when his letter-missive was presented the council had no action to take upon the matter. His ministry was of short duration, and ended January 1, 1863.

December 8, 1862, the parish warrant contained an article "to see what measures the society will take to supply themselves with a minister after July 1, 1863." The action upon this article gave the prudential committee authority to confer with the Rev. James Cruickshanks, of Chelsea, Mass., and "engage him, if possible, to preach for the society for one year." He was employed as supply for the above term. After ten months the church and parish united in a call to him to become their settled minister, which he accepted, and January 13, 1864, he was regularly installed.

Mr. Cruickshanks was a preacher of superior ability; his sermons were well grounded upon a sound evangelical doctrine, and all his literary efforts bore marks of culture and high scholarly attainments. He remained in charge of his duties eight years, his resignation taking effect July 2, 1871.

He was followed by Rev. H. A. Shorey, of Camden, Me., who was installed September 6, 1873, and dismissed January 1, 1877. His successor, Rev. A. S. Walker, of Gloversville, N. Y., was installed November 14, 1877, and remained in his charge ten years, when he was dismissed, September 1, 1887. The Rev. Erastus Blakslee, of Fair Haven, Conn., followed, and after preaching three months was installed May 15, 1888.

THE REVOLUTION.—The military reputation of Spencer from the French and Indian Wars to the closing of the late Rebellion has been one of patriotism and courage, and the town has furnished liberally of both men and means in all the conflicts for freedom.

Edmund Bemis and James Smith were in the great expedition sent out under Sir William Pepperell, in conjunction with Admiral Warren, for the capture of Louisbourg in 1744, the former serving with some distinction. James Smith, Jr., was in a later service; John Stebbings was captain in the regiment of Col. Timothy Ruggles at Fort Edward in 1755 and 1756, where he died. In the same expedition Capt. Philip Richardson and his lieutenant, John Wicker, were in command of a company, and before the war closed, which was substantially in 1762, the following persons participated, viz.: Israel Richardson, Jonas Bemis, James Capen, William May, Josiah Robinson, Jr., James Stebbings, Joseph Worster, Nathaniel Parmenter, David Prouty and Daniel Hill.

Thus early in the history of the country the people of Spencer were being trained in the art of war by actual service, willingly fighting the battles for Eng-

lish sovereignty. (At this period most of the people supposed themselves loyal to the King, and were ready to shout, "God save King George!") Scarcely had the people recovered from the shock occasioned by these frontier wars before they were called upon to enter upon another contest, fraught with greater hardships and more personal sacrifices. The British ministry were beginning to press measures which some of the leading spirits regarded as infringements upon the liberties of the American people. A spirit of resentment to these acts, born, perhaps, without any ambitious design of dissolving connection with Great Britain, in a few short years became universal, and as a result the War of the Revolution.

This town distinguished herself—not by sending into the army illustrious men, for those she had not—but by promptly furnishing her quota of the soldiers called for and patiently bearing the heavy burdens imposed by the war with as much patriotism and loyalty to the cause of freedom as the average American community of those times. Chief among these burdens was the payment of taxes necessary in the prosecution of the war. These they met heroically; but the system of taxation early instituted by the British government against the colonies, of which these people were a part, was both obnoxious and oppressive to them. "Taxation without representation" they considered unjust, no matter how trifling the tax, and objected to it as it involved a principle, and many of the wisest Englishmen of that day regarded their objections as reasonable. The people of Spencer were by no means alone in this reasoning. The Stamp Act of 1765 and later Revenue Acts were particularly obnoxious, and Spencer was in full sympathy with the town of Boston, which was first to enter a protest against these and other like measures. Circulars and pamphlets sent out from Boston fired the hearts of the people and probably had much to do in hastening the conflict which soon followed. For seven years the people of Boston and immediate vicinity were discussing the situation and attempting to solve the problem involving their relations to the mother country. Very early, however, those towns more removed from the immediate effects of these acts began to comprehend the design of Great Britain towards the American people, and the effect produced by this literature upon them was very marked.

The towns of Leicester, Spencer and Paxton, being united as a representative district, met in convention January 1, 1773, "to consider these circular letters concerning the state and rights of the Province," and "spirited and patriotic resolutions," endorsing the views of Boston, were adopted and instructions of the same nature were prepared and forwarded to their representative in the General Court, Thomas Denny, Esq., of Leicester, requesting that his course of action be guided by the "spirit and letter of these instructions." For two years these towns acted jointly in these deliberations, adopting patriotic measures, formulating instructions to representatives or delegates in convention or Congress and appointing Committees of Correspondence.

The British Government, from policy, had, up to this time, abandoned some of the taxes upon imported articles, but among those upon which a tax still rested was tea, to give, as Lord North proudly said, "the King an opportunity to try the question with America." The opportunity soon presented itself, and the result was the "Boston Tea Party" of December 16, 1775.

The people of Spencer were heartily in sympathy with that movement, and on the 27th of December, at a convention of the above-named towns, strong resolutions were presented condemning the use of tea, "while ladened with a tribute, contrary to our consent," and declaring that "we will not use it in our families." The women, too, acted as patriotically as the men of the convention, and they declared "that any of the sisters found using the destructive herb should be treated with scorn and contempt."

The resolves of the Great Continental Congress, for the non-importation of goods, wares and merchandise, were also cordially endorsed by these towns, at a convention held two days later, and the people of Spencer found no difficulty in abstaining from the use of such goods. The women, also, on this occasion affirmed that the "home spun" should be sufficient for the wants of themselves and their families on all occasions.

At a meeting held December 15, 1774, the town voted that sundry "Province assessments be paid to Henry Gardner, Esq., of Stow, and not to Harrison Gray, Province Treasurer," and they further added that they would "defend the assessors or constables from any damage of what kind or nature soever, that may arise from conforming to the votes or orders of this meeting." But the spirit of resistance to the real or imaginary encroachments made upon them by the British authorities was not confined to words or resolutions. Long before the conflict between the colonies and mother country began active measures had been taken, and a stock of powder, bullets and flint had been provided, and minute-men raised, that they might be prepared for an emergency at a moment's warning.

Under a warrant dated April 29, 1774, the town voted to raise "Fifty effective men, and that one pound of powder and Bullets answerable, be delivered out of the town's stock to each soldier," and any amounts remaining in the treasury from unexpended appropriations were also ordered to be used for patriotic purposes. At the raising of the meeting-house, in 1772, the sum of £1 6*s*. 6*d*. was still in the hands of the treasurer, and it was ordered that £1 0*s*. 6*d*. be given to the Continental committee, and six shillings be paid to Jeremiah Whittemore "for bringing a Barr of Lead from Boston for Bullets."

A meeting had been called for the 24th of April,

1775, "to make provisions for the company of minute-men in case of any special Imergency, such as providing Waggons and Drivers to carry their Baggage, and support them before they can be otherwise supplied." But before this meeting convened they were called to "march in the Defence of our Just Rights and Liberties before the day came." The signal lantern had been hung out from the belfry of the old North Church, and messengers had brought the word to this and other towns in all directions from Boston, that "the war had begun, the British troops were marching on Concord." Although this was not in the days of the telegraph or telephone, yet the news of this movement sped with a rapidity almost rivaling these modern inventions, as on the afternoon of that eventful day, April 19th, "Capt. Ebenezer Mason, with a company of fifty-six men, buckled on their knapsacks, shouldered their muskets, and before the set of sun were on the march for Cambridge." The following are the names of those composing this company, viz.: Captain, Ebenezer Mason; Lieutenant, Abijah Livermore; Ensign, Joseph Livermore; Sergeants, Benjamin Bemis, Jr., William Green, William White and Samuel Hall; Corporals, Oliver Watson, Jonas Muzzy, Asa Sprague and Jeduthan Green; Drummer, James Draper; Fifer, Luther Prouty; Privates, John Draper, Jesse Bemis, Isaac Prouty, Nathaniel Wilson, Isaac Livermore, Michael Hatch, Jonathan Rich, John Waite, John Knapp, Joseph Grout, Benjamin Gleazen, Joseph Wheat, Levi Thayer, Joshua Draper, Jr., Elisha Whitney, Reuben Lamb, John Hatch, Amos Whittemore, Wright Woodward, Samuel Bemis, Rand White, Benjamin Sumner, John Woodward, Jr., Jonas Lamb, Thomas Sprague, John Bemis, John Ball, David Livermore, James Watson, Robert Watson, Thomas Whittemore, Nathaniel F. Loring, David Rice, Richard Huttice, Samuel Garfield, Jr., Nathaniel Cunningham, John Lamb, Jr., Asa Whittemore, John Worster, Elijah Southgate, Knight Sprague, David Lamb and Timothy Capen. Of this company forty enlisted, upon arriving at Cambridge, into the service for eight months under Captain Joel Green, with David Prouty as his lieutenant. In Captain Seth Washburn's company of Leicester, which left there on the 17th of June for Boston, were nine men from Spencer, viz.: Ensign Joseph Livermore, Corporal Elijah Southgate, Privates Andrew Morgan, Jonas Lamb, Peter Rice, Thomas Sprague, John Hatch, Wright Woodward and Isaac Livermore. Those that participated in the battle of Bunker Hill were Joseph Livermore, Elijah Southgate, Jonas Lamb, Peter Rice, Thomas Sprague and Isaac Livermore. In the unfortunate expedition against Quebec, in 1775, were four Spencer men, viz.: John Guilford, Daniel Ball, Benjamin C. Ball and David Chamberlain. Although the town had no officers of high rank, it will ever be proud of those holding the minor offices, together with the rank and file who served in the army of the Revolution.

REPRESENTATIVES.—On the 17th of June, 1775, the town elected their first representative to the Great and General Court, to be convened at Watertown on the 19th, and Oliver Watson was selected for that post of distinguished honor. He was re-elected in 1776.

DECLARATION OF INDEPENDENCE.—In June of this year a resolve of the General Court was forwarded to the various towns in the Province to ascertain the minds of the inhabitants of said towns in regard to declaring the Colonies independent. In response to this resolution the town voted, emphatically, that they "Do Fully, Freely and Solemnly engage, with their Lives and Fortunes, to abide by and support said Congress in all such measures as they shall think proper to come into for the safety of the United Colonies."

The Continental Congress, having no power to manage trade, could not force Great Britain into a trade treaty; consequently the continued importation of English goods caused consternation in the Colonies, and balances, which were heavily against them, and which must be settled in coin, were forwarded to England by boxes and barrels. This caused Congress to issue its paper money as a circulating medium, and this act, together with the unfortunate condition of the country, with the evils of the war pressing hard upon them, added another and serious embarrassment. The people of Spencer early took into consideration the situation, and resolved to do what lay in their power toward maintaining the value of the currency. The first of a series of instructions to their Representative, Mr. Watson, was that "he use his influence in the support and credit of the paper currency of this Colony, and if any person or persons shall, by petition or any other way, motion or move for the discredit of said currency, that his or their names be published to the world." On the 4th of July, 1776, the ever memorable Declaration of Independence was signed, and agreeable to orders of the Continental Congress it stands recorded upon the town's records, "there to remain a perpetual memorial thereof."

STATE CONSTITUTION.—The following October the question was submitted to the town, "Whether they will give their consent that the present house of representatives, together with the council, shall enact a Constitution and form of government for the State of Massachusetts Bay." A meeting was called to consider this important question, and, upon presentation of the article, it passed in the negative, and the following were their reasons for sustaining the vote: "First—There being many of the members of this town absent and in the army at this time, therefore not in a proper capacity to consent. Secondly—We do not understand, by said hand-bill, that after our perusal of s^{d} constitution, if not agreeable, we have no liberty to make objections, and if made, no encouragement of any alterations; and, thirdly—As circumstances, are at this day, we are of opinion a form of government ought to be suspended for the

present." To frame a Constitution for a great State, under these circumstances, they felt to be a matter of grave import, and, in their judgment, the people should be allowed more time for its consideration.

PRICES OF COMMODITIES.—Prices of all commodities were high, a depreciated currency was the only available money, and people were put to their wits' ends to meet their obligations, and trade generally was in a demoralized condition. Early in 1777 the General Court sought to remedy one feature of this evil, viz., the exceeding high prices, and an act to prevent monopoly and oppression" was passed by that body. A committee for the purpose, together with the selectmen of the towns and districts, were required to fix prices upon agricultural labor and products; also upon all goods, wares and merchandise necessary to the support of the people, or in use in the various trades. The following are some of the prices "fixed" for the town of Spencer, viz.. "Farming labor not to exceed 3*s.* per day; a day's work for a yoke of oxen 1*s.* 6*d.*; wheat 6*s.* per bushel; corn 3*s.*; rye 4*s.*; beef 2½*d.* per pound; shoes 3*s.* per pair; meal of victuals 9*d.*; West India rum 8*s.* 2*d.* per gallon; New England rum 5*s.*; W. I. flip 11*d.* per mug; N. E. flip 9*d.*, etc." This scheme, however, was not a success.

A CREDIT MEASURE.—During the years which immediately followed the Revolution the people here, as everywhere else among the colonies, were greatly crippled financially, and it required the united wisdom and watchfulness of the General Court to devise means and measures for the best interests of the people and for bolstering up the currency and credit of the country.

Near the close of the year 1777 an act passed the House and Council calling in the State's money or bills of credit and putting the same on interest, which act appeared to be an oppressive one, and the inhabitants of this town instructed their representatives to "use every effort in their power to procure a repeal of the said act, as they considered it injurious to the poorer sort of people." A still further objection was, that "it would become payable about the same time that a large amount of the Continental money would be called in." The act, however, was not repealed, and, at a meeting December 29th, they proceeded to arrange for their proportion of the "called money," and voted "that £991, 17*s.* be assessed upon the Polls, Real and Personal Estates of the inhabitants, for the purpose of paying the town's proportion of Four Hundred Thousand Pounds, which is now called in by way of Loan." This assessment represented about thirteen hundred dollars in hard money, and was a burdensome tax for the people to meet at this time.

ARTICLES OF CONFEDERATION.—January 5, 1778, a meeting was called to hear read the "articles of Confederation for a perpetual union between the United States of America," and a committee was chosen for the purpose of examining said articles. This committee reported that "we find them to be, according to our best judgment, a well-concerted plan for the rule of government for the United States of America," and without further comment it was voted that "the representative be, and he is hereby directed to give his consent in the General Court to authorize the delegates of the State to ratify and confirm the said articles of confederation." At a meeting called May 4th, following, to hear the form of government proposed for Massachusetts Bay, a committee was chosen, consisting of Joshua Barton, Oliver Seager and Elijah Howe, to consider the same. Their report was unfavorable, and, after a long debate, the question was put, "whether, or not, the town would approve of the Constitution," and it passed in the negative, one hundred and two voting against it, and *none* voting for it. They also sent to the General Court a remonstrance against adopting the instrument, and, from the tone of their "long debate," their reasons, in sustaining their vote, were, in substance, that the fundamental principles, in such a form of government, should originate with the people, through their delegates in convention for the purpose, as such a method was more in harmony with the great principles that underlie a free government, and eminently more democratic; and then, that the doings of such a convention be submitted to the people for their acceptance or rejection.

AID TO SOLDIERS AND THEIR FAMILIES.—Although at this time the people were absorbed in discussing matters of state, as they understood them, they were not unmindful of the wants of the soldiers in the field, or their dependants at home. At this meeting aid was voted to their families, and a supply of shoes, stockings and shirts was forwarded to the soldiers in the camp or field.

Early in 1778 nine men enlisted into the army for nine months, and each received, as bounty, a note of thirty pounds, given by the selectmen, and on the 8th of June, of the same year, the town voted the selectmen authority to draw the sum of two hundred and ten pounds and interest from the treasury "to pay the said notes when they shall become due."

In 1779 six soldiers were furnished to go to Rhode Island, and eighty-four pounds in bounties was voted them for this service, and at the same time sixty pounds was voted to "provide for the families of the soldiers who are in the public service."

RETURNED TORIES.—The spirit of self-sacrifice that actuated these people was a noble one, and during the years of anxiety and hardship through which they had already passed their deliberations were marked by an earnest regard for the welfare of the country and their posterity. Actuated by this ardent love of country, they demanded that cowards in it be disgraced or otherwise punished, and traitors to it hanged.

It was the spontaneous overflow of this sentiment that prompted a hearty response to the town of Bos-

ton, by resolutions, in regard "to certain Inimical persons Lately Returned into the State." January 21, 1779, resolves were offered in town-meeting, the third of which read as follows, viz.:

Resolved, That we will, to the utmost of our power, aid and assist the civil magistrate in the execution of all laws made for the purpose of excluding all such *hateful creatures* from among us.

The persons referred to were Tories, or Loyalists, as they styled themselves, who fled the country at the commencement of the Revolution, but were now appearing again in Boston and other towns in the State, and their presence was as obnoxious now as at the commencement of the troubles with Great Britain, to which country they preferred to give their allegiance. Although their appearance again was so dista-teful, the magnanimity of the people, after the conclusion of peace, not only allowed their return to their homes, but even invited it, and they freely forgave them the heinous sin of disloyalty.

More Soldiers and Equalizing Expense.—During the year 1779 the energies of these people were severely taxed in devising ways for furnishing men to fill up the army, and raising money and material for the support of the same. On the 21st of June the sum of five thousand four hundred pounds was voted to pay for the services of seven men hired for the Continental Army, four for Rhode Island and others for guard over prisoners in the barracks at Rutland. This year a committee was chosen "to see if the burdens caused by the expense of the war" could be equalized, and each made to bear his proportion of the cost; but after giving the matter careful consideration, it was found "that it was very difficult to do each person justice, and we omitted to proceed on sd business."

Instructions to Representative.—On the 7th of August following, Deacon John Muzzy was chosen representative, and instructed "to have particular regard for the United States, the State and his constituency, to support the credit of the currency, and not to give his consent to any act for making up the sink of money between debtors and creditors, either public or private, soldiers and officers of the Continental Army excepted."

Prices Regulated.—August 17th, Major Asa Baldwin was chosen delegate to a convention to be held at Concord on the first Wednesday in October, to take into consideration, among other matters, the regulating of prices of the necessaries of life. The following is a partial list of prices, established by the convention, and they indicate the condition of the currency at that period, viz.. Corn, $14 per bushel rye, $7; wheat, $27; oats, $6; hay, $5 per hundred; labor, $9 per day; beef, 92 cents per pound; butter, $1.83; cheese, 92 cents; men's shoes, $20 per pair; stockings, $12, etc.

Condition of Money.—The condition of the finances was growing worse daily, and at the beginning of 1780 one dollar in currency was valued at about one-sixtieth of a hard dollar. This situation pressed so heavily upon the people, that many were obliged to ask an abatement of their taxes for this and the past year.

The Constitution.—On the 27th of May, of this year, they were called upon to consider a new Constitution for the government of the Commonwealth, and after earnest discussion, with the exception of one article, the whole document received the unanimous approval of the town. The exception was to article two of the third section of chapter one, relating to the House of Representatives. In their judgment the small plantations were deprived of representation, and "they should be allowed to join two or more of them together, in choosing one or more representatives." This was, in substance, an amendment unanimously agreed upon by them, and language similar was, later on, made a part of the Constitution.

Governor.—In the autumn of this year the town cast its first vote for Governor, and John Hancock received the whole number of votes cast, viz.: sixty-nine. The first representative under this new régime was John Bisco, Esq.

During this and the two succeeding years the town responded to the calls for more men for the army, raised money for bounties and other purposes, cared for the families of the soldiers and forwarded requisitions of beef and other supplies to headquarters. The appropriations for 1780, for war and kindred expenses, were: July 11th, £19,000 to pay for services of six and three-months' soldiers; October 12th, £48,456 for the same purpose; £3,565 for horses purchased; and £12,000 for beef supplies, aggregating nearly £90,000, or about $4,000 in coin.

Watchful.—In 1780 the General Court passed an act for repealing, or "taking of the new emissions of money," and the people of Spencer thought this to be a "notorious Breach of y^{e} Public faith and a grand Reflection on y^{e} Continental Congress," and they forwarded a remonstrance and petition to that body, asking for the immediate repeal of said act, requesting, at the same time, that the "vote be taken by yea and nay, and published, that the good people of the Commonwealth may have a Greater Opportunity to Guard against Enemies of the Glorious cause of America." They watched closely the doings of the General Court, condemning that which seemed oppressive or unjust, and commending when they felt that the people would be benefited thereby.

In 1781 they were passing through the severest crisis of their existence, the heavy war debt causing burdensome taxes, the resources of the country nearly exhausted, and the Continental money almost worthless. Nothing could procure the men and materials called for but hard money, and the town was in great danger of having executions levied upon it for deficiencies in men and beef. June 20th the sum of £416 hard money was raised for supplies of men and

beef, and a committee of three, viz.: John Bisco, Lieutenant John Muzzy and Lieutenant John Worster, were chosen to procure the same. All transactions were now made upon a hard money basis. Spencer filled her last quota in March, 1782, the war being now virtually over; still there were men in the field to be cared for, as it was not yet considered safe to disband the army.

GRIEVANCE.—The following five years was a period full of grievances and, sad to relate, of misguided judgment. In the winter of 1781–82 the General Court passed the Valuation and Excise Acts, and the town, upon their consideration, freely expressed their disapprobation of them in a remonstrance as being "unjust and oppressive, and an Infringement on y^e^ National Rights of mankind." That part relating to the valuation they characterized as "unjust and unreasonable as Nebuchadnezzar's demanding of his magicians an interpretation of his untold Dream," and they demanded that both be repealed.

April 9, 1782, a meeting was held at Worcester to take into consideration "the many grievances of the good people of this commonwealth," and Isaac Jenks was sent as delegate from the town. On the 16th of May following he was elected representative, and a long list of instructions, suggested by the recent convention, were given him, of which the following is but a fractional part, viz.: "that it shall be unlawful for the Creditor to sue, until the Debtor be notified; that all state securities, whether notes or certificates, be made Lawful tenders; that all goods or estates, taken on execution, be appraised to the Creditor, &c., &c."

In 1785 the people were in a most "Distressing and Disagreeable" condition. No cash was to be had; stock and produce, though they had it, would not pay debts, unless sold at too great sacrifice, and they asked the General Court to relieve them, by making paper money pass equal to silver or gold, or real and personal estates a tender in discharge of debts. But this they could not do. The town was now deficient in its taxes, executions had been served upon it for their payment, and they were obliged to pawn their State securities to satisfy these demands. These securities were, however, subsequently redeemed.

On the 26th of June, 1786, a convention was called at Leicester to see if means could be devised which would bring "relief for grievances, done one way or other, occasioned by the scarcity of the Circulating Medium," and John Sumner was chosen delegate.

Grievances were now, with common consent, the order of the day; but Spencer was not alone affected by this malady. Other towns and plantations in the State bear record of the same disease, contracted under the same influences. Business was at a standstill, while the State and Continental debts were enormous, and the people were called upon, by way of taxation, until their patience was well-nigh exhausted. Property was seized for debt; people were thrown into jails, and great distress prevailed here and throughout the Commonwealth. High salaries of public officers, fees of lawyers and sheriffs and costs of courts, when compared with their own scanty means of subsistence, and, added to these, their own jealousy towards those officials and courts, were, according to their reasoning, sufficient grounds for complaint, and for a resort to force, if need be. Their animus was especially directed to the courts, and they demanded that they be abolished, as "their existence was a burdensome expense." This, and the nursing of the feelings which led to it, were but the wild vagaries of the communistic ideas, better known to the present age than to the people of those times.

SHAYS' REBELLION.—It was this condition of the social atmosphere that led to the inglorious Shays' Rebellion, which "began with high-sounding trumpets at Worcester, about the 3d of December, 1786, and vanished like a mist on the hills of Princeton," not far from a month later. Some of the good people of Spencer took part in this unfortunate fracas, among whom were found commissioned officers of the militia. At its close they were temporarily disqualified, and ordered to renew their allegiance to the government, which they humbly did. One Abijah Livermore and six confederates broke into the town magazine and took away the stock of powder, balls, etc., but soon after the insurrection was stamped out, he, with three others, made a written confession to the inhabitants of Spencer, in which they "craved the assistance to live to the Honor of the town and the Glory of God in all our future conduct."

Henry Gale was one of the leaders in this revolt, and after his capture was sentenced to death for high treason. The people of Spencer interested themselves in his behalf, and forwarded a petition to His Excellency, Governor Hancock, asking that he might be pardoned, "as he appears to be very Penitent and Humble for his very wicked crime." He was brought to the gallows for execution, but was there reprieved and afterwards pardoned.

COMMITTEES OF CORRESPONDENCE.—The Committees of Correspondence, during and after the war, were:—in 1774, John Cunningham, Oliver Watson, Asa Baldwin; in 1775, Oliver Watson, Moses Livermore, John Muzzy; in 1776 and 1777, Asa Baldwin, Jeremiah Whittemore, Joshua Draper, David Prouty, Knight Sprague, Benjamin Gleason; in 1778, Joshua Lamb, John Muzzy, Joshua Bemis, John Worster, John Watson; in 1779, James Livermore, Benjamin Gleason, John Worster, John Muzzy, Jacob Upham; 1780, John Muzzy, Johnson Lynde, John Sumner, Benjamin Bemis, Jonas Muzzy; in 1781, John Sumner, Jonas Muzzy, Johnson Lynde, Jeremiah Whittemore, Nathaniel T. Loring; in 1782, Asa Baldwin, Jeremiah Whittemore, Captain Ezekiel Newton; in 1783, James Hathaway, Jonas Muzzy, Isaac Morgan.

THE LATE REBELLION.—In the late Rebellion

the military spirit of this town was aroused, as in days of yore, and men and means were furnished without stint or grudging, in the grand effort made for the preservation of the Union. The echo of the first gun fired on Sumter, and the clash of arms in the streets of Baltimore, had scarcely died away before the heroic spirit of the people of Spencer showed itself, with but one feeling of sentiment and purpose, viz.: that the government should be sustained at all hazards in this hour of her need. From this moment until the closing scenes at Petersburg the citizens never faltered in their duty to the Union cause; and the courage and bravery of the men sent out were honorable alike to the town as her citizens and to themselves as soldiers. Before the first call of the President for seventy-five thousand soldiers, men were volunteering into the service of the government, and the sound of the fife and drum resounded through the streets, calling them—not to a holiday festival, as was their wont, but to the stern realities of a bloody war.

On the 29th of April, 1861, a town-meeting was called, "to see what measures the town would take to furnish outfits and uniforms for a company of volunteers about to be organized for the service of the government." At this meeting the selectmen and assessors were made a "Committee of Safety," and their duty was to "supervise, expend and lay out such a sum of money, not exceeding $5000, as may be necessary," paying the members of the company "seventy-five cents for each one-half day they drill during the next thirty days." These men were at first placed under the military instruction of Col. Alonzo Temple, of Spencer, a militia officer of the old school, but later on Capt. J. M. Studley, of Worcester, became their drill-master, and their time was now occupied in becoming familiar with the manœuvres of the soldier in camp or field. When the time for their service should arrive, the town stipulated that they should be paid a further sum of ten dollars per month, in addition to their government pay. This company left town for camp at Springfield, arriving there June 20th, and on the 21st were mustered into the service of the United States for the term of three years. It numbered fifty-one men, and formed parts of Companies F, G, H and K, of the Tenth Massachusetts Regiment.

At the above-named meeting a committee of eleven citizens was chosen for recruiting purposes, and the ladies were invited to procure a flag for the volunteer company. The Committee of Safety were also ordered to "purchase a flag, to be erected on the town-house." This committee, according to instructions, purchased the uniforms for the company in training. For these, together with a flag and staff, and the drilling of the volunteers, they expended the sum of $2463.75. One of their important duties was the care of the soldiers' families, and this they attended to most carefully and conscientiously.

At a town-meeting held July 19th, measures were discussed for offering bounties, and it was decided to pay the sum of $100 each "for thirty-two persons who shall enlist into the service of the United States at such a time as the committee of safety shall prescribe," and a further sum of $50 each "to all who remain in the service more than one year," and an additional sum of $5 "to all who shall enlist to-day." This number was the town's quota under the President's call, May 29, 1862, for 300,000 troops, to serve for the term of three years, or until the end of the war. On the 4th of August following, another call was issued for 300,000 men to serve for nine months; and in response to this a town-meeting was held, to make provisions for their quota under it, and a bounty of $100 was voted to each volunteer, together with aid to the families of all such.

At an adjourned meeting, held September 11, 1862, eleven persons were chosen to notify the enrolled militia to meet at the town-house for medical examination, preparatory to a draft, "if one is found necessary." On the 17th of October, 1863, a call came for 34 men more, and on the 25th of February following, an additional one for 25 men. In the meantime a draft had taken place, and by it 28 men were secured, either by voluntary enlistment, furnishing substitutes or paying a commutation fee of $300. This number was further increased by ten soldiers reenlisting and 49 new recruits, and the town now had a surplus of 23 men, which could be applied on future calls. August 20, 1864, a meeting was held to arrange for 39 soldiers to fill the quota of the town, under the last call of the President, and a bounty of $125 was offered to such as would enlist. December 24th the selectmen were authorized "to procure all the soldiers that, in their judgment, they think the town will need." April 26, 1866, the town refunded the sum of $5955 to such of the enrolled militia as had previously subscribed to the war expense account.

Many of the soldiers, at the expiration of their long or short terms of service, having a desire to witness the closing scenes of this gigantic Rebellion, re-enlisted "for the war," with an enthusiasm all the more earnest for the hardships they had endured or dangers encountered in behalf of the cause. Spencer furnished 319 men for the war, which was a surplus of 32 over and above all demands, among whom, at its close, were eight commissioned officers.

The first regiment forwarded to the seat of war, in which were Spencer soldiers, was the Tenth Massachusetts, and they were engaged in the battles of Williamsburg, Fair Oaks, Malvern Hill, Fredericksburg, Gettysburg, Rappahannock Station, Wilderness, Spottsylvania Court-House, Cold Harbor, Petersburg, &c. The Fifteenth Regiment contained five men from Spencer, who went into camp June 28, 1861, and were under fire the first time at Ball's Bluff, October 21, 1861. This body of troops went into the engage-

ment with six hundred and fifteen men and came out with only three hundred and eleven fit for duty. The Twenty-first contained twenty-six Spencer men, and went into camp July 19, 1861, on the agricultural grounds, Worcester, and they reached Annapolis, Md., on the 29th of August following, and on the 6th of July, 1862, embarked in the Burnside expedition to North Carolina and took part in the battles of Roanoke Island, having fifty-seven men killed and wounded. In one year the regiment had lost one hundred and thirty men, in killed, disabled by wounds, prisoners and discharged. At the expiration of their term of service all but twenty-four men re-enlisted for a term of three years, and nearly all the Spencer soldiers returned with the re-enlisted. Besides Roanoke Island, they were engaged in the battles of Newbern, Camden, second Bull Run, Chantilly, South Mountain, Antietam, Fredericksburg, Wilderness, Spottsylvania and Petersburg. The Twenty-fifth, with nine Spencer men, followed the Twenty-first on the 7th upon the same expedition, and their loss at Roanoke Island was six killed and 42 wounded. It was also in the engagements at Newbern, Port Walthall Station, Arrowsfield Church, Drury's Bluff, Cold Harbor, Point of Rocks, &c.

The Thirty-fourth went into camp June 3, 1862, with forty-three Spencer soldiers. Their first year's experience was garrison and picket duty in front of Washington. From the time of its first engagement it passed through the battles of Newmarket, Piedmont, Lynchburg, Winchester, Fisher Hill, two battles at Cedar Creek, Petersburg and Richmond. June 16, 1865, the original members were mustered out of the service and the remainder transferred to the 24th. The 57th contained sixteen Spencer men and was raised in the spring of 1864. It left the State in April and "fought its way from the Wilderness to Hatcher's Run, bearing a part in nearly every battle which occurred between these two points." For three months, following January 1, 1865, they were in the lines before Petersburg, marching and fighting until Lee's surrender. The 60th was a one hundred days' regiment, and in it were fifteen men from Spencer; also twenty-five men were distributed through the 1st, 2d, 3d, 4th and 5th Cavalry and ten men in the 2d and 11th Heavy Artillery. Spencer was also represented in the 1st, 9th, 12th, 19th, 24th, 28th, 36th, 50th, 54th Massachusetts Regiments, the 154th New York, the California Artillery and the navy.

Tablets erected in the town-house bear the following names of those brave and true men who gave their lives in defence of the liberties of their country, viz.: Oscar R. Bemis, 10th Regiment, died in hospital at Baltimore, Md., August 22, 1862; Harry F. Adams, 21st Regiment, died at home on a furlough, May 19, 1863; Frederick A. Bemis, 21st Regiment, killed at Chantilly, Va., September 1, 1862; Elbridge C. Barr, 21st Regiment, killed at Fredericksburg, Va., December 13, 1862; Frank Bird, 57th Regiment, killed at Wilderness, Va., May 6, 1864; Dwight Chickering, 34th Regiment killed at Snickers Ford, Va., July 18, 1864; Henry C. Chickering, 34th Regiment, lost from transport, May 2, 1865; Isaiah Crosby, 10th Regiment, killed at Malvern Hill, Va., July 1, 1862; Thomas Carney, 10th Regiment, died in hospital, Washington, D. C., August 30, 1861; James Crook, 2d Heavy Artillery, died at home on a furlough, April 25, 1865; Freeman Davis, 15th Regiment, killed at Wilderness, Va., May 6, 1864; Louis Dana, 21st Regiment, killed at Newbern, N. C., March 14, 1862; Nathan S. Dickenson, 25th Regiment, died in hospital, Philadelphia, Pa., August 18, 1864; Lucien Fogg, 10th Regiment, killed at Wilderness, Va., May 12, 1864; William A. Frink, 25th Regiment, killed at Drury's Bluff, Va., May 16, 1864; George Farrel, 5th Cavalry, died at Point Lookout, Md., July 29, 1864; Joel W. Green, 1st Cavalry, died at Potomac Creek, Va., January 22, 1863; David Green, 3d Cavalry, died in hospital, Louisiana, July 28, 1864; Gardner M. Gage, 34th Regiment, killed at Berryville, Va., October 18, 1863; George W. Henry, 21st Regiment, killed at Roanoke Island, N. C., February 8, 1862; Otis M. Hunter, 34th Regiment, killed at Harper's Ferry, Va., April 10, 1864; Leroy Haws, 34th Regiment, died on transport, April 3, 1865; Dennis Harrington, 25th Regiment, died in hospital, Newbern, N. C., September 21, 1862; Sylvester D. Johnson, 10th Regiment, killed at Fair Oaks, Va., May 31, 1862; Daniel Kelly, 9th Regiment, died in hospital, Fairfax, Va., October 20, 1862; Waldo H. Luther, 10th Regiment, died at Newbern, N. C., October 23, 1864; Edward A. Lamb, 60th Regiment, died at Indianapolis, Ind., October 31, 1864; Abraham Luchay, 57th Regiment, killed at Wilderness, Va., May 6, 1864; James Larkey, 21st Regiment, died at Arlington, Va., June 1, 1864; Alfred W. Midgely, 10th Regiment, died of wounds, May 12, 1864; Joseph Mead, 21st Regiment, died at Danville, N. C., January 15, 1865; George W. Nason, 2d Heavy Artillery, died at Newbern, N. C., April 15, 1865; Nelson Reno, 4th Cavalry, died at Jacksonville, Fla., September 5, 1864; Samuel D. Sargent, 21st Regiment, killed at Roanoke Island, N. C., February 8, 1862; Jarius Sessions, 46th Regiment, died at Newbern, March 10, 1865; Edmund Toomey, 10th Regiment, died at Harrison's Landing, Va., July 19, 1862; John M. Worthington, 10th Regiment, killed at Winchester, Va. September 9, 1864; Horace Wilson, 24th Regiment, died in hospital, Newbern, N. C., April 26, 1862.

The whole amount of money expended by the town on account of the war, exclusive of State aid, was $27,101.70; for State aid, $23,529.92.

SCHOOLS.—The advantages for schooling in the West Precinct of Leicester were very limited during its early history as a precinct. Indeed, there were no schools in this part of the town until 1748, when a term of ten weeks was granted them, and three years later another term of six weeks. In 1753 this pre-

cinct contained a population of more than two hundred people, and while they were paying taxes for the support of schools in the East Precinct, yet they were of little or no value to them, owing to the great distance to travel and poor roads to reach them. In 1755, two years after being incorporated into a parish, the sum of sixteen pounds was raised for schools, and the annual appropriations for this purpose, up to 1775, averaged thirty pounds. There were, as yet, no school-houses here, but for several years the question of building one or more had been before the parish.

In 1766 the town was divided into six school "squadrons," three on the east and three on the west, and it was voted that "schools be kept in such as the inhabitants shall appoint," and private houses were used for this purpose. Two years later, houses were erected in some of these, but, as each was so sparsely settled and embraced so much territory, schools kept in them could not be made either practical or profitable.

In 1786 it was decided to reduce the size of the "squadrons," making them ten in number, and a vote was passed "to build houses in each," but the impoverished condition of the town at this time prevented the carrying out of this vote, and they were not commenced until 1790. In 1792 two hundred pounds were raised to finish school-houses already in process of construction, and also to build more, and in 1795 an additional sum of four hundred pounds was voted for the same object. The houses were now completed and the late divisions were now known as wards or districts, and in 1810 were formally numbered from one to ten inclusive, and duly recorded.

In 1849 another district was added by a division of Nos. 9 and 10 into three separate districts, and this was recorded as 11.

The first School Committee chosen in the town was in 1815, and the members thereof were required to visit the schools twice each year, to note the progress of the various classes and their standing in reading, spelling and pronouncing, also in writing, arithmetic and English grammar, and "more especially their decent and respectable behavior both in and out of school." It was also obligatory upon the committee to instruct the scholars in their "duty as to piety and morality." At the first visit of the committee they required each scholar to write his or her name upon a slip of paper, and the same again at the close, "that by this test they might ascertain what proficiency the pupil had made during the year."

The growth of the town from 1795 to 1837 did not require extra school facilities, and annual appropriations ranging from five to eight hundred dollars gave them a fair amount of schooling, both summer and winter.

In 1832 a school sustained by private subscription was opened in the vestry belonging to the Congregational Church, in which the higher branches were taught, and remained there until a room for school purposes was fitted up on the first floor of the old town-house building, where it was transferred and the same grade continued until 1857. In 1856, the population having reached the required number named in the school law making a high-school obligatory, steps were now taken by the town to comply with that law. Additional land adjoining that upon which the vestry stood was given them by William Pope, Esq., for a high-school building, and "a large and commodious edifice, 60 x 40, two stories high, with cupola and bell," was erected. The school and ante-rooms were upon the first or ground floor, and the second floor was used as a hall. Mr. Charles E. Denny, a respected citizen of Spencer, bequeathed the sum of two thousand dollars towards the payment of this building, and in appreciation of this generous act the hall was thereafter to be known as "Denny Hall." In 1888 this building was moved to the south side of Main Street, near the Baptist Church, to be used as a graded or grammar-school, to give place to a new high-school building.

In the school year of 1865–66 fifteen schools were maintained in the eleven districts.

The first important addition to the district schools was in 1867, in District No. 9, when a substantial brick building, three stories high, was erected, which would accommodate three hundred scholars. The rooms were spacious, well lighted and ventilated, and it cost, when built, $22,000. In 1885 steam-heating apparatus was added and in 1887 gas for lighting. From 1865 to 1888 the population of the town trebled in numbers, necessitating a continued enlargement of school buildings in many of the districts, while within a radius of one-half mile from the centre extraordinary facilities were required. Within the latter limits six large brick structures have been built, the last one completed in 1888, which will accommodate two hundred and eighty scholars, and the aggregate sittings in the six is sixteen hundred and twelve. They are unique in architectural designs and constructed with great care in reference to sanitary arrangements; airy and well lighted and furnished with all the modern improvements.

The High School building, built in 1888, is the gift to the town of Spencer by David Prouty, Esq., a life-long resident and honored citizen. The dimensions of this building are eighty-five by ninety-two feet, two stories high, with a basement. It is built of brick and stone, and the style of architecture, above the basement, is Romanesque in type. Upon a front corner is a tower eighty-three feet in height, and at its base a corner stone, with the inscription: "David Prouty High School."

The basement contains two large play-rooms, a laboratory and library room, heating apparatus, store-rooms, etc. On the first floor is the principal's office, school and recitation rooms, and upon the upper floor a large hall used for meetings and entertainments in connection with class exercises. The cloak-rooms,

David Prouty

closets, halls and stairways are large and convenient. This magnificent gift was erected at a cost of forty-five thousand dollars.

The appropriations for schools from 1753 to 1795 varied from £20 to £50 annually; from 1795 to 1850, $500 to $1600; in 1865, $3000; 1875, $11,000, and in 1887, $22,000. The number of scholars in 1840 was 324; in 1860, 346; in 1880, 1521, and in 1887, 2110. In 1869 the town paid the sum of $95,000 for new school buildings, and improving old ones, equipments and supplies, and for teachers' services and expenses for maintaining the schools, the sum of $150,000.

The number of school-houses in 1888 were 15; the number of rooms occupied, 34, and the number of teachers employed, in all grades, 52.

This generous record is indicative of the steadily-growing interest the inhabitants have manifested over the intellectual training of the young.

DAVID PROUTY.—David Prouty was the fourth of that name in direct descent from Richard Prouty, who was a resident of Scituate, Mass., as early as 1667. The first David in the line moved to Spencer early in the eighteenth century, purchasing and settling upon a lot north of the centre of what was, years after, Spencer Township. He had a son David, born in 1739, who was conspicuous as a soldier in the war with the French, a captain in the War of the Revolution, a major in the State militia and for many years selectman and assessor of Spencer. He had a son bearing his name, born in 1772, who also participated in the honors of the town as selectman for many years and Representative to the General Court; and he had a son of the same name, born October 13, 1813, and is the subject of this sketch.

Mr. Prouty was reared as a farmer and continued in this occupation until he reached the age of twenty-three years. The year following he left the farm and entered the employ of Mrs. Hannah Hatch, widow of the late Eli Hatch, manufacturer of wire, and in 1840 he purchased these works of her. This was his first business venture, and he remained in it until 1846, when he disposed of the works to Liberty Prouty, that he might take possession of the farm inherited by him from his father, who died in 1845. In 1850 he sold this farm and came to "the village" and erected the dwelling-house he now occupies, moving into it January 6, 1851. In 1852 he entered the boot-firm of Charles E. Denny & Co., but in 1853 this firm was dissolved, in consequence of the ill-health of Mr. Denny, and in 1854 a second dissolution occurred, by the death of John G. Prouty, a member of it. John Boyden then became partner, under the firm-name of Prouty & Boyden, until 1857, at which time E. Jones & Co. took the interest of Mr. Boyden in the concern, and the name of the firm was changed to David Prouty & Co. In 1859 Isaac L. Prouty bought out the interest of E. Jones & Co., but the style of the firm remained the same, and in 1862 T. C. Prouty was admitted to the partnership.

This business relation continued until 1876, when Mr. Prouty retired from it and an active business life.

There are qualities in the make-up of individuals, which, if well balanced and blended, are a guarantee to success. These Mr. Prouty possessed in a marked degree, viz., prudence, good management and a sound judgment; and they were in a great measure the secret of his prosperity.

Being a man of quiet and unpretending habits, whether in a social or more public way, unnecessary or outward demonstration or show was always carefully avoided by him. He has represented his fellow-citizens in the General Court, has held many offices in the gift of the town, and in any, or all of them, there has been no question raised as to his faithfulness, honesty or capability.

In his business efforts he has been richly rewarded with an ample fortune, and in his quiet way has made it the source from which many charitable objects have obtained pecuniary relief, and no worthy charity has appealed to him in vain. He has merited and still receives the kindest remembrances of his fellow-citizens, and they trust he may live long to enjoy the fruits of his generous charities.

He married Caroline, daughter of Dr. Jonas Guilford, of Spencer, Jan. 14, 1840. She died Nov. 14, 1863. Dec. 16, 1867, he married Mrs. Sarah B., widow of the late Charles E. Denny, sister of his former wife, and she died January 3, 1873. By his first marriage he had but one child, a son, Jonas Guilford Prouty, born September 21, 1844, and he died at the age of nineteen years. Mr. Prouty was deeply afflicted by this loss, as it not only destroyed in him bright hopes for the future, but this death left him childless and alone. Possibly it may have warmed his heart towards other worthy young men, as he has been deeply interested in a number of such, and they have reason to thank him for material aid rendered them. The spontaneous gift of the David Prouty High School Building was a noble illustration of a desire to confer a lasting benefit upon the young of this and future generations who shall seek it for moral and mental improvement.

ROADS.—The traveled ways of the early settlers were the foot-path, which led from house to house, and the bridle-path, which led *to town*. Later on, these ways became roads, and at the present time, after passing through the various changes of straightening, widening and grading, many of these "primitive paths" constitute important highways in this town. There is no record showing when the "Great Post Road" was laid, but it was a public traveled way previous to 1725, as during that year the town—Leicester—was "presented" at the Court of Quarter Sessions for having no bridge across the "Seven Mile River." If the road had not a recorded location at that time, it must have had a little later on, as in 1728 the town was assessed the sum of £12 2*s*. 5*d*., it being their proportion of the expense of locating it.

After having been "presented" the second time at the court for the same offence, in 1729 they caused a bridge to be built. In 1800, complaint having been made by the attorney-general of the "badness of the Great Post Road," an effort was made to convert it and the North County Roads into turnpikes, but the town successfully remonstrated, by petition to the General Court, against it. In 1807 this road was altered and improved, by straightening easterly and westerly, from the house of Amasa Bemis, near Westville, now so called. Further alterations, in location, east of this point had been suggested from time to time, and the commissioners called upon to make them, but as late as 1832 no important changes had been made. This year, however, they ordered specific repairs through "the village," and September 10th the sum of eight hundred dollars was voted "for repairs near the houses of Joseph Mason and Walton Livermore." In 1856 general alterations were made in the road from Brookfield to Leicester lines, re-locating it in places, widening, cutting and filling it in others, and marking the boundaries by stone posts at each angle along the whole line. The North and South County Roads were located in 1756 and '57 respectively. The Great Post Road was *the* busy one of these three highways, as the principal business between the country towns and Boston centred upon it. It was the main thoroughfare between Hartford and Worcester, and was the route over which the first line of stage-coaches between these two points plied. This line was established in 1783, and the trip was made in four days.

Taverns.—Spencer was a famous stopping-place for these coaches from the days of the "three taverns" in 1788 to the supplanting of them by railroads. It was a relay station for change of horses, while its taverns furnished travelers with substantial food and drink, and it was not unusual to see fifteen coaches congregated here at the noon hour, and upon extra occasions, twenty-five. The *Centre* was early designated as "Upper and Lower Villages," the meeting-house being the nucleus of the former, and the "three taverns" the latter. These taverns, in 1788 the only three dwellings in the lower village, were the "Jenks," which occupied the site of the Massasoit Hotel; the "Mason House," beneath the "big elms" near the boot factory of J. Prouty & Co., and the "Livermore House," on the site of the residence of J. W. Temple. In 1743, Josiah Robinson built a small dwelling upon lot No. 22, which was purchased in 1754 by one John Flagg and kept by him as a public-house for seven years. In 1775 Isaac Jenks became owner of the property and the house was ever afterward known as the "Jenks Tavern," and was the most famous of all the inns in Spencer with the traveling public. A French gentleman who chanced to spend a night under its roof in 1788 spoke in high terms of the manner in which it was kept in comparison with French taverns. He said, "the chambers were neat, the beds good, the sheets clean, the supper passable; cider, tea, punch and all for fourteen pence per head." Also, General Washington passed the night here October 22, 1779, and Mrs. Jenks, the hostess, was ever proud to refer to the event, as her illustrious guest complimented her at the breakfast-table by saying, "Madam, your bread is very beautiful."

There were but two dwellings in the "Upper Village" at this time, viz., the "Morse House," now standing on the west corner of Main and May Streets, and the "Pope Mansion." This latter, the oldest dwelling standing in town, was built in 1745 for Rev. Joshua Eaton; and four years after the Rev. Joseph Pope succeeded Mr. Eaton. The former occupied this house with his bride. At his decease it came into possession of his son, William Pope, Esq.; then was owned by Hon. William Upham, son-in-law of the latter; and since his death, Mrs. Lucretia H., widow of the late William Upham, has owned and occupied the premises.

This building has been carefully preserved for nearly a century and a half, and bids fair to pass far into the twentieth century as a venerable land-mark representing the birth of the "Leicester West Precinct."

Town Pound.—Upon a small piece of land, "five or six rods square," at the west end of the meeting-house, was located the town pound, stocks and horse-block. The two latter "fixtures" did not survive the eighteenth century. There is no record showing at what date the pound was built; but it was undoubtedly of early origin, as in 1768 a new one appeared to be necessary, the town voting then to build "a new one with stone," and appropriated £7 for the purpose. It would seem that they had but little use for it, as in 1772, and again in 1790, articles were in the warrant of these years, "to see if the town would use the stone to underpin the meeting-house," or "to take the stone to fence the burying-ground." Previous to 1796 one or more attempts were made to move it; but this year the ground upon which it stood was wanted for horse-sheds, in connection with the meeting-house, and it was voted "to build a town pound on Jeremiah Whittemore's land, at the corner of the town road where it turns to Benjamin Gleason's, of the same bigness of the old one, three sides of stone and one of wood." The contract for building was awarded to Mr. Whittemore for £11. This enclosure remained until 1877, when the wall was taken down and the pound abandoned.

Post-office and Postmasters.—The first post-office established in town was on the 1st of October, 1810, and was kept in the "Jenks tavern." Isaac Jenks and his son, Isaac, Jr., were postmasters until December 15, 1825. At this date Charles Bemis received the appointment, and moved the office to the tavern in the "Upper Village." Amasa Bemis, Jr.,

was appointed postmaster August 12, 1828, and Nathaniel Wilson February 25, 1831. Eleazer B. Draper became postmaster October 24, 1832, and he removed the office to the first location. William Bush, Jr., succeeded him September 22, 1845, and after two years he moved the office to the store of Dr. L. Bemis, now corner Main and Elm Streets, east side. April 3, 1849, Dexter Bemis received the appointment. The next appointee was George H. Livermore, January 13, 1851, and he located the office at "Union Building." The 3d of May, 1853, Willard Rice became postmaster, and he changed the location to the ell part of the "Solomon Davis" house, corner Main and Elm Streets, west side. May 23, 1845, Luther Hill was appointed, and he removed the office to the "Bemis Store." July 11, 1861, Eli J. Whittemore was made postmaster, and it was again taken to Union Building, where it has remained to the present time. Horace A. Grant was postmaster September 26, 1864, and Emerson Stern was appointed May 18, 1869, and no change has been made since his appointment.

CEMETERIES.—The first public burial-place in the town was upon about one acre of land, donated by Mr. Cunningham, and was the north part of the meeting-house and training-field lot. In 1791, 1817 and 1857 one-half acre each year were added, making the lot contain about three acres. In 1872 a further addition was made, and at this time a trust fund was raised by parties having an interest in the protection and preservation of the family lots, monuments and other stones that marked the burial spots. The sum subscribed for this purpose was three thousand and thirty-five dollars, and the town was made trustee of the fund. New lots were located, concrete walks laid out and from time to time appropriate monumental and other work erected in memory of the departed.

The first person buried in the original lot was Elizabeth Adams, in 1742. In 1759 John Stebbings and others were given permission to erect tombs on the burying-ground. In 1790 this lot was inclosed with a "Good stone wall, with two Gates for to Pass and Repass." In 1793 it was voted "to purchase a carriage to carry Corpse to the Graves," and in 1794 a house was built for the hearse and a pall purchased. This was the only burial-ground until 1845. On the 20th of May of this year B. H. Kinney, of Worcester, purchased four acres of land lying partly on and forming the west bank of the "Seven Mile River," near the "Whittemore Bridge," so-called. He laid this out into burial-lots, avenues, paths, etc, and while it remained in his possession it was dedicated with appropriate ceremonies as "Pine Grove Cemetery." This lot has been added to at two different times, until it now contains about twenty-five acres. It is owned by an association of proprietors belonging to Spencer, and the spot selected for it shows ability and taste to provide a home for the remains of loved ones. It is superintended with excellent judgment and care.

In 1864 the Catholics purchased three acres of land for a cemetery lying on the west side of the great post road, one mile west of the post-office. In 1868 they bought thirteen acres upon the east side of the road and opposite this lot, and subsequently, four and one-half acres more were added. The new ground is neatly laid out, with a circular drive around a central mound, upon which is erected the Holy Cross. They have considerable fine monumental work, and are doing much each year to beautify the place.

DIVISION OF THE COUNTY.—As early as 1798 the question of a division of Worcester County came before the town, but the people were as loyal to the old county at this time as they had been to the country during the late perilous times, and did not cast a single vote in its favor. In 1828 another attempt at separation was made by taking sixteen towns from this county and four from Middlesex, and a petition from parties interested was presented to the General Court for that purpose. The vote of the town upon the question was two in favor and eighty-five against. A third time, in 1874, the people were requested to vote for or against a division, and they were as decided in their opposition to it as ever, and instructed their Representative "to oppose any legislation tending to make any change in the county."

STATISTICS.—The population in 1776 was 1042; in 1790, 1322; in 1800, 1432; in 1810, 1453; in 1820, 1548; in 1830, 1618; in 1840, 1604; in 1850, 2243; in 1860, 2777; in 1865, 3026; in 1870, 3953; in 1875, 5451; in 1880, 7460; and in 1885, 8250. The number of polls in 1800 was 285; in 1810, 301; in 1820, 347; in 1830, 386; in 1840, 395; in 1850, 591; in 1860, 715; in 1870, 940; in 1880, 1671; in 1888, 2039. In taking the valuation, and assessing the taxes of the town from 1753 to 1824, two lists were made and called the "North Side List" and "South Side List," the great post road being the dividing line. From the latter date this division was abandoned, and but one list made of the whole. The valuation in 1860 was $1,286,333; in 1870, $2,121,210; in 1880, $3,048,520; in 1888, $3,918,150. The number of houses in 1764 was 100; in 1850, 341; in 1860, 485; in 1875, 666; in 1885, 1003, and in 1888, 1088.

CONNECTED WITH STATE GOVERNMENT.—The following persons have been connected with the State government, viz.: William Upham, Councilor in 1878–79. Senators: James Draper in 1831–32; William Upham in 1859; Luther Hill in 1867; Charles P. Barton in 1883, and George P. Ladd in 1888. Delegates to Constitutional Convention: John Bisco in 1779; James Draper in 1820, and Jabez Green in 1853. Representatives to the General Court: Oliver Watson in 1775–76–77–80; John Bisco in 1777–80–81; John Muzzy in 1779; Isaac Jenks, 1728 to 1786; James Hathaway, 1787 to 1794; Benjamin Drury, 1794 to 1811; Jonas Muzzy, 1811–12; Phineas Jones, 1812;

James Draper, 1813 to 1819, and 1828 to 1832, and 1836 and 1837; William Bemis, 1820; Rufus Adams, 1823 and 1832; William Pope, 1827; Walton Livermore, 1831; David Prouty, 1833–34; Lewis Bemis, 1834–35; Amos Brown, 1835; Dennis Ward, 1836–37–39–47–56; Walter Sibley, 1838; Eleazer B. Draper, 1839–40–41–45; Jonas Guilford, 1842; Jabez Green, 1843–44–50; Milton Boyden, 1848; William Baldwin, 1851; Alonzo Temple, 1852; Alanson Prouty, 1853; William Henshaw, 1854; William Upham in 1857–72; John L. Bush, 1859; George L. Hobbs, 1861; Luther Hill, 1863–65–70–87–88; Dexter Bullard, 1867; Erastus Jones, 1874; David Prouty, 1876; James H. Ames, 1878; John W. Bigelow, 1880; Isaac L. Prouty, 1881–82; Joseph W. Temple, 1884; James Holmes, 1886.

Spencer, for several years after its incorporation, elected a representative alone; then a representative district was formed of Leicester and Spencer. In 1866 the towns of Leicester, Spencer, Southbridge, Charlton and Auburn formed a district, and in 1876 Southbridge, Spencer, Oxford and Charlton were made a representative district. In 1887 the district was again changed to Leicester and Spencer.

PHYSICIANS.—The physicians of Spencer, previous to 1800, were James Ormes, from 1732, and later on, Asa Burden, William Frink, Benjamin Drury and Jonas Guilford. At the present time they are E. R. Wheeler, E. W. Norwood, F. J. Sanborn, E. A. Murdock, Marc Fontaine, Ishmael Verner and Eli Barnard.

HON. JAMES DRAPER.—James Draper was born February 26, 1778. He traces his ancestry to James Draper, of Yorkshire, England, who was born in 1618, and came to this country "between 1640 and 1650," and located in Roxbury, Mass. James, the subject of this sketch, was a native of Spencer, as were two generations of his ancestors, and after a long and useful life he quietly passed away at the great age of ninety years, eight months and one day. His early life was devoted to the farm, but as this occupation was not altogether congenial to his taste, by close application to the limited educational advantages of the times, he fitted himself to perform such duties as an adviser or magistrate was expected to be familiar with in those days. With this qualification, and possessed of a good degree of intelligence, he very soon became a leading man in the town, and in the various positions in which he served his townsmen, acquired their confidence and established a high reputation among them and throughout the county. Although of an irascible nature, his kindness of heart and sincerity of motive enabled his many friends not only to overlook this characteristic, but to fully appreciate his abundant good qualities and worth.

In 1810 he was appointed a justice of the peace under Governor Gore's administration, and held the office more than fifty years. He ably performed the duties of it, whether called to act within the immediate vicinity of Spencer, or, as was often the case, in the more remote parts of the county. As a magistrate, his decisions or rulings were made after a conscientious consideration of the case in question, and by common consent it was admitted they were rendered in a fair and impartial manner. He was regarded as good authority in matters of common law, and was well qualified for writing deeds, wills, agreements or other legal documents, and being a practical surveyor, was particularly adapted for the work of conveyancing. He was county commissioner for several years, was twelve times elected as representative to the General Court, and twice to the State Senate. In 1820 he was delegate to the convention for making or altering the Constitution and, at times, occupied other positions of importance in the Commonwealth. In town affairs he was selectman, assessor, town clerk and treasurer for many years.

In his early life, when church and town were one and the same, he was prominent in the management of the former and interested in whatever pertained to it, and although a man of liberal spirit, he had a strong sentiment of veneration for whatever was spiritual and sacred. He was a great lover of music, and in his younger days taught singing-school in his native town. He composed some music, and at his decease considerable in manuscript was found among his effects. At the installation of Rev. S. G. Dodd an anthem, written by him, was performed by the choir, and was regarded as a very worthy production.

In 1840 Mr. Draper completed a history of the town of Spencer, relating to "facts, incidents and events" recorded therein, with "brief notices and genealogies of families," and three hundred copies of it were published. In 1860 he revised this history with "additions and improvements," to this latter date. The genealogical department contains a list of more than five hundred families, and the history, as a whole, is a work of considerable merit.

Mr. Draper married Lucy, daughter of Captain Samuel Watson, of Leicester, January 6, 1805. She died July 7, 1848. Their children were four daughters, all of whom lived to be married, but only one survived the father.

TOWN-HOUSE.—From 1744 to 1838 all meetings for the transaction of public business, of whatever nature, were held in the meeting-house. At this latter date objections were raised to the further use of this house for these purposes, and the subject of building a town-house was, at the earliest moment, brought before the town.

At a meeting previous to April 1, 1839, a committee was chosen to purchase a lot of land for a town-house, and after consideration a lot four by five rods, on the corner of what is now Main and Maple Streets, the same being a part of the present "Union block lot," was bargained for and purchased. Then at a meeting, the above date, it was

James Draper

voted "that the town take measures to build a town-house, or building for the purpose of transacting Public town business." At a subsequent meeting, however, the purchase of this lot of "4 x 5 rods," and all the business connected therewith, was reconsidered, on account of strong opposition to the location, and the lot upon which the present house stands was substituted. A building was at once contracted for, the same to be "50x40 feet, 2 stories high with cupola," the first floor to be used for rooms for selectmen, weights and measures and other town purposes, and the second floor for a town hall. While this building was in process of construction, town-meetings were held at the taverns of Eleazer B. Draper and Dexter Bemis.

In 1859 a bell was purchased and hung in the cupola, but in 1863 this became injured to such an extent that the selectmen were authorized to replace it by a new one "to weigh not less than 1800 pounds."

In 1871 the town had increased in population to such an extent that the old town-house was wholly inadequate to the wants of the public, either in hall facilities or rooms for the transaction of the town business. Consequently, at a meeting called for the purpose this year, it was voted to build a new town-house, "not less than 60, nor more than 80 feet in width, and not less than 80, nor more than 100 feet in length, 3 stories high, with bell, clock and memorial tablets." A committee of thirteen was chosen to arrange the details and attend to the building of the same. The old house was disposed of, and a large brick structure erected on the spot of the old one, containing rooms on the first floor for the use of town officers, a lock-up and the Fire Department; also waiting-rooms, a hall, reading and library rooms. On the second floor is the main hall, with a seating capacity for a thousand people, and convenient ante-rooms, and the third is occupied as a Masonic hall on the east side, and on the west a large hall for entertainments, with kitchen attached. The cost of this building, with furniture, was $57,870.

Town Farm.—The question of purchasing a farm upon which to maintain the town's poor was under consideration by the town for several years previous to 1825. This year a committee was chosen, with authority to negotiate for the Eleazer B. Draper farm of ninety-six acres, and the Joseph Cheever farm of sixty-six and a half acres, to be used unitedly as a "town farm." After purchasing the farm and furnishing equipments, making repairs, etc., upon the same, the total cost was $6,142.61. On the 28th of March, 1826, "Rules and Regulations" for the government of the inmates and the observance of good order" were adopted and entered upon the town records. In 1841 a new barn "72x38 feet with 16 foot posts" was built. Three years later, and also in 1851, propositions were entertained in town-meeting to dispose of the whole or a part of the farm, and committees were chosen to effect a sale accordingly, but without success. In this latter year the sum of $600 was raised "to build a new house and repair the old one." In 1871 the farm barn was raised, turned one-half round and a cellar excavated under the whole building, and in 1880 the house was enlarged by an addition of sixty by thirty feet, two stories high.

The whole building at the present time contains thirty-two rooms, and the halls, sleeping apartments and waiting-rooms are well ventilated and warmed by steam-heat.

The farm is pleasantly and healthfully located two and a half miles north of the village, and is under a good state of cultivation. The sunny exposure of the "home" and farm buildings, together with an extended southern view, lend a charm to the spot, whether viewed by inmate or visitor. It has been the study of those in charge of this institution to make it a cheerful and comfortable retreat for the town's unfortunates, and their efforts have been attended with marked success.

Fire Department.—Since first the need of better protection against fire was felt the town has been generous and wise in adopting safeguards for preventing or extinguishing fires. In 1830 dwellings and other buildings in the immediate vicinity of the village had become numerous enough to demand provisions for their better security against this element. At a meeting held March 7th, of this year, this subject was discussed and an appropriation of one hundred dollars was made towards the purchase of a fire-engine. This machine was a primitive affair, operated by two horizontal levers, requiring eight persons to "man the breaks," and often five times this number, with buckets in hand, to supply it with water. On the 26th of the same month, a further sum of thirty-five dollars was voted to purchase hose for this engine. A small building was erected on what is now "Union Block" lot, to house the new fire apparatus. This "tub engine" proved of but little value, as the buildings increased in number and size, but was the only appliance for protection against fire for nearly twenty years. In 1849 the town voted the sum of five hundred dollars to purchase a hand fire-engine and the committee, chosen for the purpose, selected a "Hunneman machine," with hose-reel and five hundred feet of hose. The small engine was now abandoned, the house disposed of and a new one erected on the east side of the town-house. A company of forty-five members was organized, and this organization has been well maintained to the present time. In 1851 the first board of fire wards was chosen, viz., Alonzo Temple, David Prouty and Andrew J. Roberts. The fire companies held their meetings in the new building until 1859, when the town granted the department the use of a room in the town-house building for business purposes. In 1871 a Hunneman steam fire-engine and hose-carriage was added at a cost of five thousand eight hundred dollars; and in 1874 a hook-and-ladder truck,

fully equipped for service, provided. A large and convenient room was now fitted up in the new town-house for the storage of the fire apparatus and use of the department. In 1882 a double tank fire-extinguisher was purchased, and in 1883–84 two new hose-reels were added to the equipments.

These additions necessitated a more abundant water supply, and reservoirs were, from time to time, located in convenient places for this purpose, at a cost of more than ten thousand dollars. In 1882 the introduction of public water-works added materially to the efficiency of this department by the location of eighty-eight hydrants exclusively for fire purposes. The manual force aggregates eighty men. Although an expensive necessity, the citizens have freely voted money to sustain the Fire Department, and they fully appreciate the perilous and responsible labors rendered by the firemen. They have expended, since 1849, the sum of sixty-five thousand dollars for engines, hose, equipments and services of men; and for engine-houses a further sum of twenty-five thousand dollars.

WATER WORKS.—In 1882 steps were taken to procure a supply of pure water for the town, as it was feared by medical experts and others that in the thickly-settled portions of the village the water had become contaminated to such an extent as to affect the sanitary condition of the people in these localities. A supply by gravitation was essential, if possible, and "Shaw Pond," in Leicester, was found to be the only body of water of sufficient altitude and supply. The town took this, by charter from the General Court, but subsequently transferred their interest in it to Messrs. Goodhue & Birnie, of Springfield, Mass., and they constructed the works as a private enterprise. In 1884 the town purchased them of the owners for two hundred and forty thousand dollars. The receipts for the six months ending January 1, 1885, were $7,036.97; for the year ending January 1, 1886, $14,171.38; 1887, $15,094.81; 1888, $15,324.79. The whole number of miles of pipe laid to January 1, 1888, was twelve and three-quarters, and at this date the daily consumption, 153,000 gallons.

LIBRARY.—January 7, 1867, "about thirty young people of both sexes," members of the High School, met at the house of Emory Shumway and organized themselves into a society "for social and intellectual improvement," and after the choice of officers proceeded to the further business of adopting a constitution and by-laws. This society was to be called the Young People's Library Association and the object was to establish a High School Library. As a prerequisite to membership one must be a member of the High School and pay a fee as follows, viz.: "For a young gentleman twenty-five cents, and for any lady twelve cents," and at each weekly meeting a tax of five cents for the former and three cents for the latter. These moneys were to be used as a fund for the purchases of the library. One year later it was voted to change the name to the "Spencer" Library Association, and the constitution was altered accordingly. April 21, 1858, by vote of this body, it was made a "Public" Library, with a membership fee of one dollar per year, half-yearly or quarterly in the same proportion. The first installment of books purchased was one hundred and ninety volumes, and the first librarian John W. Bigelow. These books were kept in an ante-room on the floor of the "Denny Hall," but subsequently they were arranged in cases in the hall.

About the year 1862 twenty-nine persons, principally farmers, organized themselves into a body, called the Spencer Agricultural Library Association, and purchased one hundred and ten volumes, relating to farming interests, and these were kept in a case in the store of Temple & Whittemore, they acting as librarians. In 1864 it was thought best to merge this into the Public Library, and, on the 30th of November the following proposition was submitted, at a meeting of the members of both, viz.: "That the members of the Agricultural Association have free use of the Spencer library for the space of four years, as an equivalent for its books." This arrangement was accepted, and their books were transferred to the cases of the latter. Until the year 1869 the funds for the purchase of books were obtained from membership fees and fines and the proceeds of "fairs," to which the public gave generous support.

November 8, 1870, a proposition was made by the Library Association to turn over to the town their books, cases and other property, upon conditions that the town should assume the indebedness of the association, and "keep the library in good condition." This proposition was accepted, and from this date it became the property of the town. At the next annual meeting of the town it was voted that the money known as the "Dog Fund" be expended for standard books, to be added to the library, and their "use be free to the town." This "fund" was annually thereafter appropriated for the use of the library. In 1871 a spacious room was fitted up in the town-house, to accommodate the large number of books already accumulated, and, a few years later, further additions to this room were made for the same purpose. In 1888 a public library building was erected for the use of the library and a free public reading-room. This beautiful building was the gift to the town of Mr. Richard Sugden, a highly respected citizen. It is of brick, with brown-stone trimmings and granite basement. The main room is thirty-two by sixty feet. The front projection is eleven by thirty-nine feet, and at one corner is an ornamental tower fifty-two feet in height. The projection is used for an entrance hall, librarian's and delivery room. In the rear of these is the library and reading-rooms, and these rooms are essentially one, being separated by a screen only. The shelves on the floor are arranged

to accommodate from eight to ten thousand books, while the galleries, which are reached by a spiral stairway, furnish shelf-room for an additional twenty thousand volumes. It is a substantial and enduring edifice, and reflects great credit upon the generous and noble-hearted giver. His portrait, in oil, occupies a prominent place in the main room. This building is called the "Richard Sugden Library." It was completed at a cost of twenty-five thousand dollars. The number of volumes in the library January 1, 1887, was 6,272, and the number of books taken out from March, 1887, to February, 1888, was 16,384.

RICHARD SUGDEN.—Richard Sugden was born in an obscure village near Bradford, England, March 26, 1815. His parents were of humble origin and circumstances, and he struggled hard, from boyhood to early manhood, to overcome these embarrassing conditions of birth. He gave his daily labor for his board alone, while his scanty clothing was obtained from hours of overwork, and it required weeks of such toil to purchase a single garment even. Although he was deprived of the privilege of an ordinary education, yet in a small way he was able to gratify a longing for books and the current literature of the day. There were but two libraries in the neighborhood in which he lived, one containing three volumes, viz. . the Bible, Baxter's Saint's Rest and Bunyan's Pilgrim's Progress; the other was the treasure of an old Welsh cobbler, consisting of about sixty volumes, carefully secured in a box beside his bench. He became a confidant of this man, and as a consequence was privileged to take a book for perusal, once a week, from this primitive library. His method for procuring a newspaper was novel and business-like. Fourteen-pence per copy was required to purchase one paper each week, and he and six comrades formed a club at a cost of two-pence each per week, and in this way obtained the coveted prize.

This ardent love for literary information followed him to manhood, and when the cares of business were laid aside for the day, the book and paper were the solace of his evening hour. Works of history and autobiographies of self-made men were his favorite reading, and now, in his riper years, when the cares of business press less heavily upon him, he scans these works, together with the popular magazines, as eagerly as in his younger and more vigorous days. Blessed with a retentive memory, and being an intelligent reader, he possesses a fund of knowledge which renders him an entertaining companion for social conversation.

At twenty-eight years of age he embarked in an emigrant ship for America, and, after a prosperous voyage of twenty-seven days, landed in New York, March 29, 1845. During the passage he formed the acquaintance of a young Scotchman, whose brother in America had sent him a small hand-book, descriptive of the manufacturing towns in Massachusetts. From this he learned that wire was manufactured in Spencer and card clothing in Leicester. Wire-working being his particular trade, he decided to make one of these two points his first stopping-place. Reaching the latter, he applied for, and obtained work of, H. A. Denny, in a small wire-drawing mill in Cherry Valley, Leicester. Two years later he and a fellow-workman—Nathaniel Myrick—came to Spencer and purchased the small wire-works owned by Roswell Bisco. In 1850 they purchased the machinery of a mill in Cherry Valley in which H. G. Henshaw was interested, and moving it to Spencer, admitted Mr. Henshaw to the firm. The business was expanding quite rapidly, but the feeble health of Mr. Henshaw made this a partnership of short duration. The firm became Myrick & Sugden again, and so continued until Mr. Myrick retired from it in 1870. Harry H., son of Mr. Sugden, was now admitted, but in a few years this firm was dissolved by his death. In 1876 Mr. Sugden purchased the large works of J. R. & J. E. Prouty, in the "lower wire village," and converted the combined business into an incorporation called the Spencer Wire Company, of which he is president and general manager.

From the time of entering upon his business life, the characteristics of his younger days have been steadily developed and strengthened by the experience of years, until now, in a matured manhood, he is able to enjoy, with satisfaction, their fruits.

At the age of seventy-three years he is still hale and hearty, and though he has resigned the details of the business to subordinates, he still gives his personal attention to its general management.

STREET LAMPS.—Previous to 1872 the village was partially lighted by street lamps, erected and cared for mostly by private individuals. This year the town voted "to light all the lamps at the expense of the town," and this mode of street lighting continued, with many additions to the number of lamps, until 1887. A three years' contract was made at this time with the Spencer Gas Company, to light the streets with electricity, and sixty electric lights were distributed through the various parts of the village. The cost to the town for these lights was to be 33½ cents per evening for a single light. From 1872 to 1888 the town expended the sum of $16,000 for street lamps lighting and maintaining the same.

SHADE TREES.—Much interest has been taken by the inhabitants of the older portion of the village in setting out and preserving shade and ornamental trees. The number of growing trees, of all sizes and ages, add materially to the attractiveness of the streets and general appearance of the village. Some of the older ones are majestic. This is true of the three "big elms" near the corner of Main and Mechanic Streets. They were set out on the day the battle of Bunker Hill was fought, and the "oldest inhabitant," at the present time remembers that his father informed him that while engaged in planting these

elms he distinctly heard the booming of the cannon while the battle was in progress. In 1871–72 the town appropriated one hundred and fifty dollars each year "for setting out shade trees in the public streets."

SOCIETIES.—The Ladies' Benevolent Society, connected with the Congregational Church, is the oldest social organization in town, dating from 1821. But one of the original members survives, viz., Mrs. Dennis Ward. The St. Jean Baptiste is the largest society and contains a membership of five hundred and sixty-two and has a relief fund of $10,000. The other societies are the Masonic Lodge, chartered December 11, 1872; the Ancient Order of Hibernians, organized 1872; Royal Arcanum, 1879; Home Circle, Daughters of Rebecca, Association Mallet, Independent Order of Odd Fellows, F. A. Stearns' Post, No. 37, G. A. R.; Institute Canadien-Francaise; Luther Hill Camp, Sons of Veterans; Sons of Temperance' Fanciers' Club, Firemen's Relief Association, Woman's Christian Temperance Union and Patrons of Husbandry. This latter was organized February 11, 1875, with twenty charter members, but in April, 1877, it, like many other granges, gave up its organization. It was re-organized July 27, 1882, and, at the present time, Parsiello Emerson is master.

FARMERS' AND MECHANICS' ASSOCIATION.—August 26, 1884, a few farmers, and others interested in agriculture, met at the town hall to consider the advisability of holding a "Fair and Cattle Show the coming fall," and following this meeting several more were held for a further exchange of opinion upon the project. In the interim an interest developed sufficient to cause an association to be formed and officered as follows, viz.: George Wilson, president, and Thomas J. Comins, secretary and treasurer, and the first fair and exhibition was held October 1, 1884. Meetings and fairs were held annually thereafter and were attended with such success as to encourage the members to apply for a charter, that they might become a State institution. One was granted March 8, 1888, and by it they became known as the "Spencer Farmers' and Mechanics' Association." The following April Nathaniel Myrick, a former resident of Spencer, donated to this body property to the value of $2000, to be used toward the purchase of a park and fitting up the same with a racing course and buildings. Thirty acres of land were bought, lying south of and adjoining the Pine Grove Cemetery, and suitable buildings were erected for the accommodation of agricultural and live-stock exhibits. A good one-half mile track was also laid out and constructed for horse sports and other exhibitions.

The cost of the land, buildings, track and other improvements was about eight thousand dollars. The main building, forty by eighty-four feet, two stories high, contains an exhibition-room upon the ground-floor, the second being used as a dining-hall, and has a seating capacity of three hundred and sixty people. Rooms for a kitchen and steam cooking apparatus are conveniently attached. The crockery service, consisting of twelve hundred pieces, was also a donation from Mr. Myrick, and upon each piece is appropriately inscribed the giver's name. In appreciation of these generous gifts, the grounds are called "The Nathaniel Myrick Park." The premiums paid at the fair held October 4 and 5, 1888, amounted to eight hundred and seventy dollars, and the membership of that date was five hundred and sixty. The officers during the year 1888 were Chas. N. Prouty, president; Thos. J. Comins, secretary; I. L. Prouty, treasurer, and John G. Avery, delegate to State Board.

GAS WORKS.—In 1886 the Spencer Gas Company was chartered, with Luther Hill as president and Edwin Evans as general manager. From July 1, 1887, to July 1, 1888, the works distributed eleven million feet of gas, used for heating, lighting and cooking purposes, and at the latter date had laid twelve miles of gas-pipe.

BANKS.—The Spencer Savings Bank was incorporated in 1871, with Wm. Upham, president, and Erastus Jones, treasurer, and was kept at the office of E. Jones & Co. until January 1, 1876, when it was moved to the banking-rooms of the Spencer National Bank. January 4, 1877, Mr. Jones became president and W. L. Demond, treasurer. The latter resigned the office in June, and Asa T. Jones was chosen in his place, and October 1, 1886, C. T. Linley succeeded Mr. Jones. The deposits January 1, 1875, were $94,647; January 1, 1880, $221,462, and January 1, 1888, $470,266.

The Spencer National Bank was chartered in 1875 with a capital of one hundred and fifty thousand dollars, with Erastus Jones as president; W. L. Demond, cashier and C. T. Linley, assistant cashier. Mr. Demond resigned July 1, 1882, on account of ill health, and Mr. Linley was appointed October 1, 1882, as his successor. The office for the transaction of business was first opened in rooms in the I. Prouty & Co. boot factory, but January 1, 1876, was moved into their new quarters in "Bank Block."

NEWSPAPERS.—In 1872 *The Spencer Sun*, a weekly newspaper, was founded by Stillman B. Pratt, of Marlboro', Mass., and the concern was known as the "Sun Publishing Company." January 1, 1873, Samuel G. Ames became editor and proprietor, and April 27, 1875, he sold the paper and business to James Pickup, who continued it until his decease, June 20, 1887. It was then purchased by H. M. Converse, the present proprietor and manager.

October 10, 1885, the *Spencer Bulletin* was established by A. H. Johnson, manager, and H. N. Carter, editor. On account of failing health Mr. Johnson sold out the business to Mr. Carter, and January 8, 1888, it was merged into the *Spencer Sun*, and the paper was known as the *Sun-Bulletin*. It was, however, soon changed to the original *Spencer Sun* heading.

BAKERIES.—David Girouard established in the fall

of 1873 a bread bakery in Spencer, situated upon Elm Street, south of the railroad track. He has had several partners in this establishment from time to time, but, at present, the business is carried on by the D. Girouard Co. October 29, 1883, this concern started a cracker bakery at the corner of Chestnut and Maple Streets, and are now turning out about twenty-five barrels of crackers daily, which they sell principally to the New England trade. They also manufacture pastry and small bread. This company was incorporated at the above date, and is composed of D. Girouard, P. Berthiaume, D. Parent, A. Dufault, F. Collette and A. Girouard. In June, 1879, B. C. Dustin opened upon Wall Street a bakery for the manufacture of plain and fancy bread, cake and pastry. In 1886 he associated his son with him in the business, as B. C. Dustin & Son, and in 1888 they enlarged their establishment and added the manufactory of confectionery to the works. Their trade is not confined to Spencer, but extends to the Brookfields and Leicester.

PUBLIC PARK.—The town owns a beautiful park of fourteen acres, situated upon the south shore of the "Whittemore Pond." The tract is well-shaded by a heavy growth of native pine trees, and the land slopes gradually to the water's edge. It is encircled with a broad, well-laid drive, and is a refreshing spot to while away a pleasant hour, in vehicle or on foot, in the heat of a summer's day, or after the labors of the day have closed. The trees, with their cooling shade, and the pond, across which can be had a charming sail, make this an attractive resort for private lunch parties or picnics.

This park was the generous gift of Judge Luther Hill. Mr. Hill is a native of Spencer, and has been a public man in the town since he was twenty-five years of age. He was born November 22, 1825, and in 1845 he was appointed postmaster, which office he held eight years, was a deputy sheriff three years, and has been a justice of the peace and quorum, notary public and trial justice for many years. While holding the latter office, he has tried more than six thousand criminal cases and, although not a lawyer by profession, has never spared money or pains to become well-posted in matters of law. He has held many town offices, was chairman of the Board of Selectmen twelve years, and moderator of the town-meetings thirty years. He has been actively prominent in all public improvements, such as new streets, public buildings, railroad, sewers, water and gas works. He is president of the latter company. Mr. Hill is a man of strong likes and dislikes, of temperate habits and a Republican in politics.

LAWYERS.—In 1813, Bradford Summer opened a law office in Spencer, but remained a few weeks only. Subsequently he became quite a prominent and successful lawyer in Boston. John Davis, afterwards Governor, was established here in 1815 for a short time. He was succeeded by William S. Andrews in 1816, and he by Daniel Knight in 1817. Napoleon B. Smith was located here in 1852 and William T. Harlow in 1854. The latter practiced his profession until the breaking out of the late Rebellion, when he was appointed captain of a company of volunteers and he, with it, joined the 21st Massachusetts Regiment. Soon after his return from the war he was appointed assistant clerk of the Superior Court for the county, which office he still holds. Albert W. Curtis opened a law office in 1874 and is in practice here at the present time. There are also Lawyers Jerry R. Kane, D. J. Cowen and C. S. Dodge. In the early history of the town John Bisco, Esq., was a magistrate, and later on James Draper, Esq., and for more than a quarter of a century Luther Hill, Esq., has held that position.

MEN OF NOTE.—Spencer has produced but few men that have become distinguished, socially, politically, or otherwise, outside our own State. The bent and training of her sons has been decidedly of a business nature, and in this school they have become business men that have given her, and themselves, an honorable and extended record. She has, however, sent out two men, whose genius as inventors has been recognized and appreciated far and wide. One made for himself a world-wide reputation.

William Howe, the inventor of the "truss wooden bridge," was born in Spencer, May 12, 1803, and the system designed and made practical by him was the safest and most reliable of any in use in his day. It was not confined to bridges alone, but was extensively used in the construction of roofs to large buildings, depots and other like structures. These wooden bridges and other structures had their day, serving their purpose admirably, and reflected great credit upon the genius which conceived them, but are now superseded by devices in iron, although the principle of the "truss" is still retained. Mr. Howe early became a resident of Springfield, where he died.

Elias Howe, Jr., nephew of William Howe, was born in Spencer, July 9, 1819, and his invention has not only made him eminently great throughout the civilized world, but the principles embodied in the sewing-machine conceived by him, live, at the present time, without a rival.

His early years were passed upon the farm and in the mill, and later on in machine shops at Lowell and Boston. At twenty-five years of age he developed his invention and in 1845 completed his first machine. For ten years he was involved in expensive law-suits, but he eventually substantiated his claims to the patents involved, and from this time was able to enjoy the rich fruits of his genius. Beside the plaster bust of this inventor, the museum contains an oil painting of the old home of the "Howe family."

MUSEUM.—Previous to 1874 certain individuals had private collections of natural curiosities, historical relics and sundry mementoes of the early history of the town. At a town-meeting in March of that year,

they asked the town to accept these collections and hold them in trust for a public museum, which was done, and a board of trustees was appointed to have charge of them. They occupy an ante-room fitted up for the purpose in the basement of the Library Building, and comprise a large collection of Indian relics and many souvenirs of the Revolution and late Rebellion, also a bust of Elias Howe, the inventor of sewing-machine.

INFECTIOUS DISEASES.—Excepting the years 1841, 1853 and 1874, the town has not been visited by any sweeping contagious or other diseases that have given the inhabitants real cause for alarm. In 1777, 1836 and 1849 small-pox prevailed to some extent, and resulted in one death in each of these years. In 1853 the same disease appeared in the central part of the village, causing some anxiety on the part of the neighborhood and town authorities. There were several cases of varioloid, with one case of small-pox which resulted fatally. In 1874 this malady again reappeared, and for a time promised to be of a very serious nature. The selectmen, however, took active measures to prevent its spreading, by isolating the cases that were past removal and establishing a "pest-house" for new ones, or exposures. This building was located two and one-half miles south of the Centre, and was owned by Ira E. Lackey. These vigorous precautions were effectual, and the disease, with one exception, was confined to this hospital. The subjects were mostly from the French population, and the six deaths resulting were persons of this nationality. The town expended on account of this sickness the sum of $3722.21.

In 1778, 1792, 1795 and 1802 dysentery and scarlet fever prevailed, and several families were deeply afflicted, in the loss of children, by their ravages. In the summer and fall of 1841 the former disease caused consternation in the immediate vicinity of the village, the fatality amounting to forty deaths, viz., thirty-two children and eight adults. A protracted drouth of four months was the attributed cause. October 1st a freezing storm of rain and snow set in, and from this time no new cases appeared, and the old ones were convalescent.

In 1860 the pleuro-pneumonia, so prevalent throughout New England, received the closest attention of the town authorities. The regulations of the General Court "to prevent the spread of the cattle disease" were strictly enforced by them. Some cattle were killed, and hay, grain and other food was destroyed by their order.

JOSIAH GREEN.—It has been said that "Josiah Green was the founder of the wholesale *peg* boot manufacturing interests in this country," but whether this be true or not, he certainly has a reasonable claim to being *one* of the foremost in this branch of the boot industry. He was born of humble parentage, in the town of Leicester, August 9, 1792. His early education was necessarily limited, as in the economy of the family the children's time was an indispensable factor in their support, and they could not take advantage, even of the short allowance of the schooling in those days. The greater part of his early life was occupied upon the farm, but in the fall of 1811 he and his elder brother undertook the manufacture of sewed shoes as a business hazard. They began with a capital of five dollars and forty cents, in the house of John Hubbard, a near neighbor, and their mother raised and spun the flax and made the thread used in the manufacture of their work. The leather used for the goods was the splits and remnants of card leather, such as was used by the card manufacturers of Leicester. This was taken to the leather dresser, one Abel Chapman, of Leicester, oiled, blacked and finished ready for use. Their product, during the winter, was a "one-horse load," or about two hundred and thirty pairs, and in early spring these were taken to Boston by Josiah, to be disposed of. This was a large amount of goods to be offered upon the market at one time, and only one party, an auctioneer, was found willing to undertake the sale of them. He purchased six pairs at two dollars and thirty cents per pair, with the privilege of the lot, if the venture should prove a success. It was satisfactory, and he took the balance. Receiving the money for them, Mr. Green purchased leather to make up another lot, and returned home. The second "load" was completed and sold with satisfactory results. In 1814 they made a "two-horse load," designed for the Albany market, but these were sold to some army speculators before reaching Albany, at two dollars and twenty-seven cents per pair. Two years later the brothers found they had accumulated three thousand dollars, and the elder proposed that they retire from business and purchase, each, a farm. The partnership was dissolved, and Nathaniel removed to Maine and invested his money in land, but Josiah continued in the manufacture of boots. This year, 1816, he came to Spencer, and on the 4th of September, married Tamer, daughter of Robert Watson, of Leicester. He had just purchased the farm, which was later on owned and occupied by the late Samuel Adams, using one room in the dwelling-house as his shop. This was his first year for making pegged boots, and for a while all the pegs he used were made by himself, with the aid of a common shoe knife. The plan of disposing of his goods now was a novel one. It was to take them around the country in a one or two-horse wagon, to sell or return when called for, and on his next trip collect for what had been sold, and if the arrangement had been mutually satisfactory, they would assort up the sizes of those unsold and continue the relations. These "sale boots" were denounced in the strongest terms by the village and traveling shoemaker. October 13, 1820, his wife died, and October 2, 1821, he married Sybil, daughter of Deacon Reuben Underwood, of Spencer, and by this marriage they reared a family of eight children. In

Josiah Green

1831 he purchased the homestead upon which he resided until his death, December 28, 1876, and the room in the old mansion now used as a parlor was his work-shop until 1834. This year he built and occupied a small factory opposite his dwelling, on the Great Post Road. It was enlarged at two different times to accommodate an increasing business. His boots had a wide reputation and were extensively known as "Green's boots." He was alone in his business until 1852, when his son, Henry R., and son-in-law, Emory Shumway, were admitted as partners. The latter left the concern in 1856, and was succeeded by Edward, Mr. Green's youngest son. He retired from the firm in 1865, and his interest was purchased by his brother, Jonas U. Green. In 1866 Mr. Green, Sr., retired from the business, leaving his interest to Josiah, Jr., who remained in the firm until his death, in 1886. Jonas U. disposed of his interest in the concern in 1877. In 1887 Henry R. retired, and since then the business has been conducted by Charles H., son of Henry R., and Austin F. Southwick, son-in-law of Josiah, Jr. In 1874 a new factory, four stories high, was erected connecting with the old one to the west of it, and over the main entrance to the new building is the old sign, "Josiah Green's, Boot Manufactory. Established in 1812."

Mr. Green was emphatically a self-made man, and, for the days in which he was in active business life, possessed more than ordinary ability. As an old school man he was among the foremost in his line of trade, and noted for vigor, indomitable perseverance and an iron will. His careful and judicious management enabled him to pass through the several notable seasons of depression and disastrous failures in the business community, commencing with 1837, prepared at any time to meet all his liabilities with one hundred cents on every dollar of his indebtedness. For more than a half-century he was closely identified with the business interests, growth and prosperity of Spencer, and it was a source of gratification, in his declining years, to feel that he had been instrumental in bringing about such a grand result. "Learning the trade" in those days meant a thorough knowledge of the business in all its details, and many of his workmen left his employ to engage in the business on their own account. According to the laws of trade, some were a success and some a failure, and of the former class the most successful of his apprentices were Charles E. Denny and Asa T. Jones.

Boots and Shoes.—The business upon which the town has relied for its growth and support is the manufacture of boots and shoes, although of late years the business of the wire manufactories and also the manufacture of woolen and satinet goods have contributed largely towards the success of the town. Prior to 1872 the manufacture of leather goods was distinctively boots, but since that date shoes have been added, until at the present time they occupy a prominent position in this traffic. Charles Watson was the first to commence in this business. He began in 1809, but his enterprise was not a success financially, and was therefore temporarily abandoned. Josiah Green and his brother were the next to venture in it, and for a full history of the rise and progress of their undertaking, see biography of Josiah Green. In 1820 Isaac Prouty began making boots as a custom boot-maker, and the further history of the firm of Isaac Prouty & Co. will be found under the life sketches of Isaac Prouty and Charles N., his son. From 1835 to 1842 several new firms started out in the business, but the "hard times" of 1837 and other causes, later, proved disastrous to them. In 1838 Charles E. Denny started the business in a small building which stood west of and adjoining the premises of Horace A. Grout.

Mr. Denny afterwards built a boot-shop on the lot now known as the "Guilford place," corner of Main and Linden Streets. In 1850 this building was moved to the present Cherry Street, between Maple and Linden Streets, and converted into a dwelling. He then built what is now a part of the David Prouty factory, and this year he formed a partnership with John G. Prouty, as Charles E. Denny & Co. In 1852 David Prouty was admitted to the firm, the style remaining the same. (See biography of David Prouty for the continuation of the business in this factory until Mr. Prouty retired from it, in 1876.) From 1880 until the present time the business has been carried on by Bemis & Allen.

In 1844 the firm of L. & O. Warren occupied the basement of the Universalist Church, corner of Main and Wall Streets, on the site of the factory of E. E. Kent & Co., for the manufacture of boots. Three years later they disposed of this business to Jeremiah Grout, J. L. Bush and G. F. Grout, who continued it in the same place until 1850. This firm then purchased the carpenter-shop owned and occupied by Temple & Livermore, for joiners' work, and also by William Bush, Jr., for carriage-making and repairing. This shop stood upon the site of the present boot factory of Bacon, Kent & Co. After enlarging the same, they moved their works into it.

In 1865 the Messrs. Grout retired from the business and Mr. Bush continued alone for two years, when H. A. Grout became a partner, under the firm-name of Bush & Grout. December 21, 1875, this building was destroyed by fire, but was rebuilt and occupied by them until 1880, when they disposed of the property to Prouty & Bacon, and this factory has been occupied by the firm of Bacon, Kent & Co. to the present time.

In 1850 Charles Watson, Jr., Dexter and Lorenzo Bemis began the manufacture of boots in the basement vacated by Grout, Bush & Co., and while there they erected a boot-shop upon the site of the "Drury factory," which, at that date, was the largest building used for this purpose in the town. During 1857 this firm dissolved, and in 1858 Charles & George Wat-

son commenced the business again in the same factory, and continued it until 1864, when they dissolved partnership. Charles Watson remained alone until 1866, at which time he retired on account of failing health.

George Watson purchased the building erected by Howland & Merritt in 1836 for a clothing manufactory and afterwards used as a store, and made suitable additions and changes for a boot factory. He formed a partnership with J. Edward Bacon, and they began the manufacture of boots here in 1865 as George Watson & Co. Mr. Watson died in 1866, and Mr. Bacon continued the business until 1867, when he, in company with I. Rich Kent, of Calais, Vt., purchased the property, and carried on the business under the firm-name of Kent & Bacon until the decease of Mr. Kent, in 1875.

In 1871, '72 and '73 this firm, in connection with H. G. Lamb, of Charlton, Mass., manufactured women's, misses' and children's shoes in a small building, next door (east) to this factory. In 1876 Mr. Bacon entered the firm of Bush & Grout, under the firm-name of J. E. Bacon & Co., and remained with them one year. In 1878 he returned to his old factory, and took as a partner Van R. Kent, the style of the firm being J. E. Bacon, and they continued in business until 1881. This factory remained unoccupied until 1885, when A. B. Bacon and Emory F. Sibley formed a co-partnership and began the manufacture of boots in it. December 6, 1886, this building and contents were destroyed by fire, and was a total loss. (For the rise and progress of the business of Asa T. Jones and E. Jones & Co., see biography of Erastus Jones.)

In 1850 a building was erected upon, or near the site of B. C. Dustin & Son's bakery, Wall Street, by Cheney Hatch, of Leicester, for a boot manufactory, and was used for this purpose by William L. Powers and George D. Hatch, under the firm-name of Powers & Hatch. After three years of unsuccessful labor, they retired from the business. In 1857 George H. Livermore and D. A. Drury formed a partnership, known as Livermore & Drury, and commenced the same business in this building.

In 1860 they purchased the Universalist Church property, fitting it up into a boot factory, and moved their works into it. They remained here, however, but one year, closing up their business in 1861. Manufacturing was carried on one year, in the Powers & Hatch building, by Prouty, Bigelow & Co.

In 1867 D. A. Drury and Frank E. Dunton entered into partnership under the style of D. A. Drury & Co., and started the boot business in the factory of the late Charles Watson, and this firm continued to manufacture here until the building was destroyed by fire, in 1874. Mr. Drury erected a new building, and for six years following his partners were Christopher Prince, Theodore Green and Walter Eldredge. He enlarged the factory and works twice during this time, and for the last two years of his manufacturing he was alone in the business. The building was unoccupied until 1886, when, during the labor troubles of that year, a co-operative boot and shoe company was organized and used it as their manufactory for four months, after which they moved to smaller quarters on Cherry Street, between Mechanics and Maple Streets. In August, 1888, at a meeting of the stockholders it was voted to close up the business and "dispose of it to the best advantage." This year the "Drury building" was purchased by Bacon & Sibley, and this firm are carrying on the boot business in it at the present time.

In 1867 Dexter Bullard, John Boyden and Isaac Prouty & Co. became partners in the business, under the firm-name of Bullard & Boyden, and they occupied the factory built by the latter parties in 1856. In 1869 J. W. Temple purchased the interest of Isaac Prouty & Co., and the style of the firm was changed to Bullard, Boyden & Co. In 1876 Mr. Boyden retired and the concern became Bullard & Temple. In 1883 Mr. Temple retired from the business and a new firm was formed by Mr. Bullard, F. G. Mullet and F. A. Rice, under the firm-name of D. Bullard & Co., and this concern continues the same at the present time.

In 1863 the boot firm of Shumway, Temple & Co., of Warren, Mass., moved their works to Spencer, and into the Livermore & Drury factory, which had been purchased by Mr. Shumway. This concern manufactured here for two years, when Mr. Temple left the firm. It was continued by E. Shumway & Son nearly two years longer, when the business was closed up, and in 1868 the property was sold to Edward E. Kent. Mr. Kent formed a business connection with David Prouty & Co., under the style of Proutys & Kent, and they carried on the manufacturing of boots from 1868 to 1874, at which time the Proutys' interest ceased and was purchased by Charles N. Myrick, and the firm-name changed to E. E. Kent & Co. Mr. Myrick remained a partner two years, when he retired on account of ill health, since which time Mr. Kent has been sole owner and proprietor. There are, then, eight boot and shoe manufacturing establishments in the town at the present time.

In 1837 the value of leather goods made was $106,496; in 1845, $93,100; in 1865, $835,800; in 1875, $2,185,000; in 1880, $2,347,000; and in 1885, $2,617,736. The total value of all the goods, of whatever nature or kind, made in town in 1885 was $3,627,467.

NUMBER OF BUSINESS FIRMS.—The number of private firms in Spencer in 1885 was eighty-three and one corporation with a capital stock of $75,000. The capital invested in these establishments, including plant, was $1,580,794.

ISAAC PROUTY.—No family name in Spencer is so common and none embraces so great a number of people as that of Prouty. The family sprung from

Lewis H. Roudy

Charles N Pierce

one Richard Prouty, who resided in Scituate, Mass., in 1667. Isaac Prouty is the fourth generation from Richard, and is the subject of this sketch.

He was born December 9, 1798, and was the founder of the well-known boot manufactory of Isaac Prouty & Co. In 1820 his occupation was making boots to order, from measure, in a small room in his own dwelling-house in North Spencer, so called. Little by little his work increased until he found it necessary to employ help to meet the demands of "the trade," and soon was forced to build a small one and a half story building in which he could extend the facilities for manufacturing. This building, together with a barn and other store-houses, subserved his purpose until 1855. He had subsequently purchased the homestead of Rev. Levi Packard in "the village," and this year he caused a factory to be erected upon the westerly part of this lot, and in 1856 occupied it for his business and the dwelling for his residence.

This factory, for those days, was a spacious one, being thirty by sixty feet, with three stories and a basement. The system and management was now thoroughly reorganized, and a partnership formed with two of his sons, Lewis W. and George P., under the firm-name of Isaac Prouty & Co. With the aid of machinery, which they now added, they were, in a great measure, able to supplant hand labor most advantageously.

This was really the first aggressive step taken by Mr. Prouty, looking towards an extension of business, and the success which in the following six years attended the undertaking proved the wisdom of it. His aim was now to build up and develop a large manufacturing enterprise, and in this effort he was heartily seconded by Lewis W., who had become superintendent and business manager under his father's direction.

In 1862 it became necessary to increase the factory capacity, and for this purpose they purchased the "Mason property" and erected a building forty-two by one hundred and four feet, five stories with basement, adding an engine and boiler to run the works by power. The old firm moved into this factory in January, 1864, and Charles N., a younger son, was admitted to the firm, the firm-name remaining the same. By these improvements and with the addition of valuable room and machinery adapted to power, the concern made a radical change both in mode and facility of doing business. Mr. Prouty was early convinced that machinery was eventually to be an important factor in cheapening the cost of manufactured goods, and also in enabling the manufacturer to produce a greater quantity in a given time, and he was foremost to introduce such machines as promised good work and quick results. He lived to see their enterprise outgrow these accommodations and to plan for a further enlargement of the factory of one hundred and thirty by forty-two feet, with new engine, boilers, etc. But while in the midst of these improvements he was taken sick, and died after an illness of seven days. Five days later his son, Lewis W., followed him.

Mr. Prouty was noted as a careful and shrewd business man, giving his individual attention to his entire business, watching closely every detail, and scanning as closely the economy of the various departments in their use of stock and other materials. He thoroughly believed in the old maxim, "economy is wealth," and to practice it was one of the important distinguishing features of his business life, and was a strong corner-stone to that structure, Success, which he in his life planned with much care. He was one of the most unpretending of men, and to an unfamiliar observer was indifferent to what was transpiring around him, but in matters of business, or socially, he was quick of hearing and keen of vision. and it was a matter of trifling importance that escaped either. His customs and habits were those of the New Englander of an earlier date, and he persistently ignored the conventionality of the people during the latter days of his life. He clung tenaciously to the social and domestic habits formed in early life, but in his business he was decidedly modern and progressive. He was a tireless worker, and this characteristic was prominent from the commencement of his business enterprise. He died at the age of seventy-three years, but remained vigorous and attentive to the demands of business up to the beginning of his last sickness.

Charles N. Prouty was born October 6, 1842, and he remained at the homestead until he reached the age of seventeen years. At this age he was employed as clerk in the country store of Grout, Prouty & Co., and the experience gained there, in a year's service, by contact with the people and matters pertaining to business, he regards as the first and valuable step in his business education. From eighteen to twenty years of age he attended school at Wilbraham, Mass., and at the close of his last school year returned home, and was admitted a partner in the firm of Isaac Prouty & Co. Four years previous to the death of his father and brother, early in 1872, he acted as general superintendent of the labor department of this manufactory, employing the help and having the charge of the manufacturing interests generally.

The death of these two business members of the firm following so closely upon each other were events of extraordinary importance to the surviving members, and how to meet the situation and overcome it was their first care and thought. Unexpected responsibilities, with new cares and burdens, were suddenly thrust upon them, but they *must*, if possible, show themselves equal to the emergency. It is true that each had ably filled a position in the prosecution of the business thus far, but to the knowledge of the markets, for buying and selling, the financial management and the relationship be-

tween manufacturer and customer, they were strangers, as these duties had been the exclusive prerogative of father and brother, now gone.

They at once reorganized the concern, and it consisted of George P., Charles N. and Jason W., a younger brother, and they still retained the old firm-name of Isaac Prouty & Co. Each entered upon his duties full of confidence and hope, and each took a position in the management of the business where he thought he could best promote the interests of the concern. Many of the important details were assumed by George P. and Jason W., while by common consent the general management fell to the lot of Charles N. Under the circumstances this was a difficult task for him to perform, but as time passed on, and he became more familiar with the new duties, he gave evidence, by his management, that he was abundantly able to assume the trust so suddenly imposed upon him.

The business received a fresh impetus under this new order, and in a short period of time it became necessary to increase the facilities, by additions and extensions, in both buildings and motive-power. These have been made from time to time, until at present the building containing the boot and shoe departments measures 457 feet in length by 42 feet in width, and is five stories high, with basement. There are also two large brick store-houses, for leather and manufactured goods, and still another one of brick, used for the manufacture of boot and shoe boxes, lasts, etc.

The main building is divided into fire-proof sections, and the whole establishment provided with the latest improvements as safeguards against fire. It is lighted by the incandescent electric light, and the motive-power for the whole works is supplied by a 250 horse-power engine, and four 100 horse-power boilers. In 1872 this concern turned out 20,000 cases of boots, valued at $500,000, and in 1886 the value of the boots and shoes combined was more than $2,000,000.

Mr. Prouty married Jennie, daughter of Selby Richardson, of Spencer, May 25, 1864.

ERASTUS JONES.—Erastus Jones was born September 11, 1825. His father, Dr. Asa Jones, was a native of Charlton, Mass., where he studied medicine, and, in 1811, began his practice in Spencer. Here he became a physician of considerable note. Asa, his oldest son, commenced the manufacture of boots in Spencer in 1841, in the chambers of the "Livermore House," corner of Main and North Streets. Four years later he moved these works to his factory situated upon the site of the residence of Asa T. Jones, son of the elder member of this firm. Erastus, the younger son, and subject of this sketch, spent several years in his brother's employ, learning the trade and the details of the business. In 1846 he was made a partner, under the firm-name of A. T. & E. Jones. Although he had hardly attained his majority when he took upon himself these duties and responsibilities, yet his early business training and habits of industry were an assurance of his future success.

This partnership continued until 1862, when Asa T. retired from the business, and the style of the firm was changed to E. Jones & Co., by the admission of Hezekiah P. Starr as partner, and, in 1871, Frank E. Dunton was admitted, without change in the firm-name. In 1860 the rapid increase of business caused a demand for more room, and the present factory of E. Jones & Co. was erected. Several important additions have been made to this building from time to time. January 1, 1886, Mr. Starr retired from the concern.

Mr. Jones is a man of marked characteristics, in both his business and private life, and his kind and generous disposition, through long years of intercourse, has endeared him to his business associates and numerous employés. They have found him to be a man of few words, but yet enough to convey an unmistakable meaning, although spoken in an unobtrusive way. He is quiet to a fault, if that be possible; nevertheless, there is an energy in this quietness which has made his business life a success, and in a more private way has established for him a well-merited reputation for shrewdness and sagacity. Being a man of few words, subjects under his consideration have always been carefully weighed and his opinion given only after the most mature deliberation. His honor as a business man has never been doubted, and, as a private citizen, he commands the respect of all.

He is president of the Spencer National Bank, and for many years has been treasurer of the town. He has been Representative to the General Court, and in various ways has occupied positions of honor and trust. His life, from the beginning of his business career, has been one of untiring industry, and, with few exceptions, he has given it his daily care and management. This fidelity has returned to him a handsome fortune, from which many an honest, needy object has found pecuniary relief. Subscriptions, gifts and donations have been bestowed without number, although the public have had little or no knowledge of these numerous benefactions. His motto most emphatically is,—"Let not thy left hand know what thy right hand doeth."

Mr. Jones was married to Mary I. Starr, of Thomaston, Me., June 5, 1850.

COTTON AND WOOLEN INDUSTRIES.—"Clearing up" a spot to build a log-house or other rude structure for a place to live, then planting and gathering in his crops was the *first* business of the pioneer; next came the indispensable grist and saw-mills, and when the housewife began the manufacture of "homespun," the fulling-mill became a necessity also. The former were located upon small streams in various parts of the town, while the latter, two in number, were

Erastus Jones

situated at the foot of "Sumner Hill," just below the present grist-mill of T. J. Bemis.

The first record of these fulling-mills is in 1791, although they were probably established at a much earlier date. One, at a later date, was owned by William Sumner and one by Willard Rice. This year —1791—the property and industries of the town were made returnable by law to the Secretary of State, and was as follows, viz.: Whole number of dwellings and other buildings, 186; 6 grist and 6 saw mills, 2 fulling and all other mills and 1 pot and pearl-ash works.

In 1811 the number of buildings remained the same, but one "Tan House" and one "other mill" was added. This "other mill" was probably the one built in 1810 and known as the "Green Factory," and this was the first business enterprise of any magnitude started in the town. This was built for the manufacture of woolen goods and was owned and operated for several years by Jabez Howe, Isaac Jenks and Willard Rice. In 1825 this became the property of Willard and Horace Rice, and was run as the Spencer Woolen Company. From this period until 1837, when it was destroyed by fire, the ownership was fluctuating, but it was owned and run principally by Reuben Whittemore, Amos Brown and Augustus Rider.

Connected with this mill was another one standing upon the site of the present "Upham and Sagendorph Mill." This was originally a "trip-hammer" shop, for the working of iron in some form, but was converted into a woolen-mill about the time the "upper" one was built, and this was known as the "lower mill." The product of these two "four set" mills, containing thirteen looms, for the year ending April 1, 1837, was thirty-four thousand yards of woolen cloth, valued at eighty-seven thousand dollars.

The "upper" property lay in ruins until 1840, when it was purchased by Alonzo Temple, and he erected a stone factory upon it. In 1841 Silas Eldridge bought this property and formed a co-partnership with his brother Nathaniel and William Henshaw under the firm-name of Silas Eldridge & Co., for the manufacture of cotton cloth and satinet warps.

In 1845 Nathaniel Eldridge left the firm, and in 1849 Silas Eldridge retired from it and active business. The business was continued by Mr. Henshaw until 1852, when the factory was again burned. In 1857 Mr. Henshaw built a grain and grist-mill in its place, and he, together with James Capen as partner, occupied the premises until 1870, when Mr. Henshaw retired. The business on this property has remained the same up to the present time, but with changes in managers and ownership.

In 1843 Thomas H. Shorey purchased the property of the "lower mill" from Whittemore & Brown, and in 1844 he formed a partnership with Henry J. Lyman for the manufacture of satinet goods, but in 1845 Mr. Shorey purchased the interest of the latter, and the firm dissolved. In 1846 this mill was operated by Baker, Sibley & Co.; in 1847 and '48 by Baker & Bellows, and from that time until 1860 by Mr. Shorey. In 1866 and 1867 the work was carried on by Peel & Meyers, and from 1868 to 1871 by Joseph Peel. During these years the machinery was employed in the manufacture of satinets. It was now in a dilapidated condition, and standing until 1875, became almost a ruin. This year the privilege was purchased by Upham & Sagendorph, and they erected a three-set mill upon the site for the manufacture of fine woolen goods and fancy cassimeres. Jan. 1, 1880, George P. Ladd purchased the interest of Mr. Sagendorph in this property, and it was run by Upham & Ladd until the partnership was dissolved by the death of the former, since which time Mr. Ladd has been proprietor and sole manager.

A short distance below this mill, and standing upon the same stream, was a partial ruin of one of the earlier grist-mills. In 1832 a new building was erected near the old one by Amos Brown, and used as a grist and flouring-mill until 1841, when the property was sold to Samuel G. Reed, of Brookfield, and converted into a manufactory of wheels and wheel stock. He made quite extensive improvements on the premises, by enlarging and repairs, for the better accommodation of his works. He continued this business until 1845, when it was closed up, and in 1846 the privilege and property was purchased by Henry J. Lyman. The two original mills were moved away and used for dwelling and store-house, and Mr. Lyman built a two-set mill upon the old location, taking Mr. Upham as a partner in the business. For a further history of this mill, see biography of William Upham until his decease, after which this property passed into the hands of Mr. Ladd, and he is carrying on the business at the present time.

In 1840 Edward Smith, of North Brookfield, Mass., formerly in the employ of Samuel G. Reed, built what was afterwards known as the "Draper Mill," in which he attempted the manufacture of cotton batts and wicking in a very small way, but the business was not a success. This building was then occupied by L. J. Knowles and Warren H. Sibley, under the firm-name of Knowles & Sibley, and they carried on the manufacture of cotton warps in it until 1849, when they closed up their business here and transferred their works to Warren, Mass. In 1850 Eli J. Whittemore leased it for a term of three years for a manufactory of carriage-wheels and spokes, and December 15, 1852, the building was considerably damaged by fire. In 1854 it was again changed to a satinet mill, and as such was run one year by Wm. Stanley and George C. Holden. From 1855 to 1868 Mr. Stanley was interested in the mill, operating it at times in connection with Mr. Upham, and then again on his own account. In 1869 Mr. Upham became associated with Hugh Kelley in this property, and it was thereafter known as the Spencer Woolen Company. At the death of Mr. Upham, Mr. Ladd

took his interest in the business, and is carrying on the works at the present time in connection with Mr. Kelley.

When Nathaniel Eldridge left the concern of Silas Eldridge & Co., in 1845, he went to what is now called "Westville," made a water privilege, and built a mill for the manufacture of satinet warps. He continued in this mill until 1854, at which time he was obliged to close up his affairs. This property, after remaining idle for some time, was purchased by W. G. Fay, G. B. Dewing and John Gilman, of East Brookfield, and this company manufactured denims and balmoral skirts for a season, when Mr. Gilman bought the interests of Fay and Dewing, changing the works to denims and batting. In 1871 he sold the mill and privilege to Upham & Stanley, and they changed the machinery for the manufacture of satinets. This relation between these parties remained until Mr. Upham's death. These several mills contain eleven sets of machinery and one hundred and one looms. They are run under the direct management of Mr. Ladd, he being the sole owner of the "Valley Mill," and one-half owner in the remaining three. The production aggregates one hundred thousand yards of fine cassimeres per month.

HON. WILLIAM UPHAM.—William Upham was born in Brimfield, Mass., February 27, 1825. His parents were William and Nancy Smith Upham, and the father died when William, Jr., was but two and one-half years old. When four years of age, he was taken by a kind friend of the family, Deacon Jacob Bishop, with whom he lived, receiving the care and love of a son, working on the farm and receiving the benefit of the district school until sixteen years of age. Later he attended school at Warren Academy, and until twenty years of age he spent the fall and winter months at school or in teaching.

He came to Spencer in 1845, and entered the employ of his brother-in-law, Henry J. Lyman, as a common mill-hand. In 1846 he formed a co-partnership with Mr. Lyman, in the manufacture of satinet goods in a small way. In 1853 he purchased Mr. Lyman's interest in the business, and continued it, enlarging the capacity of the mill from time to time until 1865. He then disposed of the property and business to E. D. Thayer, of Worcester, to engage in an enterprise in Boston; but in 1868 he returned to Spencer, and leased the mill but recently sold, for a term of three years, at the expiration of which he re-purchased it. This was known as the "Valley Mill," and in 1874 George P. Ladd became one-half owner in this property. For several years Mr. Upham had more or less business connection with William Stanley in what was known as the "Draper Mill;" but in 1868 he formed a partnership with Hugh Kelley in this mill, which was thereafter known as the "Spencer Woolen Company." Two years later he associated himself again with Mr. Stanley, and they purchased the "Westville" property, replacing the cotton with woolen machinery, and commenced the manufacture of woolen goods. In 1876 he entered into partnership with Noah Sagendorph, and they erected the mill known as the "Upham & Sagendorph Mill," and their business relations continued until 1880, when Mr. Sagendorph withdrew from the firm, and was succeeded by Mr. Ladd. At the time of his death Mr. Upham was the head and general manager of these several mills. The product of the "one-set" mill in 1845 was about five thousand yards of goods per month, while in 1880, under his judicious management, the production of the above mills reached a total of one hundred thousand yards monthly.

Mr. Upham enjoyed the confidence of all who knew him, and when the citizens honored him with any office in their gift, they felt that the duties of that position would be faithfully and conscientiously performed. He was elected to town office in 1858, and from that date he served the town in most of its important offices. Two years he represented this district in the General Court, and one year was a member of the Senate. He was elected to a seat in the Executive Council, serving the first year with Governor Alexander H. Rice, and the second with Governor Thomas Talbot. He filled these positions with credit to his constituency and honor to himself. He always took a deep interest in the political affairs of the town or State, and would never countenance dishonorable means to reach a desired end. He was fortunate in the position he occupied with his employés, as he was scrupulously exact in his treatment of them, never giving offense, but, on the contrary, manifesting at all times the kindest regard for their welfare. This friendly interest, on his part, was the natural overflow of a sympathetic nature, and he easily won their confidence and affection. As a citizen, he gave liberally of time and money to such local enterprises or improvements as would promote the best interests of the town; and as a neighbor, his words of cheer and encouragement were not without a potent influence.

His temperance principles and habits were formed in early youth, and through all his life he was a consistent and energetic worker in the cause. He was thoroughly in sympathy with the principles of the prohibitory liquor law and favored a rigid and impartial enforcement of it. Being a member of the Congregational Church, he took a deep and active interest in its welfare, and gave generously towards its support. His benevolence, in church or out, was a distinguishing feature of his character. Mr. Upham was a member of the Raymond California excursionists who left the East in May, 1882, for San Francisco and surroundings, and at a re-union of the party at the Palace Hotel, on the eve of their departure for home, June 13th, he was stricken with apoplexy and died on the morning of the 14th, at the age of fifty-seven years, three months and seventeen days. Mr.

William Upham

Upham married Lucretia H., daughter of Wm. Pope, Esq., of Spencer, June 28, 1853.

Some years previous to 1825 (there is now no way of fixing the precise date) a small mill for the manufacture of linseed oil was located a few rods below the T. J. Bemis grist-mill. One Gardner Washburn was accidentally killed while employed there, by being "caught by a rope which was used in raising the press-beam." In 1833, or earlier, this property was owned and occupied by Willard Rice, and he changed the location of the works by removing the dam and buildings farther "down stream," making what is known as the privilege of the "Livermore Box Manufactory." Later on, this oil-mill was converted into a woolen factory, with one set of machinery, and from 1837 to 1839 the works were run by Chapin & Prouty. Near the close of the latter year it was partially destroyed by fire.

In 1841 Danforth Burgess bought the property, repaired the buildings, and fitted them for the manufacture of cotton wadding and batting, and, with the exception of the years 1846, '47 and '48, in which Dexter and Lorenzo Bemis were partners with Mr. Burgess, he owned and operated these works alone, until 1851. In 1853 Winthrop Livermore started the business of manufacturing boot, cloth and other boxes at "Howe's Mills," two and a half miles south from the post-office, introducing machinery to do the work usually performed by hand. He remained here until 1860, when he moved "to town," and became owner of the above privilege, erecting new and suitable buildings for the better accommodation of his increasing works. He was identified with this industry until his death, after which his son, Warren J. succeeded to it. The latter continued to carry on the business here until 1886, when he moved the machinery in these works to a brick building on the premises of Isaac Prouty & Co., and carries on the business there at the present time. The old works are unoccupied. The largest yearly production of Mr. Livermore's works was 100,000 boxes, consuming 2,000,000 feet of lumber.

One of the first saw-mills erected in the town was known as "Howe's Mill," and was situated two and a half miles southerly from the village. The working of lumber has been carried on there until the present time. The location of the mill, however, has been changed and also the ownership, but it has never passed out of the possession of the Howe family. Ebenezer Howe is the present owner and proprietor. He has been engaged in the manufacture of cloth, boot and shoe boxes for twenty-five years or more, and has produced 30,000 annually, using nearly 750,000 feet of lumber.

MANUFACTURE OF LEATHER.—Tanning and currying was an enterprise commenced in the early part of the present century and carried on by Ebenezer Mason. These works were located upon the site of the "Heywood block." Mr. Mason was succeeded by Thomas Pierce, who occupied them from 1825 to 1832, then Pierce & Barnes from 1833 to 1834 and Barnes & Muzzy in 1835. Following them, some years later, was Joseph W. Morse and Josephus Muzzy, under the firm-name of Morse & Muzzy. Their shop was located at the corner of Lake and Powers Streets, and was owned by the former. They carried on the business here until the building was destroyed by fire, in 1858. In 1859 a new one was erected, and the works were again operated by Mr. Morse until his decease, in 1860. In 1862 Edward E. Kent leased the establishment for one year, and in 1863 purchased it, carrying on the same business until 1864, when he turned it into a boot-factory. It was, after this date, operated by Mr. Kent, then by Kent & R. S. Watson, and lastly by Mr. Watson alone, until his death, in 1875. The building was then converted into a tenement-house, and is now known as "Condrick's block."

In 1851 Edward Proctor began currying rough leather in a shop near his present residence, and continued the business until 1868. In 1864 Isaac Prouty & Co. erected a building for this enterprise on North Street, which was run about two years, when it was closed up and the building moved away and this was made into a dwelling.

In 1837, 800 hides were used, valued, when finished, at $3,000; in 1845, 2,000 hides, at $4,500; and in 1865, 3,200 hides, valued at $19,000.

Boot and Shoe Heels.—In 1865 a Mr. Rice started a small business in the manufacture of heels for women's, misses' and children's shoes. About this time William A. Barr, of Spencer, made eight dollars' worth of these goods, and taking them to Lynn realized sixty dollars for the lot. He returned home, and on October 1st of this year bought Mr. Rice out and continued the business, which, under his management, has proved to be a prosperous one. On October 1, 1883, he took his son into partnership, and the firm has been, since that date, William A. Barr & Son. They have a manufactory now, sixty by forty, three stories high, well equipped with rollers, presses and all the latest improved machinery, with steam-power for the business, and employ fifty girls in the works. Their sales have reached seventy thousand dollars annually. In connection with this business they have oil extracting works, and the sales of "chip and naphtha grease" have reached twelve thousand dollars annually.

WIRE WORKS.—From a very small beginning, the wire industry has grown to be an important enterprise in the town. At the commencement of the War of 1812 with England, the importation of wire ceased, and "Yankee ingenuity" was called into requisition. The card-factories of Leicester promised to be a market for the article, and being convenient and near at hand, the genius of some

of the citizens of Spencer was exercised with very favorable results. The first experiment in this line was by Windsor Hatch and Charles Watson, about 1812, at the house of Jacob Watson (later known as the Warner Livermore house), and the wire was drawn from two tubs by hand. This was a small seed from which a larger plant was to spring in the future. About this same date Elliot Prouty began the business below what is now the "Sugden lower mill," but it was not until 1820 that wire-drawing became an industry, and then, only in a small way. Mr. Russell Prouty commenced it this year, in connection with his brother Elliot, and they were followed by Foster & Roswell Bisco, and in 1847 Myrick & Sugden succeeded the Bisco's. Below, on the same stream, was the small works of Eli Hatch, in 1830, and in 1840 this mill passed into the hands of David Prouty, and in 1846 he sold the same to Liberty Prouty. Mr. Prouty's sons, Jonas R. and Joel E., succeeded him, and they built up a large and prosperous business after a labor of about twenty years.

In 1876 this concern was consolidated with that of Myrick & Sugden, and made a stock company, called the Spencer Wire Company. In 1837 the total product of four wire-mills was 19 tons, valued at $10,000; in 1845 two wire-mills, 32,000 pounds, value $8000; and in 1888 the product of the consolidation was 1200 tons, valued at $160,000.

Scythes, Hoes and Cutlery. — Joel Wright came to Spencer in 1809 and began the manufacture of scythes, and in 1812 Ziba Eaton came to work in his manufactory for him. The latter purchased the works of Mr. Wright, continuing the scythe business and, a little later on, adding hoes and cutlery. These works were situated near the "Wright house," northeast from the "Upper Wire Village." Mr. Wright soon after started the manufacture of hoes and cutlery. Eli Putnam was early connected with this business. These works were closed about 1853. In 1837 eighteen hundred scythes were manufactured, valued at $1200, and in 1845 two thousand and forty scythes, at a value of $1530. In 1850 carriage-springs were manufactured in one of these shops by Sibley & Belcher.

Powder.—The manufacture of powder was one of the early industries of the town, and was first carried on by Isaac & Lemuel Smith, from 1812 to 1815; by the latter from 1815 to 1824; by Smith & Walton Livermore from 1824 to 1831; and by Livermore & Lewis Bemis to 1835. For two years Mr. Bemis carried on the works alone, and from 1838 to 1851 his partner in the business was Edward Hall, the firm being Bemis & Hall. In 1837 there were manufactured at the two mills 162,500 pounds of powder, valued at $14,500; in 1845 one mill produced 132,500 pounds, valued at $15,000; and in 1865 the production was valued at $12,500. But little, if anything, was done at this business after this latter date. During the year 1840 two mills blew up, killing three persons, and in 1853 another explosion took place, in which five men lost their lives.

Centennial.—The centennial of our national history was appropriately observed by a grand display of various organizations in the town, on parade; an address by Hon. George H. Loring, and a public dinner.

By-Laws.—Previous to 1875 by-laws had been adopted by the town at various times, but on the 2d of November of this year a full code, regulating the town, was accepted in town-meeting, and on the 8th following were approved by the Superior Court. Additional ones were made and approved in 1887 concerning dogs, and minor alterations were made in them in 1881.

Salaries.—The number of salaried persons employed during the year ending June 3, 1885, was nineteen, and the amount of salaries paid was $16,969.

Wages.—The total amount of wages paid in the business establishments for the year ending as above was $694,908, and the average number of days of actual running time worked in sixty of them was three hundred and seven.

Growth.—In the census of 1880 there were thirteen cities and towns in the State which presented most striking instances of growth, independent of annexation. Upon this list Spencer stood third, and her rate of gain was eighty-eight and a fraction per cent.

Old Customs.—One of the oldest customs of the town was to allow the swine, horses and cattle of the inhabitants "to run at large, yoked and ringed as the law directs" Strangers' cattle were charged two shillings eighteen pence per head, and sheep one shilling, "to run on the Common."

In 1757 it became a question how the voters should be notified of the town-meetings, and it was decided that "in the future they be warned by the constable going from house to house;" and at a later meeting, by vote of the town, they were allowed "to keep on their hats while in meeting," if they pleased to do so.

In 1759 the ministerial and school lands were sold, the former bringing £100 14*s.* or $357.67, and the latter £130 16*s.* 10*d.* or $436.14. On the 6th of May, 1822, these moneys were divided and loaned as follows, viz.: To Jeremiah Watson, $183.00; to Nathan White, $152.87; and, being the ministerial fund, these amounts were made payable to the Congregational Society. Of the school fund $113.33 was loaned to Joseph Prouty; $93 33 to Estate of Elisha Prouty; $165.28 to Charles Watson, and $64 41 to John Muzzy.

In 1794 the General Court ordered a survey of the town to be made, and the work was let out to the lowest bidder. John Sumner, being the lowest, was made chief, at 5*s.* 6*d.* per day, and Levi and Zerub-

abel Baldwin were assistants, at 2*s.* 8*d.* and 2*s.* 5*d.* per day, respectively. In 1830 a second survey was made by William Baldwin, under the same authority.

SMALL INDUSTRIES.—Braiding palm leaf hats and labor upon hand cards were about the only industries that furnished employment for the women and children in the early part of this century, by which they were able to earn a little "spending money" for extra occasions. Hand cards were manufactured in Leicester from 1758, and until machinery superseded the nimble fingers, the setting of card teeth by hand constituted the "small work" of many families in Spencer. This was especially children's work, and no "time off" could be had by either boy or girl until the "stent" at card-setting had been performed.

Braiding the palm leaf was more of an industry, and was "farmed out" to the workers of straw in the same manner as were the cards. The number of palm leaf hats manufactured in Spencer in 1837 was twenty-nine thousand eight hundred, valued at seven thousand dollars.

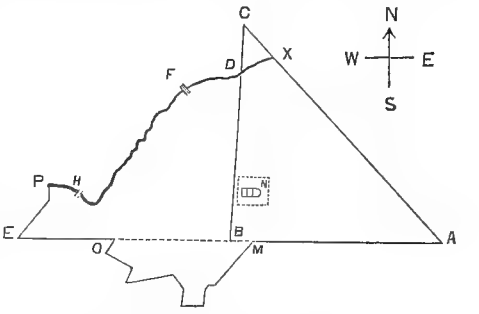
OLD LANDMARKS.—Of the twenty-five buildings (exclusive of barns) located upon the Great Post Road between Brookfield and Leicester lines in 1800, eight were standing in 1888, six of them but little, if any, changed from their original appearance and condition outwardly. These are the Pope Mansion, Mason House, Emerson Shepherd's, Aaron Watson's, Edward Proctor's and Israel Taft's. There are two off of the great road, on Ash Street, viz., Alford Wilson's and the old house of Thos. B. Clark.

CHAPTER LXXXVI.

NEW BRAINTREE.

BY GEORGE K. TUFTS.

INTRODUCTORY.—New Braintree is nearly in shape of an isosceles triangle, with sides of six miles and base of nine, nearly in the centre of the State, bounded by Oakham and Barre on its northeast side and Hardwick, from which it is separated by Ware River on its northwest side, and by Brookfield and North Brookfield on its base or south line. It contains 19¼ square miles. The surface is uneven and hilly. Its highest elevation is "Tufts Hill," in the eastern part, 1179 feet above sea level. It was made up of the territory of three towns—"Braintree Grant," a tract of 6000 acres, lying between Rutland and Brookfield, designated by the triangle C B A on the annexed plan; all that part of Lambstown (Hardwick) east of Ware River marked D E B, and about 1200 acres from the north part of Brookfield, south of line O M. That part, 400 acres north of Ware River, C D X, was annexed to Hardwick in 1814. N is the common land, in the centre of which the church stands. A, point of intersection with Spencer, Oakham, North Brookfield; E, with Ware and Brookfield. A tract of 320 acres,



PLAN OF NEW BRAINTREE.

lying the whole length of line AM, and omitted by error in original survey, was afterwards given to John Quincy, Speaker of the House, and assigned to New Braintree.

Before its settlement fires made in the woods had destroyed almost its entire growth of wood and timber; so it was feared there would not be a sufficient supply for the settlers, but Whitney writes, 1796, that "through their care and prudence there had, within a few years, sprung up fine growths of wood." At that time there were two hills of note—"Mohawk," probably "Tufts" Hill, and "Rattlesnake's Rocks," in the west part, a name that has passed away with its occupants. A plain extends across the west part, at the extreme south end of which, on land of W. & E. Pepper, is the narrow pass referred to by Capt. Wheeler in his "narrative," where, on his way under Capt. Hutchinson, with twenty men, to treat with Philip, August 2, 1675, he was surprised by the Indians, and eleven killed or mortally wounded. "Meminimisset was the name given by the Indians to the low lands at the upper end of this plain, once a hideous swamp." Here was formerly an Indian town of considerable importance and a military stronghold, the headquarters and chief place of rendezvous of the Indians when Brookfield was destroyed. Here Mrs. Howard, taken captive at Lancaster in 1679, was brought with two children, and one died. On the hill rising east from the plain is a small stone monument, resembling a tomahawk, which tradition affirms marks its grave. The town is well watered with springs and brooks. At the base of Tufts Hill, on its north and west sides, are the sources of the two brooks which, afterwards meeting at "Webb's" Pond and flowing southeast and west under the name of Sucker Brook, supply the water "privileges" at Wait's Corner and "Pepper's Mills," and empty into Quaboag Pond. The first saw-mill erected in Brookfield, in 1709, was in that part of it afterward set off and

forming a part of New Braintree, and located just above the bridge, east of "Pepper's Pond." A company of nine, headed by Thomas Barnes, received a grant of forty acres for their encouragement to build the mill. This privilege was afterwards used for a malt-mill.

Pepper's Mills were used as a blacksmith forge and trip-hammer. The first mill erected by an inhabitant of "Braintree Grant" was at what is now "Webb's Pond." Daniel Mathews, Jr., of Southboro', a millwright, bought the privilege in 1749, and erected a saw-mill soon after. His house was on site of present residence of J. T. Webb. The general appearance of the town is attractive. Whitney writes of it, "Excellent for grass and good roads. Its homes are neat and commodious." It has surely gained in these attractive features since 1795, and added, on miles of road, lines of shade trees of maple, ash and elm. It has many really fine residences, especially that of Mr. Francis Shaw. The first road built in town was in 1730, from the "Old Furnace," by Pepper's Mills to Brookfield.

The population was, in 1776, 798; 1790, 939; 1800, 875; 1810, 912; 1820, 888; 1830, 825; 1840, 752; 1850, 852; 1860, 805; 1870, 640; 1880, 610; 1885, 558. Its valuation 1776,—real, £3226; personal, £1435, including 272 head of cattle and horses. Highest valuation, 1871, $590,430; number of heads of stock, 1340.

Braintree Grant.—In 1666 the freeholders and other inhabitants of Braintree, in town-meeting, passed the following resolution: "Whereas, much of the best and most available arable surface is held by non-residents and citizens of Boston as a matter of speculation and by others in large farms, that it is a source of great inconvenience to the permanent inhabitants of the town, as they in their poverty are not able to pay the high rents asked, nor the necessary expenses of the town; therefore, Resolved: To petition the General Court for an additional grant of land." In answer to this petition the court, in consideration of the reasons therein expressed, judged meet to grant them "sixe thousand acres of land in some place, limited to one place, not prejudicing any plantation or particular grant." In 1670 Braintree selected a tract lying between Braintree and Plymouth, which was not confirmed by the court. No further action was taken until 1679, when Braintree again petitioned the court that "since the *Lord* out of his rich grace had made them *lords* of the heathen land" (referring to their victory over Philip) "they might have an opportunity to have ratified the former grant." In answer to this petition, October, 1679, the court allowed the petitioners "to lay out their sixe thousand acres of land in *any* vacant place within the Court's jurisdiction." Here the matter rested for thirty-four years, until June, 1713, when Braintree chose a committee to ascertain if the former grant had "lapsed," and if not, to find and lay out the six thousand acres granted in 1666, and do what is needful to be done in the space of one year and have for their work, if effective, thirty pounds; otherwise nothing.

The treasurer was evidently never called upon to pay the money, for in June, 1714, we find Colonel Edmond Quincy, in behalf of Braintree, petitioning the court for the appointment of a surveyor to lay out the land. The petition was granted and a surveyor, Samuel Jones, Jr., appointed.

December 17, 1715, in the House of Representatives it was ordered that "a Plot of six thousand acres of land, lying in angle between Brookfield and Rutland, be accepted, and land confirmed to Braintree as by plan annexed, in fulfillment of original grant." This six thousand acres was nearly in form of a right-angled triangle, with right angle B at a point just southeast of the present residence of Alfred Boyden; the upper acute angle C included the farm recently occupied by Colonel Joseph Robinson in Hardwick. The perpendicular B C of the triangle is identical with the west line of our present common, while the base A B extended to O would be identical with the present boundary between lands now owned by Mr. J. B. Fobes and Mrs. S. W. Peckham. For twelve years after the "Braintree Grant" was confirmed, it was a constant source of contention in Braintree town-meetings. A vote to sell it would be passed at one meeting, only to be reconsidered and reversed at the next, and sometimes the same meeting, and *vice versa*. No rule of division of the land could be agreed upon. A question arose as to the ownership, whether it belonged to the town in its corporate capacity, or to its inhabitants in 1666 (the time of the original grant) and their posterity, or the inhabitants of 1715, when the grant was confirmed, and we find the town on record at different times as in favor of each of these views. Finally, in 1727, a vote was passed that, to promote peace, the land be divided as equally as possible between the two precincts of Braintree, to be henceforth managed, improved and further divided or disposed of as each should decide, from henceforth and forever. Here "Braintree Grant" disappears from Braintree records, and does not again reappear until 1749, when it appeals to the General Court to be admitted into the sisterhood of towns.

For some years portions of the "Grant" were used for pasturing of stock during the summer season by residents of Braintree, and hence came the title of "Braintree Farms." It seems reasonable to suppose that previous to 1738 it was extensively settled, as the inhabitants in Lambstown, east of Ware River, petitioned the General Court in that year to be annexed to the "Grant" without success.

March 20, 1749, George Shaw, James Robinson, John Wilson, James Thompson, Jona. Cobleigh, John Blair, Jacob Nichols, Jona. Higgins, William Baxter, Edward Ruggles, John Barr, Roger Sprague, Abram Joslyn and Andrew Shaw (total, fourteen), all occupants of Braintree Farms, with John Peacock, Joseph

Little, Eleazer Warner, Beriah Hawes, James and Edward Blair, David and James Woods, Matthew Barr, Josiah Benet, Samuel Steele, David Ayres, Phineas Warner, William Anderson, Israel Day, Samuel Ware, Hugh Barnes and Wareham Warner (total, eighteen), from Hardwick, east of Ware River, and Joseph and Jacob Pepper, and Joseph Pepper, Jr., Moses and Obed. Abbot, David and Solomon Gilbert, Joseph and Sarah Barnes, Thomas Hammond, Eben. Spooner and Roger Haskell (twelve), from the north part of Brookfield, met and chose their "well-beloved and faithful" friend, James Thompson, to convey their petition to the proprietors of the land known as "Braintree Farms," that inasmuch as the petitioners make a body large enough to support the gospel, and were a long way off from any preaching, and for the interest of said proprietors, they would unite with them in a petition to the General Court to be set off as a separate district.

May 31, 1749, James Thompson, in behalf of said petitioners, memorialized the Governor, Council and House that, being of sufficient ability to make a town or district, being of one mind and having obtained the full consent of the non-resident proprietors, humbly prayed their excellencies and honorables to consider the premises and order therein as they should deem best.

The names of the non-resident proprietors were, Thomas Hovey, Nathan Goodell, John Weeks, Joseph Tidd, Wm. Wheeler, Edmond Quincy, Wm. Torrey, Thomas Cutler, Joseph and Thomas Crosby, Richard Faxon, Moses Belcher, David Rawson, Josiah Ruggles, Samuel Paine and Eben Adams.

March 6, 1749, Hardwick in town-meeting opposed this petition, and August 11th chose an agent to present their reasons for it to the General Court; but October 8th, of the same year, voted its "willingness" to the annexation. In June, 1749, a counter-petition, signed by James Craig, Samuel Crawford, Alex. Bothel and others from the west wing of Rutland (now Oakham), and Adam Homes and Robert Hunter, from Braintree Farms, was presented to the court praying that inasmuch as the two tracts of land aforesaid laid in a commodious form for a township, being about five miles square, capable of a sufficient number of settlements to support a minister, and neither could ever be accommodated for public worship as it was or by annexation to any town, that they might be set off as a separate township. On both these petitions the court ordered the usual notices served on all parties interested to appear at its next sitting and show cause, if any existed, why they should not be granted. The proprietors of Rutland warmly favored the plan.

In August following a committee, consisting of James Minot and John Otis, with three others added by the House in December, was appointed to take the several petitions into consideration and report. December 9th this committee reported that the west wing of Rutland and Braintree Farms ought to be set off with their inhabitants into a separate district, with all powers then conferred upon towns except the right of representation in the General Court. This report the Council accepted and sent down to the House for concurrence; but that body refused to concur and ordered the several petitions and the report upon them back to the committee for further consideration. January 3, 1750, the same committee again reported to the Council that after another careful review of the situation they saw no reason to change their opinion, but reaffirmed their former one, and further recommended that the petitioners for a union of Braintree Farms and portions of Hardwick and Brookfield be dismissed. This report was also accepted by the Council and sent to the House for concurrence, but the House again refused to concur and referred the whole matter to the next General Court To this the Council agreed. It is well to state here that the religious preferences of the petitioners had much to do with their choice of their future townsmen; those desiring a union of the west wing with the Farms being Presbyterians, while the petitioners for a union of the Farms with portions of Brookfield and Hardwick were nearly all Congregationalists.

The latter party, defeated twice in the Council and as many times victorious in the House now went to work with renewed zeal and vigor. March 22, 1750, they again sent a petition to the Council, desiring a speedy answer by the sending of a committee to view the lands designated unless it saw fit to grant the petition without such viewing. To this the Council replied by the appointment, April 20th, of another committee of which Samuel Watts was chairman and who were instructed to repair to the land, view it and report in following May.

To this committee the inhabitants of the Farms presented the following reasons against a union with West Wing: 1st. The quality of the land in the West Wing was so inferior to that in the Farms it could not pay its share of the common expenses. 2d. They hoped the Court would not impose upon their consciences by forcing them to unite with a society differing so much in religious views; that the boast had already been made by some of their neighbors of the Wing that they would soon have a Presbyterian minister over them. 3d. A union with a part of Hardwick was much more desirable, because they were better able to pay common charges and were well-agreed to unite. The inhabitants of Hardwick, east of Ware River, informed the committee that, having been annexed to Hardwick for want of a better place, they were not essential to its support; that in the location of Hardwick meeting-house no regard was paid to their interests, as it was understood they would at some future time be annexed to the Farms.

At this juncture Brookfield, hitherto silent, interposed a vigorous protest against any scheme, as it

termed it, of its neighbors of the Farms to benefit themselves at the expense of Brookfield, giving as a reason for the delay of its protest that it had never been officially notified of the petitions. The full protest of Brookfield, for which there is no space here, gives credit to the adroitness of its author, and was without doubt the cause of the subsequent action of the Council, to whom it was referred.

The committee, appointed April 20th, reported June 14th that the tract of land known as Braintree Farms, that part of Hardwick east of Ware River, and seven families in Brookfield, with their estates, viz.: Joseph Pepper, Moses Abbott, David and Jona. Gilbert, Sarah Barnes, Eben. Spooner and Joseph Pepper, Jr., be erected into a distinct and separate precinct, and invested with all powers and privileges accorded other precincts. The same day the Council refused to accept this report, and ordered the petitioners to be dismissed and sent it to the House for concurrence. The House refused to concur and ordered that the report *be* and hereby *is* accepted, and then sent it back to the Council for concurrence. The Council referred it to the next General Court, but after pigeon-holing it for three months, reconsidered its action and ordered it accepted. Here the fight ended. What reasons or persons, if any, influenced the Council to decide uniformly against the popular voice, as expressed in the petition and uniform action of the House, is a matter of conjecture. It is noted in this connection that all but eight of the original petitioners for a union of West Wing with the Farms withdrew their request for that union three weeks before the report of the committee, recommending that union, was made.

First Doings.—June 13, 1751, the court issued the final order constituting the precinct and appointing Eleazer Warner to call the first meeting. Agreed to by Council and signed by Lieutenant-Governor. The powers conferred included all rights of towns except that of representation in General Court. Nor did the precinct become a town until 1776, when it became so by a general law of the province. The name of New Braintree was given to the precinct the next April. A space of one hundred and ten years intervened between the date of the original grant and its incorporation. There were at this time forty-five families in town. The first meeting for the choice of officers was held March 13, 1751, at the house of David Ayers (on the site of the present residence of Francis Shaw). Officers chosen: Eleazer Warner, moderator; David Woods, town clerk; Eleazer Warner, David Gilburt and Cornelius Cannon, selectmen and assessors; James Woods, treasurer; James Thompson, constable; James Blair, tything-man. Two of these had already taken part in the organization of Hardwick, 1739—Cannon as its first town clerk, and Warner as chairman of its first Board of Selectmen.

Church Buildings.—At the next meeting, March 25th, voted "to find the centre of the tract of land already laid off in this district, and that it be the prefixt spot for a meeting-house." This vote was rescinded at a later meeting, and a deed of another piece of land for the meeting-house was accepted, but no record exists of the deed or by whom given. Ten pounds were appropriated for preaching, and a committee chosen "to procure a preacher as soon as conveniently he could be had."

October 4th the town finding it difficult, by reason of smallness of its numbers and straitness of its circumstances, to secure sufficient support for a minister, petitioned the General Court for authority to lay a tax of twopence per acre on all lands, improved or otherwise, in the district. The court granted them one-half the sum asked for for three years. This tax amounted to fifty pounds, and was the sum annually paid the minister for twenty-five years. The next step was the erection of a meeting-house. A vote was passed in November to procure the material the coming winter. Robert Hunter was chairman of the building committee. January 1, 1752, voted "To build a house 40 by 50 feet and 20 feet between joints," "to be enclosed and clay-boarded." The price of labor per day in winter in its erection was one shilling fourpence. It was not ready for occupany until July, 1753, and then but little better than a barn. For fourteen years it was minus lath and plaster. It faced the west on site of present building, and for twenty years nothing was erected to shield the worshippers, when the doors were opened, from the cold blasts that swept thirty miles in a straight line unimpeded. Our forefathers must have valued highly Gospel privileges to sit four hours each Sabbath in a room the natural temperature of which was at zero, with nothing but their own breaths and a few foot-stoves to warm them. In 1772 porches were added at the east and west ends. It is said that one winter the cold was so intense that the snow on the south side of the meeting-house roof never melted a drop for six weeks in succession. For a long time there was no belfry, and the bell hung by itself on the Common. The house was colored a dingy yellow. The fore-doors on the south side were double. There was a single door at each end. The broad aisle led directly from the fore-doors to the pulpit on the north side and the deacons' seat in front. The main floor, for a space of ten feet in from the walls on all sides and ends, was assigned for the pew-ground. This was divided into twenty-one lots, appraised at three to seven pounds each, old tenor, according to its dignity (location), and assigned by a special committee, appointed by the town, to twenty-one freeholders, according to their ability to pay, age and influence in the community. James Blair had the first choice. The bounty money received from sale of pew-ground was used to build a "decent" pulpit, deacons' seat and a "suitable body of seats." In addition to the bounty, each purchaser of pew-ground must build his own pew and ceil the walls against it. The seats in the body of the house were plain benches

occupied by the other members of the district, seated annually by a special committee who were governed in their duty by the same law as that which assigned the pew-ground, viz.: the relative standing in the community of the attendant. A feeling of uneasiness arising in the pit that the pews had got their privileges too cheap, an "indifferent committee was selected from Brookfield and Hardwick to fix the bounty."

On the two ends and south side were galleries, the west half occupied by men and the east half by women. Young men must receive special permission to occupy these seats. Five shillings annually were allowed the sexton, James Thompson, for sweeping the house and shutting the doors. As the town grew in numbers and wealth the pews encroached upon the pit, the pit becoming better able to build pews. Every available foot of ground on main floor and in galleries, and even in the porches, was used for pews. From 1790 to 1800 the town had the largest population of any time in its history, and the old house was not only too small, but unsuited to the improved tastes and pockets of the people. The erection of a new house was begun in 1800 and completed in 1802. The frame is the same as that of the present structure. Henry Penniman gave three hundred dollars to buy a new bell, and his son, Henry, and son-in-law, Joseph Bowman gave two hundred dollars to buy a new town clock. In 1806 Henry Penniman, Jr., asked and obtained leave of the town to place an organ in the new church. The value of this addition in church worship seems not to have been appreciated by all, for one deacon was heard to remark that he'd "rather hear the filing of his old saw than that noise." In this building no alterations were made until 1846, when it was lowered six feet and entirely remodeled, with town-hall and vestry below; dedicated October 26, 1846, the fiftieth anniversary of the settlement of Rev. John Fiske, D.D. A new organ was bought at a cost of eleven hundred dollars. In 1877 house repaired at a cost of six hundred dollars, of which three hundred dollars was contributed by Edward Fiske, of Brooklyn, N. Y.

Although one of the first acts of the new district was the selection of a committee to provide a preacher, two years passed and none of the many candidates heard were sufficiently acceptable to be called. Discouraged, the district appointed February 23, 1753, a day of fasting and prayer for divine help, and invited the neighboring ministers to take charge of the services. In July, voted to hear Rev. Benjamin Ruggles, of Middleton, on condition that he be dismissed from the pastorate he then held. In this they were both shrewd and honorable. Mr. Ruggles came, was liked, and invited to preach longer. Five of the neighboring ministers were consulted as to the advisability of settling him, and invited to preach a lecture to the people Jan. 23d. Feb. 4th, a call was extended to Mr. Ruggles. The settlement given him was thirty pounds, and annual salary fifty pounds. This call Mr. Ruggles accepted, "sensible in a measure of the difficulty of the calling, but relying upon the sincerity and fidelity of the people." He was installed April 17, 1754. To the council installing him was referred by the district a petition of several of its members for the free use of the meeting-house two Sabbaths yearly that the sacrament might be administered in the Presbyterian way by one of their order. The council decided that though willing to promote union and communion between the sects, yet, considering the circumstances and fearing the consequences, they did not deem it wise to grant it.

Of Mr. Ruggles a successor writes that he was "a man of average ability and sincere piety, and his relations to the people were entirely harmonious and productive of great blessing." To this end he contributed more than his share. A letter from him to the town, when the matter of a colleague and his proportionate salary was under consideration, reveals some of his trials and the spirit in which he bore them. He writes "My salary has *never* been paid when due. Not only for one year, but for the twenty years I have been here it has been six and seven months overdue, so that I have been straightened for money to buy the necessaries of life, and often obliged to borrow so small a sum as half a dollar of the Treasurer (Dea. James Woods), who, out of his own money, would give me a dollar, or if I asked one dollar he would give me two. Every town around, altho' poorer than this town, has paid their minister more. In those days," he adds, "I kept these things much to myself, careful that neither by word or deed it might get abroad to the discredit of the town." His name heads the long roll of the Brookfield Association of Ministers, of which he was one of the original five founders when it was organized, June 22, 1757. Mr. Ruggles was sole minister twenty-four years and associate senior pastor six years, until his death, January 6, 1784. The whole period of his ministry was fifty-nine years.

After a period of five months on probation, in July, 1778, Rev. Daniel Foster received a call from church and town to become associate minister with Mr. Ruggles, with one thousand pounds settlement and sixty-six pounds, thirteen shillings and four pence annual salary, and thirty cords of wood eight feet long at his door, the salary to be regulated by the following standard, *i. e.*, rye at four shillings and Indian corn at two shillings eight pence per bushel. Mr. Foster accepted the call, "relying upon their generosity as to Temporals while he ministered to them in Spirituals." October 28th was set apart for the ordination. Seventeen churches were invited. Committees were chosen to carry the letters missive, to prop the meeting-house and to keep the doors and reserved seats. In his examination by the council Mr. Foster differed in a measure in his theological views from the majority of its members, but it was finally voted satisfactory and the ordination proceeded. He was

born September 1, 1750; ordained October 28, 1778. January 28, 1779, married Miss Betsey Reed, of Western. February 17, 1779, bought of Rev. Benjamin Ruggles the premises now occupied by Mr. Frank Gaffney for $2350.

His ministry continued until his death, September 1, 1795. Mr. Foster was a man of much personal magnetism, especially popular with the young men, who, at his decease, out of respect wore a badge of mourning on their left arms for thirty days. He was fluent and often extravagant in speech. A good dinner appeared to be more to his liking than spiritual penance. He was an unbeliever in creeds. Soon after his settlement some of the church-members avowed their belief in his denial of some of the fundamental truths of the Gospel and presented their grievances at a church-meeting. The church sustained its pastor. Several attempts, among them an appeal to the Association, were made to reconcile the differences. In most cases they seem to have been successful. One or two, however, joined the Baptists, two absented themselves from church and rode every Sabbath to Rutland for conscience' sake.

Rev. John Fiske, D.D., writes that he seems to have overcome opposition and ultimately won the affections of his people. His death was the occasion for many popular expressions of grief; all the ministers in the association were invited. The town paid all the bills and had printed the funeral sermon. After Mr. Foster's decease the town was without a minister more than a year. August 15, 1796, a unanimous call from church and town was given Rev. John Fiske, with a settlement of two hundred and thirty pounds, and an annual salary of ninety-five pounds. He was installed October 26th. Rev. Dr. Lyman, of Hatfield, preached the sermon, afterwards published. The installation services occupied two days and closed with a ball on the evening of the second day, in which all that could, joined.

Rev. John Fiske was born at Warwick, October 26, 1770. Fitted for college partly with his pastor and partly with his brother, Moses; graduated at Dartmouth, 1791; studied theology with Dr. Lyman, of Hatfield; licensed to preach and ordained to the ministry at Hadley, May 6, 1794; labored for a season in Northern New York; attacked with fever and ague and returned to Massachusetts; preached a while at Milford and North Brookfield. Overtures to settle at both places were made him, which he declined; received degree of D.D. in 1844 from Amherst College, of which he was one of the founders and long a trustee—published a spelling-book in 1807; "Fast Day Sermon," in 1812; "Dedicatory and Semi-centennial discourse," in 1846; was chosen first president of the Brookfield Auxiliary Foreign Missionary Society 1824, and held that office twenty years. During his ministry of fifty-eight years in New Braintree he was called to one hundred and twenty-one councils and attended one hundred and fifteen. As Dr. Fiske's pastorate covered a period of marked changes and great contrasts in not only the social customs, but also the moral and religious sentiments and practices of the people of this town and all New England as well, a glimpse at the state of society at the close of the eighteenth century through his eyes may be of interest: "There were really two classes of ministers as to theological doctrines and the methods the gospel reveals whereby sinners are to obtain an interest in Christ, altho' no division had taken place nor had it entered into any one's heart to conceive of it. There was then no Unitarianism in this Association, but the character of Christ was not frequently brought into view in preaching. While some of the older ministers were sound in the faith and preached the doctrines of grace with consistency and earnestness, others had become comparatively lax, and were disposed to avoid in their preaching what they esteemed doubtful points and things not well understood nor received by the people. There were great objections to metaphysical subtilties. The character of the preaching was defective as to doctrine and pungency. The great day of labor of the minister was the Sabbath. It was expected of him that he deliver two sermons on the Sabbath and administer the Sacrament of the Lord's Supper once in two months, except in winter, when it was the cause of much suffering. No custom existed of holding an evening or third service. He was wont to exchange one-fourth to one-third of the time and to go and come to the place of exchange the same day—such arduous labors were generally thought to require the sustaining power of comforting cordials and the best dinner that could be provided between services and were always furnished without grudge or measure. He was often called upon to preach a service to an aged person unable to attend church at his own home. On the records of the Association, which he was expected to attend three times yearly, no allusion was to be found to seasons of prayer for the outpouring of the Holy Spirit upon the churches, for no such seasons were held. Nothing was said concerning the state of religion in them. No question proposed for discussion was selected on account of its relation to the spiritual condition of the people, or aim at the conversion of sinners or edification of believers. Formalism reigned. No multiplied meetings or visitations; no efforts to publish the gospel at home or abroad or diffuse knowledge by lectures, conferences, Sabbath-schools, Bible classes or anniversaries.

"Of the church it might be said 'Like people, like priest.' If the minister did little, the church would do less, and be less concerned for its own or others' salvation. In some of the churches there had been revivals of religion, but in most of them there never had been any, nor were they expected, and in some not desired. No efforts were made to obtain them, —no weekly prayer-meeting. There were no young

people in the church by profession of faith. Their membership was neither expected nor sought after. It was held in the estimation of sober people that when persons entered into family relations and became parents, they should join the church and have their children baptized, but in one-third of the churches the latter was performed and the former neglected. Religion among professors and others alike was seldom a topic of conversation. There were many social gatherings and festivities and much story-telling, but little said or done to promote godliness. There were some godly persons in church who were waiting and praying for better times, but their number was so few that they found their cross too great to venture forth against the strong current of public sentiment. The people at large were apparently (but only apparently) more religious than now. Every person, except a few obstinate Baptists and occasionally an emigrant from Rhode Island, all of whom were looked upon as pestilent fellows, paid a tax in proportion to his worth in support of the Congregational ministry; exemption from this tax was no more thought of than exemption from support of Government. Both were paid on same principle, viz.: from necessity laid on them by the strong arm of the law. There was one advantage in this custom. Every inhabitant had a right to such services of his minister as he might need. 'There was no stealing of preaching or begging of prayers.' There was much ignorance of the nature of personal religion. Infidelity prevailed. Paine's 'Age of Reason' was widely circulated and had many believers. The Bible was almost a proscribed book, but little read in families by youth. Morals were much vitiated. There was much lewdness in language and action; much Sabbath-breaking. The great roads were filled with teams on their way to and from market, and with droves of cattle, sheep and swine.

"All classes of persons, Christians and sinners, high and low, rich and poor, could meet on same platform so far as drinking rum and brandy was concerned; almost all men would drink, and multitudes to repletion, on such occasions as town-meetings, raisings, huskings, auctions and trainings. Especially was indulgence thought to be not only allowable, but praiseworthy, on the glorious Fourth of July. It would have been looked upon as a most indecorous thing in the year 1800 had a Christian funeral been attended at which the mourners, bearers and other friends were not comforted together in well-filled tumblers of grog. It was a dark day for New England churches. But at the beginning of the 19th century light began to dawn out of darkness. Ministers began to talk and pray and preach differently. They appointed church-meetings for conference and prayer, instituted Bible-classes and Sabbath-schools for the young, preached the Gospel to the poor, and interpreted literally the last command of Christ. They found many supporters in the church, and the result was not one, but repeated visitations of the Holy Spirit upon pastors, churches and congregations, that recalled the day of Pentecost." Dr. Fiske was, from the first, fully in spirit and action with these movements. As a result, from 1800 to 1821, with one exception, the church received yearly accessions to its membership by profession of faith. From 1809 to 1811, forty-five; 1819 to 1821, one hundred. In 1810 it was formally and publicly re-organized with articles of faith essentially the same as in 1850. The later largest accessions during Dr. Fiske's ministry were in 1826, thirty; 1831, twenty-five; 1845, forty-three.

1817, Sabbath-school was first organized.

The church was first gathered and formed (as by memorandum of Deacon Jonathan Woods), April 18, 1754, date of the installation of Mr. Ruggles. No records exist for forty-two years, except in 1778 and 1779. Since 1800 there has been from it a constant emigration. Its membership, in 1800, was fifty-eight; 1888, seventy-three; and reaching as high as two hundred in the interval. Its deacons have been William Witt, Samuel Ware, James Woods, Jonathan Woods and Jonathan Gould chosen previous to 1775; George Barr, between 1775 and 1800; Abijah Bigelow, 1805; James Woods, 1808; Jacob Pepper and Samuel Warner, 1815; Phinehas Warner, 1817; Francis Adams, 1828; Amasa Bigelow, 1830; Welcome Newell, 1830; Henry M. Daniels, 1855; Elbridge Gleason and Moses Pollard, 1862; Dwight G. Barr, 1871. In 1819 a legacy of one hundred dollars was left by Lieutenant Jonas Newell to the church for the purchase of furniture for the communion table.

Of Dr. Fiske, Rev. Mr. Hyde wrote:

It was especially true of him that he was *young* when he was *old* and *lived until he died.* In person, tall and well-proportioned, with large and regular features and but slightly bended form, with eye still bright and voice still strong and clear, with slow but solid footstep; generally reading, writing, singing or talking when he was not visiting or sleeping, he seemed, when I first knew him, at 83 years of age, to be about as vigorous as he was venerable,—with a serene and intelligent countenance, with mild and dignified manners, with an active and well-balanced mind,—discriminating in judgment, skillful in management, cautious and yet determined in action, in conversation at once inquisitive and instructive, deeply interested in the practical affairs of men and with as deep an insight into their character and motives, he made his presence to be felt by all around him, without ever attempting to exert an influence or make an impression. Fixed in his opinions and ways, but seldom arbitrary, strict in his principles, severe in his sense of propriety without being sanctimonious, equable in temperament and yet playful in feeling, generous in sympathy and uncommonly companionable to those who really knew him, siding always with a noble impulse and a steady faith in favor of whatever seemed right or useful, nervously sensitive to suffering, timid and sometimes impatient, but always submissive and trustful, thoroughly republican in simplicity, truly patriarchal in hospitality, he presented to my eye a rounded completeness of character seldom found, except in those who have grown old with a silent and natural growth without any special excitement or constraint, but in the quiet service of the Gospel. In the pulpit he spoke not with enticing words nor impassionate appeal, but with sterling good sense and with great appropriateness, particularly in prayer. In all the councils of the Church, especially in difficult cases, he was eminently wise and efficient.

He died, 1855, at eighty-five years of age and sixty-first of his ministry.

May, 1853, a call was extended to Rev. James T. Hyde to become associate pastor with Dr. Fiske; salary, eight hundred dollars. The call was unanimous by the church and three to one in the society. The call was accepted, and Mr. Hyde ordained June 22d following. Mr. Hyde was a graduate of Yale College, ranking second in his class. He was a varied and accurate scholar, an able writer and preacher of refined tastes. His natural gifts were of a high order. Most of those opposed to calling Mr. Hyde were men of extremely liberal views—two or three Unitarian, or with Unitarian views, prominent in society, to whom Mr. Hyde's strong orthodoxy and forcible expression of it were distasteful. During the two years following his settlement twenty withdrew from the society, many of them large property-owners, part from dislike of Mr. Hyde, part on account of the greatly increased rate of taxation, and part through fear of a still higher rate. The breach widened. That spirit of bitterness which Dr. Fiske, in his communication to the society on the eve of settling a colleague, deprecated, had already sprung up. A few determined that Mr. Hyde must go and a few determined that he should stay. Finally, the good sense of the majority triumphed. The votes on the two following resolutions, taken in June, 1855, indicate the true state of affairs. The first resolution was, "That we, personally, without reference to the feelings or acts of others, are satisfied with the ability and faithfulness of our Pastor." Yeas, 26; nays, 2; silent, 5. The 2d, "That it is expedient under existing circumstances that the pastoral relation be dissolved." Yeas, 19; Nays, 6.[1] August 13th the dissolution was effected. Notwithstanding his comparatively unsuccessful pastorate, which he attributed in a measure to his own inexperience, he always retained a strong affection for his first parish, remarking to the writer that he would have been content to have lived and died among this people. He died while Professor of Pastoral Theology in Chicago Seminary. It was said of him that "no man in all the West would be more missed. Another might fill his chair in the seminary, but no man in all the land could be found to touch the seminary at so many points or be so conspicuously useful in all that concerns the welfare of the Churches." Rev. John H. Gurney received a unanimous call to succeed Mr. Hyde, and was installed April 23, 1856; salary, nine hundred dollars. A resolution, "That the Church for a third service in the Sabbath be free to other denominations when unoccupied by the pastor," was lost by a majority of one. Mr. Gurney possessed, in addition to other ministerial qualifications, a strong mind, good common sense, a fondness for agriculture and the highest capacities of a citizen. His pastorate lasted thirteen years, during which there was one extensive revival. May 3, 1871, Rev. John Dodge was installed. His pastorate was terminated by his death, in June, 1872. He was much esteemed and beloved. He was succeeded by Rev. William B. Bond October 30th of same year, whose pastorate continued seven years. Of him it could be said, "he never preached a poor sermon." He was the last settled pastor. Since then the church has been supplied successively by Rev. William Barrows, D.D., Rev. T. A. Merrill and Rev. U. W. Small.

[1] Fourteen persons voting yea on first resolution also voted yea on second.

EDUCATION.—The support of schools has always been liberal and hearty. In 1796 Whitney writes: "The people in New Braintree are particularly attentive to the education of their children and youth. They have eight reputable school-houses, and in the winter season as many instructors; two Latin grammar masters, and in the summer they have generally two or three masters and as many mistresses, and they expend more annually in supporting schools than in supporting their public teacher of piety, religion and morality, though he is honorably maintained." This interest was fostered and increased by Dr. Fiske, who for fifty-five years held the active superintendence of the schools, who exercised a sort of parental care over them, and whose constant aim was to raise the standard of qualifications among teachers. In 1845 and for several years previous, the amount raised per scholar exceeded that of any town or city in the State, excepting Boston and six adjoining towns. In the published address at the semi-centennial of the Brookfield Association, New Braintree is accredited with having furnished to that date eighteen ministers to the Congregational denomination,—two more than any other town in the association. There have been thirty-two liberally educated and professional men from this town, of which the following is a list:

Levi Washburn, graduated at Dartmouth; died 1776.
Jonathan Gould, graduated at Brown, 1786; died 1794; minister.
James Tufts, graduated at Brown, 1789; minister.
Joseph Delano, graduated at Brown, 1790.
Edwards Whipple, graduated at Williams, 1801; minister.
Luther Wilson, graduated at Williams, 1807; minister.
Thomas Pope, graduated at Harvard, 1806; lawyer.
Frederic Matthews, graduated at Harvard, 1816; lawyer.
Luke B. Foster, graduated at Vermont University, 1811; minister.
Henry H. Penniman, graduated at Harvard, 1822; teacher.
Charles Eames, graduated at Harvard, 1831; lawyer.
Frederic C. Whipple, graduated at Union, 1837; lawyer.
Waldo F. Converse, graduated at Wesleyan University, 1839; lawyer and business.
Eli W. Harrington, graduated at Amherst, 1833; minister.
Charles D. Bowman, graduated at Harvard, 1838; lawyer.
Wm. Penniman, graduated at Amherst.
Joseph Washburn, graduated at Yale, 1793; minister.
James Woods, graduated at Columbia, 1832; minister.
Gustavus Davis, D.D., minister.
Jesse A. Penniman, graduated at Amherst, 1833-35; minister and physician.
Charles Delano, graduated at Amherst, 1840; lawyer.
Wm. Barrows, D.D., graduated at Amherst, 1840; minister.
Wm. Miller, graduated at Amherst, 1842; minister.
Simon Barrows, graduated at Dartmouth, 1842; minister.
Lewis Barrows, graduated at Waterville; minister.
David Burt, graduated at Oberlin, 1848; minister.

George H. Gould, D.D., graduated at Amherst, 1850; minister.
Henry M. Daniels, graduated at Chicago Theological Seminary, 1861; minister.
Nathan Thompson, graduated at Amherst, 1861; minister and teacher.
Charles S. Brooks, graduated at Amherst, 1863; minister.
George K. Tufts, graduated at Yale, 1863; business.
Henry Penniman, graduated at Andover Theological Seminary, 1882; minister.
Emerson Warner, physician.

James Tufts, born 1764, completed his theological studies with Dr. Emmons, of Franklin, and ordained November 4, 1794, over the Congregational Church at Wardsboro', Vermont. His pastorate continued forty-seven years, until his death. He was a minister highly respected and venerated in the circles in which he moved.

Luke B. Foster, born 1789, son of Rev. Daniel Foster, second pastor of this church, had but one pastorate, at Rutland, commencing 1813, and continuing four years till his death, 1817.

Edwards Whipple, born 1778, was one of the three most distinguished scholars in his class. He studied theology and was installed at Charlton, January 25, 1804; remained there seventeen years; dismissed March, 1821; was then installed colleague pastor at Shrewsbury, where he remained one year, until his death, September 17, 1822. He was an able and faithful pastor, a man of decided talents and undoubted piety.

Luther Wilson, born 1783, son of Joseph and Sarah Mathews Wilson, fitted for college at Leicester Academy, entered Yale 1804, and Williams 1805; became English preceptor at Leicester Academy 1806; received his degree 1807. Made principal of Leicester Academy a few years later, and filled that position three and one-half years; studied theology with Rev. Zephaniah Swift Moore, D.D.; settled over First Congregational Church, Brooklyn, Connecticut, as colleague pastor with Rev. Josiah Whiting, D.D., June 9, 1813. During this ministry he changed his theological views and became Unitarian; resigned his charge September, 1817; installed pastor First Congregational Church, Petersham, June 23, 1819; resigned his pastorate October 18, 1834; died November 20, 1864; married November, 30, 1806, Sally, daughter of Abijah Bigelow, of New Braintree.

Thomas Pope commenced practice of law in Dudley, where he married, raised a family, lived and died.

Frederic Matthews, son of Elisha Matthews, graduated at Harvard Law School; commenced practice of his profession at Albany, N. Y.; remained until his death, about 1820.

Gustavus F. Davis, born in 1797, in Boston. At three years of age his father died, and mother married Adin Ayres, who removed to New Braintree in 1812. Young Davis went to Worcester to learn a trade; was converted, and became a Baptist, under the preaching of Elder William Bently; began to preach at the age of seventeen in Hampton, Conn.; at nineteen was settled over the Baptist Church at Preston, Conn.; at twenty-one became pastor of the church at South Reading (now Wakefield), Mass.; removed to Hartford in 1829, as pastor of the church there; died in Boston, while on a visit there, September, 1836. He was never a graduate of any college or other institution; a self-educated man, but largely interested in the cause of education; a trustee of Trinity College, and of the Connecticut Literary Institution; received the degree of D.D. from Wesleyan University, 1835.

Henry N. Penniman was for many years principal of a boarding-school in New York, and afterwards in business.

Waldo F. Converse began study of law in 1840; commenced practice in Sandusky, Ohio, 1842; continued in practice until 1859, afterwards engaged in business; is now president of Sandusky Machine and Agricultural Works.

Simon Barrows, born 1811, studied theology at Union Seminary, N. Y., engaged in various ways in cause of education, then entered into the active and hard duties of home missionary life beyond the Mississippi. Sometimes pastor of four churches, he has carried the New England church and school system into our border land.

Lewis Barrows, born 1813, has devoted his whole life to missionary work on the border.

William Barrows, born 1815, completed his theological studies at Union Seminary, N. Y., 1843, and since that has been variously in the Gospel ministry. There is space for a few quotations from a sketch of him in the "History of Reading," where he has resided since 1856: "Dr. Barrows comes of a type of family slowly disappearing from New England. His early home was a family of twelve; a farm of sixty acres and obstinate for boy's culture; parental common sense; a spindle; a loom; annual barrels of home beef and pork; a few books well chosen; a district school well attended without regard to weather and the Sabbath uniformly divided between home and the Lord's house 3 miles away. The old-fashioned virtues, ideas and knowledge ruled the home more than a dinner, new jacket, or 2-story house. No winter snows were too lively or deep for the ox-sled and a load of neighborhood children on the way to school, where the firewood was 4 feet long and many of the boys 6. Naturally, from such a home the boys entered college, yet with pecuniary struggles. Garden roots were cultivated by day and Greek roots by night by the youngest of the three in Phillips Academy. In the seminary private teaching by the hour, theological polemics in the seminary, classics in Brooklyn and five minute lunches in Fulton Ferry were sandwiched together. So every bill was paid and every borrowed dollar returned. Ill health has hardly cost him a day from the pulpit, perhaps because he has kindled so many vacation camp-fires all the way from New Brunswick to the head-waters of the Missouri and Columbia. Dr. Barrows has had three pastorates and was for some years secretary of the Congregational & Publishing

Society and the Massachusetts Home Missionary Society. He has taken deep interest in western civilization and Christianization, and with this in view has made eleven tours over the border and published 'The General, or Twelve Nights in the Hunter's Camp,' a true narrative of his brother William's life; 'Oregon: The Struggle for Possession;' 'The United States of Yesterday and To-morrow;' also 'The Church and Her Children;' 'Purgatory, Doctrinally, Practically and Historically Considered;' 'The Indian Side of the Indian Question.'"

William Miller graduated at Andover Theological Seminary, 1845, and settled at Halifax, Vt.; has been in ministry forty-two years.

David Burt, born 1822, graduated at Andover Theological Seminary 1851; preached at Raymond, N. H., 1851–55, at Rutland 1856–58, and acting pastor at Winona, Minn., 1858–66; engaged in work of Freedmen's Bureau 1866–68; State Superintendent of Schools in Minnesota (1875) until his death, 1881.

Eli W. Harrington, born 1804, graduated at Andover Theological Seminary 1836; pastor at Lunenburg 1836–47; Marion, N. H., 1848–50; Rochester, Mass., 1850–59; North Beverly 1860–67. Since that time impaired health has interfered with continuous pastoral service.

Charles D. Bowman studied law at Harvard Law School and practiced in Oxford, where he died.

James Woods was for many years a minister in San Francisco and Sacramento, Cal., where he died.

Charles Delano, born 1820, called at his death, 1882, the most distinguished member of the Hampshire County bar. Member of Congress 1859–63, resident of Northampton, a close student, a man of broad culture, social, public-spirited, liberal, whose integrity and conscientiousness were never questioned.

George H. Gould, born 1827, graduated Union Seminary, 1853. For eleven years his impaired health seriously interfered with the continuity of his public ministry. Traveled in Europe four years with John B. Gough; 1862 and 1863 with Olivet Church, Springfield; 1864–70 with Centre Church, Hartford, Conn.; has since resided in Worcester and been acting-pastor of both Piedmont and Union Churches. What a few churches have lost by his inability for continued pastoral service, the general public has gained.

Henry M. Daniels, graduated Chicago Theological Seminary, 1861; pastor First Congregational Church, Winnebago, Ill., 1861–75; home missionary at Dallas, Texas, 1875–79; at Lebanon, Md., 1880–83; De Luz, Cal., 1883–88.

Nathan Thompson, born 1837, graduated Andover Theological Seminary, 1865; home missionary, at Boulder, Col., 1865–75; acting-pastor at Roxborough and South Acton, 1876–81; president of Board of Trustees of Colorado University; principal Lawrence Academy, Groton, Mass., 1881–86; principal Elgin Academy, Elgin, Ill., 1886–88; author of two local histories.

Chas. S. Brooks, born 1840, graduated Andover Theological Seminary, 1869; pastor Congregational Church, Tyngsboro', 1869–72; church at South Deerfield, 1873–77; Second Congregational Church, Putnam, Ct., 1877–87; installed pastor Rollstone Congregational Church, Fitchburg, 1887.

Henry Penniman, graduated Andover Theological Seminary, ordained over First Church, East Derry, N. H., 1884.

Willard Barrows, born in 1800, early in life left the East for the Mississippi Valley, and was for many years deputy-surveyor for Government of wild lands in Missouri, Arkansas, and the territory comprising the present States of Wisconsin, Minnesota and Iowa. The first map of the latter he published from his own field-notes, which, with his brief historical outline, was afterwards published by the State in 1845. Afterwards he wrote out the history of a part of Iowa, published in "Annals of Iowa." In 1850 he led a company of sixty men and one hundred and twenty-five horses over the plains to California, in the wild rush for gold, when he gained the title of "General." In 1864, he made up a private party for adventure into Montana and Idaho, 1600 miles and 160 days; and another the next year to the same region, *via* the Missouri River, 3000 miles. Died 1868—ending the career of a stirring frontier man, honored, beloved and lamented.

Revolutionary Period.—On the first Monday in June, 1773, in reply to a letter from "ye Inhabitants of ye Town of Boston," the town voted, "That the Freeholders and other Inhabitants of ye Town of Boston hereby receive the hearty thanks of this district for the vigilance, firmness and wisdom which they have discovered at all times in support of ye rights and liberties of the colony, and so heartily concur with them in all their constitutional determinations." March 7, 1774, a committee was chosen to draw up something in reply to "ye Inhabitants of ye Town of Boston" relative to the difficulties the Province labors under. April 4th the following resolves were reported, which being twice read and considered, were passed unanimously:

1st. That we will, in conjunction with our Brethren in America, Risk our Fortunes & even our Lives in defence of his Majesty King George the third, His Person, Crown and Dignity, and will also with y^e^ same Resolution as his free-born subjects in this country, to the utmost of our Power And Ability, Defend our Charter Rights that they may transmitted Inviolate to the Latest Posterity.

2. *Resolved* that every British Subject in America has by our happy constitution as well as by Nature, the sole Right to dispose of his own Property either by himself or by his Representative.

3. *Resolved* that y^e^ act of y^e^ British Parliament Laying a Duty on Tea Landed in America payable here is a Tax whereby the Property of Americans is taken from them without their consent.

Therefore Resolved, That we will not, either by ourselves or any for or under us, buy or sell or use any of y^e^ East India Company Tea Imported from Great Brittain, or any other Tea with a Duty for raising a Revenue thereon in America, which is affixed by acts of Parliament on the same. Neither will we suffer any such Tea to be made up in our Families.

Resolved, that all such persons as shall purchase, sell or use such Tea shall be for the future deemed unfriendly & Enemies to the happy Constitution of this Country.

At the same time—

Voted Ninety-one Pounds to provide a Town's Stock of Powder & Lead & Flints with.

August 25th Deacons James Woods and Samuel Ware were appointed a committee to meet like committees from other towns in the county, "to consider what measures they ought to come into at this critical, difficult day," and a Committee of Correspondence was chosen. September 2d Deacon James Woods chosen a delegate to a Provincial Congress to be held in October; the town then chose officers for a standing militia. November 7th a committee of seven, chosen to inspect all tea-drinkers and post their names. January 9, 1775, the town accepted the proposal of the minute-men to serve without pay, on condition that the other members of the district provide themselves with arms and ammunition. Same date a committee chosen to receive and forward the donations to the poor of Boston, and a committee chosen to see that the Provincial and Continental resolves be strictly adhered to.

May 22, 1776, "the Question being put whether y^e^ Town would willingly support y^e^ General Congress if it shall declare Independence. Passed unanimously in the affirmative."

February 17, 1777, Ephraim Woods chosen delegate to a County Congress, to obtain a more equal and just representation in the General Court for smaller towns.

February 24th the Committee of Safety, to prevent monopoly and oppression, fixed a uniform price of all produce and merchandise and all kinds of labor. Following are a few of these prices:

"For men's labor in haying or reaping, 3 shillings per day, & the same for Carpenters; Blacksmiths for plain shoeing, all round, 4 shillings; with steel corkings, 5 shillings. To Cordwainers, for making good men or women's shoes *Strong*, 2 shillings 8 pence pr., exclusive of thread.

"Doctor's Fea for riding, 6 pence per mile & Business in proportion. Good wheat, 6 sh. per bu.; Rye, 4 sh.; Ind. corn, 3 sh.; Oats, 1 sh. 8 Pence; Fresh Pork, 4 Pence lb.; Grass-fed Beef, 2½ Pence; Stall-fed do. 3½ pence; N. E. Rum, 5 sh. per gall.; Good W. I. Flip, 10 pence per mug; Horsekeeping at Farmers, 1 sh. pr. night by hay, & 6 Pence by grass. One meal of victuals of the best, ten pence, other victuals accordingly; new-milk cheese, six pence per lb.; firkin butter, 8 pence lb.; Beans, six shillings bu.; Potatoes, one shilling per bu. in fall, one & six pence in spring; good yarn, men's stockings, 5 shillings 4 Pence pair; mutton, four pence; veal, two pence per lb.; Home-made flour, twenty shillings per cwt.; Eng. Hay, 2 shillings cwt.; hire of a horse, 2 Pence pr. mile; maid labor in spring, 3 shillings per week. Mch. 31 a bounty of 20 pounds was offered soldiers who should enlist in the Continental Army for 3 years, & a com. chosen to collect evidence against all persons appearing enemical to this country. June 5, 1778, Voted that the town has no objection to articles of Confederation & perpetual Union between the United States of America. But the town refused, 54 to 4, May 19, & again May 31, 1780, to adopt the Constitution of the state of Massachusetts Bay, except on certain conditions, one of which was a provision for a Judge of Probate & Register of Deeds in each town in the county."

The total cost to the town of the war is unknown, but the records from 1778 to '82 are replete with votes for filling quota of men and horses, paying bounties, monthly wages and furnishing clothing and provisions to soldiers and their families. A complete list of the members of the company of minute-men from New Braintree that marched to Boston April 19, 1775, may be found on the town records.

The town furnished sixty-seven men for three years, nineteen men for six months, seventeen men for nine months; thirty-eight men for three months, and fifty men for a less period of service in the Revolutionary War.

May, 1786, the town gave instructions to its Representative to the General Court, Captain Artemas Howe, setting forth the great extortion and oppression practiced by the lawyers of the Commonwealth; their growing importance as a class in numbers, wealth and grandeur, and the danger to civil liberty thereby; the tardiness in obtaining justice in the courts and the high fees of certain court officers; that instead of the courts and juries being enlightened and assisted in searching after and doing justice in the cases that came before them by the gentlemen of the bar, they were left by them more perplexed and embarrassed; and expressing the belief that our only hope of existence as a nation rested in the frugality, economy and industry of the people.

SHAYS' REBELLION.—The views embodied in these resolutions seem to have been held by the large mass of the people of the State. Many were embittered by the feeling that adequate compensation had never been made the soldiers for their sacrifice in saving the country, nor the widows and orphans of those who were killed. That many in office who had remained at home had enriched themselves at the expense of those who had gone to the war. The debtor class was large. The war had demoralized the people. The majority hoped for a remedy for many of the existing evils through the constituted authorities and the General Court, peacefully; but a great many were in favor of resorting to force for a redress of their wrongs. Conventions were held in several counties. September 25th a committee chosen by the town recommended that for the peace of the town no representative should be sent to the General Court that year. This was the act of the minority, who had no faith in legislation to attain their ends. At a

subsequent meeting the conservatives rallied and voted to send its representative as usual and seek redress in a lawful way. The trouble culminated in what is known as "Shays' Rebellion." Twenty-three from New Braintree joined Captain Shays, some of them soldiers in the late war. A large body of insurgents collected at New Braintree. Their chief acts were to obstruct the courts and prevent their assembling.

Jan. 30, 1787, the town characterized the proceedings of the "Regulators," as they termed themselves, as illegal and irregular, and chose Rev. David Foster, Benjamin Joslyn and Percival Hall, Esq., a committee to confer with General Lincoln and officers, and Captain Shays and officers, for the purpose of effecting a reconciliation. February 3d, voted to petition the General Court for a general pardon of the insurgents, provided they laid down their arms and returned to their allegiance, and issue circular letters to a number of towns in this and other counties to do the same. February 5th, met and heard the report of the conference with General Lincoln, including a letter to the town, in which he advised them "to call home, without delay, all the men then with Captain Shays belonging to the town, and not to afford any aid, support or comfort to any of y^e^ insergents." When this letter was received, after being several times read and considered, such a disagreement appeared concerning the adoption of the course advised, that the meeting adjourned without action. Captain Artemas Howe was appointed major and commissioned as aid-de-camp of General Warner, August 28, 1886, in the campaign against the insurgents. The other men from New Braintree, who were in the service of the State and endured the sufferings and dangers of the night-march from Hadley to Petersham, which Minot styles "one of the most indefatigable marches ever performed in America," which resulted in the rout of the rebels, were: Sampson Whitherley, First Lieutenant; Wyman Hoit, Second Lieutenant: Elisha Mathews, Sergeant; John Doty, Corporal; John Thompson, Corporal; James Woods, Corporal; Elijah Barnes, Robert Voaks, William Tidd, Percival Hall, Isaac Denni, George Whetherell, James Weston, Privates; John Stevenson, Drummer; Samuel Shaw, Sergeant; Lemuel Kennedy.

March 17, 1787, twenty-two took the oath of allegiance. Some of the insurgents fled from the State, and among them Capt. Francis Stone, who, if not a citizen of the town at the time, was closely connected with some of its families. Hence we find the town, May 21st, instructing its representative to use his utmost exertions for a general pardon of the insurgents, that the banished might return home. The town further instructed him that "In all free governments that idea ought ever be kept in view that the rulers and ministers of state are the honorable servants and not the haughty masters of the people;" that he should use his influence to restrict the number of lawyers in the commonwealth to a small number of approved and upright character, to dismiss the Courts of Common Pleas, sheriffs and deputy-sheriffs of the county, empower the selectmen to do the business of judge of probate and have the General Court removed from Boston.

MISCELLANEOUS.—June, 1790, the town adopted an act to discourage unnecessary lawsuits, providing for a committee of three discreet freeholders, to whom should be submitted for settlement all demands whatsoever held by one citizen against another. The fees of the committee were two shillings each for each case. Any person refusing to submit his claim to the committee for settlement should be deemed unfriendly to the peace of the town and bad members of society, and treated by the inhabitants with contempt and neglect as to dealings and intercourse, save in the bare offices of humanity, and should have no votes for any town office for three years.

March 20, 1792, the town became security to Maj. Joseph Bowman, Elias Hall, Moses Hamilton and John Joslyn in a contract to support the entire poor of the State for ten years. They in turn agreed to collect all taxes during that time free of expense, to take all kinds of produce in payment of taxes at a generous price, and to purchase at a generous price from said town all produce needed besides for the support of said poor. They were authorized to procure immediately materials for and proceed to erect suitable buildings for their accommodation. The present residence of Wm. A. Felton was one of these buildings. The town was opposed to the War of 1812.

July 2, 1812, voted to co-operate with the town of Boston in using all constitutional means to avert it. July 24th memorialized the President of the United States disapproving of the war and abhorring an alliance with France.

In 1818 stoves were first introduced into the meeting-house at a cost of one hundred and seventy-five dollars.

Previous to 1826 the support of the poor had been put up at auction to the lowest bidder. In 1833 the town purchased the Little farm and supported its poor thereon. In 1835 rules were adopted for the regulation of its pauper establishment.

March 20, 1843, Congregational parish organized with a membership of seventy-nine. Until then religious institutions had been supported by a town tax.

WAR OF REBELLION, 1861.—The first town-meeting to act upon matters relating to the War of the Rebellion was held May 7th, at which the selectmen were authorized to pay each volunteer belonging to the town five dollars per month while in service, in addition to regular pay, and four dollars per month to his wife and two dollars to each child under twelve years of age.

July 21, 1862, voted to pay a bounty of one hundred

dollars to each volunteer who enlists for three years and ten dollars additional to those who enlist within one week.

August 26th, the bounty for three years' volunteers was raised to two hundred dollars and the bounty for volunteers for nine months fixed at one hundred and fifty dollars, which, November 4th, was raised to two hundred dollars.

April 11, 1864, voted a bounty of one hundred and twenty-five dollars to volunteers for three years' service, and this bounty was continued to be paid until the end of the war. The town raised $9000.55 for the war and seventy-eight men—four beyond her quota—two-thirds of the men subject to military duty and one-tenth of her population. One only, Lieutenant George Davis, was a commissioned officer. The following are the names of the volunteers on town records:

For Three Years.—Nahum H. Ayres, John Birmingham, Henry H. Bush, Albert Barrett, Josiah C. Converse, George Cooley, Daniel W. Dean, Carlton DeLand, Richard T. Davis, George A. Davis, Joseph Goddard, Lyman A. Holmes, William Hunter, William Jerome, Harrison Lamb, Peter McCue, Henry Mullett, David D. Pierce, Sidney Smith, Jr., Josiah Tuly, Oramel F. Thresher, Charles Q. Wetherell, Albert G. Wilder.

For Nine Months.—Rufus Boyden, Loring S. Barlow, Frank D. Brigham, Alfred D. Barr, Michael Bowen, Benjamin Fagan, Theodore S. Pierce, Brigham Pierce, Elijah T. Randall, Albert A. Thresher, George Woods. The rest of the seventy-eight were furnished from the surplus in other towns, this town paying the bounties.

Business.—In 1791 Joseph Bowman, Jr., entered into trade in foreign goods in a small one-storied building, situated at the north end of the present line of horse-sheds. In 1793 Henry Penniman, Jr., became a partner with him and for twenty years the firm of Bowman & Penniman was a household word in many homes in towns in the west part of Worcester and east part of Hampshire Counties. Mr. Penniman retired in 1813 and was succeeded by John Wetherell. In 1824 Mr. Wetherell removed to Petersham and Amory H. Bowman assumed the management of the business, his father furnishing the capital. In 1835 he was succeeded by Benj. F. Hamilton, who remained till 1840, when Edwin A. Read (who had had charge of the currying business of Hiram Wadsworth, at Barre Plains), in company with Samuel Wadsworth, took the place until 1850. The firm was successively Read & Wadsworth, Read & Smith and Read & Anderson. In 1850 Wm. Bowdoin commenced business and sold out in 1855 to Charles B. Frost. In 1858 Abijah Eddy succeeded Mr. Frost and remained until the spring of 1863, when a protective union store was opened with Mr. Frost as agent. In 1865 Mr. Frost bought out the stockholders and December 1, 1886, sold out stock and store to George K. Tufts, who now occupies it.

In 1812 Elisha Mathews, in company with Deacon James Woods, induced by the high price of woolen goods incident upon the war, purchased a water privilege and erected a mill one-fourth mile below the saw-mill built by his father, Daniel, on the same stream, and commenced the manufacture of woolen cloths. Mr. Mathews was on his way to market with his first load of cloths when peace was declared and prices dropped. Deacon Woods soon sold out his interest, and Mr. Mathews continued for some years, but at a constant pecuniary loss. The enterprise ruined him financially. In 1839 Isaac Hunter, Jr., James Hunter and T. P. Anderson commenced the manufacture of shoes under contract with Clark Bates, of South Carolina, to furnish two thousand pairs per month. In March, 1840, Anderson withdrew and David Wetherell took his place. The enterprise was a failure through the rascality and irresponsibility of the parties to whom the goods were sold. The business, which was carried on in a part of the store, closed in 1841. In 1848 a steam mill was erected by a stock company. This was sold to Joel Garfield, and then to Jos. P. Cheney, and finally to James Penniman, and burned in 1853; rebuilt in 1854 by a stock company and sold to Jos. M. Green, Wm. A. Mixter, Moses Pollard, Henry A. Hoyt and Hollis Tidd; burnt in 1863. Henry A. Delano made carriages and wagons from 1820–60, and later Wm. T. Felton carried on the same kind of business.

The pursuits of the inhabitants have been almost wholly agricultural. Whitney writes of New Braintree, 1796: "For its bigness it exceeds any other town in the county in fine grazing land, as is evinced by the annual product of the dairy & Beef." Then the product of beef far exceeded that of the dairy. An inventory of that time shows that one man was taxed for twenty-eight oxen; several years after the same farm maintained thirty cows. The increased profits of the dairy over those of beef changed the business from fatting cattle to making cheese, and the labor also from out-doors to in-doors. New Braintree cheese had acquired an enviable reputation in Boston as early as 1800, and many a dairy of cheese from other towns passed through the hands of Bowman & Penniman to be sold as New Braintree make. Previous to 1865 cheese was made in private dairies; during that year the New Braintree Cheese Manufacturing Company was organized, with a capital of $4000, and erected and furnished a factory at a cost of $11,000. The greatest quantity of milk received for eight months was 3,021,000 lbs. The cheese factory in 1886 became a creamery, and was then abandoned. Making milk supplanted making cheese for Boston market. In 1888 not one dairy in town made cheese through the season, a thing that had not been before for a century.

There has been but little manufacturing. Samuel Harrington made, in a small way, shoe-shaves for several years.

Besides the mills already referred to, there was a grist-mill built by Solomon Mathews on the site of the present residence of Mrs. B. F. Hamilton, on the stream north of the road.

PHYSICIANS.—Dr. Percival Hall was probably the first physician in town and almost the only one for thirty years. He commenced practice about 1760; married a daughter of Deacon Samuel Ware, 1764; removed to Boston 1793. One of his children, Betsey, born February 29, 1780, died at the age of one hundred and four years. He was a very popular man, holding many town offices, and especially in demand as chairman of committees to draw up instructions to Representatives. His productions are models in their clear, concise and comprehensive statements of the points at issue, and would do credit to any statesman of to-day. Dr. John Frink practiced in 1786–87. In 1794 Dr. Benjamin Severance succeeded Dr. Hall, and continued until his death, in 1832. During that time there were usually two physicians. Dr. Thomas Fletcher, 1789–91; Dr. John Blair, Jr., 1793–98; Dr. Increase Mathews, 1799; Dr. March, 1803; Dr. Fairfield, 1805; Dr. John Field, 1810–15; Dr. Luther Spaulding, 1816–20; Dr. Thomas Boutelle, 1820–24; Dr. Daniel McGregor, 1825–33; Dr. Oramel Martin, 1833–45; Dr. Julius Miner, 1847–52; Dr. A. A. Kendall, 1852–55; Dr. Saxton Martin, 1857–66. Since that time there has been no resident physician.

"Dr. Martin was a Democrat in politics. When he came, that party in town numbered four; during his stay it increased to thirty-five. He was thoroughly Democratic (as that word was used then) in town, as well as in State and national affairs, and believed that the ability to govern existed in the many, not the few; accordingly, he labored in all town elections for a more equal distribution of town offices."

The only resident lawyer there has ever been was Hon. Charles Allen, who came here from Worcester after being admitted to the bar in 1818; practiced six years and then returned to Worcester.

BUILDING.—A prominent feature of the Centre is the long row of horse-sheds. Previous to 1816 there were but three sheds to shelter the horses from heat, cold and storm on the Sabbath, owned by Elisha Mathews, Lieutenant Jonas Newell and Captain Abijah Bigelow. These, with the old school-house, built in 1774, that replaced the first, built in 1760, "twenty feet square with chimney in the middle," occupied the present site of the store. In 1816 Joseph Bowman exchanged the land on which the sheds now stand with the town for a portion of the land on which the store is, and Bowman & Wetherell erected the brick store, sixty by thirty feet and thirty feet high, at a cost of thirty-five hundred dollars. The same year a wooden building, twenty-seven by forty-three feet, and two storied, was built five hundred and fifty feet farther north, the lower part of which was used for a school-room and the upper for a hall. In 1865 the building was enlarged, the lower part converted into a cheese factory and the hall retained. In 1861, five school-houses were built; cost, $5,000.

In 1837 the New Braintree Temperance House was erected by a stock company (cost, six thousand dollars) to furnish a place of entertainment free from the sale of intoxicating liquors, and for thirty years it remained true to its name. It changed owners twice, and was burned in 1880. Much of the stock, with a par value of one hundred dollars, sold at eight dollars.

MISCELLANEOUS.—In 1810 the town was visited with the spotted fever, and two hundred and forty dollars paid for attendance of physicians. In 1860 pleuro-pneumonia appeared among cattle; two whole herds were slaughtered and five hundred dollars paid for relief of the owners. The greatest loss to the town, and one which badly defaced the looks of the Centre, was by fire, in 1880—one-third of an acre covered with buildings being burned. The cheese factory, Temperance House and Bigelow House were destroyed, and but for the timely assistance of fire companies from North and West Brookfield, the church and other buildings must have shared the same fate. Loss, fifteen thousand dollars. A new cheese factory is on site of the old one. A reward of one thousand dollars offered failed to find the incendiary.

March 7, 1832, the New Braintree Thief Detecting Society was formed, with a membership of forty-eight. It has been chiefly a social organization, having observed for the last forty years, on the first Wednesday in January, nearly every anniversary of its formation by a hot turkey supper. Sometimes the attendance reaches one hundred. For many years a characteristic feature of society was the annual temperance supper, instituted for the encouragement of the Temperance House. It was thoroughly democratic. Everybody was expected to attend and respond to a toast. It was the occasion for much badinage, wit and some eloquence.

The Free Public Library was founded in 1878 on a gift of one hundred dollars by F. W. Delano, of Boston, and was sustained for a few years by private contributions and the exertions of the Young Ladies' Literary Society. In 1884 it became the property of the town. It numbers eight hundred volumes, well selected.

The Third Regiment State Militia, including, with others, one company of militia from this town and one company of grenadiers from New Braintree and Oakham jointly, mustered every alternate year on the parade-ground granted by Henry Penniman. The commissioned colonels of the Third Regiment from New Braintree were Samuel Mixter, Louis Blackmer, Henry Penniman, Stephen Fay, Asa Barr, Roswell Converse and Amory H. Bowman.

In politics the Federalists, Whigs and Republicans have in succession usually been in a majority. Notable exceptions occurred in the reign of the Know-nothing party and in the Presidential election in 1884, when Blaine and Cleveland polled the same number of votes. The greater inequality was in 1803, when Gerry, the Democratic candidate for Governor, received only one vote against eighty for Strong, his opponent. There has been but little disposition for frequent changes in office. Men once chosen to office, and proving themselves capable and faithful therein, have received the continued support of the people.

In 1796 Whitney wrote of the people of New Braintree, "They have the reputation of being good husbandmen, frugal and industrious, and they live much independent." This frugality and industry brought most of them a competence and many wealth. But this wealth was held in no miserly spirit. They could beautify their own homes and the Lord's house, erect and sustain a public house of entertainment in the interests of temperance, give liberally to promote education at home and abroad, and in support of all benevolent objects. They were liberal in appropriations for musical education. The "independent" spirit referred to increased with the increase of wealth and intelligence. There was a just pride in the relative position the town held among other towns and in the character of its men.

INDIVIDUALS.—Of the early settlers, Capt. Eleazer Warner was already a veteran soldier. He was born in 1686, and early entered the military service of his country during the French and Indian Wars. At twenty-seven, was an attendant of a commission sent by Governor Dudley to Canada to redeem prisoners in the hands of the French; is on record, at forty, as teacher of the first school taught in Brookfield. In 1822 he married Prudence, sister of Comfort Barnes, who built the first house on Brookfield soil, that afterward became New Braintree, and located on the south bank of Sucker Brook, opposite to the house of Jonathan Nye; removed 1730 to the place known afterwards as the "Perez Cobb" place, near the North Cemetery, a portion of which house he built. In the "History of Hardwick" he is referred to as probably the first settler in Hardwick, and his son, Wareham, as the first white child born on New Braintree soil; his nephew, Joseph Barnes, was the second. His farm included a part of the Indian fort before referred to.

Three brothers, active in the town's early history, were David, James and Jonathan Woods, who came from Marlboro' respectively in 1744, 1746 and 1752. David was town clerk (1750–78) and assessor; Jonathan, second representative to General Court; James, moderator, treasurer, delegate to Provincial Congress and first representative to General Court. Jacob Pepper was at least fifty times moderator of town-meetings. John Barr, who came from Ireland about 1730, became the owner of five hundred acres of land in the southwestern part of the town, including a large part of present School District No. 5. Cornelius Cannon came from Dartmouth in 1737, and settled on present residence of Mr. Graves. John Peacock, a native of Ireland, was a soldier in the French and Indian War, and his son, John, Jr., an adjutant in Col. Timothy Ruggles' regiment, 1757. Oliver Cobleigh was also a soldier in that war. The Abbots, Barneses, Gilberts and Cannons were all connected by marriage, as well as the Peppers, Woods and Barrs. Abraham Hunter, the father of all the Hunters except Robert, came in 1753, having purchased a large tract of land in the east part of Braintree grant, which he divided among his sons and daughters. Daniel Matthews, who erected the saw-mill in 1749 at Webb's Pond, married Huldah, sister of Gen. Rufus Putnam. To him the general was apprenticed at fifteen years of age. Mr. Matthews was a member of Committee of Correspondence and an inspector of tea-drinkers, 1774. Wm. Tufts came from Brookfield in 1758, purchased land of Richard Faxon, an original proprietor, and was for many years a member of the School Committee.

Joseph Bowman came from Lexington about 1765. He was an ensign of a company of fifty men from this town who marched to Boston on the report of the attack upon the company at Lexington on the 19th of April, 1775. He soon after joined the army, and commanded a battalion at the battle of Bennington and other battles, which resulted in the capture of Burgoyne. He was not only a leading man in New Braintree, but his family, uniting the blood of the Bowmans and Munroes of Lexington, became one of the most influential in this part of Worcester County. His daughters intermarried with the Delanos, Woods, Matthews, Fields, Hoyts, &c., in the town. His son, Hon. Joseph Bowman, born September 11, 1771, entered mercantile business in his minority in New Braintree without capital or expectation of any. His marriage with the sister of his partner, Col. Henry Penniman, materially aided him, but he was mainly indebted for his success to his untiring energy, industry and perseverance, his sagacity, judgment and unyielding integrity. He remained in trade thirty-five years, and accumulated a large fortune. He became the leading merchant in the region, and his store the principal place of resort for surrounding towns. For twenty-one years he was president of the Hampshire Manufacturers' Bank at Ware. In politics a Whig, but always reserving the right of individual action, independent of party. Office sought him, not he the office. He was elected representative to the General Court in 1806 and thirteen times thereafter; Senator, 1828–29; member of Governor Lincoln's Council in 1832–34. He was a liberal supporter of religious and educational institutions. In private life most agreeable, hospitable, courteous and even-tempered. Few retain the confidence of the public as long as he. He died January 30, 1852.

Henry Penniman came from Mendon, 1785, and was for many years the largest landholder in value, if not in acreage. His gifts to the town were, in 1795, six acres of land for a training-field (value, $333.33), east of Centre, and $300 for a new bell in 1800. His son, Colonel Henry Penniman, and Joseph Bowman gave a new town clock in 1802; was partner in trade with Mr. Bowman 1793–1813; also gave an organ for the church, and his family supplied it with players for more than thirty years, one daughter commencing at nine years of age. Colonel Penniman was a trustee and a liberal donor to the funds of Amherst College; was much in town affairs and twice Representative, but declined more honors.

Lieutenant Samuel Mixter came from Brookfield, 1775, and reared a large family, who became connected by marriage with the Tidds, Popes and Greens. His son, Honorable Samuel Mixter, was in nearly every town office, and settled estates, etc.; Representative, 1818–19; Senator, 1833–35; Councillor, 1837–38. A man of great native sagacity and influence.

The three brothers Tidd came from Lexington (Ebenezer and Joseph, 1768), the former receiving by his father a large portion of the farm formerly occupied by Hollis Tidd, the latter the farm now occupied by Mr. Mahan. Benjamin came in 1790, and located where Frank Roch now lives. He was a member of the company under Parker that took part in the struggle at Lexington, April 19th, at Cambridge, June 17th, and served Dorchester the following year. Ebenezer, as well as his son Hollis, were prominent men; the latter was an aid to General Crawford, School Committee over thirty years; Representative, and filled other offices. The limited space allotted to New Braintree in this history of the county forbids mention, as they deserve, of many others equally prominent and influential, such as Captain Benjamin Joslyn, Gideon and Philip Delano (the latter a model town clerk for thirty-four years), Elisha Mathews, Colonel Roswell Converse (who, in compliance with Dr. Fiske's wish, bought and fitted a parsonage, running the risk of returns for the investment), Josiah Gleason, Amasa Bigelow, James Bowdoin and scores of others (not omitting the women), some of whose names are on record and more not, all of whom contributed equally, by private virtues as well as public services, to make the town in a peculiar sense a representative New England town.

Of the original settlers the following are, with one or two exceptions, resident descendants:

David Woods. { Hon. Bonum Nye. / Mrs. Wm. Bowdoin.

James Woods. { Mrs. D. G. Barr.

John Barr and Jona. Woods { D. G. Barr.

James Thompson. { Moses Thompson. / C. B. Thompson. / Miss E. A. Hoyt.

Eleazer Warner. { R. P. Warner.

Wm. Anderson. { Wm. E. Anderson.

Jacob Nichols. { H. L. Pollard.

Sam'l Harrington. { Nath'l Harrington.

Abraham Hunter. { John Hunter. / Mary Hunter.

Wm. Tufts. { Hon. Washington Tufts, who, a life-long Democrat, was sent, 1875, to the State Senate from a Republican district. / Geo. K. Tufts.

Adam Homes. { Mrs. C. Wilcox. / Mrs. D. Wetherill.

John Barr. { J. H. Barr.

George Woods. { Mrs. J. H. Barr.

Jona. Woods and Jacob Pepper. { Geo. D. Woods.

Joseph Pepper. { All of that name.

Ebenezer Tidd. { Mrs. J. P. Gleason.

Benjamin Tidd. { Mrs. Charles Burt.

Joseph Bowman. { H. A. Hoyt. / Geo. K. Tufts. / Miss E. A. Hoyt. / Mrs. H. M. Tufts.

Daniel Mathews. { Mrs. H. M. Tufts. / Geo. K. Tufts.

LOCATION.—So far as known, the original settlers located themselves as follows, the second column indicating present occupants of their farms, with due allowance for additions and subtractions incidental to a century and a half:

Former.	Present.
James Robinson	Col. Robinson Place, Hardwick
John Wilson	Thomas Loring
James Thompson	Est. M. H. Fay
Jona. Cobleigh	E. of Geo. Needham
John Blair	Josiah Bush, near Pond
Jacob Nichols	H. L. Pollard
John Barr	John Cooney, where house was burned
Abram Joslyn	Edwin Hoar
Joseph Little	C. P. and H. I. Howard
Eleazer Warner	L. Crawford, "Perez Cobb house"
Beriah Hawes, Dennis Healey, on discontinued road to Hardwick	
Edward Blair	Jerry Mara
David Woods	Alfred Boyden
James Woods	Horatio Moore
John Barr	J. B. Fobes, John Sibley, M. Greenwood, P. Monahan.
Samuel Steele	Geo. F. Vaughn
George Woods	W. W. Gray
David Ayers	Francis Shaw
Phinehas Warner	J. H. Thresher
Wm. Anderson	Wm. E. Anderson

B. F. Hamilton.

Samuel Ware	Geo. F. Snow
Wareham Warner	John O'Brien
Joseph Pepper	Wm. A. and E. Pepper
Jacob Pepper	J. E. Barr
Moses Abbot	Dwight Tyler
David and Jona. Gilburt	M. Cota
Sarah Barnes	John Cooney, opp. side of brook
Ebenezer Spooner	M. D. Peckham
Wm. Tufts	John P. Day
Abraham Hunter	J. P. Hunter, H. Moore, M. Iago, J. D. Frost and pt. by John Danbruskie
Adam Homes	John Danbruskie
Cornelius Cannon	M. Graves

The cemetery in District No. 3 was given, in 1756, to the town by Edward Blair. For many facts and dates the writer is indebted to Mr. George D. Woods; for some facts relative to that portion of the town formerly in Hardwick, to the "History of Hardwick" to C. B. Tillinghast, acting State librarian, for his uniform courtesy and assistance in furnishing access to original documents.

BIOGRAPHICAL.

BENJAMIN F. HAMILTON.

Benjamin F. Hamilton, son of William and Rhoda Hamilton, and a direct descendant in the fourth generation of James Hamilton, father of Alexander Hamilton, of Revolutionary fame, was born in Conway, February 18, 1809. He received a common-school education in his native town. His was one of the old families of the town, and the name Hamilton was the name of the leading physician of Conway for nearly a hundred years. During his minority he engaged with his brother and uncle in the manufacture of woolens.

To him much was intrusted of the buying, selling and general management of the business. The depression in American manufacturing in competition with that of England after the declaration of peace following the War of 1812 rendering the business unprofitable, Mr. Hamilton went to Taunton as a clerk. From Taunton, in 1829, when twenty years of age, he came to Barre, in the employ of Harding, Woods & Co., as a clerk and book-keeper in their general store, remaining for six of the most receptive years of his life in one of the best kind of schools for the study of human nature that ever existed. Mr. Woods endorsed his services with him in this remark, that "He had been one of the most faithful, accurate and honest clerks he ever had in his employ." While in Barre he married Catherine Wilson, who died December 16, 1837, and by whom he had one child—Catherine—born December 11, 1837, who also died.

In 1835 he purchased of Amory H. Bowman his stock of goods in the old "Brick Store," and came first to reside in New Braintree. Here he remained until 1840, then removed to Petersham, where, in company with Sampson Wetherell, he engaged in the same kind of business. It was customary then for country traders to purchase large quantities of leaf, parcel it out among their customers to be braided into hats, then buy the hats and pay for the same from the store. The depression in the hat business, and the consequent failure of many large houses, caused the failure of many smaller firms, of which Hamilton & Wetherell were one. Mr. Hamilton returned to New Braintree, and spent the remainder of his days in farming.

May 27, 1841, he married Hannah D. Gleason, daughter of Josiah Gleason, of New Braintree. During his residence in New Braintree he was closely identified with its interests, civil, parochial, business and political, and was, for a longer or shorter time, the official head of all of them. He was thoroughly faithful to all these interests while in his charge.

From 1863–68 he was a member of the Board of Selectmen, one year its chairman. For the first fifteen years of its existence he was a director of the New Braintree Cheese Manufacturing Company, and five years its president. For eighteen years he was a member of the Parish Committee, and much of the time its chairman. It was a favorite saying of his that "He had been a member of this Parish for a longer consecutive time, and paid a parish tax a greater number of years, than any other living member, with perhaps one exception." In his theological views he was diametrically opposed to the tenets held by the varions preachers, to whom he listened nearly forty years, but in the practical application of religious truth he stood upon the broad ground, so common to many men of all denominations, that "Faith without works is dead also,"—a doctrine that an eminent divine once said would have classed the Apostle James as a Unitarian had he lived in our day.

Channing, the great apostle of Unitarianism, never had a more devout admirer than Mr. Hamilton. To say that he was always cool and deliberate in judgment, or wise and temperate in action, would be to say more than he would have said of himself. He was always true to his convictions and fearless in their expression. He believed that truth was its own greatest safeguard and its declaration better than its suppression.

Besides, he never hit a man in the back; his blows were always in front, and whatever criticisms he had to make were made in so open a manner that the one criticised had ample opportunity to defend himself. If he sometimes went to extremes, he never did things by halves. If he was impulsive, he was also generous. He was methodical in business, paying close attention to details, enterprising and public-spirited. He died August 28, 1884.

J. P. GLEASON.

Josiah Parsons Gleason, son of Josiah and Mary (Hitchcock) Gleason, was born in New Braintree, May 15, 1822. His early education was mainly obtained in the district-schools of his native town, supplemented with a term or two each at Leicester Academy in 1835, at Phillips Academy, Andover, 1836, and at Munson Academy and Hadley in 1839. In 1837 and '38 he was clerk in the store of his brother-in-law, J. S. Marsh, in Hardwick, Mass. He became the home son and at the death of his father came into possession of the "Homestead" of about 250 acres, situated on the west slope of Fort Hill, overlooking the beautiful valley of the Ware River, and one of the most productive farms in New Braintree.

He was a member of the Board of Selectmen from 1865 to 1884, excepting 1868, and several years its chairman; assessor from 1867–80. He was always the scribe of both boards, and the entire transactions of both during his membership are recorded in his bold, legible handwriting. His public as well as private affairs have always been conducted on business principles, with promptness, accuracy, thoroughness and system. He has always advocated a liberal, but never extravagant, expenditure of the public funds, both for the general interests for which the town provides, such as schools, etc., as well as for special objects which the law does not make obligatory.

In politics he has always held it to be the right of the individual to form his opinions and act in accordance with his own convictions, independent of the opinions or acts of others, although by so doing he occupied a position opposed to the party to which he nominally belonged. Hence he has found himself at different times allied to both parties. In his early life he was much in general society, but later a family of wife and eight children furnished him with ample opportunities for the play of his social faculties, and this devotion to home has been fully reciprocated even after its younger members had grown to maturity and made homes of their own.

He married, November 21, 1849, Mary Newton Makepeace, born May 19, 1822; died September 16, 1855. His children by this marriage were: Josiah Makepeace, born September 11, 1850, died March 2, 1852; Mary Parsons, born May 29, 1852; Robert Rantoul, born September 7, 1855, died September 22, 1855; Albert Makepeace, born September 7, 1855.

He married, February 24, 1859, Ellen Augusta Tidd, daughter of Hollis Tidd, Esq., born April 30, 1831, The children by this marriage are: Edward Hollis, born February 4, 1860; Herbert Parsons, born August 1, 1861; Alexander DeWitt, born March 1, 1863; George Davis, born November 21, 1864; Ronald Prentiss, born August 24, 1866; Alice Hamilton, born October 15, 1870.

Albert Makepeace Gleason married, September 8, 1883, Elizabeth Aiken, of Greenfield.

Edward Hollis Gleason married, May 30, 1885, Julia Hamilton, of Boston. Children: Ellen Harris, born August 23, 1886; Hollis Tidd, born April 13, 1888.

CHARLES EAMES.

Charles Eames was a native of New Braintree. His mother was a descendant of the Ebenezer Tidd who emigrated from Lexington to this place in 1768. He was fitted for college when twelve years of age, but did not enter till the next year. He graduated at Harvard at the age of eighteen, the first scholar in a class in which were Wendell Phillips and Motley, the historian, with both of whom his friendship lasted till his death. In early life he acquired fame by his eloquence and rare oratorical powers. At the close of Mr. Polk's administration he was appointed commissioner to the Sandwich Islands, to make a commercial treaty with that government, which he accomplished. President Pierce appointed him Minister Resident at Caraccas, Venezuela, with which government he also negotiated a treaty. On his return from that country he resumed the practice of law in Washington.

During the War of the Rebellion he was counsel for the Navy Department and the captors in all the prize cases, and for the Treasury Department in all the cotton cases. It was in arguing before the Supreme Court of the United States the great prize case of the "Sir William Peel," in which William M. Evarts was the opposing counsel, that he was stricken down with the disease that terminated fatally in two months. He rallied sufficiently in a month to appear again in the Supreme Court as counsel for the navy and the captors in the great prize case of the "Grey Jacket," involving a million of dollars, which he gained for the government, and that ended his professional career. He died March 16, 1867, in his fifty-fifth year. For many years his house was a great centre of celebrities in politics, jurisprudence, letters, art and society. Governor Andrew, in a notice of his death which he wrote for a Boston newspaper, said: "I think this tribute is due to a native of Massachusetts, the first scholar in his class at Cambridge, and a lawyer who has won the leading reputation for his mastery of the learning of Prize, and the various other questions arising out of the War of the Rebellion, involving, as they do under our special national statutes, a great, difficult and philosophical branch of judicial study.

"Mr. Eames was the special counsel of the Treasury Department in all the great cotton cases, in which he has displayed alike ingenuity and native sagacity and skill.

"Many of our Massachusetts people will always remember the house of Mr. and Mrs. Eames as the most hospitable, agreeable and attractive house in Washington. With great simplicity, but with every charm of gracious and cordial manners, they received constantly, informally, and for years. There all the best and strongest men were to be seen, and though not

J. P. Gleason

Charles Eames

exclusive in a political sense in their friends, Mr. Eames was still, while with Democratic antecedents, warmly and faithfully loyal to the most advanced ideas, both during and since our struggle with the rebels. His employment professionally by the government in no sense seemed to compromise his thorough and manly regard for the truth, as it naturally lay in the mind of a man *trained to think*, and educated in the original ideas of Massachusetts. To his birthplace, to his native Commonwealth, he was faithfully and warmly attached."

An International Episode.—"By a curious coincidence, just as our attention is turned to Mr. Sandham's notable painting of the 'Battle of Lexington,' I have received a call to-day from a Scotch gentleman who is the great-great-grandson of Major Pitcairn. He was greatly interested in our Pitcairn pistols and other relics, and spent several hours in looking about town. To make the coincidence still more striking, his wife, who accompanied him (an American lady), is a descendant of Joseph Tidd, who lived in the old Tidd homestead, which is still standing in Lexington, and whose sons, Benjamin and John, were in Captain Parker's company on the 19th of April, 1775.

"It is related by this John Tidd that, being one of the last to leave the Common, he was pursued by the British, struck down and robbed of his arms. At the same time his cousin, Lieutenant William Tidd, retreating up Hancock St., was chased by a British officer (supposed to be Pitcairn), who cried out, 'Stop or you're a dead man.' The plucky lieutenant sprang over a pair of bars, made a stand, took aim and fired at his pursuer, who dodged the shot, wheeled about, and hastened back to join his men. That a descendant of this 'Britisher' should, after one hundred years, marry a descendant of this 'rebel,' and that the two should to-day come with eagerness to see, for the first time, the spot where their ancestors fought against each other, is a fact as strange as anything in fiction. Cupid has healed many a wound, but he was more than usually adroit when he contrived that a Pitcairn should at last marry a Tidd."

MOSES THOMPSON.

Moses Thompson, son of Nathan and grandson of James Thompson, the first captain of militia in town, whom, under the title of their "well-beloved and faithful" friend, the inhabitants of "Braintree Farms" selected from among their number to convey their petition to the non-resident proprietors, and secure their co-operation in their efforts to become incorporated as a town, and who afterwards bore the petition for incorporation to the General Court, was born in the south room of the house now belonging to the estate of M. H. Fay, formerly the residence of his grandfather.

November 21, 1807, when James Thompson first came to reside here, there was only one standing tree on the farm—a rock maple. The whole territory of the "Farms" had been burned over by the Indians, to afford pasturage for deer.

Nathan, the father, died when Moses was seven years old. He remained with his mother three years, then went to live with Moses Felton, where he remained four years, and afterward two years with Joseph Bowman. His mother having bought the farm now owned by Michael Boyle, on the road to West Brookfield from Wait's Corner, Moses went to live with her.

At twenty-two he bought of Baxter Ayres a farm in North Brookfield, where he remained five years. While there he married, June 29, 1830, Hannah Bush, daughter of Josiah and Molly Bush, born December 4, 1811, who has been a faithful and devoted wife and mother. They came to New Braintree in 1834, and bought of Daniel Woods the homestead they now occupy. This farm Mr. Thompson has about doubled in area since the original purchase. Mr. Thompson is the only living original member of the Congregational Parish, that has always retained his connection with it. He was for many years its treasurer and collector and a member of its committee annually chosen to manage its affairs. He held the office of town treasurer, with the exception of two years, from 1858 to 1884, and for some years had the sole management of its town farm, with its occupants. He is conspicuous for the same traits that created public confidence in his grandfather, and his faithfulness, integrity and good sense have especially characterized his public and private dealings. He likes trust and responsibility. He has always been a constant attendant of divine worship (including fast and thanksgiving days), and a constant and liberal supporter of religious institutions, not from impulse, but from principle, and equally liberal in his support of schools.

He is peculiarly fond of his family and friends, of visiting and receiving visits, and seldom is to be seen riding unaccompanied by one or more of his grandchildren. He is a descendant, through his mother, Molly Doty, of Edward Doty, who came over in the "Mayflower" in 1620, "and was a party to the first duel fought by Englishmen in New England."

His children are: Charles Bush, born September 20, 1834; Nathan, born August 26, 1837; Harriet Delia, born November 6, 1841.

Of these, Charles married, January 23, 1858, Elizabeth D. Fagan, born February 6, 1837. Their children are: George Hilliard, born May 22, 1863; Annah Maria, born April 30, 1865, died April 13, 1877; Frances Hunter, born May 21, 1867; Harry William, born November 8, 1873, died April 8, 1877; Charles Moses, born September 13, 1875, died April 6, 1877; Ethel Garfield, born September 21, 1878; Gertrude Elizabeth, born February 14, 1884.

Of these, George Hilliard married, December 10, 1887, Adelaide Wight, born June 28, 1863. They

have one child—Georgia Elizabeth—born September 10, 1888.

Nathan (to whom further reference is made in list of educated men) married, January 1, 1870, Mary E. Dartt. Their children are: Clarence Dartt, born February 14, 1871, died September 10, 1871; Mary Florence, born January 3, 1873; Helen Morton, born March 9, 1875.

Harriet Delia married, April 9, 1874, L. Kirke Harlow, who died March 15, 1887.

CHAPTER LXXXVII.

LEICESTER.

BY REV. A. H. COOLIDGE.

SETTLEMENT.

Location—Indian Deed—Proprietors—Incorporation - Settlement—Hardships—Snow Storm—Thomas Green—Struggles—Rural Life—Houses—Mills—Lovell's War—Fortified Houses—Discouragements—Spencer "set off," also parts of Paxton and Auburn—Cyclone.

THE town of Leicester stands upon the ridge of the water-shed of Central Massachusetts, one thousand and seven feet above the sea level. Its waters flow easterly, through Lynde and Kettle Brooks, into the Blackstone River; southerly, through French River, into the Quinebaug and Thames, and westerly from Shaw Pond, through the Chicopee River, into the Connecticut. Lynde Brook Reservoir, on the east, is one of the sources of water supply for Worcester, and Shaw Pond, on the west, is the source of the supply for Spencer. Leicester is about forty-eight miles from Boston. It is six miles west of Worcester and five hundred feet above that city. Its location is 42° 14′ 49″ north latitude, and 71° 54′ 47″ west longitude.

Its villages are the Centre, at first called Strawberry Hill; Cherry Valley, two miles east of the Centre, generally so-called since 1820; Rochdale, at first South Leicester, named Clappville, from Joshua Clapp, who purchased the mill property in 1829, and changed to Rochdale in November, 1869; Greenville, which about the middle of the present century began to be so called from its founder, Captain Samuel Green; Mannville, two miles north of the Centre, which was named after Mr. Billings Mann about the year 1856; and Lakeside, which has come to be so called within a few years. The northeast part of the town is called "Mulberry Grove," the name being first given in 1827 to the estate of Silas Earle, on which he raised mulberry trees and produced silk from the silk-worm.

At the time of its original purchase the township of Leicester was a part of the extended domain of the Nipmuck tribe of Indians. The character of this tribe had been greatly changed, and many of its members had been converted to Christianity through the labors of John Eliot and Daniel Gookin. Gookin, in his "Historical Collections," mentions seven "new praying towns" among the Nipmuck Indians. One of these was in Oxford and another was Pacachoag, in Worcester and the southeastern border of Leicester. That the Indians of Leicester had been brought under the same influences is indicated by the fact that one of the signers of the deed is styled "deacon." Few Indian relics have been found here, there are few Indian traditions, and there is little to indicate that the place ever had a considerable native population, although it was of sufficient importance to have a sachem.

The Massachusetts Colony, like the Plymouth, recognized the claim of the aborigines to the land, and secured it of them by fair purchase. The territory embracing Leicester, Spencer, a part of Paxton and a small portion of Auburn was bought of the Indians by nine gentlemen of Roxbury and vicinity, who became the original "Associate Proprietors." The sachem, Oraskaso, had recently died, and the deed is signed by his heirs. The price paid for the land was fifteen pounds, New England money.

The deed is an interesting historical document. It declares

That the heirs of Oraskaso, Sachem of a place called Towtaid, situate and lying near the new town of the English, called Worcester, with all others which may, under them, belong unto the same place aforesaid, Towtaid, these heirs being two women, with their husbands, newly married; which, being by name called Philip Tray, with his wife, Momokhue; and John Wampkson, with Waiwaynom, his wife, for divers good causes and considerations us thereunto moving; and more especially for and in consideration of the sum of fifteen pounds, current money of New England to us in hand paid by Joshua Lamb, Nathaniel Page, Andrew Gardner, Benjamin Gamblin, Benjamin Tucker, John Curtice, Richard Draper and Samuel Ruggles, with Ralf Bradhurst, of Roxbury, in the county of Suffolk, in New England, the receipt of which we do fully acknowledge ourselves to be fully satisfied and paid, have given —— a certain tract of land containing, by estimation, eight miles square, situate, lying and being near Worcester aforesaid, abutting southerly, on the lands of Joseph Dudley, Esq., lately purchased of the Indians; and westerly, the most southernmost corner of a little pond called Paupakquamcock, then to a hill called Wakapokotownow, and from theuce to a little hill called Mossonachud, and unto a great hill, called Aspomsok; and so then easterly, upon a line, until it comes against Worcester bounds, and joins unto their bounds; or howsoever otherwise abutted and bounded, &c.

In witness whereof, the said Philip Tray and Momokhue, and John Wampscon, Waiwaynow, being their wives, have hereunto set their hands and seals, this twenty-seventh day of January, *anno Domini*, one thousand six hundred and eighty-six.

Signed, sealed and delivered, in presence of us:

PHILLIP TRAY × his mark. [Seal.]
MOMOKHUE TRAY × her mark. [Seal.]
JOHN WAMSCON. [Seal.]
WAIWAYNOW WAMSCON × her mark. [Seal.]
WANDWOAMAG, × the deacon, his mark. [Seal.]
JONAS, his × wife's mark. [Seal.]

TOM TRAY × his mark.
NONAWANO × his mark.
CAPT. MOOGUS × his mark.
ANDREW PITTEME × his mark.

The deed was acknowledged before William Stoughton, "one of his Majesty's Council, of his territory and dominions of New England," June 1, 1687.

Twenty-seven years afterward the number of proprie-

tors was increased to twenty-two. They were men of wealth and influence, and some of them were owners of large tracts of land in other towns of Central Massachusetts. None of them ever settled in Leicester. The purchase was a pecuniary investment, but was also designed to encourage the speedy settlement of the province.

The speculative venture was, however, for a long time unremunerative, and Towtaid remained for almost twenty-seven years an unbroken wilderness. The period was unpropitious for interior settlement, and it was well that none was undertaken. Leicester was thus saved from perils and horrors to which other towns were subjected, while her primeval forests waited in silence for more peaceful occupation. Under the influence of the Christian religion, the Nipmuck Indians had become a peaceable and friendly people; but upon the outbreak of King Phillip's War, they became divided and broken. That wily and powerful chief came among them, and by persuasions and threats, and by the force of his fiery eloquence, won a portion of them to his cause. Many of them remained true to their English neighbors; but others followed their great leader. Their savage instincts were reawakened, they took the war-path, and brought disaster and ruin to the scattered settlements. In this, and the successive French and Indian Wars, all the earlier settlements of Central Massachusetts were broken up. Worcester was twice attacked, and the colonists killed or driven out. Lancaster was burned, and its people massacred. Brookfield suffered the same fate; and the interesting colony of Huguenots in Oxford, were attacked, and forced to abandon their homes, their vineyards, their church and the burial-place of their dead.

There was little encouragement in circumstances so adverse to seek homes on the bleak hills of Leicester, in the heart of the Indian territory.

After the close of the French war in 1713, measures were taken to make the grant available. The original deed was recorded March 8th, 1713-14. The title had been confirmed by the General Court, February 15th, with the usual conditions, that portions of the land should be reserved for the Gospel ministry, and for a school, and that within seven years fifty families should settle themselves, with reasonable provision for self-defence, on a part of the land. This was a virtual, and indeed is the only, act of incorporation of the town of Leicester.

The early English explorers found on Leicester hill a luxuriant growth of strawberries, and therefore gave the place the name of Strawberry Hill, which it had hitherto retained. It now received the name of Leicester, and was assigned to Middlesex County. It was on the 23d day of the same month that the number of proprietors was increased from nine to twenty-two. At this meeting the proprietors voted to offer one-half of the town to settlers, and chose a committee, consisting of Colonel William Dudley, Captain Joshua Lamb, Captain Thomas Howe and Captain Samuel Ruggles, to determine which half should be opened for settlement, and which should be reserved for later and more advantageous sale. They decided to offer for occupation the eastern half. On the 14th day of May the allotment was made; and the next day the committee came to Leicester to locate the lots. In June the township was, by order of the General Court, surveyed by John Chandler, "to fix the bounds."

Fifty "house-lots," of from thirty to fifty acres each, were laid out, and sold for one shilling an acre, with "after rights" of one hundred acres for each ten acres of "house-lot." Thus the purchaser secured a farm of five hundred and fifty acres for fifty shillings. The lots were to be settled in three years or forfeited for the benefit of the public. One lot of forty acres was to be reserved for the ministry, one of one hundred acres for schools, and three lots of thirty acres each for mills.

Special grants were also made of seven and a half acres of "meadow," to each lot, for "feed." These meadows were evidently regarded as of special value; but the event has proved that the hilly ridges and slopes are more productive. The cedar swamps were left undivided.

The lots were numbered, and the purchasers drew for choice. The first choice was drawn by John Stebbins. He chose the lot on Strawberry Hill, on which the house of Rev. Samuel May now stands. Here the first house in town was probably built.

At a meeting of the proprietors, held July 23, 1722 a committee of the proprietors was appointed to convey deeds to those who had complied with the terms of purchase. The deed itself was not, however, executed till January 11, 1724, (O. S.), more than forty-seven years after the purchase of the town. It was recorded November 29, 1729.

The names of purchasers were John Stebbins, Joseph Stebbins, James Wilson, Samuel Green, Arthur Carey, Moses Stockbridge, Hezekiah Russ, John Peters, William Brown, Thomas Hopkins, Daniel Denny, John Smith, Ralph Earle, Nathaniel Kanney, Samuel Stimpson, Benjamin Woodbridge, John Lynde, Josiah Winslow, Josiah Langdon, Joshua Henshaw, Joseph Parsons, Nathaniel Richardson, John Menzies, Joseph Sargent, Daniel Livermore, James Southgate, Daniel Parker, William Brown, Thomas Baker, Richard Southgate, William Green, Samuel Prince, Dorothy Friar, Thomas Dexter, William Kean, James Winslow, Stephen Winchester, Paul Dudley, John King.

Thomas Baker and Joseph Parsons did not settle in Leicester.

These men and their families, and those who had already joined them, together with those who soon afterward united their fortunes with the infant colony, were the founders of Leicester. Some of them were men of superior quality. To the hardships and toils

of these pioneer families, to their intellectual and moral character and their Christian fortitude, the town is largely indebted for its prosperity and its worthy standing and honorable history.

The settlement of the place began soon after the allotment was made. In a few instances the purchasers engaged families to hold the lots for them, but others took direct possession.

According to early traditions, the first inhabitants found upon their arrival a solitary hermit, named Arthur Carey, living on the hill which from him was named Carey's Hill. Whitney, in his County History, states that he "went thither and digged a cave in the side of this hill, and lived there as a hermit many years, while that part of the country was in its wilderness state." What were his feelings when his solitude was disturbed by the approach of civilization no one now can tell, nor what had been the romance or the tragedy of his life, nor why he had retired from the world and buried himself in the lonely forest.

Leicester was then an unbroken wilderness. Worcester was just beginning, for the third time, to be resettled. There was no settlement of whites, except Brookfield, between Leicester and the Connecticut River. Bears and wolves and wild-cats and moose and other wild beasts roamed undisturbed in the forests, and the place was infested with serpents. The dams and curious homes of the beaver were long afterward visible in the meadows. There were, as late as 1740, pits for the capture of wolves; and the names "Moose Hill," "Raccoon Hill" and "Rattlesnake Hill" are suggestive of realities familiar to the early inhabitants, while "Bald Hill" stood peculiar as a tract of land which had been already cleared.

The first town-meeting of which there is any record was on March 6, 1721–22, although meetings had evidently been held for two or three years previously. A meeting-house had already been built. Judge John Menzes had served the town in the General Court the year before, and was re-elected the two succeeding years. He declined any remuneration for his services, "being fully satisfied and paid." The precedent thus established was so popular that when, in 1724, a successor was to be elected, it was voted that whoever should be chosen "should be paid the same as Judge Menzes and no other." Lieutenant Thomas Newhall was then elected "to serve on the above conditions."

At the first recorded town-meeting Samuel Green was chosen moderator, first selectman, first assessor and grand juror. The town offices then were the same as those now filled at town-meeting. Two tithingmen were also elected to keep order in the meeting-house.

At first the families were sheltered in rude log-houses. The first impression which one of these houses made upon the mind of a little child is indicative of their outward aspect. Daniel Henshaw came to Leicester about thirty-four years after its first settlement to take possession of a house already built for the family. The household goods had been moved from Boston on an ox-cart. As the family approached the house, by the narrow cart-path, the little daughter exclaimed "Oh, father, this is Leicester jail, isn't it?" In this household was a dog, named Hero, which came with the family from Boston. There was then no regular means of communication with the outside world, and Hero was for several years the mail-carrier of the family. Receiving verbal instructions as to his destination, he hastened at a rapid pace to Boston, with letters fastened to his neck, delivered them as directed, and after rest and refreshment returned with letters to the home friends.

In February and March of 1717, when there were only a few families here, and these were provided with hardly more than temporary shelters, the whole of New England was visited with a series of snow storms of almost unparalleled severity. For several weeks no mails could reach Boston, and when they came they were brought by men on snow-shoes. The low houses were covered so that in some cases the chimneys could not be seen. Families for days were prisoners in their own houses, and first made their exit from the attic windows. Many domestic animals perished, and some were said to have been rescued alive weeks afterward. After the storm ceased, cattle could be seen walking over drifts twelve feet deep, and feeding upon twigs on the tops of trees. Such was the welcome of these hills to the men and women who settled Leicester.

It was not far from this time that Dr. Thomas Green, then a boy of eighteen years, was left alone, in the summer, in charge of his father's cattle. Attacked with a fever, he sheltered himself under a shelving rock, by the stream on which his father's mill afterward stood. Here, alone in the wilderness, his shrewdness saved him. He tied one of the calves within reach, and as the cow came to it, nourished himself with her milk. In this distressing condition he remained till found by passing land-owners, in the vicinity. They hastened on to inform his friends. His father at once came and removed him back to Malden, on horseback—a four days' journey.

The progress of the settlement for many years was slow. Its location was isolated, and the people, on their scattered farms, must have been lonely in the extreme. Expected and unexpected difficulties opposed their prosperity. The soil was hard and cold, although in many parts rich and strong. They cut down the forests and cleared the fields, they were busy "breaking stubble," "ditching meddows," "splitting ye hills," and making roads. They struggled with rocks, and winds, and snow, and suffered from cold, the degrees of which there were no thermometers to mark. Portions of the town were infested with rattlesnakes, and as now there were various enemies to vegetation. A bounty of "Six Pence pr. hed" was voted by the town "for killing Rattel Snakes." In one year, nearly a quarter of a century after the incor-

poration of the town, Benjamin Richardson received eleven shillings as a bounty for killing twenty-eight rattlesnakes; and in 1740 the town paid in bounties forty-one pounds and three pence "for killing rattlesnakes, jays, red and gray squirrels, red-headed woodpeckers, and black birds," and even then there were "pits" for the capture of wolves.

The life of the town in the last century was primitive and rural. The cattle ran at large, and the office of "hog rieve" was no sinecure. In the town records are voluminous minutes of the special marks which each person adopted to distinguish his own cattle; and of the horses, cows, hogs, "hiffers," "steares," etc., which had "strayed" and were "taken up in damiag." The question annually came up whether "horses might go at large, being fettered and clogged as the law directs," and whether "hoggs" should "go at large, yoked and ringed as the law directs."

Even the best of the houses were devoid of architectural attractions, and of the conveniences and comforts which we regard essential. They are described as "small, low one-story buildings," with a "front room and kitchen," and in some cases an added bedroom. The hinges of the doors were of wood; there were no handles; and the wooden latch was raised by a "latch string" passing through a hole to the outside. The fire in the immense fire-places served to scorch one side, while the other was freezing. The hard necessities of frontier afforded little opportunity for adornment.

The people generally rode on horseback, the women often seated behind the men on pillions. In 1790 a lady, attended by her husband, rode from Leicester to Vermont on horseback, holding a child two years old in her arms. In 1733 there were four chairs in town. Daniel Henshaw's family came to Leicester in a chaise in 1748. In his account-book that year and onward there are charges for the use of a "chair." The rate from Leicester to Boston or Malden was three pounds. There was not a "buggy wagon" in town till 1810. Books were rare. Thomas Earle was repairing watches in 1768 and later. In Daniel Henshaw's account-book is a memorandum of his verbal agreement to "take care," for a year "of his watch when wanted, for one cord of wood." Watches, clocks and looking-glasses, however, were evidently rare. The hour-glass measured the hours, and "dinner-time" was indicated by the shadow at the "noon-mark" on the window-sill.

In 1722 the town voted that if Joseph Parsons would build a "corn-mill it should not be taxed." The mill was soon afterward erected at the outlet of "Town Meadow," where Sargent's brick factory now stands. The first saw-mill was built by Captain Samuel Green, at Greenville. He also, in 1724, built a grist-mill on the same stream, where Draper's grist-mill now stands. The "Mill lot" of Thomas Richardson also came, probably, into his possession, so that he became the owner of the original mill lots. The second saw-mill was built by Richard Southgate, in Cherry Valley, on the Auburn Road. William Earle had a grist-mill on "Hasley Brook" before 1730.

There was a carpenter here in 1717, and a few years later two other carpenters, a mason, a wheelwright and a tailor.

There was plenty of land, and land which had been secured at low rates. But, although the first distribution was on equitable terms, the equality of ownership did not long continue, and it came to pass, in the buying and selling of "rights," that some of the farms contained from twelve to fifteen hundred acres.

Even that early period of labor and struggle was not exempt from class distinctions and jealousies. Some of the families that came early to Leicester were in those days regarded as rich. Some were well-educated and refined. Coming thus from Boston, which had been settled a hundred years, their style of dress and their manners were doubtless somewhat in contrast with those of some of their neighbors. Soon after the family to which reference has already been made came to town, the congregation, one Sunday, was startled by the entrance of a man dressed in small-clothes, a green calamanco coat and gold-laced hat, and with a cavalry sword hanging at his side, which thumped against the floor as he strode to his seat. When asked, at the close of the service, the occasion of this remarkable display, he said, "It is to let the Henshaws know that there is a God in Israel."

In 1722, when there were hardly fifty families on the scattered farms in the wilderness, the Indians of Maine and Canada resumed hostilities. This war is called "Lovell's War," from its most tragic incident, "Lovell's fight," in which Colonel Lovell routed the savages, but lost his own life on the shore of the beautiful lake in Fryeburg, Maine, which bears his name.

There were no general engagements in this region, but the frontier towns were harassed and kept in fear four years by roving bands of Indians, who lurked in the woods waiting to shoot down or capture their unsuspecting victims. The tidings that Worcester was threatened, and that three men had been shot and scalped in Rutland, naturally alarmed the people of Leicester. Although there are no traditions of similar attacks here, the marks of bullets in the fortified King house remained for a century afterward. In a letter to Lieutenant-Governor Dummer, Thomas Newhall gives information that "a man reaping here, informs us an Indian had got within seven rods of him, and, looking up, he had a certain discovery of him; and stepping a few rods for his gun, he saw him no more, but hastened home."

Draper, also, in his "History of Spencer," informs us that "the earlier settlers of the town were frequently alarmed and disturbed by small parties or individual Indians prowling about the neighborhood, or through the town." Indians were also said to have been seen

in the woods southwest of Greenville; but they were deterred from making an attack by the fact of fortified houses in that neighborhood.

In 1722 two Worcester men were sent to Leicester as scouts. In the correspondence of those years there are affecting references to the sad, anxious and defenceless condition of the people. In an appeal for help from Worcester, in 1724, to Colonel John Chandler, of Woodstock, who had command of the defensive forces in this vicinity, there is this significant reference to Leicester: "As to Leicester, the people there more need help from us than are able to render us any." Colonel Chandler himself, in a letter to Lieutenant-Governor Dummer, seconding the request for protection, expresses his regret, in view of the disappointment of "the poor people of Worcester, Leicester," etc., in not receiving it, and pleads for "consideration of the distressed circumstances of the poor people of these towns." Soon after, twenty-nine soldiers were posted in Leicester.

The next April the Lieutenant-Governor gave Colonel Chandler notice of the approach of several parties of Indians from Canada, and ordered him to visit and warn the towns. The whole region was soon thrown into consternation by tidings that two companies of Indians were between them and "the Warchusetts," and the citizens of Leicester applied to the Lieutenant-Governor for speedy assistance of soldiers to defend them. "Our number of inhabitants," they write, "is very small, and several were much discouraged; it was so late last summer before we had soldiers that we were exceedingly behind with our business." That year the town was, by the General Court, released from the payment of the "Province tax" of seven pounds, on account, as the people in their petition say, "of being a frontier," and "being very much exposed and reduced to very low circumstances by the late Indian war."

The house of the minister was, at the first, surrounded by a "garrison" or stockade, and in 1726 this defense was, by vote of the town, repaired and strengthened. There was also a garrison on the place of Judge Menzes, the outlines of which, near the Henshaw place, remained till the middle of the present century. A house at Mannville was also fortified. The house of John King, between Leicester and Greenville, was made a fort. This house still stands, a solitary relic of those early times.

After its early trials and struggles, the town seems to have prospered generally as a farming community. Some of the early inhabitants were men of means, as well as of culture and standing, and other valuable families came into town. The farms greatly increased in value, and, with the building of better houses, the removal of the forests and the laying out and improvement of roads, the prosperity and comfort of the people were increased. Still, the growth of the place was slow, and there were repeated periods of great trial and depression. After forty years, there were less than one hundred families in the Eastern Precinct. At the time of the Declaration of Independence the population was ten hundred and seventy-eight. There was no increase during the war. At the opening of the present century the number was eleven hundred and three.

During a considerable portion of the last century the town, like other communities, suffered from the depreciation of the currency, and losses from State loans and private banking enterprises. These difficulties confronted the settlers almost at the first, and were increased by the heavy demands made necessary by successive wars; in the time of the Revolution paper-money depreciated so rapidly that it became necessary to rate its value every few weeks. It finally became worthless.

Even in these circumstances money was counterfeited, and in 1747 we find the town voting Mr. William Green the sum of "2 pounds towards the counterfeit bill he took as town treasurer."

The danger of small-pox at times called for town action. The question of establishing an inoculating hospital was evidently a subject of controversy. It was finally disposed of in 1777 (after being repeatedly deferred) by a vote "that the physician provide a hospital at his own cost, subject to the selectmen." September 17, 1792, the town "voted to have small-pox in town by inoculation."

At the March meeting in 1771 the town voted "that a list presented by the selectmen of the names of those persons who have come into town, and the place where they came from since June 1, 1767, be put on the town records, in order that posterity may know when and from whence they came, and that the selectmen be directed to present such a list at the town-meeting in March for the future." Such a list was presented every year; notices were recorded of persons who came to town until the year 1786; and as late as 1793 certificates were recorded of persons taken into houses and families.

On the afternoon of July 10, 1759, the town was visited by a remarkable cyclone. Two numbers of the *Boston Post* of that time are largely devoted to the details. It struck the tavern-house of Mr. Samuel Lynde, the last on the road to Spencer, passing from southwest to northeast. The house was lifted a considerable distance from its foundations, "and in the space of two minutes tore all to pieces." Several persons in the house were severely injured. "A little girl, being also at the Door, was carried by the Force of the Wind upwards of 40 rods, and had an arm broke." Four women were afterwards found in the cellar, "but could give no account how they got there." Articles from the house were found in Holden, ten miles distant, and "a watch was taken up above a mile from where the house stood." The barn and farm buildings were "torn to pieces," and a horse was killed. Trees were torn up by the roots, and fences broken down. A negro "standing at the

door of that House was carried near 10 Rods Distance in the Air," and was so much injured that he died; and "a Pile of Boards ('tis said 7,000 Feet), being near the house, was shivered to Splinters, and carried to a great Distance, so that there was not Pieces large enough to make a Coffin to bury the Negro in."

It is said that purchasers who drew lots on the Connecticut Road, near what is now the line between Leicester and Spencer, expected, as was natural, that this would be the centre of the town, with all the advantages of such a position. But favorable as that locality might have been as the site of a village, the basis of separation between the two parts was laid at the beginning, when the eastern half was selected for prior occupation. After disposing of the eastern portion, the proprietors divided the western half among themselves, and the farms began slowly to be taken up. Before 1725 there were only three families in this part of the town. The two sections were so far apart, and the circumstances of their early settlement were so unlike that their interests were never identical. There were differences with reference to laying out roads and the adjustment of appropriations; and the western portion was not satisfied to be without a minister, and desired to have the money raised by them for the ministry used for a minister in their part of the town. They also wished to be exempted from taxation for the schools, the advantage of which they did not enjoy. In 1741 the inhabitants petitioned to be "set off" as a town. The General Court readily passed an act of incorporation, but it was vetoed by Governor Shirley.

In 1744, July 18th, they were incorporated as a parish, and called "The Westerly Parish of Leicester." Five years later both precincts petitioned the General Court "to erect the west part of Leicester into a distinct and separate town." A bill of incorporation was passed, but it was vetoed by Lieutenant-Governor Phipps, on the ground that it would increase the number of representatives to the General Court. The House protested against the arbitrary action of the royal executive, but without effect. In April, 1753, the precinct was made a district, with all the prerogatives of a town except that of sending a representative to the General Assembly. The bill was signed by Lieutenant-Governor Spencer Phipps, April 12, 1753, and his honor condescended to have the town called after his own first name. In 1775, upon the outbreak of the Revolutionary War, the town assumed its right to send a representative to the Assembly, and in 1780 the right was made constitutional.

Upon the incorporation of Paxton, February, 1765, a strip of land two miles in width was set off to that town; and when Ward (now Auburn) was incorporated, April 10, 1778, the town parted with a small tract of land.

CHAPTER LXXXVIII.

LEICESTER—(*Continued.*)

FRENCH AND REVOLUTIONARY WARS.

Leicester in the French Wars—Louisbourg—Massacre of Fort William Henry—Quebec—Colonel William Henshaw—Revolutionary War—Leading Patriots—Town Meetings—"Instructions"—Committee of Correspondence—"Minute-men" proposed—Tea—Courts—Provincial Congress—Ammunition Stored—19th of April—Colonel William Henshaw's Orderly Books—Bunker Hill—Peter Salem—Provincial Congress—Suspected Persons—War Expenses—Soldiers—Leicester Men in the Service.

FRENCH WAR.—The history of the connection of Leicester with the wars of the last century shows how true it is that the life of a little settlement in the interior is identified in all its interests with the great movements of society and of nations. The people of Leicester had a somewhat prominent part in shaping, as well as in determining, some of the great issues which distinguished the last century. The convulsions of the old world, and the conflicts between the old world and the new, were felt on the hills of Leicester. While the people of the town were occupied with their arduous labors, and were struggling with the difficulties of a new country and of frontier life, they also accepted their full share of the service, and the burden of these exhausting wars in which the energies of the province were so largely engaged during the middle portion of the century.

The colonies loyally and heartily supported the mother country in the French wars from 1744 to 1763, and accepted with enthusiasm the hardships and sufferings of the several campaigns. They saw the perils to which their own settlements were exposed by the alliance of the French with the Indians, and comprehended, to some extent, the magnitude and importance of the great struggle between England and France for supremacy in America. "Our people," wrote Benjamin Henshaw, of Connecticut, "are *prodigiously spirited* to help in the work."

In the several expeditions and engagements of the war of 1744 many Leicester men took part. The earlier enlistment rolls are not to be found, and therefore the names of most of these men are unknown.

In 1745 the Legislature of Massachusetts planned an expedition for the reduction of the fortress at Louisbourg, on the island of Cape Breton. There are no means of knowing to what extent Leicester responded to this call. Captain John Brown commanded a company in the expedition, and was present at the surrender of the place. James Smith died in the expedition. Other Leicester men shared in the terrible hardships of the six weeks' investment of the fortress. The next year a French fleet was sent to recover the place, and to ravage the coast of New England. The approach of this fleet caused great alarm, and an attack on Boston was expected. In September Captain Nathaniel Green, "in his Majesty's service in Leicester," received and executed an order

from Colonel John Chandler for an immediate draft of twenty-five men, with ammunition and provision for fourteen days, to march for the defence of Boston. The fleet, however, was scattered by a storm, a pestilential fever broke out among the men, the whole expedition was given up, and the two admirals, in their chagrin, took their own lives. In the winter of 1747 and 1748 men were sent to Colraine, and to Fort Massachusetts, in Williamstown, for the protection of that region against Indian attacks; and others enlisted in the "Canada expedition."

In the French and Indian War, which broke out in 1754, still larger demands were made upon the town for soldiers. Leicester was represented by its soldiers, in the earlier campaigns of this war, under General Winslow, and at Crown Point. In 1756 fifteen men enlisted in the expedition against Crown Point. They were in the company of Captain John Stebbins, son of the early settler by that name, but then a resident of Spencer. In that year twenty men from Leicester joined the army, only two of whom were conscripts.

Thomas Newhall had command of a company of cavalry. Nathan Parsons, a native of Leicester, and son of the first minister, was present at the surrender and the "Massacre of Fort William Henry," as was also Knight Sprague, then a boy of 16 years. Governor Washburn, in his history, gives in detail Mr. Sprague's reminiscences of that terrible scene in which men and women were the victims of the wild and drunken fury of the savages. "Sprague escaped after being partially stripped, and made his way to Fort Edward. On the way he passed his captain, who had been entirely stripped and many women were in no better condition. The yells of the savages, the groans of the wounded and dying, the shrieks of the affrighted women and frantic soldiers, and the dead who lay scattered around them, made it a scene of unsurpassed horror. Fifteen of his own company of fifty were killed soon after leaving the fort."

In the final struggle of that war, in which Quebec was taken by General Wolfe, and Canada was wrested from the French, a large number of Leicester men participated. The names of twenty-three are given in Washburn's History. Dr. Thomas Steele, of Leicester, was surgeon's mate in the same campaign and there were probably other Leicester men.

It was at this time that Colonel William Henshaw began his distinguished military career. He received a commission as second lieutenant March 31, 1759, in Colonel Timothy Ruggles' regiment, in the company of Captain Jeduthan Baldwin, and served from May 10th to November 28th, in two campaigns.

He kept a diary of the daily experiences of these months, which is now in the possession of his granddaughter, Miss Harriet E. Henshaw, of Leicester. Marching orders were received on the 9th of May. "The Carriages to be loaded by Day Break to Morrow Morning, and all the Troops that have passed Muster to gett themselves ready to march to Morrow Morning by Sunrise." The troops were conveyed on horseback and in carriages. It was a journey of fourteen days through the forest and over "the mountains." They passed through the "Land of Contention," the disputed territory between the States, and, at length reached Albany, where they "drawed Tents and Provisions, and encamped on the Hill 100 rods from Albany City." They were stationed most of the time at Fort Edward and Crown Point.

"In the month of June," Lieutenant Henshaw writes, "I was taken from the Provincials and did duty in one of the British regiments under General Amherst, which afforded me opportunity of becoming acquainted with discipline." The severity and inhuman cruelty of the British "discipline" are evinced by such entries as the following: "Sentenced 200 lashes each;" "Two R. I. men whipped, One 1000 lashes, the other 500 lashes." While he was at Fort Edward, news was received of the taking of Ticonderoga, upon which the "other prisoners were pardoned." Here, also, the news of the taking of Quebec was received.

THE REVOLUTIONARY WAR.—In the preliminary stages of the Revolutionary struggle the town of Leicester acted a prominent and distinguished part. There were men here of unusual ability. Some of them were well educated, and many were trained for military service in the French wars. Several of the leading families were intimately associated with the Revolutionary leaders in Boston. Hon. Joseph Allen was a nephew of Samuel Adams. Adams, Warren, Otis and Hancock often met at the house of Joshua Henshaw, in Boston, before his removal to Leicester, to discuss and mature their plans. Other leading citizens were in the confidence of the Revolutionary leaders.

There was then no mail service, but early and confidential information was received by couriers on horseback, respecting the movements of the English and the plans of the patriots.

The records of the town show what a power the town-meeting was, in which, as the revenue commissioners of Boston complained, "the lowest mechanics discussed the most important points of government with the utmost freedom," and with what effect it unified and voiced the spirit of the people.

During all the years of British aggression, of the war, and the period which followed, in which the state and the federation were taking form, they came together in these meetings, in "the first meeting-house," and deliberated upon the great questions of principle and policy involved in the Declaration of Independence and the organization of government on the basis of personal liberty. From these town-meetings there issued manifestoes really statesmanlike in their grasp and expression.

The whole original township acted together until 1775. The people were truly loyal to the King until they saw that war was inevitable. Some of them, the Dennys, the Stebbingses, the Southgates and others, came directly from England to Leicester. The town had heartily responded in former wars to every call of the mother country. They approved the "Protestant succession" and were ready to hazard "their" lives in defence of "the person, crown and dignity" of the King; but they were equally ready to maintain their own rights and to resist every encroachment upon their own liberties at whatever cost.

Nearly ten years before the war began, the town, with the districts of Spencer and Paxton, adopted the practice of giving formal instructions to their Representatives to the General Assembly, and, from time to time, of passing resolutions representing their opinions upon public affairs.

In October, 1765, having elected Capt. John Brown Representative, they proceeded to give him formal instructions in "this critical juncture." The Stamp Act had been passed and was soon to be enforced, and Courts of Admiralty had been ordered for the trial of offenders without jury. The excitement occasioned by these acts had been so great that a mob had, in August, burnt the house of Lieut.-Gov. Hutchinson. With these facts fresh in mind, the town and districts gave extended and specific instructions to their Representative, in whose "ability and integrity" they confided. They declared their "inexpressible grief and concern" in view of the "repeated taxes," and especially the "Stamp Act," which they "had no voice in Parliament in making;" and expressed their alarm at the "unparalleled stretch given to admiralty jurisdiction," "by which every man is liable to be carried a thousand miles before a Court of Admiralty," "tried without jury," "amerced," "taxed with costs," and, if unable to pay, "to die in prison in an unknown land, without friends to bury him." They also expressed their disapproval of all "tumultuous ravages," and especially that "wherein our Lieut.-Gov. suffered," and their surprise that he should "charge the outrage to the province, thus representing them as an ungrateful and disloyal people."

In the summer of 1768 the colonies were aroused by new acts of oppression. The General Assembly of Massachusetts was dissolved by the Governor, and not allowed to meet again while it refused to withdraw an appeal to the other colonies. A sloop-of-war was anchored in Boston harbor, and troops were ordered to Boston to subdue the rebellious spirit of the people. In consequence of these proceedings the citizens of Boston called a conference of towns. Ninety-six towns responded. The call was issued September 14th, and five days afterward we find the citizens of Leicester in "the first meeting-house," called together hastily, and without due notice, to act upon the proposition. The proceedings of this meeting were legalized at the next March meeting, and thus recorded. Capt. John Brown was chosen delegate to the conference, "without any authority," and, in resolutions which breathe the spirit of fervent loyalty to the King and devotion to the English Constitution and the Magna Charta, and which yet declare the "dissolution of the 'General Court' a real grievance," instructed "to give his advice and use his influence that all rash measures be prevented, and every mild one adopted that may be consistent with Englishmen claiming their rights." The hour of rebellion had not yet come, but it was rapidly approaching.

In January, 1770, a meeting was called to "see if the town will come to any note or vote about the purchasing of goods of those that import from Great Britan, contrary to the agreement of the principal merchants in Boston and most others on the continent." A vote of thanks was passed to those merchants who were thus "sacrificing their own interest for the good of their country." The call for this meeting was prepared by William Henshaw, and was signed by twenty-eight persons. They asked the town to vote that those who should offend by purchasing the prescribed goods "shall be deemed enemies to America, and as such shall be recorded in the town's book of records," and the town appears to have adopted the proposal.

In May following, a military company of forty-six men was formed for drill. The next year the town bought one hundred pounds of powder, also bullets and flints.

In 1772 Committees of Correspondence were organized under the leadership of Samuel Adams. They proved to be one of the most effective agencies in advancing the Revolutionary cause. Two years later, Daniel Leonard, the Tory writer, pronounced them "the foulest, subtlest and most venemous serpent ever hatched from the egg of sedition. It is the source of the rebellion. I saw the small seed when it was planted; it was a grain of mustard. I have watched the plant till it has become a great tree." They were at first voluntary bodies, but were afterward recognized by the Legislature. The date and manner of the appointment of the committee in Leicester are not known. It was in existence and in correspondence with the Boston committee in January of 1773, within less than four months after the introduction of the system. Later the committee was chosen annually by the town.

Of the first committee William Henshaw was the chairman and Thomas Denny, Joseph Henshaw, Rev. Benjamin Conklin, Hezekiah Ward and Thomas Newhall were members, together with William Green, Samuel Green and Joseph Sargent, who were added the same year.

A convention of the Committees of Safety in the county assembled in Worcester in August, 1774. The meeting was opened with prayer by Rev. Mr. Conklin, of Leicester, and William Henshaw was made clerk.

Joseph Henshaw and Thomas Denny were also prominent members. The Leicester and Worcester committees were appointed a committee for the county, to conduct correspondence, and call a county congressional convention. The convention was continued by adjournment till May 31, 1775.

It was in accordance with the recommendation of Col. William Henshaw in the convention, and upon his motion, that the famed companies of "Minute-Men" were organized, who in the emergency proved, as he in his motion expressed it, "ready to act at a minute's warning." He also presented the resolution in response to which six thousand men came to Worcester, armed and officered, and prevented the assembling of the Inferior Court. At this time Judge Steele, of Leicester, was compelled, with other justices, to sign an assurance that the court would stay proceedings. He was also forced to make a written apology for a letter of congratulation which he, with other justices, had sent to Gov. Gage upon his assumption of command at Boston.

Early in the year 1773 the town and districts again met to instruct their representative, Mr. Thomas Denny, and to pass resolutions. The meeting was "full," and continued till a late hour. "The votes were unanimous." These resolutions and instructions contain a brief but comprehensive statement of the wrongs, and a declaration of the rights of the province. They were still loyal to the crown, but they resolve, "We have a right to all the liberties and privileges of subjects born within the realm of England; and we esteem and prize them so highly, that we think it our duty to risk our lives and fortunes in defence thereof." Mr. Denny was re-elected in May, and again instructed.

The patriots of Boston were greatly encouraged by the response of the towns of the interior. Two weeks after the instructions had been given to Mr. Denny, the Boston Committee of Correspondence wrote to the committee in Leicester, acknowledging the receipt of a copy of the proceedings, and added, "We think it must supprize our Oppressors to read your very ingenious and sensible Resolves, and your Instructions to your worthy Representative."

To this letter the committee replied at length, through Colonel Henshaw: "We have paid, and are still willing to pay due obedience to laws,—made by our own consent,—and lawful authority; but he who tamely submits to 'the tyrannical Edicts of the British Parliament and Ministry,' is unworthy even of the name of 'an American.'"

In November, 1773, four days before the arrival in Boston of the vessels loaded with tea, the Boston committee, in a long letter on "that worst of plagues, the detested tea," wrote to know the sense the "towns have of the present gloomy situation of our public affairs." To this the Leicester committee replied in no doubtful terms, expressing obligation to the committee in Boston for their "vigilance," and for their "late proceedings and manly resolutions in regard to the detestable tea sent here by the West India Company," "and as you have requested our advice, we shall, as a committee, freely give it: and that is to go on as you have begun, and on no account suffer it to be landed, or pay one farthing of duty." This was two days before the tea was thrown overboard. Joshua Henshaw is understood to have been one of the "tea party."

On December 27 the town and districts responded. They were loyal still to the crown, and ready to hazard their lives in its defence, but they asserted their provincial rights of property and person, denounced the Stamp Act as "a usurpation of authority to which no power on earth is entitled, and contrary to the fundamental principles of our happy Constitution;" and promised to oppose, "at the hazard of their lives and fortunes," any impositions unconstitutionally laid upon imported articles.

They also resolved "That we will not use any tea in our families or suffer any to be consumed therein while loaded with a tribute contrary to our consent, and that whoever shall sell any of that destructive herb shall be deemed by us inimical to the rights of his country as endeavoring to counteract the designs of those who are zealous for its true interests." They enforced these proceedings by choosing a committee of fourteen to "inspect any teas sold or used in the towns and districts and report the names of offenders at the annual meeting."

The objection of the people to "that destructive herb" was not to the tea nor to the tax, but to its imposition by a government in which they had no representation, and in 1781 we find the town voting to license persons "to sell Bohea tea and other Indian teas, according to the law of 1781," imposing "excise duties."

One of the acts of the crown which awakened special alarm, and against which the people indignantly protested, was that which provided that the judges of the Superior Court should be paid out of the royal treasury. Chief Justice Oliver was the only judge who accepted this provision, and the House of Representatives took prompt measures for his impeachment. Upon the meeting of the court in Worcester in April, 1774, the grand jurors, instead of coming forward to be sworn, presented a written protest, refusing to serve if Justice Oliver was to sit with the court. This protest was drawn up by Col. Wm. Henshaw. "By his own confession," it declares, "he stands convicted, in the minds of the people, of a crime more heinous, in all probability, than any that might come before him." The chief justice, however, was not present, and the business of the court proceeded without interruption. In a subsequent letter to the court, a draft of which, as well as the original protest, is in the possession of his granddaughter, Col. Henshaw, after explanations and the expression of satisfaction at the course of the

judges, makes complaint of what he styles "a great hardship," and at that early day recommends the course which now universally prevails in the courts. The complaint was of "having a foreman imposed upon jurys by the Court, which we think ought to be chosen by the Jurors." The reason given is that "the Jurors who live in the vicinity are better acquainted with the abilities of their neighbors than the judges can be." "We hope," he writes, "that this error in appointing a Foreman will be soon rectified, & the power vested in the Jurys to choose their own foreman by a fair Vote, which we think would be of vast utility to the Public and for the facilitating business & saving expense to the County."

The year 1774 was one of agitation and preparation. Repeated acts of oppression were effectually exhausting the loyalty of the people to the mother country, and the spirit of resistance was growing more determined. Eighteen town-meetings were held this year, and repeated instructions and resolutions were voted, some of which rank with the ablest and most eloquent manifestoes of that period. They cover the whole range of questions involved in the struggle, and counsel the most determined resistance. In May they protested against the Port Bill. In July resolutions, prepared by a committee, were adopted, which clearly, comprehensively and eloquently discuss the issues of the hour, and declare the duty of citizens loyal, at the same time, to the Province and to the rightful authority of the Crown. It is a dignified and determined declaration of rights, by the town of Leicester and the districts of Spencer and Paxton assembled, "not tumultuously, riotously or seditiously, but soberly and seriously, as men, as citizens and as Christians, to take into our consideration the present distressed state of our affairs." They pledged themselves not to purchase goods imported from England, and to have no dealings with those who import such goods while the duty on tea is continued, unless "other measures of redress be recommended by General Congress." They also urge the people to "associate together, and discourse and inform themselves of their rights and privileges as men, as members of society and the English Constitution."

In September Thomas Denny was chosen Representative to the Great and General Court, which, driven from Boston, met the next month in Salem, and instructed to be sworn only by an officer appointed under the charter, and to refuse to be sworn by the Lieutenant-Governor. The Legislature was prorogued by the Governor, and immediately resolved itself into a Provincial Convention or Congress.

Mr. Denny was delegated to represent the town in this "convention" at its meeting the next month in Concord,—"An assembly," as they suggest in their instructions, "in which at this dark and difficult day, perhaps the most important business will come before you that was ever transacted since the settlement of North America." "Everything now conspires to prompt the full exertion of true policy, valor and intrepidity." The instructions are under ten "particulars." They urge, since "charters have become bubbles," resistance to all compromise, and "compliance with the advice of the Continental Congress." They urge an "endeavor to have the militia of the Province put on the most respectable footing, and that every town be supplied with one or more field pieces, properly mounted and furnished with ammunition. A militia composed of the yeomanry and proprietors of the country is its surest defence: therefore we esteem it a matter of the last necessity that they be properly disciplined and taught the arts of war with all expedition, as we know not how soon we may be called to action."

They demand restitution for the removal of arms and ammunition from Boston and Cambridge, and for loss and damage resulting from the blockade of Boston. They urge the encouragement of arts and manufactures, by granting premiums and preventing importation, recommend intercolonial correspondence and the apprehension and trial of persons "inimical to their country."

Mr. Denny died soon after the assembling of the Congress, and Col. Joseph Henshaw was chosen his successor. He was briefly instructed to promote with all his influence "any plan for the common good, generally adopted by the Congress," and urge upon it "an immediate assumption of government." "Particular matters will no doubt turn up in the course of the session, which, as we, your constituants, are not now apprized of, so cannot particularly instruct." This was January 9, 1775.

The anticipated "matters" were not far in the future. When they did "turn up" they found the people in this hot-bed of treason ready to convert their resolutions into actions. The standing company of the town was under the command of Capt. Thomas Newhall and Lieutenants Benjamin Richardson and Ebenezer Upham. An "independent company of volunteers," formed in 1770, had been reorganized, with Seth Washburn as captain and William Watson and Nathaniel Harrod as lieutenants.

The town had also made some provision for ammunition. The minute-men had met weekly for drill, under an officer of the regular army, whom they had hired.

In February the Committee of Safety and Supplies of the Provincial Congress decided to remove the powder stored at Concord to Leicester; also eight field-pieces, shot, cartridges and two brass mortars, with bombs. The letter of Joseph Henshaw to his brother, whom he styles "Brother Billy," gives minute directions with reference to the storing of the six or seven hogsheads of powder in the barns of Colonel Henshaw, Major Denny, Captain Newhall and Captain Green. It was afterward decided to distribute these stores in

nine towns, of which Leicester was one. In all the correspondence of these years the greatest secrecy was observed. The letters were often without signature, and often signed by fictitious names.

In March there were rumors of the movement of the British forces, and Colonel Henshaw and Joseph Allen walked to Worcester over the snow-drifts on "rackets" to ascertain their truth. It is said that at one time Mr. Allen had his knapsack and his trunk, with his wedding suit, packed, not knowing whether he should first be called to battle or to his marriage.

The scenes of the 19th of April, and indeed of the period which immediately followed, are graphically given by Governor Washburn in his history. Many of them were told him by the actors themselves, who have long been dead.

Early in the afternoon of the 19th of April an unknown horseman rode rapidly through the village, stopped long enough before the blacksmith's shop to say, "The war has begun; the regulars are marching to Concord," and then hurried on to alarm the towns beyond. "I saw," wrote Col. Wm. Henshaw, "the express that came from the town of Lexington, informing that the enemy had killed several men in that town." The blacksmith, who was Captain Seth Washburn, dropped a ploughshare on which he was working, rushed into the road and discharged his musket. The members of the companies were called together from all parts of the town. At four o'clock every minute-man was on the common. They were uniformed, but they came with their Queen's arms, and with their powder-horns and shot-pouches. Members of their families and other friends were assembled to render assistance and to bid them God speed."

Dr. Honeywood, an Englishman—the physican of the place—had never till that hour had confidence in the ability of the province to resist the power of Great Britain, but when he saw that little company of resolute, determined men, who had come at a moment's warning, some of them leaving their plows in the furrows, he said: "Such men as these will fight, and what is more they won't be beat."

The pastor of the church, Rev. Benjamin Conklin, himself a "high liberty man," was present, and before the company started, as the men leaned upon their muskets and all heads were uncovered, committed them, in prayer, to the guidance and protection of the God of battles. "Pray for me and I will fight for you," said the captain to his venerable mother, and then gave the order, "Forward!"

Within three hours after meeting on the Common, the company marched. They halted in front of the house of Nathan Sargent, in Cherry Valley, and Mr. Sargent, to supply the need of the company, melted down the leaden weights of the family clock, and distributed the bullets to the company.

There were forty-three men in the company. Captain Thomas N. Newhall, with the standing company of the town, consisting of thirty-four men, marched a little later. Companies from Spencer and other western towns followed. The march of the companies was rapid till they reached Marlborough, where they heard of the retreat of the British. Lights were burning in every window on the way through the night. Regimental officers in town were equally prompt in joining their commands.

A part of the company returned after a few weeks' service. Others enlisted under Captain Washburn for eight months. There were fifty-nine men in this company, most of them from Leicester. The embargo of Boston and its occupation by the regulars rendered it necessary to call upon the towns to contribute for the support of its poor. Thirty-six were apportioned to Leicester. In May Leicester was also required to furnish one barrel of powder and twelve muskets for the use of the province.

Colonel William Henshaw, who reached Cambridge on the forenoon of the 20th, was a member of the council of war, and, with Colonel Gridley and Richard Devans, reconnoitred the heights of Cambridge and Charlestown. The report of the committee is signed by Colonel Henshaw, as chairman. It recommended the fortification of Bunker Hill and the construction of redoubts between Charlestown and Cambridge. Colonel Prescott was detailed to execute this plan, but decided to fortify Breed's Hill, instead of Bunker Hill. On the 27th of June Colonel Henshaw was commissioned adjutant-general of the Provincial army, under General W. Ward. Upon the arrival of Washington, he was, on the 3d of July, superseded by General Gates, adjutant of the American army. He was, however, persuaded to remain as assistant of General Gates. The Orderly Books, in four volumes, covering the period from April, 1775, to October, 1776, are in the possession of his granddaughter, Miss Harriet E. Henshaw, of Leicester, and are an invaluable treasure. The first volume was published by the Massachusetts Historical Society, as its centennial volume. It contains the roster of the regiments, the "Parole" and "Countersign" for each day, the "Officer of the day" and "Field-officer" and the general orders from April 20, 1775, to September 26th of the same year.

On the day of the battle of Bunker Hill, Captain Washburn's company, which formed a part of the regiment of General Artemas Ward, in command of Lieutenant-Colonel Jonathan Ward, marched from Cambridge, by way of Lechmere Point, and took position at the rail-fence, "gallantly covering the retreat." It was to them a thrilling hour. They saw the hurried movement of the troops, they heard the beat of drums, the roar of British artillery and "the cracking of musketry over in Charlestown." Just before marching, Captain Washburn addressed his company in words of counsel and encouragement and committed them to God in a fervent prayer. "Some of them often spoke," says Washburn in his history, "in their old age, of the unfaltering confidence with

which, after this, they went through the experiences of the day." On their way to Charlestown Neck, they were met by a man on horseback, supposed to be Dr. Benjamin Church, afterward proved to be a traitor, who inquired of Lieutenant-Colonel Ward to what point he was marching. He answered, "To the hill." "Have you not had counter-orders?" "I have not." "You will have soon," he said, and commanded the regiment to halt. Most of the regiment therefore remained behind; but Captain Washburn stepped forward and said, "Those are Tory orders; I sha'n't obey them. Who will follow me?" The entire company followed the captain, and two other companies with them left the regiment and moved on toward the scene of action, exposed to the shot of the British fleet; the captain gave any who might be afraid the privilege of going back. Not a man of that brave company left the ranks. "Then we'll all go together," said the captain; and the whole company started on "double quick" and ascended the hill. Charlestown was on fire and the enemy were advancing on the redoubt. A ball lodged in the cartouch-box of the captain. The company for a time fought at the rail-fence, but were soon obliged to retreat. Several of the company were wounded and borne from the field under fire. One of the two strands of Daniel Hubbard's cue was cut off close to his head by a ball. Abner Livermore's canteen was shot away and rolled toward the enemy. His brother Isaac ran and secured it, saying, "I'll be darned if the regulars shall have that rum." Samuel Sargent lost the contents of his canteen, but saved the ball that pierced it. Four balls passed through the captain's coat and one through his wig. Israel Green, a native of Leicester, had three sons in the battle, one of whom was killed, the second died of wounds received, and a third was killed in the battle of Monmouth.

Among the soldiers in this battle was Peter Salem, a negro, and formerly a slave. He was a native of Framingham, and in Colonel Nixon's regiment. It was the shot from his musket which killed Major Pitcairn, just as he mounted the redoubt and shouted, "The day is ours." After the war he came to Leicester, where he remained until, in his old age and poverty, he was taken to the poor-house in Framingham, where he died.

In July of this year the inhabitants of Leicester, having chosen Hezekiah Ward Representative to the Provincial Congress, instructed him with reference to his duties. "To this important now," they say, "posterity will look back with joy and admiration, secure in the enjoyment of their inestimable liberties, or with keenest sensations of grief, while they drag the galling chain of servitude." He was directed to comply with the orders of the Continental Congress, to oppose the accession to power of those who had proved inimical to their country, or had failed to give it their support, "waiting the tide of events;" to watch "with jealous yet candid eye the disposition and motions of the American army, always remembering the importance of preserving the superiority of the civil power over the military;" to urge the execution of the laws against immorality and vice; and to act for the interest of the cause in relation to other specific matters.

In May, 1776, instructions were given to Seth Washburn, as Representative to the General Court, urging the utmost deliberation and caution in the measures of the court for protection and organization. At the same meeting it was "Voted by the inhabitants then present, unanimously, That in case the Honorable the Continental Congress should declare these Colonies independent of Great Britain, they would support said Congress in effectuating such a measure at the risk of their lives and fortunes."

With this declaration this remarkable series of instructions and resolutions ends. They cover a period of nearly eleven years previous to the Declaration of Independence. There is hardly a question involved in the controversy with the mother country, or the policy of the colonies, which they do not discuss. In clearness and breadth of view, in forethought and wisdom, in felicity and eloquence of expression, and in fervent, self-sacrificing, courageous, invincible patriotism, they are hardly surpassed, even in the historic productions of that period. Bancroft, in his history, quotes from them, as illustrative of the spirit of the time.

But the time for manifestoes had now passed; the time for action had come. Henceforth the work of the town, as its records also show, was enlisting soldiers, raising bounties, hiring soldiers, providing for the purchase of ammunition and entrenching tools, and the pay for carting provisions, buying beef and clothing for the army, aiding companies that had done more than their share of service, authorizing the selectmen "to supply the necessities of life to soldiers," abating the poll-taxes of soldiers, caring for soldiers' wives, providing for families of officers and soldiers and fixing the prices of commodities. There was no authorized government and all difficulties were settled by arbitration.

The people were also careful to guard themselves against treachery. Too many of the leaders of the Revolutionary movements were here to render the toleration of spies safe, and the people were too much in earnest to bear patiently the opposition of men "inimical" to the cause. In 1774 the selectmen, through Colonel Henshaw, had informed at least one suspected man that his "residedence" would be "peculiarly disgustful to the Inhabitants." "And as well-wishers of the peace and order of the town, we think it advisable that you move from hence as soon as may be; as the people, roused with the insults they have already sustained, will, in all probability, pay you a visit less respectful than the Intimation you now receive." Three years later Colonel Henshaw was instructed, by vote of the town, to "procure what

evidence he may be able of the inimical Disposition of any inhabitent of this town toward the United States of America, which inhabitent may be so voted to be, in the opinion of the town." One such man was at that time voted, in the opinion of the town, "inimically disposed." In July of the next year it was "Voted that the selectmen be directed to prefer a petition to General Court, that William Manning and family may be removed from this town."

When the Declaration of Independence had been adopted it was, in accordance with the direction of the Council, copied on the town records.

These minutes are full of interest and instruction. They show the true character of the people and the power of their deliberation and united action. Lord Germaine did not speak without provocation when he said, "This is what comes of their wretched old town-meetings."

According to a report made to the town in 1784, the town paid in bounties, from 1775 to that time, £9268 6*s*. (probably equivalent to about $11,000 in coin) to 244 soldiers. It is estimated that the town raised for the expenses of the war over $18,000, in addition to State taxes. There were twenty-eight requisitions upon the town for soldiers. These were filled by more than 254 men. Beside these were the men who marched on the 19th of April and at least thirty who enlisted for three years in 1777 and 1778. Some of these soldiers were veterans of the French wars; others were boys of sixteen years.

It is to be remembered that the population of the town in 1776 was only 1078, and that it decreased during the war. There were in Leicester in 1777 only 212 men over sixteen years of age, and the names on the muster-roll were less than half the number of enlistments and re-enlistments in the quotas of the town. The valuation of the town seven years after the close of the war was only $140,000.

In 1781 the town was divided into ten classes, which were each to furnish their proportion of soldiers upon requisition of the government. So exhaustive was the demand that it was necessary to hire substitutes from other places to meet it. The town was repeatedly under the necessity of electing new selectmen and assessors, on account of the absence of the regular incumbents in the army. Women worked in the fields, because all the male members of their families were in the war, and farmers sold their cattle to raise money for the payment of taxes.

The number of commissioned officers from Leicester was large, in proportion to the size of the town. Col. William Henshaw, to whom we have already referred, was in command of a regiment in the battle of Long Island. He was with a picket-guard which was cut off from the main body by a superior force of Hessians, and cut its way through with great gallantry and little loss of life.

Col. Seth Washburn was fifty-two years old when the war began. He was in the battle of Bunker Hill, and afterward, though not in the army, was muster-master for Worcester County and served the cause on several important committees.

Col. Samuel Denny marched as lieutenant-colonel with the minute-men, on the 19th of April, and served as colonel during the early part of the war.

Dr. John Honeywood was surgeon and died in the service at Fort Ticonderoga.

Dr. Israel Green was at Saratoga when Burgoyne was taken.

Dr. Austin Flint enlisted, at the age of seventeen, as a soldier and was present at the taking of Burgoyne. He was afterward surgeon.

Lieut.-Col. Joseph Henshaw marched with the minute-men. He afterward served on important committees, conferring with other States.

Capt. David Henshaw was in the service three years.

Capt. John Southgate, Capt. William Todd and Lieut. William Crossman were also in the service.

Lieut. Nathan Craig was at the battles of Bunker Hill and Saratoga.

Lieutenant Joseph Washburn was at the battles of Saratoga and Monmouth, and also at Valley Forge. Captain Thomas Newhall was in command of the standing company on the 19th of April, and was muster-master for Worcester County. Captain John Holden served through the war, and was present at the storming of Stony Point. Captain John Brown commanded a company in the French War, and was in the battle of Bunker Hill as a sergeant. Rev. Benjamin Conklin was probably a chaplain.

Joseph Bass, of the "water service," who resided in Leicester after the war, was one of the heroes of what Irving, in his "Life of Washington," calls the "gallant little exploit" on the Hudson, the attempted "destruction of the ships which had so long been domineering over its waters," by means of fire-ships. Washburn, in his history, gives an extended narrative of the affair. Bass had charge of one of the sloops, the "Polly," which was supplied with inflammable materials, and which, under heavy fire of artillery, he fastened to the tender of one of the frigates, setting it on fire and destroying it with most of the men on board. Bass, with all his men, leaped into the life-boat, and rowed away without injury. The frigates escaped, but were prudently withdrawn from so dangerous a locality.

Solomon Parsons was severely wounded in the battle of Monmouth. He was shot, his thigh was broken, and afterwards, as he lay upon the ground, he was robbed, stabbed and roughly dragged about by the enemy, and narrowly escaped being run over by cavalry and artillery. He lay all the afternoon of that terribly hot day, in the sun, until he was rescued by Lieutenant Joseph Washburn.

These facts and figures give but a faint idea of the

burdens and sufferings of the people in the gloomy period of the Revolution, and the strain upon their resources and fortitude. They did not flinch when the time came to test the sincerity and value of their resolutions. They well redeemed the pledge to maintain the cause of independence at "the risk of their lives and fortunes."

CHAPTER LXXXIX.

LEICESTER—(*Continued.*)

State Constitution: Objections, Adoption—Jealousy of Rights—Shays' Insurrection: Causes, Convention, High Feeling, Dispersion of the Insurgents, Captain Day, Oath of Allegiance—Fine for Non-Representation in the General Court—Slavery in Leicester—"Instructions"—Jews: Aaron Lopez—Rivera Letter to Colonel Henshaw.

Soon after the Declaration of Independence measures were taken for the organization of a Constitutional State Government. These movements were, however, regarded premature and ill-advised. In October, 1776, the town voted that the House of Representatives of this State ought not to institute any new form of government at present, and chose a committee "to show the court why the town objects to settling a new constitution." Some of these objections stated were that there was no provision for amendment, that the town was not fully represented, that they were not allowed a Representative, and "that a number of the first principal inhabitants" were "in the service." The Constitution first formed was rejected by the people.

In 1779 the town voted unanimously to send two men—Seth Washburn and William Henshaw—"to frame a Constitution of Massachusetts." These gentlemen were prominent in the convention. The Constitution was the next year approved by the town, article by article, by a large majority.

Struggling against the oppression of the mother country, the people were equally jealous of any encroachments upon their rights by the government they were seeking to organize and establish. In their various resolutions and other acts in the later years of the last century there is evidence of their determination to secure a government "of the people, by the people and for the people." They protested against "monopolies." In 1777 they earnestly condemned the act of the General Court, calling in bills of credit and sinking them in a loan, as "cruel and oppressive" and "grinding the faces of the poor." In January of the next year they raised twelve hundred pounds and loaned to the State. In 1787 they instructed their representative, Samuel Denny, to oppose the excessive tax on farmers and on polls; also to oppose high salaries, as in present circumstances it was not well to "support courtly dignity." They expressed themselves as opposed to the "support of commerce," so "as to prevent their giving due encouragement to our own manufactures." The location of the Legislature appears to have been a subject much agitated, and at the same time the town declared "the setting of the General Government in the town of Boston is a Matter which the Citizens of this Commonwealth are not generally satisfied with," and advised that its removal to some other place be tried by "experience."

The eight years' struggle of the Revolution had hardly ended when the State was threatened with a formidable civil war. It was the natural reaction from the long-continued strain upon the endurance of the people. They had been taxed to their utmost limit; all interests had suffered; the people were impoverished; the currency had depreciated and finally became valueless; the State had no credit; the condition of the Government and of the community was one of bankruptcy; and thousands of suits were brought before the courts, and forced sales were numerous. Some of the acts of the Legislature were regarded as oppressive. General conventions were held in the county to confer with reference to these complaints. Two of these were in Leicester. The presence of wise and loyal men like David Henshaw and Col. Thomas Denny was a check upon rash action. When at length the dissatisfaction developed into insurrection, under the leadership of Daniel Shays, the town withdrew its delegates. The excitement was intense and the sentiments of the people were divided, some sympathizing with the insurgents and joining their ranks. As in the War of the Roses the parties had their distinctive badges, the insurgents a green sprig and the supporters of the Government a white fillet of paper. The Rev. Benjamin Conklin, loyal to the nation and the commonwealth as in the days of the Revolution, was repeatedly forced to leave his home and hide himself to escape seizure by the insurgents in the night.

The same loyal leadership and the same patient devotion to the government which were conspicuous in the Revolution, held the town to a wise and patriotic course. Every man in town over twenty years of age was by vote required to take an oath of allegiance to the State, and the list of those who thus complied was to be reported at town-meeting.

The excitement and peril of the rebellion culminated in Worcester, in December, 1786, in an attempt of the insurgent army to prevent the opening of the court. The house of Mr. Joseph Allen, then residing in Worcester, was guarded by a sentinel, who opposed him with a fixed bayonet to prevent him from going to court. Seth Washburn seized the guard and wrested his musket from him. Lincoln, in his "History of Worcester," states that Justice Seth Washburn himself was also met by the guard, and that two friends who "seized the gun presented to his breast" were arrested and detained in custody.

On the memorable 8th of December, the day in which Shays and his army retreated from Worcester

in a snow storm of such severity and cold so intense that many of his men were overcome and some were frozen to death, Luke Day, one of the insurgent captains, reached Leicester with one hundred and fifty men, but was prevented by the storm from joining the main body at Worcester. Scant courtesy did the rebels receive from the sturdy patriots of that day. When this same Day, on his way from Worcester to Springfield on a cold winter day, entered the house of Nathan Sargent and made free to warm himself by the fire and ostentatiously announced himself as Capt. Day, he soon found himself, with hat and sword preceding him, floundering in the snow-drift outside. Several Leicester men participated in the march through drifting snow and were present on the 3d of February when the insurgents, upon the approach of the State forces to their rendezvous at Petersham, fled without the firing of a gun, so completely discomfited that, as Lincoln in his "History of Worcester" expresses it, "had an army dropped from the clouds upon the hill the consternation could not have been greater." Dr. Austin Flint was one of the number, having, as he said, volunteered "to help drive the Mobites out."

During all the later years of the century persons who engaged in trade or kept public-houses were required to take a stringent oath of allegiance to the republic.

For many years the salaries of representatives to the "Great and General Court" were paid by the several towns. The town in 1789 was fined for not sending a representative; and in a memorial, an ancient copy of which is before the writer, the town petitioned to have the fine remitted. The memorial bears date of May 10, 1790, and is strikingly illustrative of the straits into which the people had been placed. They were still in debt for money borrowed to be loaned "to the Commonwealth" and for the payment of "soldiers," and for the erection of a "House of Public Worship," and they were "at a greater expense than most towns for repairing their roads owing to their hills being wet and rocky."

Slavery has never existed under the Constitution of the State of Massachusetts. There were slaves in the Province till the time of the Revolution, but the Constitution adopted in 1780 declared the right of "all men to enjoy and defend their lives and liberties." The number of slaves in Leicester was small; still they were here; Titus and Cain, and Cæsar, and Quashi, and Prymus, and Pompey, and Will, and Pegg, and Jenny, and Dinah, and Prince, and Jethro, the last person buried in the burying-yard by the church; but they were treated as wards rather than as slaves. They lived, and worked, and ate with the families, in some cases were paid wages, and in repeated instances were set free. Mr. Ralph Earle not only freed his slave Sharp, but also gave him in 1756 a farm of thirty acres. But slavery, even in its mildest form, was discordant with the spirit of a freedom-loving people. In 1773 the town gave expression to its views on the subject in instructions to its Representative, Mr. Thomas Denny: "And as we have the highest regard for (so as even to revere the name of) liberty, we cannot behold but with the greatest abhorrence any of our fellow-creatures in a state of slavery."

An interesting episode in the history of the town was the settlement here, in 1777, of a colony of Jews. Mr. Aaron Lopez, who was carrying on an extensive business in Newport, R. I., that year removed to Leicester, Newport being then in the possession of British troops; with him came several other Jewish families. There were about seventy persons in all, twelve of them being slaves. He built, on the part of the present Common now owned by the Academy, a house in the central room of which he "kept store," in which, in the words of H. G. Henshaw, Esq., he "carried on a successful trafic in Bohea and Gunpowder teas, serges, calamancos,," and doubtless a variety of other articles. Mr. Rivera had a store on the site of the hotel. "They were too patriotic to refuse in payment for their commodities Continental bills, the currency of the times; but felt rather scrupulous about holding such treacherous paper over the Sabbath, and were careful to pass it off to the farmers in exchange for neat stock or grain." They were strict in the observance of Jewish law. They carefully observed the seventh day, and also refrained from business on Sunday. A child having incautiously tasted of pork, at a neighbor's house, was treated with an emetic, by way of purification.

Mr. Lopez was a man of high character and standing, courteous and affable in manner, of extensive commercial knowledge and strict integrity in business, hospitable and benevolent. His style of living was for those days elegant. His stock in trade at the time of his death was valued at $12,000, and his estate at $100,000. Abraham Mendez and Jacob Reed Rivera were other prominent members of the colony, and carried on business, though on a smaller scale. On the 20th of May, 1782, Mr. Lopez, while on his way, in a sulky, to Providence, accompanied by his family in a carriage, was drowned before their eyes at Smithfield, R. I., in Smith Pond, into which he had driven to water his horse. At the close of the war the company returned to Newport, followed by the respect and regard of the people, with whom they had found a hospitable and congenial home. After their departure a friendly correspondence was maintained and probably an interchange of visits. One of the letters remains. It was written by Mr. Rivera to Col. Henshaw, in a clear and beautiful hand, and the whole style and spirit of the letter are indicative of the intelligence and high character of the writer, and of his appreciation of the friendship of the people of Leicester, and of the value of our national institutions. "I am happy," he writes, "to find my countrymen (the Spanish nation) begin to divest themselves from bigotry, ignorance and indolence, and adopt in

their room learning, liberty and liberality of sentiments in religious matters. That system, with propper encouragements to arts and sciences, make no doubt, will, in time, enable them to arrive to that state of perfection that will class them with all other civilized and enlightened nations, and enrich that impoverished nation, and I am confident to say. great advantages will derive to that nation in particular, and the whole world in general, from the American Revolution."

CHAPTER XC.

LEICESTER—(*Continued*).

ECCLESIASTICAL.

The First Church: First Meeting-House, Rev. David Parsons, Controversy with the Town, Rev. David Goddard, Whitefield and Edwards, Rev. Joseph Roberts, Rev. Benjamin Conklin, Dr. Moore, Dr. Nelson, Later Pastors, Second Meeting-House, Present Meeting-House, Church Music, Bible Reading, Sunday-School Parish. Friends' Meeting: Origin, Meeting House, Second House, Asa Swift, Intelligence, Anti-Slavery, Mulberry Grove School. Greenville Baptist Church: Church in Sutton, Pastors, Dr. Thomas Green, Other Pastors, Sunday-School, One Hundred and Fiftieth Anniversary. Second Congregational Church: Organization, Pastors, Christ Church, Rochdale, Methodist Episcopal Church, Cherry Valley, Centre, Wesleyan Methodist Church, Roman Catholic Church, St. Thomas' Church, Cherry Valley.

FIRST CONGREGATIONAL CHURCH.—The records of the First Congregational Church previous to the settlement of the Rev. Zephaniah Swift Moore, in 1798, are lost, with the exception of a few detached pages. The exact date of organization is unknown. The town was incorporated in 1714, and the farms purchased by the settlers began to be occupied soon afterward. It is not probable that church privileges in some form, and church organization were long neglected. A meeting-house had been built in 1719. It stood on the Common, nearly in front of the present church. It was a small and very plain, rude structure. It had a door in front and one on each end. It was clap-boarded, but not painted. It was without a porch, belfry, gallery or pews. The windows were small and lighted with diamond-shaped glass. It was sealed to "the great girt," but probably not overhead. Like all the churches of the time, it was without heating apparatus of any kind. Later, individuals built in it their own pews on the "pew ground" or "pew spots." There were comfortless "body" seats, the women sitting on the west side and the men on the east. Galleries were added about 1728. Repairs and modifications were made from time to time, by the addition of pews, placing seats in the galleries, adding in 1743 twelve feet on the back side, putting on a new "ruff," moving the pulpit to the back side, re-covering the house with "the old clap-boards taken off the back side," putting up steps, and in 1754 a sounding-board. In this house the people from all parts of the town came together to worship God. In it they held their town-meetings and all other public gatherings, and it was here that they earnestly, courageously, eloquently and with statesman-like ability and forethought enunciated the principles of liberty on which our republic was founded.

The first town action with reference to the settlement of a pastor appears to have been taken November 28, 1720, when it was voted that Mr. David Parsons be our Gospel minister. Two days later a call was sent him by a committee. In this letter they write, "Rev'd Sir, we with one heart and consent Do call and Invite you to be our Minister in the Work of the Gospel amongst us, if you see Cause to accept and see your way clear to remove; but alas if we reflect back upon ourselves, we can't but see we are utterly unworthy of so great a Blessing; but if you have such a Blessing to bestow on us, as we hope you will be, we desire forever to praise his name for his Goodness to us ward." He was to "have the forty-acre lot next the Meeting House," and "rights," "as other forty-acre lots," and a salary of sixty pounds, and sixty pounds settlement. As he hesitated to accept on these terms, thirty individuals agreed to add to the amount, so that the salary should be seventy-five pounds, and the settlement one hundred pounds.

Rev. David Parsons was born in Northampton in 1680, graduated from Harvard College in 1705, pastor of the church in Malden twelve years, where he had a church quarrel and lawsuit with the town; installed at Leicester in 1721, dismissed March 6, 1735, and died in Leicester, where he was buried October 12, 1743. Whitney, in his "History of Worcester County," gives the date of his installation as, "by the best accounts now to be had, September 15, 1721," but the town records indicate that he was already pastor early in the year. The town, "reduced to low circumstances by reason of the Indian War," soon found it difficult to comply with the conditions of settlement, and petitioned the Legislature for aid, which was granted to the amount of ten pounds. But the salary continued to be in arrears and Mr. Parsons appealed to the Legislature, and the town was notified to show cause. This was the beginning of a quarrel which lasted for sixteen years. Within six years the town, which had regarded itself "unworthy of so great a blessing," voted "that the town be willing that Mr. Parsons should remove, and remain out of this town." The town strenuously endeavored for years "to be relieved from Mr. Parsons' bondage," but in those days such an endeavor was attended with insurmountable difficulties. Memorials were made by the parties to the Legislature, complaints to the Quarter Sessions and appeals to the General Court. Those who were conscientiously opposed to Mr. Parsons were released by act of the Legislature from his support upon six months' notice, on condition of providing "an able orthodox minister, generally to dispense the Word of God among them," or attendance and taxation in

some neighboring congregation. The General Court passed an act releasing the town from Mr. Parsons' support, but the act was vetoed by Governor Belcher. "Six Worcester gentlemen came as mediators," but were unsuccessful. There were differences among the people and changes of town action in relation to the subject. Successive councils were called, one of which sat four days in Watertown, and adjourned to Boston, where it was continued four days longer. The result of this council reproves Mr. Parsons for "any rashness in his words, and hastiness in his actions," and shows that he had been arbitrary, had called the meetings of his opposers a "Mob," had assumed power not belonging to "a pastor according to the constitution of these churches;" that he, with "rash and injurious" expressions, had ordered the deacon "out of his seat," and had recognized the minority, composed of his friends, as the church, and received members into the church without due authority. But they judged, "as a former council did," that he had been "shamefully treated with respect to his support," and deprived of his "just and full title to lands in Leicester." The communion service had been withheld from his use and that of the church. "They had opposed his going into the pulpit on the Lord's Day," and "set up another in opposition to him," and had withdrawn from public worship to "private assembling." "The like was never done in this land before." He was at length dismissed by a mutual council. This controversy with the town, however, continued and he provided that his grave should not be with that of his people, but in his own grounds. The stone stood for many years near the Paxton Road; it for a time was lost, but at length was found in the house upon the place, used as the floor of the oven. It has now found a resting-place in the church building, together with that of Mrs. Parsons.

More than a year intervened before the settlement of the next pastor. In December a fast was appointed "in order to make choice of a minister." The Rev. David Goddard was the choice of the people. He was born in Framingham, September 26, 1706; graduated at Harvard in 1731; ordained June 30, 1736; and died January 19, 1754, at Framingham of "the great sickness," in that region, of which in the town of Holliston, fifty-four out of a population of four hundred died in six weeks. He was a man of devoted piety, morbidly conscientious, sympathized with the people in their financial straits, and was in full sympathy with the great religious movements of his time. In the afternoon of October 15, 1740, Rev. George Whitefield preached in Leicester, and in January, 1742, Rev. Jonathan Edwards, of Northampton, spent several weeks here in evangelistic labor. In connection with this work there were evidently some extravagances. Dr. Hall, of Sutton, while preaching here, was disturbed by "a woman somewhat troublesome," "frequent in fainting fits." Mr. Parsons, however, like Mr. Edwards, was judicious and cautious, and discountenanced all excesses; and his ministry was fruitful in spiritual results.

The Rev. Joseph Roberts, the third pastor, was born in Boston in 1720, and graduated from Harvard College in 1741. He was ordained October 23, 1754. His avaricious disposition soon occasioned dissatisfaction, and he was dismissed by council, December 14, 1762. He removed to Weston, where he was an active patriot, and was a member of the State Constitutional Convention in 1779. Engaging in business, he lost, and refusing to pay the debts of the company, was in prison, as a debtor, three years. He became a misanthrope and a miser, and lived like a beggar. He died April 30, 1811, at the age of ninety-one. After his death bags of money were found in his house, the bags so rotten as to burst when lifted.

His successor was Rev. Benjamin Conklin, who was born in Southold, L. I.; graduated from Princeton in 1755 and installed November 23, 1763. He was dismissed, on account of failing health, June 30, 1794, and died in Leicester, January 30, 1798. Dr. Moore, in the church records, gives his age as sixty-six years and six weeks. The inscription on his grave-stone is, "aged 65 years." He was a prominent adviser and actor in the Revolutionary struggle, a member of the Committee of Correspondence, and supposed to have been at one time a chaplain in the army. He was respected and beloved by his people, and the record of his patriotism, in the struggle with England and in the Shays' insurrection, adds lustre to the annals of the town. It is related of him that when asked if he would preach in the pulpit of a distinguished Unitarian minister, his answer was, "Yes, I would preach on Mars Hill if I could get a chance."

Rev. Zephaniah Swift Moore, D.D., was ordained January 10, 1798. He was born in Palmer, November 20, 1770; graduated from Dartmouth College in 1793; and was dismissed October 8, 1811; made prefessor of languages in Dartmouth College in 1811; president of Williams College in 1815; and of Amherst in 1821. He left a permanent influence upon the church and the town. He was a man of marked intellectual power and literary culture. His style was clear, simple and persuasive. When he was called to Dartmouth College, his people regarded his appointment as little less than robbery. When he left town they accompanied him in carriages, and the children stood, with uncovered heads, in long lines on each side of the way while he passed.

Professor William Tyler, D.D., of Amherst College, describes him as "a man of medium size, but commanding presence, weighing some two hundred and forty pounds, yet without any appearance of obesity, neat in his dress, retaining the use of short breeches and long hose, which were particularly becoming to his person. In his manners there was a union of suavity with dignity, rare anywhere, especially in persons bred in the country, which marked

him as a gentleman of the old school, one of nature's noblemen, and which, while it attracted the love of his pupils, invariably commanded also their respect." Rev. Dr. Thomas Snell, of North Brookfield, in his funeral sermon characterizes him as "by nature a great man, by grace a good man, and by the providence of God a useful man, a correct thinker and a lucid writer, a sound theologian, instructive preacher and greatly beloved pastor, a wise counselor and sympathizing friend, and a friend and father especially to all the young men of the infant college in which he was at the same time a winning teacher and a firm presiding officer."

Rev. John Nelson, D.D., was the sixth pastor of the church. He was born in Hopkinton, Mass., May 9, 1786. He was graduated from Williams College in 1807, and studied theology with Rev. Samuel Austin, D.D., of Worcester. He remained pastor of the church till his death, December 6, 1871, a period of fifty-nine years, nine months and two days.

It is said that there were twelve hundred sleighs on and around the Common on the day of ordination, and that there were three thousand people assembled, only a portion of whom could, of course, enter the church. It was during the ministry of Dr. Nelson that the church had its principal growth, there being at the time of his settlement only sixty-five members. He was an interesting and animated preacher, a favorite in the surrounding churches, and honored and beloved by his own people. He received the degree of D.D. from Williams College, in 1843, was a trustee of that college from 1826 to 1833, and of Amherst College from 1839 to 1848. He was a trustee of Leicester Academy from 1812 to his death, in 1871, and president from 1834. He was for many years a corporate member of the American Board of Commissioners for Foreign Missions. He was chaplain of the local regiment of militia sixteen years from 1812. He was often appointed to preach on public occasions, and was personally identified with the great moral and religious movements of his time. "Dr. Nelson descended from a strong, intelligent and pious ancestry. He early became a Christian, and united with the church. He was profoundly reverential and consecrated in spirit. He was preeminently judicious and considerate in action, and singularly broad and catholic in his moral and religious judgments. Forgetful of self, he was always thoughtful of the happiness of others. Nurtured in a genial and happy home, inured to labor and hardship in his struggles for an education, brought while in college into the atmosphere of a great religious awakening and intense missionary zeal, and actively associated with the great moral and religious movements of his time, he was trained and fitted for the ministry which he accomplished. His qualities were of the enduring kind. He loved his people and he loved his work. He was pastor of the church for nearly sixty years, and his loving, pure and gentle spirit won for him the lasting respect and affection of his people, and of all who knew him."[1]

The fiftieth anniversary of his settlement and marriage was celebrated May 6, 1862. His sermon was from Job 32: 7: "I said days should speak; and multitude of years should teach wisdom." Governor Washburn presided at the after-dinner exercises, and addresses were made by several clergymen. Rev. George Blagden, D.D., presided at the golden wedding. The occasion was as interesting as it was rare.

In consequence of failing health it became necessary for Dr. Nelson to have assistance in the pastoral office, and on the 4th of March, 1851, the Rev. Andrew C. Dennison was ordained as his assistant. He was born in Hampton, Conn., June 27, 1822; was graduated from Yale College in 1847, and from Union Theological Seminary in 1850. He was dismissed in March, 1856, and afterward settled at West Chester and Portland, Conn. He is now pastor of the Congregational Church in Middlefield, Conn.

Rev. Amos H. Coolidge, the present pastor of the church, was born in Sherborn, Mass., August 17, 1827, graduated from Amherst College in 1853 and from Andover Theological Seminary in 1856. He was ordained April 21, 1857. The day was made memorable by one of the most remarkable snow-storms of modern times. Eighteen inches of snow fell, and the furious winds blew it into drifts which made the roads impassable. Only about one hundred persons attended the services, and but a small fraction of the council was present. The sermon was by Rev. Prof. Austin Phelps, D.D., of Andover Theological Seminary.

The second meeting-house was built in 1784, a little in the rear of the old site. The pulpit was in front octagonal. It had over it a sounding-board, and just below, the "deacons' seat." There were galleries on three sides of the house, which, with the pulpit and deacons' seat, were painted to resemble shaded marble. The pews were square, and each seat was hung upon hinges. In prayer-time they were turned up and their united fall as the congregation resumed their seats justified the fears of the Philadelphian, unused to such an amen, in his movement to escape from the house. A belfry and steeple were added afterward, and in 1826 the building was moved back to the location of the present church building. In 1829 the interior was entirely renovated. A bell and a clock, made by George Holbrook, of Brookfield, were placed on it January 13, 1803. The bell was re-cast in 1810 and again in 1834, and about the year 1834 Joshua Clapp, Esq., presented the town with a clock. The first organ was purchased in 1827, the second in 1844 and the third in 1867. The house was first warmed by fires about the year 1821.

The present meeting-house was dedicated Novem-

[1] Proceedings of the Worcester Society of Antiquity, 1887.

ber 13, 1867. In 1888 the interior was changed by the removal of the organ-loft and galleries for the choir to the rear of the pulpit.

For more than sixty years the singing was purely congregational. The hymns were read by the deacon, and then sung line by line by the congregation. In 1780 a choir, by permission, occupied the front seat in the gallery. There was a short trial of sound between the deacon and the choir, in which the choir gained the permanent advantage, not, however, without greatly scandalizing some of the members, and causing them to leave the house.

Bible-reading formed no part of the service here in the last century. The first Bible thus used was published by Isaiah Thomas, and was presented to the society by Col. William Henshaw. It was read for the first time by Dr. Moore, May 4, 1800. The first action with reference to "a plan of Sunday-school" was taken May 3, 1819, and at first the schools were held in school-houses in different parts of the town. It is believed that before the year 1887 there had been but three regularly elected superintendents. The first was Deacon Joshua Murdock. Deacon Christopher C. Denny was elected in 1848, and Hon. Charles A. Denny April 6, 1862. He resigned after twenty-five years' service.

The parish was at first identified with the town, and its business transacted in the regular town-meeting till 1794. After this time those voters who had not withdrawn to other societies met after the regular town-meeting, on the same day, until February 9, 1833, when "The First Parish of Leicester" was organized.

FRIENDS' MEETING.[1]—Until about eighteen years after the incorporation of Leicester the people of the entire original township worshipped together on Strawberry Hill. A Society of Friends was then organized. It belonged to the "Yearly Meeting of Friends for New England," a body composed of several "Quarterly Meetings," each made up of minor "Monthly Meetings," which, in turn, embraced subordinate "Preparative Meetings," containing one or more "Meetings for Worship." The Meeting here was not only a Meeting for Worship, but a Preparative Meeting. "The Leicester Preparative Meeting" was at first a subordinate of the Smithfield, R. I., Monthly Meeting, but after the division of that Meeting in 1783, it became subordinate to the Uxbridge Monthly Meeting.

In 1732 Ralph Earle, his three sons—William, Robert and Benjamin—Thomas Smith, Daniel Hill, Nathaniel Potter and Joseph Potter declared themselves to the clerk of the town to be Friends and asked, on account of conscientious scruples, to be released from paying "any part of the tax for the Seport of the minister or ministers established by the Laws of the province." At the Smithfield Monthly Meeting, held January 29, 1739, according to the records, "Friends at Leicester make report to this meeting that they have agreed upon a Place for Building a Meeting-House at the Burying Place between Ralph Earle's and Nathaniel Potter's; and this meeting doth appoint Benjamin Earle, Nathaniel Potter, Thomas Smith and John Wells, all of said Leicester, to take Deed of the same; and Benjamin Earle, Thomas Smith and Nathaniel Potter are appointed to undertake for Building said House." The same meeting afterward contributed "four Pounds" toward its construction. The lot on which the house was built was a part of the farm which Robert Earle received from Ralph Earle, his father, with a small tract from the farm of Nathaniel Potter, located by the brook, and added in order that the horses of the worshippers, let loose to feed during the service, might have water. The land was conveyed to Samuel Thayer, of Mendon, Mass., on the 13th of August, 1739, and by him to the persons appointed by the Monthly Meeting on the 27th of December of the same year. It was "to go entire and without any division unto ye survivor and survivors of them, and to the heirs and assigns of ye survivors or survivor of them forever." The Uxbridge Monthly Meetings were held here three times in the year, and for a time the Smithfield November Quarterly Meeting. Washburn describes the house built at this time as "a low, one-story building, twenty by twenty-two feet." It was sold, removed and converted into a dwelling-house in 1791, and has since been destroyed.

The second meeting-house was built in 1791. It remained many years after the meetings were discontinued. Its location was secluded and singularly attractive. It was surrounded and shaded by ancient forest trees, and stood amid the graves of the worshippers of successive generations, some of them buried without reference to family relationship, and with graves marked simply by rough head-stones. It was of two stories, the upper floor being upon three sides a gallery, connected with the lower by an oblong opening in the centre. On a part of the lower floor were elevated seats for ministers, elders and overseers. The men were separated from the women by a partition, the upper part of which was hung on hinges so as to open and form one audience-room. The object of this partition was to separate the sexes at the business meetings, the women as well as the men holding a meeting of their own, the two being theoretically upon an equality. The house was taken down about twelve years ago.

In 1826, according to Washburn's history, the society had about one hundred and twenty members. This number was probably never exceeded. The last minister of the Gospel, recognized by the Yearly Meeting, who was a member of the Leicester Meeting,

[1] For most of the facts relating to the "Friends' Meeting," the writer is indebted to Dr. Pliny Earle. The history of the Baptist Church was written by Rev. H. E. Estes, D.D., and that of the Second Unitarian Church by Rev. S. May. The writer is indebted also to Rev. D. F. McGrath, the parish priest, for the facts relating to the Roman Catholic Church.

was Avis Swift, wife of Josiah Keene. She resided in Leicester from about 1812 to 1820. She was born in Nantucket, and was "a woman of much religious experience, of superior intellectual powers and of a large intelligence, and was greatly beloved by all who had the privilege of her acquaintance." She afterward lived in Lynn, where she died. In consequence of the removal of members from town, the society became reduced in numbers and the meetings were discontinued in 1853.

The Quakers, as the Friends are generally called, were averse to public life. They could not conscientiously take or administer an oath, and they were originally disposed to separate themselves as much as practicable from "the world's people." This disposition diminished with the lapse of years. Dr. Pliny Earle, to whom we are indebted for most of the facts of this history, truthfully says that "during the first quarter of the current century a no inconsiderable part of the most intelligent and highly cultivated society in the town was to be found among them." Early in the last century they in theory and practice renounced slavery. They were in this respect evidently in harmony with the sentiment of the people of the town, which found, as we have seen, an early and emphatic public expression. The Friends, however, were first to adopt the anti-slavery principle as one of the canons of their organization, and remained true to that principle in all the struggle.

In 1827, May 15th, a boarding and day school for young ladies was opened at the house of Pliny Earle, situated at the junction of Mulberry and Earle Streets, and continued till 1839. It was known as the "Mulberry Grove School," and was taught by Sarah Earle and her sisters Lucy and Eliza; the farm-house near being used for the recitation rooms. Sarah Earle was principal till her marriage, in 1832, when she was succeeded by Eliza. The French language and painting were taught; but it was professedly an English school, and the instruction was characterized by great thoroughness. The public examinations were in the Friends' meeting-house. At one of them Governor Emory Washburn, being present, remarked that he had often heard of the excellence of the school, but "the half had not been told."

GREENVILLE BAPTIST CHURCH.—Some of the first settlers in Leicester were Baptists, and among them Dr. Thomas Green. He was dismissed from the First Baptist Church in Boston to aid in forming a church in Sutton in 1735. At least eight other persons residing in Leicester,—Thomas Richardson, Daniel Denny, Elisha Nevers, Martha Green, Joshua Nichols Abiathar Vinton, Bathsheba Nevers and Lydia Vinton—had been baptized in Sutton and Leicester by a Baptist minister, named John Converse, three years before. On the 28th of September, 1737, Dr. Green and Benjamin Marsh were ordained associate pastors of the church in Sutton, "and September 28, 1738, by mutual agreement, the brethren in Leicester became a church by themselves, and Green their pastor." ("Backus' History," vol. ii., page 31.)

Since its organization the pastors of the church have been Thomas Green, 1738–73; Benjamin Foster, D.D., 1776–82; Isaac Beall, 1783–88; Nathan Dana, 1794–97; Peter Rogers, 1803–13; Benjamin N. Harris, 1827–30; John Green, 1830–40; Moses Harrington, 1840–49; L. O. Lovell, 1856–58; H. C. Estes, 1860–62; N. B. Cooke, 1862–68; L. Holmes, 1869–76; J. Sawyer, 1876–77; J. W. Searle, 1877–81; A. W. Spaulding, 1882–86; H. C. Estes, D.D., 1886. Dr. Estes was graduated from Waterville College (now Colby University) in 1847.

Dr. Thomas Green was a man of great ability, prominence and influence. He was largely engaged in business and remarkably successful. He was a physician, eminent in his profession, with a practice that extended into neighboring States, and with many medical students under his instruction. And he was quite as distinguished and successful in his work of the ministry. After his death it was said of him in an English periodical that he had baptized not less than one thousand persons. The Rev. Isaac Backus, the historian of the Baptists in New England, visited him in 1756, held a meeting with his people, and the next day wrote the following words in his journal: "Oct. 19th. I can but admire how the doctor is able to get along as he does, having a great deal of farming business to manage, multitudes of sick to take care of, several apprentices to instruct in the art of physic, and a church to care for and watch over; yet in the midst of all he seems to keep religion uppermost—to have his mind bent upon divine things—and to be very bold in Christian conversation with all sorts of people."

His successor, Dr. Foster, was ordained October 23, 1776. In January of that year he had married Elizabeth, the youngest daughter of Dr. Green. He was a graduate of Yale College, and distinguished for his learning, faithfulness and successful work. Under his ministry the church was much enlarged and strengthened. He was the author of two learned works published while he preached in Leicester, and in recognition of the ability shown in another work published later, he received the degree of Doctor of Divinity from Brown University in 1792. After having been pastor of the First Baptist Church in New York ten years, he died there of yellow fever in 1798, at the age of forty-eight years.

Under the ministry of the Rev. John Green the church enjoyed much prosperity. In those ten years the additions were ninety-six, and the membership was increased to eighty, the largest in its history, though at one time in Dr. Forbes' ministry the number of members was seventy-six. The membership is now fifty-four.

When the church has been without a settled minister it has often had valuable stated supplies from ministers living in Worcester or elsewhere: Nathan

Price, 1799; Ebenezer Burt, 1802–3; Benjamin M. Hill, 1816–18; Luther Goddard, 1821; Ebenezer Burt, 1824–25; Otis Converse, 1850–51; John F. Burbank, 1852–53; N. Hervey, 1854–56.

Benjamin M. Hill was a distinguished man, not yet ordained when he preached in Leicester, but afterwards pastor in New Haven, Ct., and Troy, N.Y., nearly twenty years, then corresponding secretary of the American Baptist Home Mission Society twenty-three years, and widely known and honored as the Rev. Dr. Hill, who died in 1881.

In 1747 the church had a house of worship already built and occupied, which, with its grounds and the cemetery adjoining, two acres in extent, was the gift of Dr. Green, of whom, after his decease, the historian, Isaac Backus, said, "He was the main support of his society in temporals and spirituals all his days." That house was repaired in 1779 at a cost of three hundred and fifty pounds, and again it was repaired and enlarged in 1824; then, after it had been occupied more than a hundred and ten years, it was replaced by a new and attractive house, with organ, bell and clock, which was dedicated in 1860 and is now occupied.

The Sunday-school was commenced in 1821. At first it was held in the afternoon "after meetings." For several years its numbers were few, sometimes ten, sometimes twenty-five and, like most Sunday-schools of that time, it was suspended during the winter. But, in 1829 and 1830, it received a sudden and surprising impulse. In the latter year its number of scholars was increased to eighty, and in 1834 it rose to one hundred and sixty. Since then the school has numbered about one hundred—sometimes more, sometimes less.

On Friday, the 28th of September, 1888, the one hundred and fiftieth anniversary of the founding of the church, commemorative services were held, in which the Green family, descendants of the first pastor, took part; and an interesting feature of the exercises was the presentation of a fine brass tablet, which had been placed upon the wall by the Hon. Andrew H. Green, of New York, in memory of his distinguished ancestor, Dr. Thomas Green.

Second Congregational Society.—"In the autumn and winter of 1832–33," says Washburn, in his "History of Leicester," "several families in the town formed a Unitarian Religious Society." In April, 1833, sixteen gentlemen—among whom were Waldo Flint, Isaac Southgate, Joseph D. Sargent, John Whittemore, Dwight Bisco, Lyman Waite, Silas Gleason and Edward Flint—applied to be incorporated as "The Second Congregational Society in Leicester," and received incorporation on the 13th of said month. From that time forward regular services of worship were held in the old Town Hall, and in June, 1834, the society gave a unanimous call to Rev. Samuel May, of Boston, to become their minister, which he accepted. On the 12th of August following their new meeting-house was dedicated, when Rev. James Walker, of Charlestown, preached the sermon; and, on the following day, Mr. May was ordained by an ecclesiastical council, of which Rev. Dr. Aaron Bancroft, of Worcester, was moderator. The sermon of ordination was by Rev. F. W. P. Greenwood, of King's Chapel, Boston; the ordaining prayer by Dr. Bancroft; the charge by Rev. Dr. Charles Lowell, of Boston, and the right hand of fellowship by Rev. Samuel J. May, then of Brooklyn, Conn. A church of twelve members had already been gathered. The sermons of Rev. Messrs. Walker and Greenwood were printed in a neat pamphlet. Mr. May continued minister for twelve years, and in the summer of 1846 resigned the office. Since his time the changes in the ministry have been many; but the society has been sustained by an honorable devotedness on the part of its members, and the list of its ministers includes the names of men of eminent ability. Those whose terms were of two years or more duration were as follows: Rev. Frederick Hinckley, 1847–48; Rev. James Thompson, D.D., who had just closed a long and prosperous ministry in Barre, 1849–51; Rev. Wm. Coe, of Worcester, 1851–54; Rev. Joseph Angier, of Milton, 1855 and 1856; Rev. F. Macintyre, of Grafton, 1858–59; Rev. James Thurston, 1862–64; Rev. J. J. Putnam, of Worcester, 1864–65. In 1866 considerable changes were made in the interior of the meeting-house, on the completion of which Rev. Everett Finley became minister, February, 1867, and continued until his death, which occurred early in 1869. His body lies buried in Leicester, in Pine Grove Cemetery. In July, 1869, Rev. David H. Montgomery became minister, and so continued eight years. Rev. S. B. Weston followed. During his ministry a question arose as to the application of the trust fund left to the society by Isaac Southgate, Esq., which being, by mutual agreement, referred to arbitration, it was decided unanimously that the fund was not available in Mr. Weston's case. Mr. Weston received the decision with honorable good feeling, resigning his office in 1881. It was not until 1883 that the society were prepared to settle a minister; but in September of that year Rev. Lewis G. Wilson was ordained by an ecclesiastical council, of which Rev. Dr. A. A. Livermore, of Meadville, Penn., was moderator. Mr. Wilson continued two years. Rev. Rodney F. Johonnot was ordained in September, 1886, and his ministry continued until September, 1888.

Christ Church, Rochdale.—The fiftieth anniversary of Christ Church in Rochdale was celebrated July 4, 1873. The sermon of the rector, Rev. B. F. Cooley, preached on that occasion, gives the history of the church to that date. "Divine service, according to the Liturgy of the Protestant Episcopal Church, was performed for the first time in Leicester, Mass., and for the first time, it is believed, in Worcester County, on the sixth day of July, 1823." The

church owed its origin to Mrs. Ann Wilby, an English lady who came to Leicester in 1822. She was buried under her pew in the church in 1826. Her family, with that of Mr. James Anderton, were the only Episcopalians in town. Services were for some time held in the hall of Hezekiah Stone's tavern.

The church building was erected in 1824, first occupied on Easter Sunday, April 18, and consecrated May 26 by Right Rev. Alexander V. Griswold, D.D. Rev. Joseph Muenscher, D.D., became minister of the parish March 14, 1824. He resigned the cure March 10, 1827. He was also the village schoolteacher. He was born in Providence, R. I., December 21, 1798, and graduated from Brown University in 1821, and Andover Theological Seminary in 1825. His marriage to Ruth, daughter of Joseph Washburn, was the first solemnized in a church, according to the Episcopal form, in Worcester County. Among the positions afterwards held by him was that of Professor of Sacred Literature, and later, Instructor in Hebrew in the Episcopal Theological Seminary, Gambier, Ohio. He was succeeded by Rev. William Horton, D.D. Rev. Lot Jones became rector in June, 1827. He was afterwards rector of the Church of the Epiphany in New York. He died in Philadelphia in 1865, while in attendance upon the General Convention, in consequence of a fall upon the steps of St. Luke's Church. Rev. C. Millett became minister in 1833. He was afterwards rector of the parish in Beloit, Wis. In August, 1834, Rev. Henry Blackaller became rector. He resigned in the spring of 1838. He died June 21, 1862, at the age of sixty-nine. Rev. Eleazer A. Greenleaf immediately succeeded him, remaining one year. Rev. John T. Sabine was minister one year, beginning in 1839. He died March 15, 1851, aged sixty-one. Rev. William Withington became minister in February, 1840, and remained one year. He was succeeded for one year by Rev. Fernando C. Putnam. From 1842 to 1844 the church had no rector, but was under the missionary charge of Rev. Orange Clark, D.D., who also ministered to the churches in Hopkinton and Montague. This was a period of great depression, but the church was "saved from utter ruin by the occasional missionary services of Dr. Clark and a few staunch churchmen on the spot." Rev. James L. Scott became minister in October, 1845, being ordained to the deaconate and priesthood here, after acting as lay reader for nearly fourteen months. He retired in April, 1849. Rev. J. Hill Rowse was rector from June 10, 1849, until his death, July, 1870. During his absence of three years as chaplain in the army, Rev. William B. Colburn and Rev. R. S. Paine officiated.

Rev. B. F. Cooley, his successor, resigned October 1, 1875. Rev. S. R. Bailey followed in the autumn of the same year, and retired October 1, 1879. Rev. Thomas W. Nickerson came to the church February 8, 1880, and is still its minister, his rectorship being the longest in the history of the church, with the exception of that of Rev. Mr. Rowse.

Rev. Mr. Rowse was chaplain in the Foster General Hospital, in Newbern, N. C. He was in that city in September, 1864, when it was visited with yellow fever. Says Captain J. W. Denny, then in command of the Twenty-fifth Regiment, "We met Chaplain Rowse, a faithful, earnest chaplain among the soldiers; he looked worn out. He said he had buried thirteen soldiers that forenoon, and as many waited his offices. We said to him, 'Chaplain, you are not able to do this work; you look worn out, and ought to leave immediately in order to save your own life.' 'No,' replied the chaplain, 'I am sick and weary. Some one may be called upon to bury me next, but I must not leave these soldiers; if I must die, I will die at my post of duty.'"[1] He had the fever, but recovered.

Methodist Episcopal Church.—In the fall of 1842 a series of meetings, continuing eight weeks, was held in the town hall, under direction of Rev. Horace Moulton, of Oxford. In these services he was assisted by his wife, Mrs. Elizabeth Ann Moulton, a woman of great religious fervor and zeal.

As the result of these efforts, a Methodist Episcopal Church was organized October 15, 1844. The first minister of this church was Rev. William C. Clark.

In 1845, in consequence of differences of opinion with reference to the Episcopal mode of church administration, and the duty of the church in relation to slavery and temperance, the church was divided, and a Wesleyan Methodist Church was organized. The Methodist Episcopal Church then removed to Cherry Valley, and a house of worship was erected for it in 1846. The funds for building were subscribed by persons of different denominations, who recognized the need of religious services in Cherry Valley, and the control of the church was committed to trustees. It was stipulated in the compact that it was to be "a house of religious worship for the use of the ministers and members of, and the friends of, the Methodist Episcopal Church in said Leicester, according to the rules and discipline of said Church in the United States of America, except the First Calvinistic Congregational Church of said Leicester, or the Episcopalians of Cherry Valley, shall wish to occupy every other Sunday night for a third religious service, in which case they shall have the right."

This house was burned in February, 1856, and rebuilt by the trustees.

The appointments for the ministry of this church have been—Revs. George Dunbar, J. T. Pettel, George F. Pool, T. W. Lewis, D. Z. Kilgore, W. B. Olds, Daniel Atkins, G. E. Chapman, J. W. P. Jordan, Albert Gould, from 1859 to '60; W. F. Lacomb, from 1861 to '62, who enlisted as a member of

[1] Wearing the Blue in the Mass. Vol. Inf., p. 298.

the Forty-second Regiment; W. W. Colburn, from 1863 to '64; George Lewis, 1865; George F. Eaton, 1866 to '67; Charles H. Hanniford, 1868; Burtis Judd, 1869; J. B. Treadwell, 1870 to '71; A. Caldwell, 1872; N. Bemis, 1873 to '74; F. M. Miller, 1875 to '76; J. W. Fulton, 1877 to '79; W. A. Braman, 1880; W. N. Groome, 1881 to '82; W. E. Dwight, 1883; S. H. Noon, 1884 to '86; J. A. Mesler, 1887 to '88.

In 1867 a Methodist Episcopal Church was formed in the Centre, worshipping in the Wesleyan Methodist Church. This church continued to hold services and receive ministers appointed by the Conference for a few years, when it was merged in the Methodist Episcopal Church at Cherry Valley, the appointee of that church preaching at the Centre Sunday afternoons. The ministers have been Revs. Mr. Chase, Frederick M. Miller, L. P. Causey, Samuel F. Fuller, Eratus Burlingham and H. D. Weston.

WESLEYAN METHODIST CHURCH.—After the separation in 1845, those who objected to the Episcopacy, and the position of the Methodist Episcopal Church on the subject of slavery and temperance, organized themselves into a Wesleyan Methodist Church, March 1, 1845. The pastor, Rev. Wm. C. Clark, remained with this church, and, indeed, was the active agent in securing its organization. His successors were Rev. Messrs. Christopher C. Mason, David Mason, Simeon E. Pike, J. A. Gibson, Thomas Williams and Benjamin N. Bullock.

The house of worship on Pleasant Street was dedicated July 15, 1846. The services were entirely suspended in 1861.

ROMAN CATHOLIC CHURCH.—The first Roman Catholic Church in town was St. Polycarp's, and was erected in 1854, half a mile east of Strawberry Hill. The corner-stone of the present church, St. Joseph's, was laid on the same site, September 1, 1867, Rev. Robert W. Brady, president of Holy Cross College, officiating. The church was dedicated January 2, 1870, Right Rev. John J. Williams, present Archbishop of Boston, officiating. The old church was taken down and moved to Rochdale during 1869, and was dedicated as St. Aloysius' Church. November 21st of the same year, Right Rev. John J. Williams officiating There was no resident pastor of the parish until August 1, 1880. The two churches were attended by the Jesuit Fathers from Holy Cross College, Worcester, in the following order: January, 1854, Rev. Peter Kroes; August, 1856, Rev. J. C. Moore, S. J.; August, 1857, Rev. P. M. Jolehi, S. J.; January, 1858, Rev. Eugene Veterneli; October, 1859, Rev. A. F. Ciampi, S. J.; August, 1861, Rev. J. B. Gafney, S. J.; January, 1864, Rev. J. B. O'Hagan, S. J.; August, 1864, Rev. Charles Kelly, S. J.; August, 1867, Rev. P. V. McDermott, S. J.; June, 1869, Rev. J. B. O'Hagan, S. J.; September, 1870, Rev. A. J. Ciampi, S. J.; January, 1871, Rev. Albert Peters, S. J.; August, 1872, Rev. W. F. Hamilton, S. J.; August, 1873, Rev. P. J. Blenkinsop, S. J. These clergymen were generally educated in Europe, as they were Jesuit Fathers and professors at the college. Some of them were men of eminent scholarship.

Rev. D. F. McGrath became the priest of the parish August 1, 1880. He was born in Milford, Mass., August 15, 1848; graduated from Holy Cross College in 1870, and from Grand Seminary, in Montreal, in 1873. When he came to the parish it was incumbered with a debt of six thousand five hundred dollars, which was increased to fourteen thousand five hundred dollars in remodeling and repairing the church, building a fine parsonage and by accompanying expenses. This was the amount of indebtedness January 1, 1884. By February 1, 1888, this debt was entirely paid, and all the parish property, including eighteen acres of land, is held free of indebtedness.

According to a census taken in January, 1888, by Father McGrath and his assistant, Father Kenney, there were in town three hundred and twelve Roman Catholic families, with a total of one thousand five hundred and thirty-six persons attached to St. Joseph's and St. Aloysius' Parishes.

ST. THOMAS CHURCH.—In the year 1873 the Rev. B. F. Cooley, rector of Christ Church, Rochdale, commenced service in the Methodist Church in Cherry Valley, on Sunday afternoons. These services were continued for several years by him and his successor, Rev. S. R. Bailey. The first service and also later services on week-days were held in the house of Mr. Cheney Barton, in which the Rev. H. Blackaller had held similar services more than thirty-five years before. The church was afterward made a mission of St. Matthew's Church, Worcester, which relation it still holds, although it has been self-supporting since 1886.

Rev. E. Osgood took charge, probably in the autumn of 1878, and continued until early in the year 1881. The Rev. Julius Waterberry was in charge from 1881 to 1882. He was a beautiful singer, a man of culture, of wide information, and pleasing and refined manners. He died in Boston, on Good Friday, 1882, and his memory is cherished with affection by the members of his charge. It was while he was connected with the church that "Shamrock Hall" began to be used as the place of worship.

He was succeeded by Rev. H. Hague, the present incumbent, who assumed charge on the first Sunday of August, 1882.

The church was built in 1884, and consecrated February 14, 1885, by Bishop W. R. Huntington, D.D., of Grace Church, New York. Since that time a pipe-organ has been placed in the church. The church contains five memorial windows, one of them in memory of Rev. Julius H. Waterberry.

The mission was first named "The House of Prayer," but in 1884 it was changed to "St. Thomas' Church."

CHAPTER XCI.

LEICESTER—(*Continued.*)

SCHOOLS.

First Town Action—Schoolmasters—School-houses—Town Fined—District System—Amount Raised for Schools—Districts Abolished—High School—Leicester Academy—Founding—Buildings—Teachers—Funds—Military—Reorganization—Centennial Anniversary.

ALTHOUGH in the original legislative title of the town provision was made for school-houses, no action appears to have been taken upon the subject till the last day of the year 1731. It was then voted "to choose a committee of three to provide a schoolmaster; and that the said committee agree with a man to keep school for three months, and no longer; and that the school be kept in three parts of the town, so as may be most for the conveniency of the inhabitants' children going to school." The sum of $8.75 was appropriated to meet the expense. He was to teach the children to "reed and wright." His own education, such as it was, must have been acquired without much help from teachers, as he probably came to town where there were no schools, when less than ten years of age. This provision was for the whole of Leicester and Spencer. The next year there was no school, and the town was called to account before the Quarter Sessions. The sum of $17.50 was appropriated the next winter, and after a delay of nearly a year, the same teacher was employed, and taught three months at $3.75 per month in the house of Mr. Jonathan Sargent, opposite the spot where the Catholic Church now stands. The next winter Mr. Lynde taught in three different places, one month in each place. "If the town employed him any more, they was to come to new tarms."

In 1736 the town "voted to build a school-house sixteen feet in width, twenty feet in length and six and a half feet between joynts; and that it be set in the north side of the meeting-house, about ten rods, in the most convenientest place." It is described by one who remembered it as "an old shell of a building."

The next school-house was built as early as 1672, where Sargent's brick factory now stands. Another school-house in the centre was built in 1791.

In 1736 the town was again presented before the Quarter Sessions for failing to provide a school, and fined £4 12*s*. The next year John Lynde taught school one month and Joshua Nichols ten days. The school-house was probably built in 1738. Its cost was $4,784. Mr. Samuel Coolidge taught the school in 1739 six months, at $1.32 per week. In 1742 the school was taught by John Gibbons through the year, in the four quarters of the town, "so as to have the remote ends of the town have some benefit of the same." In 1742 it was taught in six places by Mr. Adam Bullard. The amount expended for schools the next twenty years was on an average $133.33 per year. In 1765 the town voted to raise £120 to build five school-houses in the East, Southeast, Northwest, and Northeast Districts.

The school-houses were all completed in 1767. The amount assessed in each district was finally appropriated to its own school-house. This was the beginning of the "district system" in town, which continued until April, 1869, when it was annulled in accordance with the statute of the State.

"Schooling mistresses" were first employed in 1766. In 1774 the number of districts was increased to nine, and on April 15, 1776, the nine districts were officially defined, and the different families assigned to their respective districts, and thus recorded. Notwithstanding the heavy burdens of the Revolutionary War, when a proposition was made in town-meeting to suspend the schools, it was promptly voted down.

A "town" or high school was organized in 1856, of which Mr. C. S. Knight was the first teacher. For several years it was migratory, being held one term each year at the Centre Village, Clappville and Cherry Valley. It was permanently located at the Centre in 1859. In 1867 an arrangement was made by which it was combined with the Academy, and this union has been continued to the present time, with the exception of four years, during which the Academy was temporarily suspended. All the advantages of that institution are now open to the children of the town who are qualified to enter upon a high school course.

The annual amount raised by the town for schools at the close of the last century was $300. In 1850 it was $1,200. The appropriation for 1888 was $7,500.

LEICESTER ACADEMY.—Leicester Academy had its origin in the intelligent forethought and unselfish enterprise of its founders, Col. Ebenezer Crafts, of Sturbridge, and Col. Jacob Davis, of Charlton. They were public-spirited, patriotic men. They clearly saw that Christian education was essential to the success and perpetuity of those free institutions which had been won at such a cost. There was no academy in Central or Western Massachusetts, and the provision for general education was exceedingly meagre. Col. Crafts was a liberally educated man, graduated from Yale College in 1759. He was an ardent patriot, and marched to Cambridge at the first call to arms, with a company of cavalry which he had already organized. He also commanded a company of one hundred men under Gen. Lincoln, for the suppression of the Shays' Rebellion. After the close of the war he appears first to have conceived the idea of establishing in Worcester County a school for classical and English education. He interested in the undertaking Col. Davis, who had also been a soldier in the Revolution, and was a man of wealth and broad public spirit.

While they were considering the matter circumstances directed their attention to Leicester as a desirable location for such an institution. Upon the departure of the Jews, the store of Mr. Lopez, with

the land, was advertised for sale at auction as "a large, commodious double mansion, and a noted place for trade." There was one acre of land. It was, as nearly as can be ascertained, upon the original lot No. 1. It had been successively owned by John Stebbins, Rev. Joseph Roberts, Rev. Benjamin Conklin; the western half by Benjamin Fosgate, who built on it a small store about the year 1770; by Joseph Allen and Henry Bass. In 1777 Mr. Lopez added to the western half-acre a half-acre purchased of Mr. Conklin, and built upon it "the splendid mansion" now offered for sale.

Col. Crafts, watchful for opportunities to carry out his purpose, was at the sale. While there he conferred with his associates and decided to make the purchase, and the place was "bid off" to them for £515. It was deeded May 7, 1783, to Col. Crafts, Col. Davis and Asa Sprague, of Spencer, who soon afterward transferred his interest to Col. Crafts. Col. Crafts then addressed a petition to the Legislature for an act of incorporation, stating that a "large and commodious building, with about one acre of land," had been secured "with intent and design to promote the public benefit in the education of youth, as said buildings are exceedingly well calculated for an academy." He asked for an act similar to that relating to Andover, "whereby the same may be made respectable; whereby the advantages of education of youth may be promoted; whereby advantages may arise not only to the individuals, but to the public in general, and prove a blessing to our land of liberty."

The petition appropriately bears date of July 4, 1783. The petition was presented to the Legislature by Col. Seth Washburn, February 7, 1784. Final action was deferred until the sum of £1000 should be raised for the academy in addition to the real estate. There were then only one hundred and fifty families in town, and a population of about a thousand. They were impoverished by the war, but they came to the rescue in a spirit of noble generosity; and within seven weeks more than the required amount was raised, as stated in the *Spy*, "by the town of Leicester, and a few gentlemen of that and this place." The town appropriated £500; citizens of Leicester contributed £367; and the amount was raised by Judge Gill, of Princeton, and others to £1355. The act of incorporation was passed March 23, 1784. It was signed by John Hancock, Governor, and Samuel Adams, President of the Senate. The property was deeded to the trustees in May, 1784.

In May the trustees made provision for subscriptions through the selectmen of the several towns of the county for the institution. It "is devoutly hoped," they say, "that it will not be suffered to wither and decay, or, for want of nourishment, to be removed to some more fertile soil." Clergymen were also appealed to, and Rev. Joseph Buckingham, in his Thanksgiving Sermon that year, made an appeal for aid. Isaiah Thomas interested himself at once in the movement, and in November the *Spy* stated that "there would soon be opened at Leicester an Academy, for the purpose of promoting the sciences, &c.," and "the people of this large county" were "urged to exert themselves to second the endeavors of those gentlemen who have laid this generous and laudable plan of another channel for public education."

Dr. John Pierce, who came as assistant preceptor in 1793, describes this "mansion" as "an oblong, barrack-looking building." The rooms were about seven and a half feet in height. The southwest "parlor" was the school-room of the principal preceptor, and the southeast that of the English preceptor. The central front room was used as a dining and rhetorical hall, while the three rooms in the rear were used by the stewards. The southwest chamber was occupied by the two preceptors, who sometimes took a visiting friend as a third occupant of their bed. The other chambers were for students, who were at times crowded six and even eight in a room. There was on the roof a small cupola, with a bell, the gift of Mr. Thomas Stickney.

The meeting-house stood west of the academy. In the rear were the grave-yard and the training-field.

The first meeting of the trustees was held April 7, 1784. They moved in a body to the meeting-house, where public services were held. The Rev. Mr. Conklin preached a sermon from Proverbs 11: 25, and the Rev. Thaddeus Maccarty offered prayer. The trustees then partook of an "elegant repast," in "Commons Hall." Hon. Moses Gill, of Princeton, was elected president, Rev. Benjamin Conklin vice-president, Rev. Joseph Pope (of Spencer) secretary, Joseph Allen, Esq., treasurer, and Colonel Crafts "steward and butler." Committees were chosen to select teachers, and prepare to open the school "with all convenient speed."

Benjamin Stone, a native of Shrewsbury, a graduate of Harvard in 1776, was engaged as principal preceptor, at a salary of sixty pounds a year, afterwards raised to eighty-five pounds. He left in 1787, and was afterward preceptor of Westford Academy. He died in Shrewsbury in 1832, at the age of seventy-six. He was a well-qualified and faithful teacher, and always retained a deep interest in the academy. The school opened with three pupils,—Samuel C. Crafts, son of the founder; Ephraim Allen, of Sturbridge; and Samuel Swan, of Leicester, then six years of age. They were all graduated afterward at Harvard College. Mr. Crafts removed to Vermont, was a member of the first Constitutional Convention of that State, chief justice of the County Court, Representative and Senator to Congress and Governor of the State.

Mr. Allen became an eminent physician in Salem, N. Y., and Mr. Swan was established as a lawyer in Hubbardston. He was a valuable friend of the in-

stitution, and a contributor to its funds. Eli Whitney, of Westboro', inventor of the cotton-gin, entered the school soon after. Such was the quality of the first pupils in Leicester Academy.

The number rose to twenty before the close of the term. In the autumn term Thomas Payson was engaged as English preceptor, and the number of pupils was between seventy and eighty.

At the time of the next annual meeting of the trustees, July 4, 1785, "the youth of that seminary entertained a large and respectable audience with specimens of their literary improvements." Dramatic entertainments continued for many years to be given by the school, sometimes occupying the morning, afternoon and evening. They were held in the meeting-house, which was crowded to its fullest capacity, the people coming from all the surrounding towns. On one of these occasions a Congregational minister of the county played, behind the scenes, the bass viol accompaniment to the "Scolding Wife." "Colloquy," "Poem," "Dialogue," "Greek Oration," "Farce," "Greek Dialogue," "Comedy," the entire (Addison's) "Tragedy of Cato," "Latin Dialogue," "Description of a Mighty Good Man" and "Description of a Mighty Good Woman" are among the parts which appear on the programmes of these entertainments.

The exhibitions, from time to time, were subjects of action by the trustees, in the way of provision and limitation. In 1796 provision was made for examination by the trustees. In 1840 the custom was introduced of inviting some former member of the institution to deliver an address in connection with the anniversary exercises. A statement of Dr. Pierce illustrates the style and dignity of the instructors. "According to the custom of the times, I then wore a cocked, or three-cornered hat. My hair was queued with a ribbon half-way down my back. I had silver knee-buckles at my knees; my plated shoe-buckles covered more than half my insteps."

The range of studies was very varied. Students were fitted for college, while in the English department the lowest common branches were taught. Dr. James Jackson, English preceptor in 1796, says, "I believe all my pupils had learned the alphabet before I saw them. I taught spelling, reading, writing, English grammar and arithmetic, and perhaps, to a few of the pupils, some of the higher branches." The charge for tuition was one shilling per week for the classics, and nine pence for English branches.

The institution soon found itself embarrassed in its finances. The currency was depreciated. The Shays' Rebellion "threatened the country with civil war. The income of the funds was so reduced that it was necessary to dispense with the services of the principal preceptor. The "large and elegant house" soon proved inadequate and uncomfortable, and came to be looked upon, in the words of an early teacher, as "the old, rickety, inconvenient Jewish house," of which the seats were "old and crowded," and which was heated by an "old-fashioned box-stove," so that "teachers and students" were "infested and inflated with steam and smoke." Measures were taken as early as 1786 to rebuild, but there were no means, and the institution was forty pounds in debt. It was a gloomy period in the history of the infant academy. In the general depression the school had become greatly reduced in numbers. In this emergency the town again showed its intelligent appreciation of the value of the institution, and, notwithstanding the embarrassed condition of its own resources, appropriated fifty pounds toward the salary of the preceptor, who received, in addition, the amount of tuitions.

The trustees had already appealed to the churches for funds; they now turned to another source. It was at a time before moralists and Christian men had come to understand the true character and demoralizing tendency of the lottery system. The trustees obtained permission of the Legislature, and issued a lottery "for the repairing Leicester Academy and making additional buildings thereto."

The public were urged to purchase tickets on the ground that "the Academy at Leicester is established for promoting piety and virtue, and for the education of youths, etc." Rev. Mr. Conklin was one of a committee to ask the General Court for an extension of time and an increase of the amount from £600 to £1200; $1419.22 was thus raised for the academy. In 1792 the Legislature made a grant of a town in Maine to the academy, which, in a few years, added $9,200 to the funds of the institution. With the adoption of the Federal Constitution confidence and prosperity returned to the country, and the academy felt the reaction. In 1804 the funds had increased to $16,703.68.

After long delay and various changes of plan, the new building was begun in 1805. A half-acre of land east of the original lot had the year before been purchased of Mr. Dall, of Boston, for seven hundred dollars. Still further addition of land was made by gift and later by purchase of Dr. Austin Flint. The architect of the new building was Rand White, of Leicester, who received as remuneration $9.84.

The corner-stone was laid on the 14th of May with much ceremony. A procession, consisting of "Artificers," the corner-stone drawn by seventeen horses, a band of music, the president of the board, the building committee, and trustees, magistrates, selectmen of Leicester, citizens and students of the academy moved through the streets to the place, the stone was laid by the master-builder and the object of the structure was stated by the president, who offered prayer.

The procession then passed into the meeting-house, where there were further exercises. The building was ready for occupancy in January, 1806. It was of three stories, with a cupola. It was dedicated on the 4th of July, 1806. Again a procession was formed on the Common, consisting of the band, students, preceptors and trustees, and moved from the old to the

new building, where the structure was received by the board, and the president, Dr. Sumner, delivered an address. At the church, whither the procession passed, prayer was offered by Dr. Sumner, and Dr. Aaron Bancroft delivered an address on the "Importance of Education." On both of the occasions described, Dr. Sumner, with great white wig and triangular cocked hat, was a conspicuous figure. The cost of the building was $9,054.36. It was built by the "job" in a very unsatisfactory manner. The foundations were not sufficiently firm and "settled," causing the building to be "racked and injured." It was hastily and unskillfully covered and finished, so that "the winds and storms of heaven" had free access. The subsequent expense and labor of repairs were fruitless, and after twenty-six years it gave place to the present structure.

Apparatus for the illustration of the sciences had already been purchased, consisting of globes, a telescope, microscope, electric machine, thermometer and surveying instruments.

It was at first understood that the principal was responsible for the management of the school, but it is evident that the two departments soon became quite distinct. Dr. James Jackson, who was English preceptor in 1796 and 1797, says, "The schools were conducted quite independently of each other," and that he believed that the principal "had no right to control 'him.' Certainly, he never did." In 1821, however, the trustees, to prevent all misunderstanding, declared the principal preceptor the authoritative head of both departments. The English teacher presided over his own school-room, with power to punish. One of the penalties was the imposition of fines; this, however, was, by vote of the trustees in 1834, prohibited, and at the same time expulsion was made subject to the approval of a committee of the trustees. For many years corporal punishment was resorted to in cases of discipline, and there are still traditions of severe inflictions and even of struggles in the school-room, and of guilty boys, in thoughtful mood and with sad apprehensions, accompanying the principal from the academy to the gloomy seclusion of his own barn.

The funds of the academy after the erection of the second school building in 1806 amounted to $8,992.21. In 1814 Captain Thomas Newhall left a legacy of $1,000, and $1,000 additional for the tuition of pupils in town residing over a mile from the academy. Small sums were afterward subscribed at different times, and the State gave land in Paxton, which had been held by an alien, and had "escheated" to the Commonwealth, which was sold for $400.

In 1823 "sundry individuals in the town of Leicester, procured by subscription a philosophical apparatus, and presented it to the academy, cost over $500." That year the academy received its first considerable legacy. Captain Israel Waters, of Charlton, "was," in the language of Governor Washburn, "the architect of his own fortune." He was born in Sutton. A poor boy, he pressed his way to wealth by his own industry, enterprise and determination. His business was the manufacture of leather, in the northerly part of Charlton. He made the academy his residuary legatee, and established the Waters Fund, "for the purpose of supporting an instructor, or instructors, of the Congregational Calvinistic order" "in the town of Leicester forever." The will provided, in case of the removal of the school from town, that the trustees in town should take the fund and use the interest for maintaining a public school, called the Waters School or Academy. If the time should come when there would be no such trustees, the selectmen were to fulfill the trust. The amount received from this estate was something over $8,000.

In 1831 the academy received $4,686.36 and also the avails of certain lands in Maine and Vermont from the estate of Hon. Isaiah Thomas, the distinguished Revolutionary patriot, original publisher of the Worcester *Spy*, and founder of the American Antiquarian Society; and the same year $250 by the will of Hon. Nathaniel Maccarty, of Worcester. In 1832 the value of the funds was $21,970.67. The building of the new academy in 1834, with the other expenses, reduced the amount, so that in 1844 it was only $13,611.72. The next year Hon. Daniel Waldo, of Worcester, for seventeen years a valuable member of the board of trustees, left the academy the sum of $6,000, to constitute the Waldo Fund, the interest of which was to be used for the "payment for able instruction in the various branches of knowledge, etc.'

It is, however, to James Smith, Esq., of Philadelphia, that the institution is most largely indebted for its endowment. He was born in Rutland, January 20, 1788, came to Leicester in 1810 a pale-faced, poor boy, all his worldly goods tied in a pocket handkerchief. First a clerk in the store of Colonel Thomas Denny, whose daughter Maria he married in 1815, he became his partner in the manufacture of card clothing. The foundations of his wealth were laid in the period of the last war with England. In 1826 he removed to Philadelphia, where he continued the same business. Some years ago, addressing the students of the academy, he said: "I early in life formed this determination, that I would be useful." That resolve was the key-note of his life.

He helped many who were in straits. He took especial pleasure in aiding young students, especially those who were fitting themselves for Christian work. He gave during his life, and in his will, liberal donations to various literary institutions. In 1852 he gave to the academy $10,000, on condition that $5000 additional should be raised. The condition was complied with, Honorable Stephen Salisbury and Joseph A. Denny, Esq., contributing $1000 each, Thomas Denny, Esq., of New York, J. Wiley Edmands, of Newton, Ichabod Washburn, of Worcester, and John A. Smith subscribing $500 each, and other individ-

ual sums varying from $100 to $5 each. In 1877 he placed in the hands of the trustees $15,000, to be added to the amount already given, thus making the Smith Fund $25,000. This fund became available in 1879, after his death.

Benjamin Stone was principal of the academy from June, 1784, to October, 1787; Amos Crosby from October, 1787, to July, 1788. He was a native of Brookfield and graduated at Harvard in 1786; afterward a lawyer in Brookfield. He is described as "a man of great quickness and ready wit and with convivial tastes and habits" which developed into dissipation. Samuel Sumner, son of Dr. Sumner, of Shrewsbury, was principal from October, 1788, to July, 1790, a graduate of Dartmouth in 1786, afterward a clergyman. David Smith from July, 1790, to May, 1792; a native of Ipswich, graduated from Harvard 1790; afterward a clergyman. Ebenezer Adams, after teaching one year in the English department, was principal from May, 1792, to July, 1806; born in Ipswich in 1765, graduated from Dartmouth in 1791. He is represented as one of the ablest, most beloved and most successful of the early principals of the Academy. He passed with the institution through its gloomy period of depression, into the dawn of its returning prosperity, and did much to shape its future character. From July, 1806, to October, 1807, Rev. Zephaniah Swift Moore discharged the duties of principal, while at the same time pastor of the church. Simeon Colton was principal from October, 1807, to February, 1809. Luther Willson from February, 1809, to August, 1812; born in New Braintree; graduated from Williams in 1807. Josiah Clark from March, 1812, to August, 1818; born in Northampton 1785; graduated from Williams in 1809; afterward pastor of the church in Rutland and many years a trustee. Bradford Sumner, one term, 1818 and 1819; graduated from Brown in 1808. John Richardson, from February, 1819, to August, 1833; born in Woburn, graduated from Harvard in 1813. He is remembered as a thorough disciplinarian, a good scholar and instructor. Luther Wright, from August, 1833, to August, 1839; born in East Hampton and graduated from Yale in 1822. He was a man of great vigor, a good scholar and effective teacher. Under his administration the school greatly increased in numbers. He was afterward principal of the Williston Academy, Easthampton.

In 1832 the second academy building was sold for four hundred dollars. The new building was erected on the site of the old. Mr. Elias Carter was the architect. It is of brick, three stories in height. It was one hundred and two feet in length, the centre forty-two feet by forty, and the wings thirty feet square. The east wing has in part been occupied by the principals and their families, and the west as a boarding-house. The upper rooms were for the associate preceptor and students. The building was completed and finished in the winter of 1833, and on the 25th of December was dedicated.

Addresses were made by Rev. George Allen on behalf of the trustees, and Mr. Luther Wright, the principal preceptor. The subject of Mr. Wright's address was "Education." It was published, together with a "Brief Sketch of the History of Leicester Academy," prepared under the direction of the building committee. The cost of the edifice was ten thousand dollars. Mr. Wright was principal for six years, with Mr. Joseph L. Partridge as assistant, and also Miss Elizabeth Holmes during the last four years. She was the first female teacher of the academy and held the position twelve years. During the period of Mr. Wright's administration the school greatly increased in numbers.

Joseph L. Partridge followed as principal from August, 1839, to November, 1845. In his time the number of pupils reached one hundred and seventy-five, which is believed to be the largest in its history. He was born in Hatfield in 1804 and graduated from Williams in 1828. He has been on the board of trustees for fourteen years, and, residing in Brooklyn, N. Y., is still, at the age of eighty-four, a regular attendant upon its meetings and an active and valuable member.

Josiah Clark, Jr., born in Leicester in 1814 and graduated from Yale in 1823, was principal from January, 1846, to January, 1849, when he became principal of Williston Seminary. The academy at this time held high rank as a fitting-school. "I am sure," says Hon. W. W. Rice of Mr. Clark, in his centennial address, "that he might have been the great master, but Leicester let him go." "He was an accomplished scholar, courteous in manner, but decided in principle, with a clear head, a large heart and a beautiful spirit."

The English department was also conducted with marked ability for ten years, from 1834, by Luther Haven. Burritt A. Smith was principal from July, 1849, to August, 1852.

From August, 1852, to June, 1860, Alvan Hyde Washburn was principal. He was a man of high character, excellent scholarship and refined taste. He afterward became an Episcopal clergyman. He was killed in the fearful railroad accident at Ashtabula, Ohio, December 29, 1876, not a vestige remaining to mark his identity.

After the large increase of funds in 1852, extensive alterations and improvements were made in the building, at a cost of about forty-two hundred dollars. The main building above the school-rooms was converted into a large and attractive audience-room, and named Smith Hall.

In this hall are hung portraits of benefactors and trustees of the institution. The re-dedication took place October 26, 1853. Hon. Thomas Kinnicutt spoke for the trustees, and Mr. Washburn, the principal, delivered an address upon "Old and New Methods," which was published.

The town in 1856 organized a high school under

the requirements of the State law, and other schools of the same nature were multiplied in the vicinity. As the number of pupils in the academy became reduced, the school was closed at the end of the summer term of 1860, and remained suspended till January, 1862, when it was re-opened, with ten pupils, under William B. Phillips, a graduate of Brown University in 1856. In April the term opened with forty pupils, and H. G. Merriam was engaged as teacher in the English department.

Mr. Phillips left at the end of the year, and John Avery had charge of the school one term. He was born in Conway, and graduated from Amherst in 1861. He was an eminent linguist, Oriental scholar and author, and afterward was professor in Iowa College and Bowdoin College.

Henry G. Merriam, after teaching in the English department a year, was made principal in May, 1863, and resigned June, 1865. He was graduated from Brown University in 1857. In 1862 the boys of the school were organized into a military company, and afterward into a battalion. Mr. Merriam, a thorough disciplinarian and teacher, conducted the school with ability and energy, and under his administration the numbers increased to about one hundred, and all the rooms for students were crowded. It was in the time of the war, and the military training met a popular need. Company, battalion and skirmish drill became important features in the daily exercise of the pupils and prominent attractions in the public examinations. The effect of this training appeared in the erect bearing and grace of the "Leicester Cadets." They were received with favor when they appeared in Worcester on parade and drill. The government, on recommendation of the academy, readily gave commissions to a number of young men, and they went immediately into active service. In 1863 a proposition to make the school a State military academy was taken into consideration; and on the 2d day of August a State Commission visited the school, and expressed much gratification with the proficiency of the military training. The Hon. Edward Everett was chairman of the commission, and addressed the pupils in his peculiarly felicitous and eloquent manner.

George W. Waite, of the class of 1861 at Amherst, was principal from August, 1865, to April, 1867, and Wm. C. Peckham, class of 1867, Amherst, from June, 1867, to June, 1868. Darius P. Sackett, a graduate of Yale 1866, was principal preceptor from August, 1868, to March, 1871. His administration raised the school to a high rank in discipline, scholarship and general character, not far surpassed in the previous history of the academy. He is now principal of the Sackett School, in Oakland, Cal. Charles A. Wetmore succeeded him, in March, 1871. He was born in Norwich, N. Y., November 8, 1843, and graduated from Hamilton College in 1869. He was an enthusiastic and inspiring teacher, entirely devoted to his work, although a great sufferer from asthma the last year of his life. In the summer of 1874 he went to Jefferson, N. H., for his health, where he died suddenly July 6th. James O. Averill, of the class of 1870, at Amherst, was principal one year, from August, 1874, and D. Newton Putney, three years, from August, 1875.

In 1867 the meeting-house of the First Church was purchased and removed to its present position, in the rear of the academy. The upper part was converted into rooms for students and the lower into a gymnasium.

In the summer of 1878 the school was again suspended, in order that the funds might accumulate sufficiently to warrant extensive repairs and better provisions for its work. These improvements were made at a cost of six thousand one hundred dollars. The school-rooms were finished in ash; the laboratory was reconstructed and fitted for practical use for students in chemistry and zöology; and a new, convenient and attractive hall was finished in the east wing for cabinets and the department of physics. It is named "Murdock Hall," in honor of Mr. Joseph Murdock, at whose expense the work was done, and who has furnished it with a telescope, sets of globes, charts and other facilities and adornments. He has also refinished the gymnasium.

In 1887 Dr. Pliny Earle presented to the academy his valuable cabinet of shells and minerals, collected in connection with his extensive travels in various parts of the earth. It contains probably over twelve thousand specimens, many of them rare and beautiful. He also provided an appropriate case, and endowed the cabinet with a fund of one thousand dollars.

In 1888 Mr. J. Bradford Sargent, of Leicester, fitted a room in the tower of the gymnasium as a weather station, and furnished it at large expense with a set of meteorological instruments, which for delicacy and beauty are supposed not to be equaled.

In the fall of 1882 the academy was reopened with Mr. Caleb A. Page, a native of Burlington, Me., a graduate of Bowdoin College, in 1870, as principal. He still retains the position. The school is organized in three departments: The classical and scientific four years' courses, and the three years' business course. The number of pupils has been about eighty. Since the reorganization many members have been prepared for different colleges, and for normal and technical schools; while others have gone from the business department into eligible mechanical and mercantile situations.

The centennial anniversary of the academy was celebrated September 4, 1884. A large number of the former members of the institution assembled in the morning at the academy building—among them Edmund J. Mills, of Sutton, a pupil in 1803, and then in the ninety-fifth year of his age. An address of welcome was given by Rev. A. H. Coolidge, the

president of the board of trustees. An historical address was given by Hon. W. W. Rice, and a poem by Rev. Thomas Hill, D.D. The company, to the number of seven hundred, then took dinner in a Yale tent on the Common. Rev. A. Huntington Clapp, D.D., presided in a very felicitous manner. Among the addresses were those of Lieutenant-Governor Oliver Ames, A. L. Partridge, Esq., Dr. Thomas Hill, Prof. F. A. March, Judge Asa French, John E. Russell, Esq., Colonel Homer B. Sprague, Rev. M. B. Angier, Rev. A. C. Dennison, Rev. J. L. Jenkins, Judge C. C. Esty, Mr. Wm. B. Earle and Rev. Samuel May. Dr. Pliny Earle read a short original poem, as did also Captain J. Waldo Denny and Rev. A. C. Dennison. The occasion was one of rare interest and pleasure. In the evening there was a delightful reunion in the academy. An association of the Alumni of Leicester Academy was organized, of which Hon. Oliver Ames, now Governor of Massachusetts, was president. The association has since then held an annual reunion at the Leicester Hotel, in June.

The academy has numbered among its trustees such men as Hon. Thomas Gill, Lieutenant-Governor of Massachusetts; Colonel Rufus Putnam, one of the founders of the North West Territory; Hon. Levi Lincoln, Attorney-General, United States; Rev. Thaddeus Maccarty, pastor of the old South Church, Worcester; Hon. Dwight Foster, United States Senator; Rev. Aaron Bancroft, D.D., pastor of the Second Congregational Church, Worcester; Hon. Nathaniel Paine, Hon. Aaron Tufts, Hon. Daniel Waldo, Samuel M. Burnside, Esq., Hon. Levi Lincoln, Governor of Massachusetts; Hon. Abijah Bigelow, Hon. Stephen Salisbury, Hon. Samuel Mixter, Ichabod Washburn, Rev. Seth Sweetser, D.D., Hon. George F. Hoar, United States Senator; Hon. A. D. Foster, Rev. Horatio Bardwell, Judge Henry Chapin, Rev. Samuel May, and many other prominent men of Leicester, together with former teachers and pupils of the academy elsewhere mentioned. Many of the teachers of the academy afterward became distinguished in other positions. Among these are Rev. John Pierce, D.D., for fifty-two years pastor of the church in Brookline; Theodore Dehon, D.D., Bishop of South Carolina; Dr. James Jackson, for many years at the head of the medical profession in Boston; Dr. John Dixwell and Dr. George Shattuck, also eminent physicians in Boston; Hon. Timothy Fuller, father of Margaret Fuller, Representative in Congress; Rev. John N. Putnam, the learned Professor of Greek in Dartmouth College; Prof. Francis A. March, of Lafayette College, Pennsylvania; William M. Poole, the eminent librarian, author of "Poole's Index" and "Index of Periodicals"; Hon. W. W. Rice, for ten years member of the national House of Representatives.

Only a few of the many pupils of the academy who have become distinguished can be mentioned: Hon. Samuel C. Crafts, Representative and Senator in Congress and Governor of Vermont; Eli Whitney, inventor of the cotton-gin; Hon. William L. Marcy, Secretary of State, United States; Hon. Wm. Upham, United States Senator from Vermont; Rev. Gardiner Spring, D.D., New York; Hon. John Davis, United States Senator and Governor of Massachusetts; Hon. Ebenezer Lane, Chief Justice of Ohio; Colonel Thomas Aspinwall, United States consul at London; Hon. David Henshaw, Secretary of the Navy; Rev. George Allen; Hon. Charles Allen, Representative in Congress and judge; Dr. Levi Hedge, professor in Harvard College; Hon. Emery Washburn, Governor of Massachusetts; Rev. Thomas Hill, D.D., president of Harvard University from 1862–68; Hon. Pliny Merrick and Hon. Benjamin F. Thomas, judges of the Supreme Court of Massachusetts; Rev. A. H. Clapp D.D., Judge Asa D. French, Hon. Oliver Ames, Governor of Massachusetts.

CHAPTER XCII.

LEICESTER—(*Continued.*)

BUSINESS.

Card Business—Woolen Manufacture—Boot and Shoe Business—Tanning and Currying Business—Leicester National and Savings Banks—Miscellaneous Industries.

CARD BUSINESS.—Leicester for many years continued to be a purely agricultural community, the people dependent for a living upon the products of their farms. In the latter part of the last century the industry was introduced which became the distinctive business of the town, and for a long time the principal source of its prosperity and wealth.

In this enterprise Mr. Edmond Snow was the pioneer. He began the manufacture of hand-cards in 1885.

Pliny Earle commenced the same business in 1786. In 1789 we find him receiving an order for card clothing from Almy & Brown, of Providence, R. I., and with it a reference to the fact that he had already covered carding machines in Worcester.

Soon after this Samuel Slater came to this country, and the next year, under the auspices of Almy & Brown, began the manufacture of cotton goods by machinery moved by water-power; and Mr. Earle supplied him with the cards by which the cotton was prepared, which was first spun in this way in the United States. Hitherto, cards had been made in "plain" form, but the filleting for Mr. Slater was set diagonally or "twilled." The sheets were of calf-skin. The holes were pricked by hand, with two needles fastened into a handle. The teeth were cut and bent by machinery and set by hand. The statement that one hundred thousand holes were thus pricked probably falls below the fact. About the year 1797 Mr. Earle

invented a machine for pricking "twilled" cards, for which, in 1803, he secured a patent. It was based upon a principle previously unrecognized in American card machinery, and was not only involved in all subsequent pricking-machines, but is continued in Mr. Whittemore's machine for pricking and setting—that wonderful mechanism the credit for inventing which is so largely due to Eleazer Smith, and of which John Randolph, speaking on the extension of its patent, said, "Yes, I would renew it to all eternity, for it is the only machine which has a soul." In 1791 Mr. Earle associated with himself his brothers Jonah and Silas, in the firm of Pliny Earle & Brothers. They were probably for some years the largest manufacturers of card-clothing in the country. From their factory at Mulberry Grove, hand-cards were taken by horse-teams even to Charleston, S. C. They manufactured machines for carding both cotton and wool, and also had wool-carding mills in several towns in Worcester County and Rhode Island, for the convenience of the farmers. Pliny Earle died in 1832, and the business was conducted in his name till 1849 by his son, William B. Earle, who had had charge of it from the year 1819. He devoted much of his skill to the improvement of the card-setting machine, and as an expert in that machinery is said to have had no superior. In 1837 he received of the Massachusetts Charitable Society in Boston, a silver medal for one of his machines.

Silas Earle withdrew from the firm and carried on the business independently, at the Marshall house, on Marshall Street, from about 1806 till the time of his death, in 1842. His machines were bought by Timothy K. Earle, who then commenced the business, but soon removed to Worcester.

Daniel Denny in 1792 made hand-cards on Denny Hill.

Woodcock & Knight.—Winthrop Earle began the machine-card business in 1812, in a building in the rear of Col. Thomas Denny's factory, which stood east of the Leicester Hotel. He died in 1807, and John Woodcock continued the business in connection with the widow until her marriage to Alpheus Smith, 1808, when Mr. Smith assumed her share. Mr. Woodcock invented the machine for splitting leather to a uniform thickness.

In 1811 the factory was moved west of the hotel, and the next year was enlarged by Mr. Woodcock. In 1812 James Smith joined the company, which took the name of Woodcock & Smith. Mr. Woodcock retired in 1813, and the next year John A. and Rufus Smith took his place, forming the firm of James & John A. Smith & Co. Rufus Smith died in 1818. In 1825, October 18th, John Woodcock, Hiram Knight and Emory Drewry became partners. In 1827 and 1828 they built the Brick Factory. Mr. Drewry left the firm in 1829, and continued to manufacture cards on Pleasant Street, a mile from the village. In 1836 they added to their business the manufacture of card-clothing in Philadelphia, with George W. Morse as a partner, and continued it for about ten years, as the firm of James Smith & Co., while carrying on business in Leicester as Smith, Woodcock & Knight. They removed to the Central Factory, north of the Church, in 1846. In 1848 T. E. Woodcock and Dexter Knight, sons of the senior members, were admitted to the firm, which took the title of Woodcock, Knight & Co.

In 1867 the fathers disposed of their interests to their sons (T. E. Woodcock, Dexter, George M. and James J. Knight). They dissolved in 1881 and sold the building and machinery to the Card-Clothing Association. The factory was much enlarged and improved in 1866.

Capt. Isaac Southgate and Col. Henry Sargent, both of them enterprising and public-spirited citizens of Leicester, began the manufacture of machine-cards in 1810, as the firm of Southgate & Sargent, in Colonel Thos. Denny's house. Col. Sargent withdrew in 1812 and was in the same business till his death in 1829, his brother (Col. Jos. D.) being with him from 1814 to 1819. Capt. Southgate, in 1826, associated with himself Joshua Lamb, Dwight Bisco, Joseph A. Denny and John Stone, as the firm of Isaac Southgate & Co., manufacturing machine-cards in the building west of the hotel. Mr. Stone died in 1827, Mr. Lamb retired in 1831 and Capt. Southgate in 1843, when the name was changed to Bisco & Denny. In 1828 they built the Central Factory and in 1845 the present factory of Bisco & Denny. In 1857 Charles A. Denny and George Bisco joined the firm. Jos. A. Denny died in 1875 and Deacon Bisco in 1882, when John W. Bisco joined the firm. In 1857 a branch establishment was opened at Manchester, N. H.

Colonel Joseph D. Sargent first made hand-cards at his home, on the road from Cherry Valley to Auburn, beyond Denny Hill. After separating from his brother in 1819, he continued to manufacture hand-cards at the Brick Factory till his death, in 1849, but sold the other part of the business to Lamb & White, in 1836. Silas Jones, Nathan Ainsworth and William Boggs were at different times his partners.

Josiah Q. Lamb and Alonzo White manufactured machine-cards in Sargent's brick factory from 1836 to 1846, when Mr. Lamb retired and Mr. White continued the business at the same place until his death, in 1850. Christopher C. Denny became associated with Mr. White in 1846, in the firm of White & Denny. In 1868 Mr. Denny disposed of his interest to H. Arthur White, and the firm of White & Son continued business till 1888, when, H. A. White having purchased the interest of the father, the concern was consolidated with the "Decker & Bonitz Card Clothing Company," incorporated under the laws of Massachusetts, which also carries on an extensive business in Philadelphia. Mr. White assumed the management of the Leicester branch. This corporation purchased the Central Factory, which they enlarged and

Lucius Mordecai

renovated, and added new buildings for the accommodation of their new power-plant, and the grinding of cards under patents owned by the corporation, and for additional facilities for their increasing business.

The firm of *J. & J. Murdock* had its origin in 1840, in that of Southgate & Murdock, composed of Samuel Southgate, Jr., and Joshua Murdock, Jr. Mr. Southgate retired in 1844, and Mr. Murdock continued the business alone until 1848, when his brother Joseph joined him, and the firm-name of J. & J. Murdock was adopted, which is still used. In 1858, John N. Murdock came into the firm. In March, 1883, Joshua died, and, in the following June, Julius O. Murdock was admitted, forming the present company. For the first eight years the business was small. When the present firm was organized the company had only thirteen machines.

In 1857 they bought the business of Baylies Upham, thus adding twenty machines to their plant that year. Previous to 1864 the motive-power was horses in a circular tread-mill. In that year steam was substituted for the primitive horse-power. At the present time they have one hundred and thirty-seven machines, capable of producing more than one hundred thousand feet of cards yearly, and their machine card business is the largest in town. The business has from the first been carried on at the same site. J. & J. Murdock's factory was enlarged in 1856 by the addition of sixty-six feet, and, in 1866, it was further enlarged by what is now the main building, thirty-five by one hundred and fifty feet. In 1868 a new branch of the business was added, and machinery put in for currying and finishing the leather for cards, eighteen thousand sides yearly being finished and used for this purpose, in addition to a considerable quantity of cloth.

In the early part of the year 1888 a dynamo was put in and the works lighted by electricity.

After leaving the firm of James & John A. Smith & Co. in 1830, John A. Smith began the manufacture of card-clothing on the site of the present Wire Mill. In 1844 he was succeeded by the firm of Southgate & Smith, consisting of Samuel Southgate, Jr., and John S. Smith. In 1859 Horace Waite, who had been making hand-cards on the first floor of Waite's factory while Southgate & Smith were using the upper floor, succeeded Mr. Southgate, and the firm became Smith & Waite. Mr. Smith retired in 1867, and the firm of E. C. & L. M. Waite & Co. was organized. Mr. Horace Waite died in 1871, Lucius M. retired in 1874, and the business has since been continued by Edward C. Waite.

Josephus Woodcock, Benjamin Conklin and Austin Conklin, as the firm of *Conklin, Woodcock & Co.*, began the machine-card business on Pleasant Street in 1828; dissolved in 1830, when Mr. Woodcock, with his brother Lucius, formed the firm of J. & L. Woodcock. Danforth Rice was with them from 1831 to 1836, and William P. White from 1848 till his death, in 1881. Charles H. then took the interest of his father, Josephus Woodcock; Henry Bisco joined the company, and the business was continued in the name of L. Woodcock & Co. until 1888, when it was given up, and the machinery sold to the Card Clothing Association. Mr. Lucius Woodcock died in 1887.

Baylies Upham manufactured machine-cards from 1825 till 1857, when he sold to J. & J. Murdoch. From 1825 till 1833 Samuel Hurd was in company with him, and from 1849 to 1855 Irving Sprague.

After leaving Mr. Upham, Mr. Hurd united with James Trask in the manufacture of machine and hand-cards, on the Trask place, on Mount Pleasant. Mr. Trask died in 1848, and Mr. Hurd removed to the rear of White & Denny's factory. In 1862 he sold to L. S. Watson, but continued to make cards till 1866 on commission. William F. Holman manufactured hand-cards from 1867 to 1873.

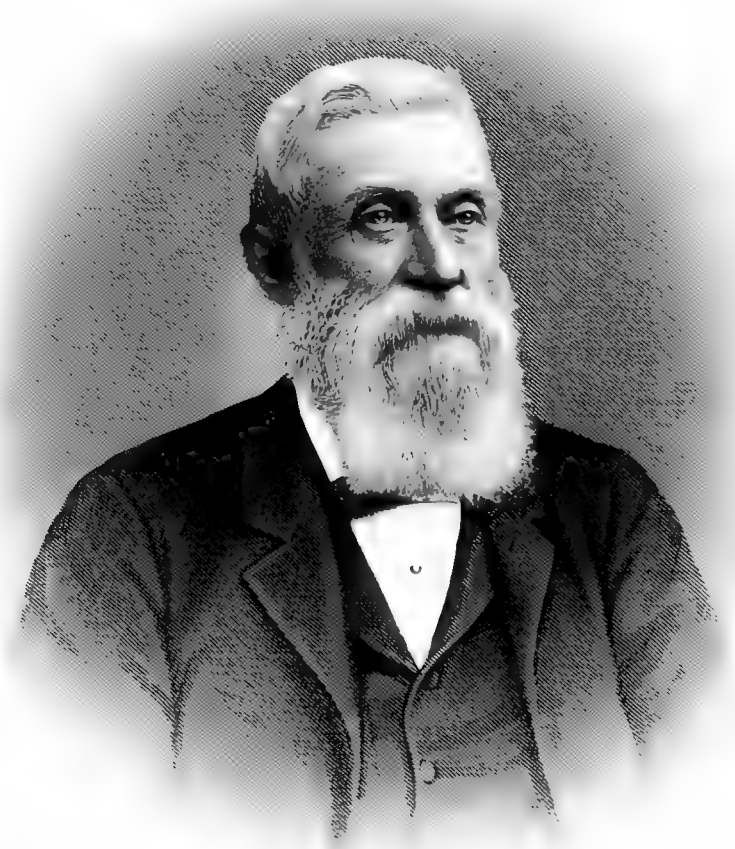
Claramon Hunt made cards on a foundation of wood from 1868 to 1874 in White & Denny's factory, and then sold to L. S. Watson & Co.

In 1842 *John H. & William Whittemore* began the manufacture of card-clothing in the building west of the Friends' burying-ground, which William Earle was at the same time using for making card-machines. In 1845 they received their brother James. John H. was killed on the Western Railroad in 1851, and the firm assumed the name of W. & J. Whittemore. James died in 1882. William F., his son, joined the company in 1874. After making cards about a year at Mannville, the Whittemores removed to the Centre Village, and occupied, for a few years, the building on Market Street in which is now Wheeler's meat-market. They then built their factory, which was much enlarged in 1883.

Cheney Hatch, first on Pleasant Street, then on Main Street, made cards from 1823 to 1836, when he sold to Alden Bisco, who soon sold to Henry A. Denny, who, in 1849, took into partnership his sons —Joseph Waldo and William S.,—as the firm of Henry A. Denny & Sons. In 1854 they sold to White & Denny.

Henry A. Denny commenced making hand-cards in 1823, with Emory Drury, as the firm of Drury & Denny, on Pleasant Street, about a mile south of Main Street, where Samuel D. Watson had before carried on the same business two or three years. They dissolved, and he continued alone, on the corner of Main and Mechanic Streets. Afterward he was associated with Reuben Merriam, until 1836, when he purchased the factory hitherto used by Mr. Hatch.

Col. Thomas Denny, with William Earle, made hand-cards on Denny Hill. In 1802 he began the manufacture of cards, hand and machine, on the corner of Main and Market Streets, which he conducted on an extensive scale till his death, in 1814. He had in the same building the post-office and a store.



E. G. Coulton

er of Cherry Valley as a manufacturing village. When he came to Leicester there were, as nearly as can be ascertained, only ten houses in what is now the village. Most of the present residences were built in his lifetime, and it was by him that the three brick factories were erected. He was a native of Yorkshire, England. He had worked in the factories as a child, but was afterward a shepherd on the moors, where he earned money with which to come to America. He came to this country in 1819, landing at Philadelphia, where he worked for a short time, and then started on foot for Rochdale, where was James Anderton, whom he had known in England. He found himself without money before the journey was completed, and always remembered with special gratitude the kindness of a family in Connecticut who entertained him over the Sabbath. He worked in Rochdale for a time, and came to Cherry Valley, and built what is now Olney's Mill in 1821, and was running it as late as 1824. The cloth was woven by hand in a building before used as a tannery, where the post-office now stands.

There was a saw-mill here at an early date owned by Benjamin Studley. About the year 1765 the privilege, with an acre of land, was bought by the "Forge Partners," who erected a building for some kind of iron-works. They, however, sold the property, which was called the "Forge Acre," to Matthew Watson, who had there a saw-mill till about the year 1821, when Thomas Bottomly built on it a woolen-factory of brick. Such is the early history of this site, with a few variations, as given by Governor Washburn and also by Joseph A. Denny, Esq., except that Washburn makes 1820 the date of building the mill, while Mr. Bottomly's son Wright places it 1821.

There have been various transfers of the property since that time. It passed from Thomas Bottomly to the Bottomly Manufacturing Company June 1, 1827, from them back to Thomas Bottomly November 10, 1846, from him to Samuel Bottomly March 10, 1849, from him to George Hodges July 6th of the same year, and December 21st one-half of Mr. Hodges' interest to Benjamin A. Farnum. June 20, 1855, Samuel L. Hodges came into possession of his father's interest, and October 9, 1857, that of Mr. Farnum, making him at this date the sole owner of the property. The factory was partially destroyed by fire September 7, 1864; up to Mr. Hodges' time broadcloths of superior grade were woven here. He introduced the manufacture of flannels. By his energy and public spirit Mr. Hodges did much to build up Cherry Valley.

In 1866, October 9th, the property was conveyed in trust to George H. Gilbert, Jr., George Hodges and Henry C. Weston, and by them to B. A. Farnum, June 7, 1867, Mr. and Mrs. Hodges giving them a quit-claim deed the same day. Frank C. Fiske came into possession January 1, 1870. The mill was nearly destroyed by fire June 3, 1874. Albert T. B. Ames purchased it August 1, 1874, and at the same time made a declaration of trust as to one-half of the property, held for George W. Olney, who with him formed the company of George W. Olney & Co. They rebuilt and opened the mill in the autumn of 1874, and continued to run it till February, 1876. George W. Olney came into entire possession March 22, 1876, and reopened the mill June 14, 1876, since which time he has continued the manufacture of flannels. Two considerable additions have since been made to the main building—one in 1881, and the other in 1885. A storehouse and other buildings and several tenement-houses have also been erected, and the general aspect of that part of the village much improved. The factory contains seven sets of cards, forty-six looms and four thousand two hundred and forty spindles. Mr. Olney is largely interested, also, in manufacturing in Lisbon, Maine.

In 1821 James Anderton began the manufacture of broadcloths and cassimeres in the south part of the town, in a small wooden mill, built about this time, by Thomas Scott, on the site of the present Lower Rochdale Factory. The Leicester Manufacturing Company was soon incorporated, and continued the same business, being afterward united with the Saxon Manufacturing Company, in Framingham, as the Saxon and Leicester Company. Mr. Joshua Clapp bought the property in 1829 and continued the same line of manufactures till 1840. For two or three years little was done in the mill. It then came into the hands of John Marland, of Andover, who sold it in 1845 to Barnes & Mansur, who added the manufacture of flannels. The building was burned in 1846. The same year Mr. Reuben S. Denny bought out Mr. Mansur's interest, and, with Mr. Barnes, built a brick factory on the same site, which was completed in 1847. Mr. Denny in 1850 bought out Mr. Barnes. This factory was burned in 1851, and rebuilt in 1852. Meantime, about the year 1844, a wooden building had been erected on the site of the present Upper Factory, where the manufacture of carpets was carried on for a year with indifferent success. This building Mr. Denny bought while erecting his new factory, and manufactured white flannels. It was burned in 1854, and the present brick building took its place.

In 1856 Ebenezer Dale, representing the firm of Johnson, Sewall & Co., of Boston, came into possession of both factories and a large property, real and personal, connected with them. In the two mills are thirteen sets of machinery. Since 1859, first as the Clappville Mills, then as the Rochdale Mills, they have manufactured flannels and ladies' dress goods, averaging for the last twenty years from one to one and a half million yards. New and improved machinery has within a few years taken the place of the old. E. G. Carlton has for thirty years been the agent and manager, and the reputation of the products of the Rochdale Mills is exceeded by few, if any, manufacturing establishments in the country.

In 1838 Amos S. Earle and Billings Mann, as the

firm of Earle & Mann, began the manufacture of satinets in the building near the corner of Mannville and Earle Streets, at Mannville, in which Earle & Bros. had made card-machines and Amos S. Earle had afterward made hand-cards. Mr. Mann removed from town in 1844. Nathan Daniels became Mr. Earle's partner, and the firm of Earle & Daniels built forty feet of the present mill. Mr. Daniels died and the estate being solvent, it was bought by a syndicate of creditors.

Meantime Mr. Mann had been engaged in the same business in Holden with Albert Marshall. In 1853 Mann & Marshall purchased the property, enlarged the mill and continued the manufacture of satinets twenty-two years. They were heavy losers in the Boston fire in 1875, and were obliged soon after to suspend business. George and Billings Mann were associated with them for about one year. In 1879 George and Billings Mann and John P. Stephen, their brother-in-law, began business. They have enlarged and improved the plant, built cottages for the operatives and conducted a prosperous business.

Cherry Valley Woolen-Mills.—In 1836 Thos. Bottomly laid the foundations of the factory now run by the Cherry Valley Woolen-Mills on the privilege early occupied by Nathan Sargent as a grist-mill. In 1837 he began there the manufacture of broad-cloths. He sold to Effingham L. Capron in 1845.

In 1859 the mill was owned by E. D. Thayer and used by Mowry Lapham and James A. Smith, under the firm-name of Lapham & Smith, until 1862, when Mr. Smith sold to Mr. Lapham and removed to Rhode Island.

In 1863 the building was destroyed by fire, and the privilege remained vacant till 1865, when George N. and James A. Smith bought it and built a six-set mill for the manufacture of fancy cassimeres. In 1868 George N. Smith sold his share to James A. In 1876 the factory was nearly destroyed by the "Flood." Mr. Smith rebuilt in 1878 and leased to Eli Collier and A. E. Smith. Collier & Smith dissolved in 1879, and A. E. Smith continued the business until 1887, when the mill was leased to the present "Cherry Valley Woolen-Mills" Company. The property was sold to F. T. Blackmer, Esq., of Worcester, in 1881, and is now owned by his heirs. This mill now manufactures ladies' dress and skirt goods.

Kettle Brook, which furnishes the water-power for all the factories in Mannville, Lakeside, Cherry Valley, Valley Falls and Jamesville, and which has repeatedly, in time of freshets, been the source of serious apprehension through the valley, was originally only a little stream winding in picturesque beauty through meadows and forests, and leaping down the rocks through narrow defiles. Says one who lived by it "When I was a little girl, Kettle Brook was a small stream of water, that I have waded across many times."

Collier's Mill.—About the year 1835 L. G. Dickinson built the embankment north of Main Street, and the dam south of the road, where Collier's mill stands. To this place Mr. Dickinson moved his saw-mill, which formerly was located where A. W. Darling & Co.'s mill now is. This mill of Mr. Dickinson was used as a saw-mill until 1844, when it was converted into a satinet factory. The business was carried on by Jonathan Earle. In the same building was the cabinet shop of Silas A. Morse. It was burned to the ground March 24, 1848, but afterwards rebuilt by Mr. Dickinson, of lumber from an old church in Charlton. It was leased to Baker & Bellows October 1, 1848. October 1, 1853, it was leased to Eli Collier. It was burned January 5, 1866, but rebuilt the next summer from the lumber of the Lower Tophet machine-shop and was leased to Collier. April 8, 1881, it was sold to Collier & Butler. September 1, 1888, Butler sold out to Collier. It has been a satinet-mill since it was first changed from a saw mill.

Chapel Mill.—In the year 1836 or '37 John Waite bought land of Samuel Waite, built a dam and canal and erected a mill where the Chapel Mill now stands, on Chapel Street, a few rods north of Main Street. Here he made churns. It was afterwards a shuttle-shop. It was used later, about 1844, by H. G. Henshaw for drawing wire. It was here that Richard Sugden, whose extensive wire business is one of the important factors in the wealth of Spencer, first drew wire in this country; both he and Mr. Myrick worked for Mr. Henshaw. In 1849 Myrick and Sugden bought the machinery of Mr. Henshaw and formed a partnership under the name of Henshaw, Myrick & Sugden, of Spencer. The partnership was dissolved in 1854.

The Chapel Mill property was afterward owned by N. R. Parkherst, and was sold by him to L. G. Dickinson, October, 1854. It has been occupied by John Q. Adams, who used it for a shoddy-mill, and by Bottomly & Fay, who made satinets there.

James Fay was in business there when it was burned, March 7, 1865. The property was bought by Samuel Chism, of Newton, and he rebuilt from the lumber of the old Baptist Church in Greenville, thus giving to the mill the name of Chapel Mill. It was leased to H. G. Kitredge, who made satinets there for two years, then to George A. Kimball and I. R. Barbour, who occupied it until sold to William N. Pierce, April 18, 1871. It was then leased to James A. Smith & Co., who made satinets there until March 6, 1879. May 5, 1879, it was leased to Collier & Butler for three years and nine months, when A. E. Smith bought the property and used it as a satinet-mill until May 1, 1887. George N. Smith then leased it and made satinets until June 15, 1887, when it was burned. Collier & Butler bought the property, rebuilt the mill and leased it to George N. Smith, who now occupies it.

There are in 1889 ten woolen-mills in the town of Leicester, and nine firms engaged in the manufacture

of woolen cloth. The average annual value of the products of these mills is about $1,286,000.

A. W. Darling & Co.—In 1827 Thomas Bottomly built a dam upon Kettle Brook, on Chapel Street, about half a mile from the corner of Main Street. The pond formed thereby was considered a reservoir for the privileges below until 1847, when the present Bottomly Mill was erected by Thomas Bottomly. Previous to this, about 1833 or 1834, L. G. Dickenson erected a saw-mill on the same privilege as the present mill. In 1845, Mr. Bottomly opened a brick-yard on this spot, and made the brick of which, in 1847, he began the present Bottomly Mill. About the same year he caused the Waite meadow to be overflowed; this was the beginning of the Waite reservoir; the property afterwards came into the hands of Booth Bottomly.

In 1874 E. D. Thayer bought the property of the trustees of the Bottomly estate, and has owned it ever since.

Booth Bottomly began to manufacture here in 1855 or 1856, and continued until his death in 1868. Other firms who have occupied the mill are R. L. Hawes & Co., George Kimball & Co., for a short time; E. D. Thayer, for twenty years, Bramley Bottomly being for some years associated with him. After 1876 or 1877 the Hopeville Company used the mill for a few years, then E. D. Thayer, Jr., from 1884 to 1886, when the firm of A. W. Darling & Co. assumed the business. It is a four-set satinet-mill.

The Greenville Woolen-Factory was first built in 1871 by A. W. & J. D. Clark. It was of wood, fifty feet square, and three stories high, with a brick picker-house adjoining. The buildings were rented to Joseph Peel, of Spencer, who began the manufacture of woolen goods in the winter of 1872, and continued until January, 1877; since that time the business has been carried on by J. D. Clark. The mill was enlarged in 1880.

The Lakeside Manufacturing Co.—In 1847, D. Waldo Kent put up a saw-mill at Lakeside. In 1853 he built his planing-mill and box-factory. In this building, in 1857, he set up the first circular saw-mill introduced into this part of the State. In 1866 he began the manufacture of shoddy, and, in 1880, of satinets. The present factory was erected in 1883. Since April, 1885, it has been running night and day. The surroundings of the factory have been much improved, and around it has sprung up a neat little village. The business of the Lakeside Manufacturing Company is carried on by P. G. & Daniel Kent. The factory was first lighted by electricity in July, 1887. In 1885 they bought the Jamesville Mills, in Worcester, and, with the two mills, they are said to be the largest manufacturers of satinets in the country.

The Leicester Wire Company had its origin in 1871. At this time Mr. Cyrus D. Howard, an experienced workman, set up machines and began the drawing of wire for cards in the building which had been used by successive firms as a card manufactory, and later as a box shop. Thomas Shaw was afterward associated with him for a short time as the firm of Cyrus D. Howard & Co. David Bemis went into company with Howard in 1876, as the firm of Howard & Bemis. In 1880 J. Bradford Sargent joined the firm, which became Howard, Bemis & Co. Mr. Howard retired in 1884, and the Leicester Wire Company was organized. Harry E. Sargent came into the firm in 1885, and Mr. Bemis retired. Of this firm H. E. Sargent is president, and J. B. Sargent treasurer. The new buildings were erected in 1881, and engine-house and boiler in 1883. The machinery is principally employed in drawing card, reed and stone wire.

The Lakeside Woolen Mills put in a dynamo and lighted their factory by electricity in July, 1887. Since that time dynamos have been placed in the card factories of J. & J. Murdock, and Decker, Bonitz & Co. On December 19, 1887, an electric plant was established at the Leicester Wire Company's works, by which the other card factories are lighted, also the Leicester Hotel, the stores in the centre, and several private houses.

Charles W. Warren began the making of shoe-counters in the house on the southwest corner of Main and Rawson Streets about the year 1852, then moved to the house on the lot between the bank and the post-office about the year 1854, there manufacturing insoles. The buildings were burnt in 1862. In 1867 he built his house and factory on Pleasant Street. The factory has been several times enlarged, and is devoted to the manufacture of shoe-heels, employing about forty persons.

Boots and Shoes.—The only shoe manufactory in town is that of Horace & Warren Smith, on Mt. Pleasant, begun in 1865. Among those who at different times have carried on the boot and shoe business are Amasa Watson, Delphus Washburn, Baldwin Watson, Cheney Hatch, Wm. F. Holman.

About the year 1849 several gentlemen formed a company for the manufacture of boots, having in mind the increase of business in town. The work was at first carried on in the house on Market Street in which is Wheeler's meat market, where there was horse-power. After a few years it was removed to Main Street, where now stands the house of E. D. Waite. On the 25th of September, 1860, the building was burnt. The company had met with heavy losses in consequence of the failures of that period, and after the fire the business was abandoned.

Leather.—The tanning and currying of leather appears to have been a prominent industry in former times. Elijah Warren had a tannery on the main road, half a mile from the Spencer line, at a very early date. He was succeeded by his son, Joseph. Henry E. Warren afterward owned it, and had also a tan-house north of Main Street, near the Spencer line. It was burned in 1848. John Lynde, the early settler,

also had a tannery in the north part of the town. Jonathan Warren had a tannery on Pine Street, two miles from the village, and was succeeded by his sons Jonathan and Elijah. It was burned in 1825. Lieut. Jonas Stone built a tannery at the foot of Strawberry Hill in 1790, where work was continued by different persons for thirty or forty years,—among them Thaddeus Upham, and E. H. & George Bowen. Mr. Studley had a tannery in Cherry Valley, where the post-office now stands. Amasa Warren and Horace and Baldwin Watson were tanners in the west part of the town.

Leander Warren, when a young man, began the currying business near the house of his father, Joseph Warren. In 1845 he bought the place south of the Centre School-house, where he carried on the business till his death, in 1862, when he was succeeded by John N. Grout. Since Mr. Grout's time there has been no currying done in town, except in connection with Murdock's Card Manufactory.

A. Hankey & Co., Manufacturers of Machine Knives.—In 1798 Caleb Wall bought land of the Green family and built above the present works of A. Hankey & Co. a blacksmith shop, where he made scythes, carrying on a large business. In 1830 Thomas Wall and Nathan Harkness built on the present site of the "Lower Shop," and carried on the business three or four years, and were followed by Cadsey, Brown & Draper.

In 1848 Hankey, Stiles & Co. purchased the property and remodeled it for the manufacture of machine-knives. The firm was Anthony Hankey, Francis Stiles and H. C. Bishop. About 1851 Mr. Hankey went into the dredging business in Boston, where he had invented a dredging-machine. The business in Greenville was carried on by Stiles & Co. (F. Stiles and F. W. Taylor) until a few years later, when Mr. Hankey returned and managed the business under the firm-name of Stiles & Co. This partnership was dissolved July 14, 1866, and in October of the same year Stiles sold his entire interest to A. Hankey & Co. J. E. Jones was admitted as a partner, but he only remained a short time. The firm was A. Hankey and George A. Corser. In February, 1877, Hankey bought out Corser, and continued the business alone until March, 1881, when J. X. Rogers was admitted to the partnership under the old firm-name of A. Hankey & Co., which continues to this date.

In 1881 a system of improvements was inaugurated. The old buildings were torn down and new and larger ones erected; new water-ways and new machinery were added, and it is to-day the largest and most complete shop in the world for the exclusive manufacture of machine-knives. The products of this shop go to all parts of the world, in many instances direct to Cuba, South America, Spain, Germany and China. In 1887 a branch was started in Philadelphia. It is an interesting fact that the first knives that were used on a planing-machine in this country were forged by hand by Mr. Hankey in Boston, and also that the first dies for cutting out paper collars were made at this shop.

Leicester National Bank.—"Leicester Bank" was chartered as a State bank March 4, 1826, with a capital of one hundred thousand dollars, which in 1853 was increased to one hundred and fifty thousand dollars, and in 1854 to two hundred thousand dollars. John Clapp was made president of the bank April 26, 1826; N. P. Denny, October 4, 1830; Joshua Clapp, October 3, 1836; Waldo Flint, October 2, 1837; Joseph A. Denny, October 1, 1838; Cheney Hatch, October 2, 1843; Charles A. Denny, December 16, 1878. John A. Smith was appointed cashier May 26, 1826; H. G. Henshaw, October 21, 1826; D. E. Merriam, December 15, 1845; George H. Sprague, May 20, 1885. The institution was made a national bank March 21, 1865.

The first bank building was in connection with the old town-house, built in 1826 by the town and the bank. In 1853 the bank was removed to the brick building east of Leicester Hotel. In 1871 the present bank was completed and the business removed to it.

Leicester Savings Bank.—The Leicester Savings Bank was incorporated April 17, 1869. Cheney Hatch was elected president May 5, 1869, and Lory S. Watson, May 21, 1879. D. E. Merriam was the first treasurer, appointed May 14, 1869, and was succeeded by the present incumbent, George H. Sprague, May 24, 1885. The present amount of deposits is three hundred and ninety-one thousand two hundred and eighty dollars.

Miscellaneous Industries.—There have been several hatters. John Whittemore bound books where the Whittemore Card Factory now stands. Hori Brown had a printing-office on the west corner of Main and Mechanic Streets, where he not only did job-work, but printed books; among these was "Scott's Lessons," printed in 1815.

At the foot of the hill, from 1823 to 1853, was the grocery of Evi Chilson, especially prized by students of the academy for the rare quality of its entertainment for the inner man. It is remembered by them after many other things are forgotten.

It would be impossible to mention all the different kinds of business carried on at different times in town, or to give the history of the many stores.

CHAPTER XCIII.

LEICESTER—(*Continued.*)

THE CIVIL WAR.

Sixth Massachusetts Regiment—War Meetings—Twenty-fifth Regiment—Fifteenth, Twenty-first, Thirty-fourth, Forty-second—Action of the Town—Other Soldiers—Expenditures—Casualties—Close of the War.

NEWS of the attack on Fort Sumter reached Leicester on Saturday, April 13, 1861, and occasioned the most intense excitement. Then first the people comprehended the fact that the war had begun. Young men at once declared their intention to respond to the first call for soldiers, and men too old for service avowed their readiness to make any sacrifice required for the preservation of the Union. From that day to the close of the war the town of Leicester loyally and liberally accepted all the demands of the government upon it for money and for men. The call of President Lincoln for 75,000 volunteers met here the same prompt answer which it received throughout the loyal North.

Leicester had a special interest in the Sixth Massachusetts Regiment, the first to march from the State and to receive the baptism of blood. Its commander, Col. Edward F. Jones, was a native of Leicester, as was also Joseph Waldo Denny, lieutenant in the Worcester Light Infantry. They had been pupils together in Leicester Academy. There were other Leicester men in the regiment.

There were sixteen Leicester men in the Third Battalion of Rifles, which left Worcester on the 20th of April. Their names were: Henry H. Bowman, Bramley A. Bottomly, Michael Collins, John P. Crimmins, Jacob H. Gibson, George W. Hatch, John Kirk, Joseph Laverty, Martin Leonard, Randall H. Mann, John McDonald, John Moriarty, J. Dawson Robinson, Emerson Stone, Jesse S. Scott and William B. White. Church Howe and Myron J. Newton enlisted in the Sixth Regiment.

The battalion was stationed at Fort McHenry, and returned on the 2d day of August, and was received with great joy. Several of these men reenlisted, and their records are given in connection with the regiments which they joined. The evening before the departure of the Third Battalion for the seat of war, news of the attack on the Sixth Regiment had been received, and had deepened the agitation. That day the national flag, before seldom seen except on government buildings, and sometimes on the Fourth of July, was thrown to the breeze on the flag-staff on the Common. The war was the all-absorbing subject of thought, conversation, discourse and prayer on the following day, which was the Sabbath.

On Monday evening, April 22d, was held the first of those memorable war meetings, which made the town-hall a historic building, and in which the fervent patriotism of the people of Leicester found earnest and eloquent expression, as in the days of the Revolution it had done in the old "First Meeting-House." On the 26th forty or fifty of the young men of the town commenced military drill in the town-hall, under the instruction of John M. Studley, of Worcester. A town-meeting was held the 4th of May, and $500 was raised and appropriated, and a committee was authorized to borrow $5000 if necessary. A bounty of $10 a month, in addition to government pay, was offered to volunteers, and uniforms, guns and equipments were to be furnished if necessary. The women were equally patriotic and efficient. Their first meeting for work was in the town-hall, May 13th, where, in response to notices from the pulpit the day before, they assembled, to the number of about sixty, and with four or five sewing-machines and many busy hands, made garments for the Third Battalion of Rifles. On the 15th, at 6½ o'clock on a pleasant May day, a beautiful flag was raised over the Centre School-house, with music by the band and addresses by the School Committee—Dr. Pliny Earle, Dr. John Murdock and Rev. A. H. Coolidge. Flags were also flying in different parts of the town. Says one, writing at the time, "The war feeling seems to absorb every other thought, and the subject of religion seems secondary to patriotism, which now occupies the mind not only of the private individual, but the pulpit and the press."

There had not been for a generation such a revulsion of feeling as was occasioned in town by the exaggerated tidings of the disaster of Bull Run. Men turned pale, and abandoning all hope of easy victory, nerved themselves for the long struggle, which was not to be ended until many of our own citizens had laid down their lives for their country.

In the early autumn of 1861 the Twenty-fifth Massachusetts Regiment was formed, with a larger number of men from Leicester than any other three years' regiment. In it were many representatives of the families in town, and it was followed in all its eventful and honorable career with the special solicitude and interest of the people.

The national fast, appointed by President Lincoln for September 26th, on account of the perilous and gloomy condition of the country, was a memorable occasion in Leicester. Services were held in the First Church. The attendance was large, and the congregation deeply affected. The recruits for the Twenty-fifth Regiment were to leave for camp that day, and this fact added to the impressiveness of the occasion.

In this regiment were Corp. Augustus Adams, in ten engagements, taken prisoner at Drury's Bluff, died at Florence, S. C.; Charles M. Ball, arm broken at Cold Harbor, killed at Petersburg; Corporal James Brady, Edwin Y. Brown, William Carson, David B. Collier, in six engagements; Isaac Creed, in eight engage-

ments, three wounds at Cold Harbor; Otis Cutting, wounded at Drury's Bluff; William Eddy, wounded at Petersburg; William Fernley, taken prisoner at Drury's Bluff, died at Andersonville; Owen Finnegan, in several engagements, wounded at Arrowfield Church; Horace L. Fisk; James S. Foster, died at Newbern; Levander M. Gould, died at Newbern; James Gehegan, wounded at Arrowfield Church, in ten engagements; John Galooly, died at Charlotte, N. C.; David Gotha, in seven engagements; George W. Gould, killed at Cold Harbor; Edward R. Graton, wounded at Roanoke Island and died of the wounds. He was saved from instant death by his prayer-book, the ball stopping at the verse,

> Thou, gracious Lord, art my defence,
> On thee my hopes rely.

Braman Grout, in two battles; George L. Grout, in two battles; Thomas Grooves, died at Newbern; William Henshaw, Patrick W. Hannagan, wounded at Cold Harbor; Albert S. Hurd, killed at Cold Harbor, in most of the battles of the regiment; George E. Kent, wounded at Roanoke Island, died at Newbern; Hugh Kenney, in three engagements, wounded at Arrowfield Church; Peter Kenney, wounded at Arrowfield Church and at Cold Harbor; William H. Kenney, killed at Cold Harbor; Sergeant John Kirk, in most of the battles of the regiment, taken prisoner at Drury's Bluff; Eugene D. Lacount, wounded and taken prisoner at Drury's Bluff; Michael Leonard, wounded at Drury's Bluff; John McMannis, wounded at Drury's Bluff; Corporal Randall Mann, killed at the battle of Roanoke Island; John McLaughlin, in ten battles, wounded at Cold Harbor; Lyman Moulton, killed at Cold Harbor; Ezra Reed, Albert Stockdale, wounded at Arrowfield Church and at Petersburg; First Sergeant Emerson Stone, lost an arm at Drury's Bluff, passed as captain of United States Colored Troops just as the war came to an end; Sergeant H. A. White, wounded in the foot at Drury's Bluff, in the battles of his regiment till his discharge in the summer of 1864.

The Twenty-fifth Regiment formed a part of the Burnside Expedition in North Carolina, and remained in that State till 1864, when it was united with the Army of the James, serving in Virginia before Richmond and Petersburg. After suffering severely and becoming reduced to a mere skeleton, it returned to North Carolina, and being recruited, participated in the closing scenes of the war under General Sherman. It will be noticed that the casualties of Leicester men in this regiment were especially numerous at Cold Harbor. Of the charge, in which the Twenty-fifth Regiment bore the brunt, Gen. Horace Porter writes in the *Century*, of June, 1888: "Perhaps the most striking case of desperate and deliberate courage which the history of modern warfare has furnished was witnessed at Cold Harbor. The men had been repeatedly repulsed in assaulting earthworks, had each time lost heavily, and had become impressed with the conviction that such attacks meant certain death. One evening after a dangerous assault had been ordered for daylight the next morning, I noticed in passing along the line that many of the men had taken off their coats and seemed engaged in mending rents in the back. Upon closer examination I found that they were calmly writing their names and home addresses on slips of paper and pinning these slips upon the backs of their coats, so that their dead bodies might be recognized upon the field and their fate made known to their friends at home. Never was there a more gallant assault than that made by those men the next day, though their act of the night before bore painful proof that they had entered upon their work without a hope of surviving. Such courage is more than heroic, it is sublime." Of this charge Gen. P. D. Bowles, who had command of the Confederate line, wrote, "The regiment that made this gallant charge was the Twenty-fifth Massachusetts. This we learned from the twenty-odd officers and men who fell down among the dead and wounded at the first fire. Not since the charge of the six hundred at Balaklava has a more heroic act been performed."

During the summer the Fifteenth and Twenty-first Massachusetts Regiments were enlisted. In the Fifteenth were from Leicester, W. H. Bergen, Simeon E. Ball, who died in the service at Poolesville, Md.; Henry Carpenter, in all the engagements from Ball's Bluff, in which the Fifteenth suffered so severely, to Gettysburg, in both of which battles he was severely wounded; H. R. Dawson transferred to the Twentieth; Chas. W. Clifford; the three Davis brothers, Freeman wounded at Ball's Bluff, reinlisted in the Fifty-seventh Regiment and killed in the battle of the Wilderness; William M. who returned from Libby prison and died; Alfred W., who died from wounds at the battle of Antietam; Charles A. Gleason, who was taken prisoner at Antietam and again in the Wilderness, and who was in Libby prison, Andersonville and Milan, where he died; Charles H. Gough, killed at Ball's Bluff, the first Leicester soldier who lost his life in the service; Maj. Church Howe, first in the Sixth Regiment and then in the Fifteenth, in thirteen battles; lieutenant quartermaster in the Fifteenth Regiment, provost marshal at Harper's Ferry, and senior aide-de-camp to Major-General Sedgwick; Peter McGee; Sergeant John A. Richardson transferred to the Twentieth Regiment; Samuel Slater; Corporal Charles W. Wood in eighteen engagements, taken prisoner at Gettysburg and again at Petersburg, confined at Andersonville, Milan, Savannah, Albany and Thomasville. These men were, with few exceptions, sharers in the hardships, the battles and the sufferings of this historic regiment.

In the Twenty-first Regiment were James Bell, who, in the battle of Chantilly, becoming separated from his regiment and finding himself surrounded by the enemy, continued to fight single-handed and was shot. Horatio N. Barrows in five battles, wounded at An-

tietam; Edgar C. Felton, also in the Thirty-sixth and Fifty-sixth; Thomas Hurst, killed at Newbern; John Hopkins, transferred to the Thirty-sixth and to the Fifty-sixth; James Lackey, also in the Thirty-sixth and Fifty-sixth, died of wounds received in the Wilderness; Barney McNulty, also in the Thirty-sixth and Fifty-sixth; Wm. McGrath, transferred to United States Cavalry; Jesse S. Scott, musician, also in the Fifty-seventh; Frank H. Southwick, wounded at Antietam; Wm. W. Scott, afterward asst. quartermaster at Chattanooga; Edgar Salisbury, wagoner.

John Graham was in the Signal Corps and also the First Frontier Cavalry. Jerome Bottomly, artificer and Andrew Crossley were in Co. C, Battalion United States Engineers' Troops, enlisting in the autumn of 1861, and serving three years. The company was recruited by Captain (afterwards Major-General) James B. McPherson, its first commander. They were engaged in all the varied duties of military engineers, laying out roads, fortifications and defences of various kinds, and especially in building pontoon bridges, often in the face of the enemy. They assisted in building one across the Chickahominy and another over the James, each two thousand feet in length. They often acted as infantry. The names of seventeen battles of the Rebellion are inscribed on their colors.

In the summer of 1862 the Thirty-fourth Regiment was organized. Leicester contributed to it the following men: Edwin N. Adams, transferred to the Twenty-fourth Regiment; Henry H. Bowman, first in Third Battalion Rifles, in seven engagements; Alexander Benway, John A. Barr, Joseph R. Brooks, Frederick S. Blodgett; Corporal Henry Converse in nine engagements; Timothy P. Griffin, principal musician; Edwin Holden in sixteen engagements, wounded at Fisher's Hill; Edwin Hoyle, wounded and a prisoner six months at Andersonville; Lincoln L. Johnson died at Harrisonburg, Va.; Sergeant Alfred James in eight engagements, wounded at Fisher's Hill; Franklin B. King, Lieut. Ira E. Lackey, Matthew Malloy, Corporal Rufus H. Newton, in sixteen battles, wounded at Winchester, and severely at Petersburg; Frank Pollard, Michael Rice, in fifteen engagements, wounded at Petersburg; Corporal James Rawdon, died of wounds; Lieutenant Walter W. Scott in ten engagements; John Shean, Henry Southwick, Corporal Henry E. Williams, wounded in the battle of Piedmont, a minie-ball passing through the left arm, through the body, and lodging in the right arm, captured and taken to Libby prison. John Sherman, James Sherman, Owen Smith, also as Leicester soldiers, Joseph P. Morse, from Worcester, and Norris Morse, of Spencer. The regiment left Worcester August 15, 1862. It served principally in the Shenandoah Valley, under Generals Sigel, Hunter and Sheridan, until March, 1865, when it formed a part of the Army of the James until the surrender of Richmond. Some of these men were with Sheriden at the time of his famous "ride." They participated in the various forced marches, raids, skirmishes and battles of that heroic commander, as well as in the later battles of the war.

The duties of the town officers during this and succeeding years were very arduous and perplexing. No pains were spared to fill each new order for men. In July, 1862, the town was called upon for forty-five men as its quota of the three hundred thousand called for by the President. In anticipation of the order a meeting of the citizens was held in the Town Hall on the evening of the 14th day of July. It was a rainy night, but the attendance was large, and stirring addresses were made by the clergymen and several other citizens of the town. It was voted expedient to pay liberal bounties, and the selectmen were requested to open a recruiting office and call a legal meeting forthwith. The next day a guarantee subscription of $1,000 for bounties was secured. On the 22d a company of thirty-two Spencer volunteers passed through town, escorted by the Spencer and Leicester fire companies and the Leicester Cornet Band. They halted a few minutes before the cottage of the venerable Dr. Nelson, who briefly addressed them. The town-meeting was held on the 26th of the same month, and it was unanimously voted to pay a bounty of $100 to all volunteers who had already enlisted or who should enlist under this call; that an additional bounty of $50 be paid to all who should remain in the service longer than one year; and an extra bounty of $25 to any who should enlist before the next Monday, at 9 o'clock, P.M. The meeting was adjourned to the evening, when patriotic addresses were made by several gentlemen. On the 28th a mass-meeting was held, but the process of filling the quota was difficult and slow. It was not completed when another call was issued for three hundred thousand men, to serve nine months. The town was ordered to furnish sixty men. On the evening of the 18th of August another war-meeting was held in the Town Hall. It was large, and proved to be the most stirring and eventful of those remarkable assemblies. John D. Cogswell, chairman of the Board of Selectmen, presided. Addresses were made by various prominent citizens. The chairman, in a few earnest words, urged all who could to enlist at once, and then placed his own name at the head of the list. Sixteen came forward at once, in the words of the Worcester *Spy*, "amidst the cheers and enthusiasm of the large number of ladies and gentlemen, who remained to a late hour." Among the number was the Rev. William F. Lacount, pastor of the Methodist Church in Cherry Valley. The quota was filled in a few days by volunteers. "Among them," as was truthfully stated in the *Spy*. "were the present and former chairmen of the Board of Selectmen, and many of the enterprising young men from the best families of the village. The industrious mechanic left a prosperous business, the minister his people, the collegiate his college class, and the husband and father the comforts and pleasures of

home to unite in putting down speedily this wicked and savage rebellion." Before August 30th fifty had volunteered, all but four of whom became members of a company recruited from Spencer, North Brookfield and Leicester, of which John D. Cogswell was captain, and T. M. Duncan, of North Brookfield, and Lyman A. Powers, of Spencer, lieutenants. On September 18 the company thus formed came together in the Town Hall, where the Leicester ladies served a collation, long remembered by these men in the subsequent days of army rations. Addresses were made by citizens and officers of the company, which was conveyed to its camp on the Agricultural Grounds in Worcester, preceded by the band, and escorted by the Union Fire Company. It was finally assigned, as Company F, to the Forty-second Massachusetts Regiment. They sailed on the 4th of December under sealed orders. After a long, stormy and perilous voyage, they reached New Orleans the 29th of December, where they served under General Banks. They were in no battles, but were engaged in arduous guard and picket duty.

They were mustered out of service August 20, 1863. A public reception had been arranged for them on their return, and tables were set in the Town Hall, but they were so much worn by their hardships in the malarial regions of New Orleans and so many were ill that the purpose was abandoned.

In this regiment were thirty-eight men from Leicester,—Albert M. Adams (who afterward enlisted in the Second Iowa Cavalry; was captured in Tennessee by Hood's army December 17, 1864, while on a charge; taken on foot to Meridian, five hundred and ninety miles, through mud, and over frozen ground, the last half of the way barefoot; thence in stock cars to Andersonville, thence to Macon, Ga., thence to Albany, Ga., thence on foot to Thomasville, Ga., thence by rail to Baleluin, Fla., thence on foot to Jacksonville, "arriving under the Star Spangled Banner April 29, 1865"), George Adams, Sergeant Bramley A. Bottomly, Corporal Charles B. Brown, Henry Bisco, Moses Bagley, Captain John D. Cogswell, Albert W. Cargell, Corporal James H. Croome, Clark K. Denny, Lewis W. Gates, George D. Hatch, Edward W. Hubbard, Henry E. Holbrook, William H. Haven, Charles S. Knight, John Craft, Rev. William F. Lacount (pastor of Cherry Valley M. E. Church, who acted a part of the time as chaplain and the rest as hospital nurse), Franklin M. Lamb (musician), Charles M. Marsh, Horatio P. Marshall, Peter McArdle, George Morgan, Albert S. Marsh, George Mann, Thomas Nolan, Martin Procter, Thomas H. Robinson, George M. Roberts (afterward lieutenant in the Sixtieth Regiment), William C. Sprague, Charles Sanderson, William J. Sprague, Corporal George L. Stone, Thomas S. Snow, Orderly Sergeant Joseph A. Titus, (afterward lieutenant in the Sixtieth Regiment), Charles H. Warren, Corporal Charles H. Woodcock, Eli Wrigglesworth (also in the Twenty-ninth Regiment), Albert M. Goulding, Warren E. Howard and John F. Kibler (first in the Fifty-first Regiment), enlisted in the Forty-second Regiment, in its second term of service for one hundred days.

July 13, 1863, fifty-two men were drafted from Leicester. Some of them paid the commutation fee of three hundred dollars or furnished substitutes, while others were, for various reasons, exempted, so that it is believed that none of them entered the service. This was a time of unusual excitement. The riots in New York and threatening demonstrations in other places encouraged resistance and awakened apprehensions. Whatever of disloyal feeling existed in town then found expression in protests and the encouragement of discontent. Information was received of threats to gain possession of the enrollment list, or burn the office where it was kept. The office was consequently guarded several nights by armed men, and the town, to some extent, patrolled. The danger may have been exaggerated, but the facts illustrate the feverish condition of the public mind at this time.

In November, 1863, the Rev. Mr. Coolidge received leave of absence from his church, and spent about two months with the Army of the Potomac, in the service of the Christian Commission. In all the years of the war the women vied with the men in loyal service. Every call for help met a prompt response, and there were many meetings for sewing and the preparation of hospital supplies, while the children made "comfort bags," furnished with sewing materials, for the convenience of the soldiers. In all this work, Mrs. Billings Swan, whose great regret was that she had not sons who were able to go to the war, was a conspicuous leader.

Mrs. Nelson, wife of the senior pastor of the First Congregational Church, although seventy-five years of age, labored unremittingly, and encouraged others to do the same. She knit one hundred pairs of stockings for the soldiers, and enclosed a note in the hundredth pair to the soldier who should receive it, to which she received an answer.

On the 21st and 22d of February, 1865, a fair was held in the Town Hall. Governor Emory Washburn was president, and made an opening address. The amount realized was $2636.07, which was equally divided between the Sanitary and Christian Commissions and the Freedmen's Aid Society.

In the Massachusetts Fifty-seventh Regiment were James Ackley, wounded at Spotsylvania, first serving in the navy, under Admiral Farragut on the Mississippi River, at the capture of New Orleans; William H. Anthony, shot at the North Anna, and killed by a charge of grape while being carried from the field; Freeman Davis, first in Fifteenth (wounded at Bull's Bluff), killed in the Wilderness; Oliver Gosler, died of wounds near Petersburg; Phineas L. Holbrook, wounded at North Anna; Edward A. Hawes, Emerson B. Lacount, musician; Patrick H. Mann-

ville, enlisted at fifteen years of age, killed at the battle of North Anna; Henry C. Maloney, died in the service; Joseph B. Winch, Sergeant Horace S. Pike, wounded at Petersburg; Jesse S. Scott, principal musician; Charles W. Gleason.

Hiram Streeter was also a member of this regiment. When friends endeavored to dissuade him from leaving his wife and young children, he said: "I have decided that it is my duty to defend my country, if I die in so doing." He enlisted, and after participating in the battles of the Wilderness and North Anna, was killed by a minie ball, before Petersburg, June 17, 1864.

In the Sixtieth Massachusetts Regiment, one hundred days' men, stationed at Indianapolis, were Corporal Alonzo W. Bond, Francis A. Bond, Aaron T. Cutler, Lewis R. Dowse, William Graham, John T. Gough, Lieutenant George R. Roberts, Lieutenant Joseph A. Titus, Henry L. Watson and Alphonso Woodcock.

In the Second Regiment was Edwards D. Farr, wounded in the foot at Cedar Mountain, twenty-four hours on the battle-field; came from it on crutches made with a pen-knife; died of the wound in the Massachusetts General Hospital, where he had suffered amputation. In the Tenth were Silas Bercume, wounded at Fair Oaks, re-enlisted in the First Connecticut Cavalry, taken prisoner at Ashland, in Libby Prison, Andersonville, Savannah and Milan; James E. Bacon, William Conway, who died in the service. In the Eleventh was George McDonald, missing after battle in the Wilderness.

In the Twelfth were the brothers Charles B. Frisbee (in fifteen battles, wounded at Antietam) and Albert Frisbee (in all the engagements of the regiment till taken prisoner at Gettysburg, in prison at Belle Isle, Libby and Andersonville, where he died. Their brother, William, was in an Ohio regiment, and was wounded in Georgia. Lovell P. Winch was in the Thirteenth; John Denny, in the Nineteenth; Henry R. Dawson, in the Twentieth. John Lord was in the Twenty-second, killed at the battle of Chickahominy. Lieutenant John Minor was in the Twenty-eighth; also Jesse Pollard, who was wounded in the second battle of Bull Run, and also at Secessionville, S. C. Eli Wrigglesworth was in the Twenty-ninth. In the Thirtieth were Sergt. Aaron Bowman (in all the battles of the regiment till his death at Baton Rouge, La.), Henry S. Thayer (who died at New Orleans), and James H. Whitney (who died in Mississippi). Captain Thomas Burt was in the Thirty-first; also in a Connecticut regiment; assistant provost marshal at New Orleans. Alexander H. Fairbanks and George E. Sibley were in the Sixty-first, and James H. Knight in the Sixty-second.

George Armitage was in the First Cavalry; Henry J. Biggs in the Second Cavalry, also John Trim, Lewis Gosler, Dennis S. Quinn. In the Third Cavalry, John Crogan, Eugene Eschman; in the Fourth Cavalry, David Dawson, bugler; Thomas Doyle, first in the Fifty-first Infantry, died of wounds at Magnolia, Florida; in the First Frontier Cavalry, Rodney W. Greenleaf.

In the Second Heavy Artillery, James Flannigan, Andrew Stowe, who died at Andersonville, and Charles L. Cummings, also in the Fifty-first Infantry; in the Third Heavy Artillery, John Crogan.

Edward May, paymaster in the naval service. Joseph Doran was also in the naval service.

In addition to those named are the following men who enlisted in the quotas of other places—in what regiments is not known: Dexter Austin, John Brooks, Andrew Clark, John Darling, Charles Fay, Michael Fritz, Patrick Henry, E. Hastings, James Morgan, John L. O'Brien, Owen Rice and Hugh Hopkins.

In addition to those who enlisted from town were men who were purchased as recruits from other places. Some of these are known to have done good service; of others little is known. In the Second Heavy Artillery were William Henry Harrison, James Lowell, Edward McKay, John McDonald, Walter Stone. In the Second Massachusetts Regiment were Richard Lynch, John Maller and Edward Shandley. In the Veteran Reserve Corps, Oliver Santum and Corporal Edward Kendall. In addition to these were Patrick Dowd, of the Fifty-sixth; Alexander H. Fairbanks, of the Sixty-first; Samuel Slater, of the Fifteenth and Twentieth; James Scott, of the Fifty-eighth; James Smith, of the Twenty-seventh; Rodney W. Greenlief, of the First Battalion, Frontier Cavalry, William H. McGregor, also of First Battalion, Frontier Cavalry, and Corporal George H. Lancaster, of the Third Heavy Artillery.

The following is a list of the names of recruits purchased by the town whose designation and history are unknown: Wm. Adams, Lewis L. M. Arnold, Jas. Barnes, Antoine Bownett, Jesse Croslin, Mark Colman, James Delany, Michael Demsey, John Doyle, Eliakim H. Eaton, Jas. Edmanson, Joshua H. Eldridge, Jno. F. Farrell, Henry Hastings, John F. Kenniston (unassigned recruit), James Leary, John L. Labene, William H. Leighton, Cornelius Leary, David G. Lambert, John Lee, Albert L. Loud, John Lindsey, Geo. S. Little, Wm. J. Lord, Patrick Lynch, Edw. L. Limminson, Stephen Lynch, John Lindsey, John Mullen, James Miller, Shubal Mayo, John Mooset, Sawney Nelson, William Ottevall, Owen Rice, Wm. Reese, Owen Smith, Henry Stewart, Samuel Stewart, Samuel Taylor, Edward Vaughn, George Varnum, Charles Vose, Edward Cottey, George Donnelly, Thomas Graves, Martin McBride, Oscar B. Phelps.

Eleven of the recruits are recorded as deserters. Their names are omitted from the roll of honor. With all the pains taken to make the list of soldiers complete, there are doubtless inevitable omissions.

The highest rank to which a soldier attained in the service is given in the lists. Some enlisted for other towns. The number of battles in which a soldier

was engaged is in some cases given; in others it is unknown.

As nearly as can be ascertained, the town furnished three hundred and twenty men for the war, of whom two hundred and forty-eight were in three years' regiments. Six were commissioned officers. Dr. John N. Murdock and T. E. Woodcock furnished substitutes. The military expenses of the town were $42,653.28, of which $12,383 were, however, for State aid. A league of enrolled men was organized in the summer of 1864, which raised $4,400 for the purchase of recruits, and $2,960 were raised by citizens not liable to a draft.

Considerable sums were also raised for the Sanitary and Christian Commissions. Throughout the entire war the women were untiring in their interest and labors for the relief of the suffering soldiers.

The names of Leicester men are on the rolls of twenty-eight Massachusetts regiments, and others enlisted in other States and in the regular army. At least thirty-three died in the service; eleven were in Rebel prisons, of whom seven died. The sons of Leicester were in over a hundred battles.

The premature announcement of General Lee's surrender occasioned such a thrill of joy as had not been experienced since the close of the Revolutionary War. The bells were rung, cannons were fired, and responses were heard from surrounding towns. News of the actual surrender arrived on the morning of the 10th of April, and was followed by the firing of cannon and the ringing of bells, and in the evening by the playing of the band and a general illumination. The terrible revulsion came on the 15th, with the tidings of the assassination of President Lincoln. The feeling here, as elsewhere, was intense; every other interest was forgotten, business was suspended, the bells were tolled during the afternoon, and ministers laid aside their preparation for the next day, unable on that memorable Sabbath to speak upon any other theme than that which alone interested the people. On the day of the funeral the bells were tolled and services, attended by people from all parts of town, were held in the First Church. "It was a large, sad audience."

During the morning service, on the 14th of May, a message was brought to the church containing the news of Jefferson Davis' capture, and the welcome fact was announced from the pulpit.

CHAPTER XCIV.

LEICESTER—(*Continued.*)

MISCELLANEOUS.

Individuals and Residences—Physicians—Lawyers—Items of Interest—Burying-Grounds—Post-Offices—Fire Department—Taverns—Libraries—Cherry Valley Flood—Histories—Celebrations.

INDIVIDUALS AND RESIDENCES.—In a sketch so brief as this there can be special mention of only a few of the many persons who are worthy of such notice. To some of these reference has been made in other connections.

The Earle families generally resided in the northeast part of the town, where they erected substantial homes, some of which are still an ornament to that neighborhood. They were so numerous that in 1812, when Rev. Dr. Nelson visited the Northeast School on examination day, he found that of the forty pupils present, twenty-one were grandchildren of "Uncle Robert" and "Aunt Sarah" Earle. Ralph Earle, the ancestor of the Leicester Earles, came to town in 1717 from Freetown, Mass. He became a large landowner and the head of a family, members of which, in their different generations, have had more than a local reputation. Among these, Ralph, his great-grandson, takes special rank as an artist. He made full-length portraits of Dr. Dwight, of Yale College, and others in Connecticut, and portraits of "many of the nobility and some of the royal family" of England. For a time he was under the instruction of Benjamin West in London, and he was made a member of the Royal Academy in that city. He painted the battle of Lexington and other battle-scenes of the early period of the Revolution, which were engraved. He has the distinction of being the first historical painter of America. A landscape view of Worcester, taken from Denny Hill, is now in the possession of Deacon C. C. Denny. His brother, James Earle, was also a painter of "considerable eminence." He was married in London, but died in Charleston, S. C., on a visit to America. Thomas Earle, grandson of the Ralph who came to Leicester, was a mechanic of remarkable skill. His home was on Bald Hill, in Cherry Valley, opposite Olney's factory. He planted rows of sycamores in front of his house on the day of the battle of Lexington, three of which are still standing. A musket of superior quality and beautiful finish, which he made for Col. William Henshaw, is preserved in good condition. Gen. Washington so much admired it that he ordered one like it for himself. Mr. Earle made the gun with great care, and when it was completed he loaded and primed it, placed it under water to the muzzle over night, and in the morning discharged it at the first pull of the trigger. He afterward shouldered it and carried it on foot to General Washington in New York.

Thomas Earle, the son of Pliny, born in Leicester and educated at the academy, was, in 1840, candidate of the Liberty party for Vice-President, with James G. Birney. He was an able editor and an influential writer in opposition to slavery. His home was in Philadelphia. He is described as "a man of powerful intellect," "enlarged views," "of warm and generous impulses," "a philanthropist whom oppression could not swerve; a politician whom politics could not corrupt; 'and a Christian whom sect could not circumscribe.'" Notices of other members of this family will be found in the history of Worcester.

The Henshaw place, northeast of Henshaw Pond, at first called Judge's Pond, was owned, and the house first built, by Judge John Menzies, who came from Roxbury in 1720. He was from Scotland, a member of the Faculty of Advocates in Edinburgh, and was appointed judge of the Court of Admiralty of Massachusetts, Rhode Island and New Hampshire. He was the first representative of the town to the General Court.

The place was afterward owned by Judge Thomas Steele, who has already been mentioned. After the Revolutionary War it came into the Henshaw family, where it has remained. Captain David Henshaw purchased it in 1782. Still later it was the home of Hon. David Henshaw. He was appointed collector of the port of Boston, by President Andrew Jackson, in 1829, and served with great credit to himself and advantage to the department. He was appointed Secretary of the Navy by President John Tyler, served for a short time, but his appointment was not confirmed by the Senate, which was of the opposite political party.

The mansion-house on Mount Pleasant was built in 1772 by Joseph Henshaw, who also gave to the hill its name.[1] He was a graduate of Harvard, in 1748. His connection with early Revolutionary events has already been referred to. He was a man of wealth, and loaned to the government, in its time of need, at least a hundred thousand dollars. At this house he took the mail from the courier, before the establishment of a post-office here. In 1795 the place came into the hands of James Swan, who fitted up the house and grounds in a style of magnificence far surpassing anything in this region. His wealth was supposed to be immense. After a few years reverses came upon him, he retired to France, and in 1830 reappears upon the opening of the Debtor's Prison, in Paris, as one who was set free, after occupying the same room thirty-two years and one day.

Daniel Denny, from whom descended all of that name in town, came from Combs, Suffolk County, England, to Boston in 1715, and removed to Leicester in 1717. The prominent position of the members of this family, in connection with town and national affairs, has already been indicated.

[1] Not Lewis Allen, as Washburn states.

Deborah, the daughter of Daniel Denny, was the wife of Rev. Thomas Prince, D.D., of the Old South Church, Boston. Colonel Samuel Denny lived on Moose Hill; he was lieutenant-colonel of the minutemen and colonel of the First Worcester County Regiment, a member of the General Court, and of the convention to ratify the National Constitution.

St. John Honeywood, son of Dr. John Honeywood, graduated with high honors at Yale in 1782, was a lawyer in Salem, N. Y., and one of the electors for John Adams. He died at the age of thirty-four. Says Washburn: "He gave early evidence of having been endowed by nature with the eye of a painter and the sensibility of a poet." A posthumous volume of his poems was published in 1801.

Colonel Henry Sargent was one of the wealthy and prominent men of the town honored with civil and military office. Two of his sons were graduated from Harvard College, and were physicians in Worcester. Dr. Henry Sargent died in 1857. Dr. Jos. Sargent died in 1888, after a long practice in the profession, in which he held high rank. The Sargent family has been one of standing in the town, and other members are elsewhere noticed.

The Green family came from Malden, and were at one time the most numerous in town. Members of this family have been already noticed in connection with the early history of the town. The Southgate family were from England, and have also been prominently identified with the town's history.

The large residence east of the Common was built by Joshua Clapp, the enterprising and generous Clappville manufacturer. Mr. Denny, in his "Reminiscences," says of him that he was "a decided and active temperance man in the early days of the reform." In 1836 he bought the hotel in the Centre village, and converted it into a temperance house. Mrs. Ellen E. Flint afterward owned the Clapp place for many years. She was a woman of strong character, benevolent and public-spirited. She built the massive walls which have given to the place the name of "Stonewall Farm." The place, some time after her death, came into the hands of Dr. Horace P. Wakefield, who resided there several years. It was then purchased by Hon. Samuel Winslow, mayor of Worcester, remodeled and much enlarged, and is now his summer residence.

Phineas Bruce was elected to Congress in 1803, but never took his seat.

Hon. William Upham was educated at the academy; was district judge in Vermont and United States Senator.

Hon. Nathan Allen was a member of the House of Representatives; also Hon. John E. Russell, elected in 1886.

Three persons at least, in Leicester, have lived to a remarkable age. Elihu Emerson was born in Westfield, Mass., July 21, 1771. He resided for many years with his daughter, Mrs. Dr. Edward Flint,

where he died October 31, 1873, at the age of one hundred and two years, three months and ten days.

Ebenezer Dunbar was born March 29, 1777, in Leicester, where he always resided. He died November 4, 1877, and was thus one hundred years, seven months and six days old.

Mrs. Lydia Watson, the widow of Mr. Robert Watson, is still living in her one hundred and third year. She was born in Spencer, January 5, 1777.

PHYSICIANS.—The first physician in Leicester was Dr. Thomas Green, already noticed as the first pastor of the Baptist Church in Greenville.

Dr. Pliny Lawton taught school in 1748 and 1749 and was then called "Doctor." He died, in 1761, of small-pox, which he contracted while in the courageous discharge of his duty, and was buried in his own field.

Dr. John Honeywood was in practice here in 1753. He was an Englishman and his interest in the early Revolutionary movements, and his death while serving in the American army, have been already noticed. He was a well-educated and skillful physician.

Dr. Solomon Parsons taught school in 1751. He was a son of Rev. David Parsons, born April 18, 1726, and died March 20, 1807. His wife died the same year as Dr. Lawton, of small-pox, and he was under the necessity of burying her alone, by night. He is supposed to have been surgeon in the army in 1761.

Dr. Isaac Green, son of Dr. Thomas Green, was born in 1741 and died in 1812. He was surgeon in Col. Samuel Denny's regiment in 1777, and was at Saratoga at the taking of Burgoyne.

Dr. Edward Rawson was born in Mendon in 1754 and died in 1786.

Dr. Absalom Russell practiced here a few years and was a surgeon in the Revolutionary army.

Dr. Robert Craige, Dr. Jeremiah Larned and Dr. Thomas Hersey were in practice in town during the last half of the last century, and also Dr. Thaddeus Brown.

The most eminent physician of the town, after Dr. Thomas Green, was Dr. Austin Flint. He was born in Shrewsbury, January, 1760; came to Leicester in 1783, and died August 29, 1850. He is characterized by Governor Washburn as "an intelligent, well-informed man, of strong will and indomitable courage;" of "affable manners" and with a "rich fund of anecdote and good sense." He entered the army at the age of seventeen and his record in the Revolution and "Shays' Rebellion" has already been given. He was for twenty successive years moderator of town-meeting, for fifteen years town clerk, for sixteen years trustee of the academy, for about thirty years a magistrate and for five years a Representative in the Legislature. He not only practiced throughout the town, but also in other towns. He kept a record of the births at which he rendered professional aid. The number is 1750. His wife (Elizabeth) was the daughter of Col. Wm. Henshaw.

Dr. Edward Flint, his son, elsewhere noticed, began practice here in 1811.

Dr. Ames Walbridge came to Greenville about the year 1830, and died there July 30, 1867, at the age of seventy-five.

Dr. Jacob Holmes was a physician in Leicester from 1834 to 1847. Rev. Isaac Worcester, M.D., who married the daughter of Colonel Henry Sargent, was for a short time in practice here, as were also Dr. C. D. Whitcomb and Dr. James P. C. Cummings and Dr. E. A. Daggett, who was followed by Dr. John P. Scribner. Dr. George O. Warner came to Leicester in 1866 and remained until his death, November 12, 1885, at the age of forty-six. He gained a very extensive practice throughout the entire town and region. He was for a short time an army surgeon. He was kind and sympathetic and his death was universally lamented.

The present physicians in the village are Dr. Fred. H. Gifford, graduated from the Harvard Medical School in 1874. Dr. Charles H. Warner graduated from the Harvard Medical School in 1870, and commenced practice in Leicester in 1885; and Dr. Charles G. Stearns, graduated from Amherst College in 1874 and from the Harvard Medical School in 1881. He commenced practice here in the winter of 1885. Dr. Leonard W. Atkinson graduated from Boston University Medical School in 1884, began practice in Cherry Valley in 1885.

LAWYERS.—Christopher J. Lawton came to Leicester, 1735; practiced until 1751.

Hon. Nathaniel Paine Denny graduated at Harvard, 1797; settled in Leicester in 1800; practiced for twenty years; and represented the town in the Legislature ten years.

Bradford Sumner, graduated at Brown University, 1808; came to Leicester, 1813; practiced until 1820.

David Brigham, graduated at Harvard, 1810; came to Leicester in 1817; practiced a little more than two years.

Daniel Knight, graduated at Brown University, 1813; came to Leicester, 1821.

Emory Washburn, graduated at Williams College in 1817; practiced in Leicester from 1821–28.

Waldo Flint, graduated at Harvard in 1814 and came to Leicester in 1828. He was afterward for many years president of the Eagle Bank, Boston.

Silas Jones succeeded Mr. Flint, but only practiced for a short time.

Henry Oliver Smith, a native of Leicester, graduated at Amherst, 1863, and since 1866 has practiced in Leicester.

ITEMS OF INTEREST.—A few items of interest from Washburn's history and other sources are added here. The first public conveyance for passengers was the line of "stage-wagons" between Boston and Hartford, opened October 20, 1783, by Levy Pease, of Somers, Conn., and Reuben Sikes, of Hartford. Before this the mails were carried on horseback.

There are persons now living who remember to have seen sixteen stage-coaches at one time around the tavern on Leicester Hill. In the last century two huge horse-blocks near the meeting-house and the public stocks were conspicuous objects on the Common. The last "pillory" was built in 1763, for thirteen shillings, by Benjamin Tucker. George Washington, on his journey to Boston in 1789, passed through Leicester October 22d, and met a delegation of gentlemen from Worcester on the line between the two towns. Lafayettte, on the 3d of September, 1824, passed through the south part of the town "attended by a troop of horse and an escort of military officers, citizens, etc."

Colonel Thomas Denny introduced the first piano to the town about the year 1809. The second belonged to the daughter of Captain John Southgate a few years later. The first carpet in town was woven by Mrs. David Bryant early in the present century.

In the first quarter of the present century there was in the Centre Village a literary association composed of the younger women, which met from house to house, and is represented to have had a brilliant success. Some of the productions of its members found a place in the *Worcester Spy*, among the "Blossoms of Parnassus." "History," says Washburn, "can only record the fact that it once existed, flourished many years and disappeared." It has had, however, many successors.

BURYING-GROUNDS.—The first burying-ground in town was the church-yard back of the early meeting-house, which was surrounded by a brush fence. It dates back to 1714. The Greenville Cemetery was opened about the year 1736; the Elliott Burying-yard, in the north part of the town, in 1756. The burying-ground of the Friends at Mannville was in existence as early as 1739. The Rawson Brook Cemetery dates back to 1755, and the Cherry Valley Cemetery was opened in 1816, and the Pine Grove in 1842. In these several burying-places have been laid about 2800 bodies. The number of deaths in town since 1800, recorded on the town books and elsewhere, is 3469. In the first decade there are 98, in the second, 150; in the third, 193; in the fourth, 265; in the fifth, 324; in the sixth, 431; in the seventh, 474; in the eighth, 552; from 1880 to 1883, 451. These facts are from the record of C. C. Denny, Esq., who has made a careful investigation and study of the subject.

POST-OFFICES.—A post-office was established in Leicester about 1798, and Ebenezer Adams, Esq., was the first commissioned postmaster. He was succeeded by Col. Thomas Denny, Col. Henry Sargent, John Sargent (appointed April, 1829), Henry D. Hatch, L. D. Thurston, the present incumbent appointed.

The post-office in Rochdale was established in 1824, and Rev. Joseph Muenscher was the first postmaster.

The post-office in Cherry Valley was established in 1859, with Henry Tainter, postmaster.

FIRE DEPARTMENT.—The date of procuring the little engine upon which the town depended many years for extinguishing fires is not known. A fire-engine, called "Union No 2," was purchased in 1841, partly by the town and partly by individual subscriptions. It came to town April 20th. A steam fire-engine was bought in 1869, and in 1886 it was replaced by the present steam-engine. In 1885 a steamer was obtained for Cherry Valley, and chemical extinguishers for Rochdale and Greenville.

TAVERNS.—The first tavern was on the corner of Main and Paxton Streets. It was occupied by Nathaniel Richardson in 1721, John Tyler 1746, John Tyler, Jr., 1755, Seth Washburn 1756, then by John Tyler, by Benjamin Tucker 1761, Edward Bond 1767. It was then burnt and rebuilt, occupied by Elijah Lathrop 1776, Peter Taft 1778, Reuben Swan 1781, William Denny 1801, Aaron Morse 1810.

The second tavern was opposite the Catholic Church, built by Jonathan Sargent as early as 1727. He was succeeded by his son Phineas, and he in 1776 by Nathan Waite.

James Smith had a tavern in the last house in Leicester, on the road to Spencer, in 1740. He was followed by Samuel Lynde in 1755; the house was destroyed by the hurricane in 1759.

Phineas Newhall built in 1776 a tavern on the Iatnuck Road, where the last house in Leicester stands, which was open for many years.

The first tavern on the site of Leicester Hotel, opposite the Common, was built in 1776, by Nathan Waite. Jacob Reed Rivera, the Jew, bought it for his store in 1777. Here a hotel has been kept by successive landlords to the present time. Among these was John Hobert, who had charge of it from 1799 to 1817, and gave to it a wide-spread reputation as an excellent hostelry. In later years, notwithstanding the growth of the temperance sentiment in town, this hotel continued to defy the public will. It at length became so intolerable a nuisance that it was purchased by a company of citizens and closed. In 1882 it was burnt. In 1885 this company built the present Leicester Hotel, which has since been kept by L. G. Joslin, and has become a favorite resort for "summer boarders." During the Revolution Abner Dunbar had a tavern on Mount Pleasant (Benjamin Earle place), and George Bruce about the beginning of this century kept public-house on Mount Pleasant, in the residence before occupied by Major James Swan.

Samuel Green had a tavern in Greenville. The Rochdale Hotel was built by Samuel Stone about 1810, and was first kept by Hezekiah Stone.

LIBRARIES.—In 1793 provision was made for a "Social Library," the "Proprietors" first meeting December 10th. The fire-engine company established a library in 1812. A "Second Social Library" was commenced in 1829. These several libraries had fallen into disuse, but in 1858, by the efforts of the writer, they were united, and removed to one of the rooms of the Town House, and again opened for cir-

culation. This library, containing about eight hundred and fifty volumes, was, in 1861, offered to the town, and at the town-meeting held March 4, 1861, was unanimously accepted. The library has gradually increased, and in February, 1888, the number of volumes was six thousand two hundred and twenty-eight. There are branch libraries at Rochdale, Greenville and Cherry Valley, and the books are largely used in all parts of the town. The library has received donations of books from many individuals. Among these should be especially mentioned Waldo Flint, Esq., who gave to it nearly three hundred and fifty volumes. Over five hundred volumes from his own library came to it after his death. The library is also indebted to the interest and liberality of Abraham Firth, Esq. Mrs. E. H. Flint, Governor Washburn and many others have been its generous friends. But the library is most of all indebted to Rev. Samuel May for his long-continued devotion and services. He has taken upon himself as a free-will service the arrangement and care of books, the preparation and publishing of catalogues, and the general supervision of the library. The management of the library is committed to a Board of Directors consisting of five members, one of whom is annually chosen to serve five years. On the 13th and 14th days of January, 1873, the library was placed in the new "Memorial Hall," an attractive room in the Town House. It has already nearly outgrown these accommodations, and waits the time when wealthy and generous friends shall make provision for a library building. D. E. Merriam, who died in 1888, left toward this object $5,000.

Cherry Valley Flood.—On March 29th, 1876, the dam of Lynde Brook Reservoir, the water supply of Worcester, gave signs of weakness. The water surface of the lake is 1870 acres and there were in it at the time 663,330,000 gallons of water. There had been heavy rains. Four days before one of the series of dams on the Kettle Brook, into which Lynde Brook empties, gave way, occasioning great damage to roads and bridges and flooding a part of Cherry Valley. The water of Lynde Reservoir was at the time running over the flash-boards, twenty-seven inches higher than the dam. A leakage at the lower waste-gate house showed signs of increase, and this was the signal of danger.

Strenuous efforts were made through this and the next day to save the dam, or at least hold it in place till the waters could gradually escape. Loads of earth and stone and large trees were thrown in above the dam. Meanwhile the alarm was given to families along the stream. Dwelling-houses were deserted, mill property was removed to the hill-sides and crowds of people stood upon the banks awaiting the result. The dam stood through the day and night and through the next day, and it was hoped that the calamity might be averted. All through the night and the next day the anxious watch continued. At about ten minutes before six, in the afternoon of Thursday, March 30th, a little stream of water broke out above the lower gate-house. The alarm was given; the dam was cleared of men and teams. The stream enlarged each second, earth and stones were thrown up, the bank of the dam caved in, the stone wall stood for a minute and then gave way, and the reservoir poured its contents into the channel below. The scene is described by many who witnessed it as grand beyond description. The water came rushing and roaring down the course of the brook, tearing out a gorge a hundred feet in width and carrying the solid masonry far down the stream. Those who were in Cherry Valley could hear the grating of the rocks ground together by the force of the waters. As it passed down the ravine its appearance was grandly beautiful. The water, nearly fifty feet in height, came surging, seething, rolling on, lashed into foam, a white feathery vapor rising above it. When it reached the street it tore away the bridge and roadway and then spread out over the meadow, converting the lower parts of the village into a sea, and then at Smith's dam was forced through the narrow passage. It passed through the centre of Mr. Olney's house, leaving the walls standing. The barn and carriage-house were separated and then floated out gracefully on the water, only to be wrecked when they reached the rocks below. Several tenement houses were destroyed. The flood tore away most of Smith's factory, annihilated Bottomly's mill and carried away the rear of the several factories along the stream and the dams; it wrenched away the boiler of Ashworth & Jones' mill and deposited it half a mile below, and swept away the engine and boiler of Smith's mill so that they were never found. At the corner of the Jamesville Road and Main Street it struck the bank, and became a whirlpool as it turned southerly to Jamesville, where it was divided. A part of the flood followed the stream, inflicting damage upon the dam and factory. The other part followed the Boston & Albany Railroad for nearly two miles, gullying out the track and destroying the double arch bridge. The scene after the flood was one of wild desolation, the fields and meadows being covered with boulders and the *débris*. The spot was visited by thousands of people during the next few days, some of them coming from a distance. The estimated number on one day was thirty thousand.

Histories.—Leicester is unusually rich in annalists and historians. First among these is Governor Emory Washburn, to whose "Topographical and Historical Sketches of the Town of Leicester," published June, 1826, in the *Worcester Magazine and Historical Journal*, his "Brief Sketch of the History of Leicester Academy," published in 1855, his several addresses on anniversary occasions, and his "History of Leicester," published in 1860, the town is indebted for the collection and preservation of the facts of its early history. In the preparation of his history he was

Edward Flint

more largely than is generally known indebted to Jos. A. Denny, Esq., who gathered much of this information, and whose "Reminiscences of Leicester," published about fourteen years ago in the *Worcester Spy*, whose history of the schools, published in the School Report of 1849, whose various compilations from the Town Records, whose identification of locations, and whose personal journal, covering a period of eighteen years, including that of the Civil War, entitle him to the distinction of the annalist of Leicester. Miss Harriet E. Henshaw in 1776 published "Reminiscences of Colonel William Henshaw," which are rich in interesting and curious information relating to the Revolutionary period. Not only local, but other historians are indebted to her rich stores of ancient manuscripts, including the Orderly Books of Colonel William Henshaw, Adjutant-General of the Provincial Army, containing the official records of the Revolutionary army during the first year of the war, letters of the Committee of Correspondence, and other documents of inestimable historical value. Draper's "History of Spencer" and Whitney's "History of Worcester County" are also sources from which light is also thrown upon the early history of the town. The academy has also had its historians. A brief but valuable sketch was published in 1829 in connection with Principal Preceptor Luther Wright's address. Rev. S. May, in the "Proceedings of the Worcester Society of Antiquity," 1882, has a paper on the academy. Governor Washburn's history, and the address of Hon. W. W. Rice at the centennial anniversary of the institution, are both of them the result of much careful research. The historical sermon of Rev. B. F. Cooley, at the fiftieth anniversary of Christ Church, Rochdale, and "The Religious History of the First Congregational Church in Leicester," by Rev. A. H. Coolidge, have also been published. To these sources of information is to be added the historical sermon of Rev. Hiram Estes, D.D., at the one hundred and fiftieth anniversary of the Baptist Church in Greenville. The manuscript journal of Ruth Henshaw, reaching back into the last century, gives an insight into the life of the early times, and serves to verify some of the facts and dates of history. The letters of Grace Denny, of England, published in the "Genealogy of the Denny Family," prepared by C. C. Denny, Esq., are of special interest, referring as they do to the situation of the place soon after its settlement.

CELEBRATIONS.—In addition to celebrations in town which have been noticed in other connections, are others of an interesting character. The four towns, Leicester, Spencer, Paxton and Auburn, which wholly or in part were embraced in the original township, united in celebration on the 4th of July, 1849, in the grove, on Grove Street. Hon. Samuel Draper, of Spencer, presided. More than two thousand persons were present. The citizens of Spencer, preceded by the fire company, were escorted into the village, under the direction of Henry A. Denny as chief marshal, by the Leicester Fire Company, with the Northbridge Band. Four Revolutionary soldiers were honored guests. The address was by Hon. Emory Washburn, and is a valuable contribution to the Revolutionary history of the towns. Rev. Dr. Nelson was chaplain. Among the after-dinner addresses was that of Hon. Joseph Sprague, ex-mayor of Brooklyn, N. Y.

The 4th of July, 1871, was chosen as the date of celebrating the one hundred and fiftieth anniversary of the organization of the town by the several towns of the original township. The exercises were in a large tent on the Common. Rev. S. May, in behalf of the Committee of Arrangements, introduced the exercises of the morning, which consisted of music by the Worcester Band, singing, prayer by the chaplain, Rev. A. H. Coolidge, and a learned and eloquent historical address by Governor Emory Washburn. About eight hundred sons and daughters of Leicester sat down at the tables, Capt. J. D. Cogswell as marshal having charge of the arrangements. Jos. A. Denny, Esq., as president of the day, introduced the after-dinner exercises, Dr. J. N. Murdock acting as toast-master. Addresses were made by Hon. Waldo Flint, Abraham Firth, Esq., Hon. Edward Earle, Gen. E. T. Jones, Hon. N. Sargent and others.

In 1876 the towns again united and celebrated the centennial of the Declaration of Independence. The morning exercises were in the town hall, and Rev. S. May was president of the day. John E. Russell, Esq., delivered an eloquent address. The singing was under the direction of Mr. Thomas S. Livermore, and the music by the Leicester Cornet Band. The company then moved in procession, under Capt. J. D. Cogswell as marshal, to Sargent's Grove, where after-dinner addresses were made by the several clergymen, teachers of the academy and others.

The principal addresses on all these occasions have been published, and are invaluable sources of important and interesting local and general history.

BIOGRAPHICAL.

DR. EDWARD FLINT.[1]

Dr. Edward Flint belonged to a family of physicians. His grandfather, Dr. Edward Flint, of Shrewsbury, was the physician of that town during a long life. His father, Dr. Austin Flint, born in Shrewsbury, established himself in Leicester in 1783, at the close of the War of the Revolution, in which he had been an army surgeon, lived here a long and honored life, professionally eminent, and died at over ninety years of age. His elder brother was Dr. Joseph H.

[1]By Rev. Samuel May.

Flint, of Northampton and Springfield, whose son Austin became distinguished in New York, both in practice and as a medical author; and who left a son, also named Austin, as successor to his labors and honors. Dr. John Flint, of Boston, was a cousin, and studied medicine with him. And his only son, John Sydenham Flint, was a physician for some forty years in Roxbury, held in the highest esteem there, and died in April, 1887.

Dr. Edward Flint, second son of Dr. Austin and Elizabeth (Henshaw) Flint, of Leicester, was born November 7, 1789. He studied medicine with his father, and established himself in its practice in Leicester in 1811. Six years later he was married to Harriet, eldest daughter of Elihu Emerson, Esq., of Norwich, Vt. Soon after marriage he built the house in the centre of the town which he occupied during life, and where his widow now resides in her ninety-first year. Dr. Flint died May 30, 1880, being, like his father, a few months over ninety years of age. Three children was born to them—Charlotte Emerson, Sally, and John Sydenham. The daughters were very excellent and attractive young women, but they both died in early womanhood. Their loss severely tried Dr. Flint's faith and firmness; but no murmur escaped him. Seven years after his own death, his only son died, as already stated, and the mother is now left childless, but is ministered to, in her age and many infirmities, with unsurpassed devotedness.

Dr. Flint succeeded to his father's large practice, which extended beyond the town limits. He gave his life, in the strictest sense, to his profession, and to those who needed his services, making no discrimination among those who were able and those who were not able to pay him for that service. It was a life uneventful, but steadily laborious, and attended with frequent exposures. A physician has peculiar opportunity to render charitable service, and Dr. Flint had his full share of such experience; and as he had a great repugnance to pressing the collection of debts due him, it followed that an unusual amount of such indebtedness was never paid. A recent writer in a *Health Journal* says: "It is safe to say that but few physicians in general practice manage to collect more than one-half of their bills," and enlarges upon the wrong thus done. Cases of destitution will always occur, and our physicians may be safely trusted not to forget them; but it should cease to be thought allowable for others to use a doctor's time and services without compensation. Attempts, on various grounds, were made to introduce other physicians to the town, but the general respect and confidence of Leicester people were never withdrawn from Dr. Flint. Washburn, in his "History of Leicester," says of him: "The rank and position which Dr. Flint sustains in the community have been the natural result of the many years of honorable and successful pursuit of the profession of his choice."

He was a life-long friend of temperance. When his house was built—which was before the day of temperance societies—he induced the workmen to give up the customary strong drink, and he furnished them hot coffee in its place, which Mrs. Flint daily made for them. He never permitted wine or strong drinks to be placed on his table, nor offered to visitors, and never used them himself. He told the present writer that he had an early lesson on the subject, in seeing his father always pass the mug or glass untasted, as it went the rounds among the neighbors collected at some public place. His horses and his dogs were more than his servants: they were his friends and he was theirs. He had a quaint humor, with a somewhat rough manner, in both respects resembling his father. When a boy he one day brought from the post-office to his father a small packet; his father, on opening it, said, "Here, Ned, take off your jacket," which being done, the father rolled up the boy's sleeve, and with no further notice made an incision in his arm and inserted some vaccine matter, and thus, as he always claimed, he became, with little previous notice, the first subject of vaccination in the town of Leicester.

DEA. JOSHUA MURDOCK.[1]

The older readers of this history will be glad to recognize in the accompanying engraving the likeness of Dea. Joshua Murdock. He was the son of William and Achsah Murdock, and was born in Westminster, Mass., October 28, 1780. He served a regular apprenticeship as cabinet-maker to Artemas Woodward, of Medfield, Mass. He was united in marriage with Clarissa Hartshorn, of Medfield, June 3, 1806, and soon removed to West Boylston, and, with his brother Artemas, began the business of cabinet-making. In 1811 he came to Leicester and purchased the place still owned by the family. His cabinet-shop was east of the house. Here he carried on the business for many years, employing a number of hands. He was in every sense a master-workman. The products of his skill were at once thorough and elegant, and many highly valued and beautiful specimens are still retained in various families in the vicinity.

In 1833, and again in 1834, the town expressed its appreciation of him by electing him to the House of Representatives in the Legislature of the State. He was for many years treasurer of the First Parish, first elected when the affairs of the parish were managed by the town, through the selectmen. He was also trustee of the invested funds of the church and parish to the time of his death. He was made deacon of the church January 7, 1817, and retained the office through life. He was the first superintendent of the Sunday-school, and held that office, as nearly as can be ascertained, more than twenty-five years.

In April, 1812, he with his wife united with the First Congregational Church—the first persons to make

[1] By A. H. Coolidge.

Joshua Murdock

Jos. A. Denny

a public profession of faith after the settlement of Dr. Nelson, the month before. He possessed a singularly even and benign spirit, sweetened by genuine piety. He was always very modest and retiring, yet he cheerfully accepted the cares and responsibilities of his office in the church, and was always heard with interest and pleasure in the several meetings of the church. The writer remembers him with the deepest respect and tenderness as one of the truest, most helpful and sympathetic of his friends in the first years of his ministry.

He died suddenly, in his shop, December 30, 1859. A memorial sermon was preached by the junior pastor, January 8, 1860, from Prov. 20: 6—"Most men will proclaim every one his own goodness; but a faithful man who can find?"

JOSEPH A. DENNY, ESQ.[1]

Joseph Addison Denny was the grandson of Daniel Denny, who settled in Leicester in the spring of 1717. He was one of the twelve children of Joseph Denny. His mother, Phœbe Denny, was the daughter of Col. William Henshaw.

He was born May 13, 1804, and passed his early childhood in the house on Main Street now owned by the family of the late John Loring. His mother died when he was eleven years old. About two years later he left home and was a clerk in the store of H. G. Henshaw, Esq., in New Worcester, for two or three years. He then returned home, and attended school at Leicester Academy for several terms. About the year 1823 he was engaged as a clerk in the store of James & John A. Smith, in a building west of the Leicester Hotel. There he remained until 1826, when he commenced the manufacture of card-clothing, which he continued until 1857.

He was a diligent and intelligent student, and productions of his pen at this period, which are still preserved, indicate unusual thoughtfulness as well as literary taste. He early formed the determination of making his life a success in the truest sense. He even gave up the games and other amusements in which many of the young were absorbed, that he might secure his evenings for useful reading. When he reached the age of twenty-one years he wrote a series of resolutions for "future guidance." These resolutions are indicative of his early purpose, as well as of his later character. Among them are the resolutions to abstain from the use of "ardent spirits," gambling and profane language. The platform of business principles which he then adopted is worthy of the consideration of the young, and is given in his own words: "Resolved, That if frugality and application to business will ensure me a competency of wealth, I will never be poor. That, while I have my health, I will never spend faster than I earn, and on the contrary, while I have a sufficiency, I will never deny myself the conveniences of life for the purpose of hoarding up treasure. That, while I am prospered in business, I will never refuse charity, where I think it my duty to extend it. And should I ever accumulate property, may I have the satisfaction of reflecting that it was not obtained by oppressing the poor, unfair dealing or any other dishonorable means, and may a bountiful Providence prosper my undertakings."

In the year 1826 he entered the firm of Isaac Southgate & Co., which, as has already been stated, developed into that of Bisco & Denny. It was in the beginning a small enterprise. The pricking and tooth-forming machines were moved by hand, and the cards sent out to be set by women and children. The business increased gradually, and prospered so that by careful attention to its details he secured a competence.

He was also largely interested in the establishment of the Leicester Boot Company. He was a prominent director and valued adviser in the State Mutual Life Assurance, and the Merchants' and Farmers' Mutual Fire Insurance Companies in Worcester, from the date of their organization to the time of his death. He was a director and for a time the president of the Leicester Bank. He was assistant assessor in the Internal Revenue Department during and after the war. He served the town as selectman and School Committee, and from March, 1850, to the time of his death, in 1875, was town clerk. He was, in 1857, elected to the House of Representatives in the Legislature of the State. His services for the academy, to whose interest he was earnestly devoted, were invaluable. He was a trustee from August 20, 1834, and treasurer from May 11, 1853, till his death, in 1875. He gave to this institution his personal services, and contributed liberally to its funds; and it was through his influence that most of its present endowment was secured. With many of the former pupils of this institution the thought of Leicester Academy and Joseph A. Denny are inseparable. His portrait has a place with the founders and benefactors of the academy in Smith Hall. Mr. Denny was a man of literary tastes, and spent much time in reading, thus familiarizing himself with history and the best literature.

He at different times traveled in various parts of the country, and had a comprehensive appreciation alike of its resources and its need. He took special pains to familiarize himself with statute law. He wrote legal documents, and had charge of pecuniary trusts, and settled estates. He wrote many wills, and often, by wise suggestion, impressed upon men in the disposal of their property the importance of making liberal provision for their wives, a consideration which is too often found overlooked. Although never admitted to the bar, he was still a legal adviser, consulted by people of his own and neighboring towns. This service was to a large extent gra-

[1] By Rev. A. H. Coolidge.

tuitous. He was pre-eminently the friend and helper of widows and orphans, and of the poor. Men and women of all classes and different nationalities resorted to him for counsel and help. They came to him with their quarrels, their business perplexities, their financial troubles, their plans and enterprises and their sorrows; and found in him an attentive listener, a sound adviser, a generous helper and a sympathizing friend. He was, perhaps, more than any other person, familiar with the locations and history of Leicester and the lives of its former inhabitants; and to him, more largely than is generally known, Gov. Emory Washburn was indebted for the materials of his excellent history of the town. His manuscript notes, his "Reminiscences of Leicester," published in the *Worcester Spy*, and his journal which is a record of passing events, are of great historical value. He may be truthfully termed the annalist of Leicester.

In 1874 he made a tour of Europe, which was a source of great profit and enjoyment to so intelligent and appreciative an observer. He was especially interested in visiting the home of his ancestors and his relatives in England.

He united with the First Congregational Church in July, 1827, and through life was one of its devoted and helpful members and a constant attendant upon all its services. He was, for many years and at the time of his death, a teacher in the Sunday-school. He was interested in the great missionary enterprises, both home and foreign, and contributed liberally to them. He set apart at the beginning of each year a certain portion of his income for benevolent objects, and regarded one-tenth of a successful business man's profits as too little to be thus employed. He was interested in young men who were struggling for an education, and gave liberal aid to those who were preparing for the ministry. He had a large circle of friends, and was widely known. He married, April 30, 1829, Mary Davis, the daughter of Major Joel Davis, of Rutland, Mass., who survives him. They had two children,—Mary Elizabeth, the wife of Deacon Lyman D. Thurston, and Hon. Charles Addison Denny. He built the house in which he so long resided in 1837. He had all the qualities which made home and social life delightful. He was fond of children, and his conversation was instructive and entertaining. He died February 25, 1875, of pneumonia, after a few days' illness. It was said of him at his funeral, which was largely attended in the First Congregational Church: "He understood better than most men the truth that while men die, institutions and influences live, and was largely endowed with that rare, unselfish wisdom which qualifies one to build the foundations of the public welfare deep and enduring. The effects of this purpose, which, to a large extent, dictated the policy of his life, will be more fully understood and acknowledged in the future than they can be now, and his name will go down to posterity as one of the benefactors of the town."

He kept from January 1, 1857, to September, 1874, a personal journal, which is of great value as a record also of local and public events in one of the most eventful periods of our national history. A few days before his death he completed a transfer to this journal of the diary of his European travels, and formally concluded the series of entries with these significant words: "And here I will close this daily journal of my own private matters, which I have kept for almost eighteen years, intending it principally as a business memoranda. It has often been useful to me as a reference; but as I have fewer business transactions, and have just recorded the history of one of the most important transactions of my life—a voyage to Europe—I will here close my record, blessing God for his care and protection, not only during this voyage, but a long life, now reaching more than three-score years and ten."

DWIGHT BISCO.[1]

Dwight Bisco, who was for sixty years one of the leading citizens and business men of Leicester, was born in Spencer April 27, 1799, one of several sons of Jacob Bisco. Upon his father's farm he lived and worked until twenty-two years of age, when, with a silver dollar as his only money capital, he came to Leicester, and engaged in the employment of Cheney Hatch, one of the card-clothing manufacturers,—a business of which Leicester then had almost a monopoly. Bringing with him good character, intelligence, habits of industry and self-control, and not afraid of work, he steadily acquired skill in this intricate and difficult manufacture.

In 1826 he associated himself as partner with Isaac Southgate, Joshua Lamb, John Stone and Joseph A. Denny, another house in the same business. In 1843 Mr. Denny and he bought the interest of the other partners, and continued the business, under the name of Bisco & Denny, until Mr. Denny's death, in 1875. It was then passed on by Mr. Bisco into the hands of his sons and of Mr. Denny's only son, he continuing to occupy himself in the factory until February, 1882, when he entirely withdrew, being then in his eighty-third year.

In middle life he had invested the chief part of his savings in the Leicester Boot Company. It was unfortunate, and was brought to an end by the burning of the company's buildings and stock, September 25, 1860, inflicting on him a total loss of all he had paid in. With a quiet courage he applied himself again to business, as closely as in his youth, and was enabled to make good his loss, and to present to his eight children, at the Thanksgiving dinner-table, five hundred dollars each.

[1] By Rev. Samuel May.

Dwight Bisco

Hiram Knight

His marriage with Ruth Woodcock (daughter of John Woodcock, Sr., and sister of John, Josephus and Lucius, of the following generation), in 1826, founded a family life of great happiness and unity for more than fifty years. When they celebrated their golden wedding, January 8, 1876, "we saw them," said Rev. Mr. Coolidge, "standing together, a spectacle rarely witnessed, an unbroken family,"—parents, children and grandchildren,—a circle which death had then never entered. But in September of that year Mrs. Bisco died, with little warning; and Mr. Bisco suffered the severest loss which could possibly happen to him. He had become very deaf, and her loss was the more severe. Their children, who are all living, are Emily A., Charles D., George, John W., William, Henry, and Frederick A.; all married but William. Mr. Bisco died December 7, 1882.

He was repeatedly a selectman of the town; a director of the Leicester Bank eleven years; treasurer of the Pine Grove Cemetery Company forty years; treasurer of the Unitarian Congregational Society as long, and a deacon of that church. He was a member of the State Legislature in 1847 and '48. In a notice of him in the *Christian Register*, Mr. Abraham Firth wrote of "his marked faithfulness in all these relations, and in every sphere of life in which he moved. He was always found on the side of virtue, and of political and spiritual freedom. Brought up under the teaching of Calvinism, it never satisfied him."

One who was long in daily business association with him wrote, in the Worcester *Spy*, "he was known among his associates as an honest, upright man, of superior sense and judgment." His pastor, during his later years, wrote of him, "I have never known a truer man, nor one of greater strength of character." His first minister, at the funeral services, paid a warm tribute to his character and life. "No man in Leicester," said a fellow-citizen, "has a better record than Dwight Bisco." A memorial book of Mr. and Mrs. Bisco has been printed.

CAPTAIN HIRAM KNIGHT.[1]

Captain Hiram Knight was one of the successful business men of Leicester, who, beginning life without pecuniary advantages, have secured for themselves a handsome property. His father, Silas Knight, was a wheelwright, and in very moderate circumstances. He was a Revolutionary soldier and pensioner. He lived to the venerable age of eighty-five years and five months. His mother was seventy-six years and six months old at the time of her death. Her maiden name was Martha Goodnow.

Hiram Knight was born in Oakham, August 22, 1793. When about twenty-one years of age he came to Leicester for employment. He was married by Rev. John Nelson, D.D., April 28, 1818, to Olive Barnes. Her mother was Betsy, the daughter of William Green, who was born in Leicester in 1743, and was the son of William and Rebeckah Green. Their first home was on Main Street, in the house afterward occupied by the Leicester Boot Company. The next year he removed to the academy, of which he was steward from 1819 to 1822. In 1823 he purchased the old "Green Tavern," on the corner of Main and Paxton Streets. Here for about two years he resided, engaged during the time in the occupations of butchering, tavern-keeping and for a time was associated with Reuben Merriam in card-making and a store. In 1825 he became a member of the firm of James & John A. Smith & Co., who built and occupied the factory where the Wire Mill now stands; and also the brick factory above and the boarding-house. The history of this company, which was afterward the firm of Smith, Woodcock & Knight, and later of Woodcock, Knight & Co., is given elsewhere. Mr. and Mrs. Knight kept the boarding-houses for this firm till about the year 1832, when the family came back to the Green tavern. Mr. Knight was in the card business till 1867, when he transferred his interest to his sons. He, with John Woodcock and George Morse, was in partnership with James Smith & Co. at the formation of that house in Philadelphia in 1836, and retained his interest for a number of years.

The lower factory of his firm was to a considerable extent built under his supervision. He superintended the building of the Brick Factory and the boarding-house. He also had general charge of the building of the brick school-house on Pleasant Street. His own residence, on the site of the old tavern, and now occupied by his son Dexter, was erected in 1843.

Mr. Knight had agricultural tastes, and at one time had considerable land, which he cultivated and improved. He was an active member of the Worcester Agricultural Society.

He was one of the directors of the Leicester National Bank from 1850 to 1874. Between the years 1836 and 1844 he served the town in the various offices of moderator of town-meetings, selectman and assessor, etc. He was appointed justice of the peace by Governor Boutwell. He was one of the early members of the Second Congregational Society, Unitarian. In politics he was a Democrat, but reserved the right of independent thought and action. He was a member of the State Constitutional Convention in 1853. In early life he was somewhat active in military affairs, and was captain of the local military company.

Captain Knight was engaged in the manufacture of card-clothing in the period of the rapid development of that industry, when inventive genius was perfecting the wonderful machine for card-setting, of which a gentleman once said, after admiringly watching its almost human movements: "Why! it

[1] By Rev. A. H. Coolidge.

thinks!" He had not been trained to the business, but was a natural mechanic, inventive and ingenious; and though not forward in asserting his claims, made many valuable improvements in the machinery for card-making. According to the testimony of his partner, Mr. John Woodcock, he made the first card clothing set by machinery in Leicester.

Captain Knight was a man of sound judgment, self-reliant, and of strict business integrity. He gave close attention to his business and was successful. He was wise and cautious in his investments, and became one of the wealthy men of the town. For his success he was largely indebted to his wife. She was a woman of domestic tastes, and devoted herself untiringly and efficiently to the varied duties of the household, acting her part with true womanly fidelity and fortitude in all the varied experiences of the family, in prosperity and in trial and sorrow. She was married at the age of seventeen years.

They had eleven children, seven of whom died young; the three older at the ages of nine, ten and twelve years respectively. Their daughter Susan died in 1856, at the age of twenty-five. She is remembered as an excellent scholar, retiring in manners, and loved by all her associates. Three sons survive—Dexter, James J. and George M.

Captain Knight died May 6, 1875, at the age of eighty-one years and eight months. His wife survived him about four years, and died April 19, 1879, at the age of seventy-eight years.

REV. SAMUEL MAY.

Rev. Samuel May, the first minister of the Second Congregational (Unitarian) Church and Society, and who continued such for twelve years, was born in Boston, April 11, 1810, oldest son of Samuel and Mary (Goddard) May. Four years a pupil of Deacon Samuel Greele, afterwards for three years at the Public Latin School of Boston, and one year at the Round Hill School, Northampton, he was graduated at Harvard College in 1829.

After spending nearly a year in study with his cousin, Rev. Samuel J. May, at Brooklyn, Ct., he entered the Cambridge Divinity School in the fall of 1830, and was graduated there in 1833. The society at Leicester was then young, having been incorporated in April, 1833, and holding its meetings in the old Town Hall. Mr. May spent six or seven weeks in their service that autumn, then left to fulfill some other engagements, and returned in March, 1834, to begin a second engagement. That spring he received and accepted the society's call to be their minister, and was ordained as such August 13th, the services being held in the society's new church, which had been dedicated the evening previous, when the late Rev. Dr. James Walker, then of Charlestown, preached the very impressive discourse, afterwards so widely circulated by the American Unitarian Association, entitled, "Faith, Regeneration, Atonement," showing these to be successive periods and steps of the religious life.

Mr. May's ministry was one of fair success. Relations of good will and friendship were formed, which continued far beyond the term of his ministerial connection, and to the close of life of his parishioners in nearly every instance. Entire harmony of feeling existed between them, except with regard to one question, viz.: that of slavery in the United States, and whether a Christian minister should or should not take part in the effort to bring that condition of slavery to an end. Mr. May regarding it his duty to take such part, and to seek to induce his hearers to do the same, several persons were so much dissatisfied as to withdraw themselves from the society. One or more others who remained being similarly dissatisfied, Mr. May decided to resign his office rather than be a cause of division, and the connection was closed in the summer of 1846.

Mr. May has continued to have his residence at Leicester to the present time. In 1835 he was married to Sarah Russell, third daughter of Nathaniel P. Russell, of Boston. Their children, all born in Leicester, and still living, are Adeline, Edward, Joseph Russell, and Elizabeth Goddard. The daughters reside with their parents. Edward is a pay director of the United States Navy, and Joseph R. is in commercial life in Boston. Edward married, in 1871, Mary Mignot Blodgett, of Boston. They have four children.

Soon after resigning his position at Leicester, Mr. May was minister of the First Ecclesiastical Society, Brooklyn, Ct., until June, 1847. Then he became the general agent of the Massachusetts Anti-slavery Society. He held this place, with the exception of about a year and a half of impaired health, for eighteen years, and until 1865, the time when, by amendment of the Constitution, slavery in the United States ceased to exist. He was also, for several years, corresponding secretary of the American Anti-slavery Society.

From 1841 to 1865 Mr. May refused to take any political action under the United States Constitution because of its recognition and support of slavery—refused, that is, to vote for officers who must take an oath to support the Constitution. When the Constitution was amended he resumed the exercise of the citizen's duties. At the outbreak of the War of the Rebellion, in 1861, he gave such aid as he could to the cause of the Union, and to its armies in the field, speaking and acting publicly.

He early took a decided stand against the use of intoxicating drinks; was a member of town, county and State societies formed to promote total abstinence from their use; and joined with others to establish the Leicester Hotel as a house in which no such drinks should be sold.

Mr. May served upon the town School Committee, at two different periods, for twenty-one years. He was

Pliny Earle.

chosen one of the directors of the town's public library at its establishment, in 1861, and still continues as such, having served nearly twenty-eight years. In 1874 he was elected a trustee of Leicester Academy. In 1875 he was a member of the State Legislature, representing, with Mr. Pliny Litchfield, of Southbridge, the district formed of the towns of Leicester, Spencer, Charlton, Southbridge and Auburn. As House chairman of the Committee on Federal Relations, he took an active part in the State's commemoration of the one hundredth anniversaries of the battles of Lexington, Concord and Bunker Hill. At the town's celebration of the centennial of American Independence, July 4, 1876, Mr. May was chairman of the town's committee. He edited the pamphlet which records in full that day's doings in Leicester.

He is a member of the American Social Science Association, of the Worcester Society of Antiquity, and of the Bostonian Society. He was chosen secretary of the Class of 1829, Harvard College, at the time of graduating, and has held the office to the present time. He aided in the compilation of the large pamphlet which records the one hundredth anniversary of the foundation of Leicester Academy, and the proceedings of that occasion, September 4, 1884.

PLINY EARLE, A.M., M.D.[1]

Dr. Pliny Earle was the fourth son of Pliny Earle, the great-grandson of Ralph Earle, who came to Leicester in 1717. His mother was the daughter of William Buffum, of Smithfield, R. I. He was born December 31, 1809, and his childhood was passed in the home of his father at Mulberry Grove. He was a pupil in Leicester Academy, and afterwards in the Friends' School, in Providence, R. I., where he was a teacher in the winter of 1828–29, and also from 1831 to 1835, when he was made principal.

He pursued the study of medicine, first with Dr. Usher Parsons, of Providence, and afterwards at the University of Pennsylvania, from which he was graduated with the degree of M.D. in 1837. The next two years were spent in Europe; one in the medical school and the hospitals of Paris, and the other in a tour of professional and general observation, "in which he visited various institutions for the insane, from England to Turkey." The results of these observations were published in 1840, in a pamphlet entitled "A Visit to Thirteen Asylums for the Insane in Europe." He had an office in Philadelphia for a short time, but in the spring of 1840 became resident physician of the Friends' Asylum for the Insane, near Frankford, now a part of Philadelphia. In 1844 he was appointed medical superintendent of the Bloomingdale Asylum for the Insane, in New York City. In 1849 he made another tour in Europe, visiting thirty-four institutions for the insane in England, Belgium, France and the Germanic countries, and, upon his return, published his book upon "Institutions for the Insane in Prussia, Austria, and Germany." In 1853 he was elected a visiting physician of the New York City Lunatic Asylum, on Blackwell's Island.

In 1855 he returned to Leicester for rest and the confirmation of his health, and passed several years on the homestead of his grandfather, Robert Earle near Mulberry Grove (now called "Earle Ridge") During this time, however, he spent the winters of 1862–63 and 1863–64 in the care of the insane soldiers of the army and navy, at the Government Hospital for the Insane near Washington, D. C., of which his former pupil, Dr. Charles H. Nichols, was superintendent. He also wrote for the medical periodicals, and acted as an expert in the trials of several important cases involving the question of insanity before the legal tribunals of Massachusetts and the adjoining States.

It was in these years of comparative rest that he rendered the town essential service as a member of the School Committee. In this relation the writer, together with Dr. J. N. Murdock, was associated with him. In this period the public schools were subjected to a thorough reorganization, and new and more practical methods of instruction were introduced. In these services Dr. Earle exhibited the same executive force, the same mastery of details, the same practical wisdom, the same contempt of shams and ability to puncture them, and the same personal integrity and demand for strict uprightness and fidelity in those who were under his supervision, which characterized his administration of the institution in Northampton, of which he was afterward the head. In one respect he was in advance of the time. He came early to appreciate the importance of objective illustration, and the practical application of school instruction. He required pupils to use books only as instructors, and to know *things* and not mere *words*.

Without seeking the position, he was appointed superintendent of the State Lunatic Hospital at Northampton, Mass., July 2, 1864, and held the office twenty-one years and three months, resigning it October 1, 1885. He made that hospital in many respects a model institution for the insane; and its trustees, in the resolutions passed at the time of their acceptance of his resignation, expressed as follows not only their own conviction, but the general judgment with reference to the value of his administration: "In its management he has combined the highest professional skill and acquirement with rare executive ability. By his patient attention to details, by his wisdom and firmness, his absolute fidelity to duty and devotion to the interests of the hospital, he has rendered invaluable service to the institution, and to the community which it serves." They also express the hope that "he will continue to make his home in the institution,

[1] By Rev. A. H. Coolidge.

that they may continue to profit by his counsels; and they will provide that his rooms shall always be open and ready for his use." This offer Mr. Earle accepted, although his summers have been spent at Mulberry Grove.

The Northampton Hospital had been erected in opposition to a widely prevalent opinion that it was not, and never could be, needed,—an opinion which delayed its construction, made the obtaining of appropriations very difficult, and finally compelled the trustees to put it in operation in a very incomplete condition, internally. The Civil War had tended to restrict the price of board for public patients to a very low limit, and in 1864, when Dr. Earle took charge of it, it had never paid its current expenses. He immediately addressed himself to the task of making it not only a first-class curative institution, but a self-supporting one as well. He purchased supplies at wholesale and in open market. He reorganized and reduced to a very complete system all the departments —domestic, economical, financial and medical—with checks and counter-checks for the detection of loss, or of waste by carelessness, as well as for the exposure of unfaithfulness in the discharge of duty toward the patients, or in other respects. The so-called "moral treatment" of the patients was amplified, made more diversified, and extended over a greater portion of the year than in any other American hospital.

The pecuniary results of this system were the payment of current expenses in the second year, and, during the whole period of Dr. Earle's service, the purchase of land at a cost of over twenty-five thousand dollars; the payment for all ordinary repairs, and over one hundred and seventy-three thousand dollars for buildings and other improvements, and an increase in cash assets and provisions and supplies of over forty-three thousand dollars, all of which became, of course, the property of the State, without any assistance from the State. The results as productive of an improved curative institution, being less tangible, cannot well be illustrated, but, as reflected in current public opinion, they were equally successful.

The importance of occupation for the insane was early recognized by Dr. Earle, and it has nowhere in New England been practically applied to a greater extent than at Northampton. As early as 1870 it was estimated that not less than two-thirds of the manual labor necessary to the running of the hospital was performed by patients.

Believing that a large part of the excessive cost of such hospitals as that at Danvers adds nothing to the curative capability of the institutions, Dr. Earle condemned such expenditure as unwise political economy, ostentatious charity and gross injustice to the payer of taxes.

Dr. Earle has been instrumental in introducing important changes in the treatment of the insane. In 1845 he established a school for the patients in the men's department of the Bloomingdale Asylum, and this was continued for two years. As early as 1840, while in the Frankford Asylum, he gave illustrated lectures on physics to the inmates. "This was the first known attempt to address an audience of the insane in any discourse other than a sermon, and has led to that system of entertainments for the patients now considered indispensable in a first-class hospital." At Northampton he gave a great variety of lectures, upon miscellaneous subjects. One course of six lectures was upon diseases of the brain, which are accompanied with mental disorder. The average number of patients who attended them was two hundred and fifty-six. "This is the first time," he says in his annual report, "that an audience of insane persons ever listened to a discourse on their own malady." His observation of the effect on the audience was not unlike that of other preachers. If the listeners were slow to take the application to themselves, they were quite ready to appropriate it "to their neighbors." He also secured lectures and entertainments from other sources, and provided amusements in which the inmates participated.

Dr. Earle is the author of many papers upon insanity and other subjects, which have been published in the *Journal of Insanity*, the *American Journal of the Medical Sciences*, etc. Some of these have been issued in pamphlet form. He anticipated by many years the valuable treatise of Dr. B. Jay Jeffries, in a paper on "The Inability to Distinguish Colors." His twenty-two reports of the Northampton Hospital are classics in the literature of mental disease. By a combination of causes the public, so far as they knew or cared about the subject, had come to the belief that from seventy-five to ninety per cent. of the insane can be cured at the hospital. Dr. Earle became convinced of the erroneousness of this belief, and was the first hospital superintendent who combated it. His researches upon the subject extended over a series of years, were embodied in his annual reports, and at length in 1887 collected and published by the J. B. Lippincott Company, in a book entitled "The Curability of Insanity."

The doctor showed that one cause of the false opinion in regard to curability was the reporting of repeated recoveries of the same person, in paroxysmal insanity. One patient was reported cured six times in one year, another seven times, a third sixteen times in three years, and a fourth forty-six times in the course of her life, and she finally died a raving maniac in one of the hospitals. Judging from the results of the doctor's researches, not one-third of the persons admitted to the Massachusetts insane hospitals have been permanently cured.

Of his work on The Curability of Insanity a reviewer writes: "This book may mark an epoch in the literature of insanity, since it has changed the whole front of that literature, and set in motion investigating forces which will carry out its main doc-

Joshua Murdock

trine into many useful details, upon which the veteran author has not dwelt."

He wrote the article on insanity in the United States Census of 1860, and about ninety articles of reviews and bibligraphical notices of insane hospital reports and other publications on mental disorders, which appeared in the *American Journal of Medical Science* between the years 1841 and 1870.

In a third visit to Europe, in 1871, he visited forty-six institutions for the insane in Ireland, Austria, Italy and intervening countries. His several foreign tours gave him opportunity to form the acquaintance and enjoy the hospitality of many professional, philanthropic and literary people; he was well acquainted with Elizabeth Frye, knew the poet, Samuel Rogers, and, at their own homes and tables, met socially the Howitts and Charles Dickens. He also cherishes pleasant memories of American missionaries in the Levant fifty years ago; of Rev. Jonas King and other missionaries in Athens; Cephas Pasco, at Patrass; Simeon Calhoun and David Temple, of Smyrna; Wm. Goodell, Rev. Mr. Shauffler and Henry A. Homes, at Constantinople. He received kind attentions from all of them, and the home hospitality of several.

Dr. Earle was one of the original members and founders of the American Medical Association, the Association of Medical Superintendents of American Institutions for the Insane, the New York Academy of Medicine, and the New England Psychological Society, of which last-mentioned association he was the first president. He was also president, in the official year 1884–85, of the Association of Superintendents. Besides holding a membership of various medical societies, he is a member of the American Philosophical Society; fellow of the New York College of Physicians and Surgeons; corresponding member of the New York Medico-Legal Society and the Medical Society of Athens, Greece, and honorary member of the British Medico-Psychological Association. In 1853 he delivered an adjunct course of lectures on "Mental Diseases" at the College of Physicians and Surgeons in New York City, and in 1863 he was appointed Professor of Materia Medica and Psychologic Medicine in the Berkshire Medical Institute at Pittsfield, Mass. Insanity had never before been included among the required subjects of instruction in any full professorship at any one of the American medical schools. After the delivery of one course of lectures the doctor resigned his professorship, as he had been called to the superintendency of the Northampton Hospital.

In his specialty Dr. Earle is recognized as an authority. "He was one of the medical experts summoned to the trial of Charles J. Guiteau, for the murder of President Garfield. After an attendance of one week his health gave way, and he was obliged to leave; but he approved, and still approves, the verdict which held the prisoner responsible for the homicide."

In 1888 he published a large volume on the genealogy of the Earle family, a work of great labor, and a model of its class. From this book many of the dates and material facts of this biography are taken. Dr. Earle still holds his birthright membership in the Society of Friends.

Dr. Earle's generous and valuable gift to the academy in which he pursued his early studies has been elsewhere noticed. He has never wavered in his attachment to Leicester, and its people claim him as one of her honored sons. It is their hope that the day may yet be long deferred when it will be suitable to pronounce his eulogy, and give full expression to the general respect and regard in which he is held in his native town.

JOSHUA MURDOCK.[1]

Joshua Murdock, the principal founder of the extensive card-clothing establishment of J. & J. Murdock, was the son of Deacon Joshua Murdock. He was born in Leicester, October 3, 1815; educated in the town schools, in Leicester Academy and Amherst Academy. At the age of sixteen years he engaged himself to the firm of Smith, Woodcock & Knight, serving a regular apprenticeship of nearly five years, and remaining with them till 1838, when he entered the employ of James Smith & Co., of Philadelphia. In 1840 he returned to Leicester and commenced the card-clothing business with Samuel Southgate, Jr. As has already been stated, after the retirement of Mr. Southgate in 1844, Mr. Murdock continued in business alone till 1848, when his brother Joseph, who had been engaged in trade at the South, returned and associated himself with him under the firm-name of J. & J. Murdock. He lived to see the gradual growth of the enterprise from the small beginning and to witness and enjoy its great prosperity. Mr. Murdock was for several years a selectman of the town, also a director of the National Bank and a trustee of the Savings Bank. Under the district system he was for many years the prudential committee of the centre schools. He discharged the duties of this office with exceptional wisdom and efficiency, and to him the marked excellence and improvement of the village schools at that period are largely due. He united with the First Congregational Church in Philadelphia in 1840 and removed his relation to the First Church in Leicester in 1842. He was always interested in the welfare of the church and society, and was a liberal contributor for the support of its ordinances. He was wise and cautious in judgment, and was identified with all the public enterprises of the place. He was so extremely modest and retiring, he shrank so instinctively from all obtrusion upon the public, and from the expression of his views, and especially his feelings, that he was fully known only to the few who were placed in intimate relations with him. He was in-

[1] By Rev. A. H. Coolidge.

telligent, sound in judgment, a man of deep and kindly feelings and positive decision of character, but always reticent.

Mr. Murdock was first married in Philadelphia, by Rev. Albert Barnes, D.D., June 16, 1842, to Angelina Maull. He was married by Rev. John Nelson, D.D., to his second wife, Julia Trask, the daughter of Samuel Hurd, of Leicester, January 10, 1849. Their only child, Caroline, is the wife of Alexander De Witt, of Worcester.

EDWARD SARGENT.[1]

Jonathan Sargent, from whom the Sargents in town descend, came to Leicester as early as the year 1728 from Malden, Mass. Among his descendants have been many men of more than ordinary standing and influence. To some of these we have already referred.

Col. Joseph D. Sargent, the father of Edward Sargent, was one of the most enterprising and successful business men in the town, and one of its most public-spirited and highly honored citizens. His three sons —Jos. Bradford, George H. and Edward Sargent— have been associated in extensive business interests in Leicester and elsewhere.

Edward Sargent, the subject of this sketch, was born in Leicester, March 25, 1832. He was the son of Joseph D. and Mindwell (Jones) Sargent. He received his education in the Leicester schools and the Academy. He, with his brother Joseph B., as has been before stated, began the manufacture of hand-cards, at the "Brick Factory," on the 1st of May, 1854. On the first day of the year 1859 they received their brother, George H., into the firm, and at the same time organized the Sargent Hardware Commission House in New York City. Mr. Sargent was connected with this company through life. They built extensive works for the manufacture of hardware in New Haven, and have become the largest hardware concern in the country. While the company were manufacturing cards in Worcester, Mr. Sargent spent several winters there. Aside from this he passed his life in Leicester, and was one of its wealthy and valued citizens. He was a selectman of the town. He was interested in everything that related to the welfare of the place, and contributed liberally both money and personal supervision to all public improvements. He was at different times nominated as a candidate for the State Legislature, and, though not belonging to the winning party, he had the habit of running invariably beyond his ticket, in his own town, in which he was a general favorite. In the time of the Civil War he was an ardent patriot, and freely contributed to all its demands.

In 1864 Mr. Sargent completed the building of his elegant residence, opposite the attractive sheet of water on what was originally the "Town Meadow," where the beavers built their houses and dams, and through which ran "Rawson Brook," but which has long been called, after his name, "Sargent's Pond." This house is now the home of his son, J. B. Sargent. At the same time Mr. Sargent built his handsome stable for his horses. He was a good horseman, and, especially in the earlier years of his life, very fond of the horse and of driving. He regarded time as too valuable to be wasted in making distances on the road.

He was married, February 9, 1858, by Rev. A. H. Coolidge, to Adelaide Sophia, the daughter of Austin F. and Sophia (Hatch) Conklin. She was a woman of amiable and cheerful spirit and superior intelligence and worth. After twenty-five years of married life she died on the 11th day of February, 1881. They had three children,—Joseph Bradford, Winthrop (who died in childhood) and Harry E.

Mr. Sargent was much affected by the death of his wife, to whom he was devotedly attached, and survived her less than two years. He died January 3, 1883.

[1] By Rev. A. H. Coolidge.

BILLINGS MANN.[2]

The village of Mannville received its name from Mr. Billings Mann, to whom it is largely indebted. He, with Mr. Albert Marshall, carried on the manufacture of woolen cloth, in the first of the series of factories on Kettle Brook, on the corner of Earle and Mannville Streets. Around this mill there has gradually grown the little village that bears his name.

Mr. Marshall, a worthy and highly-esteemed citizen of the town, is still living, at an advanced age.

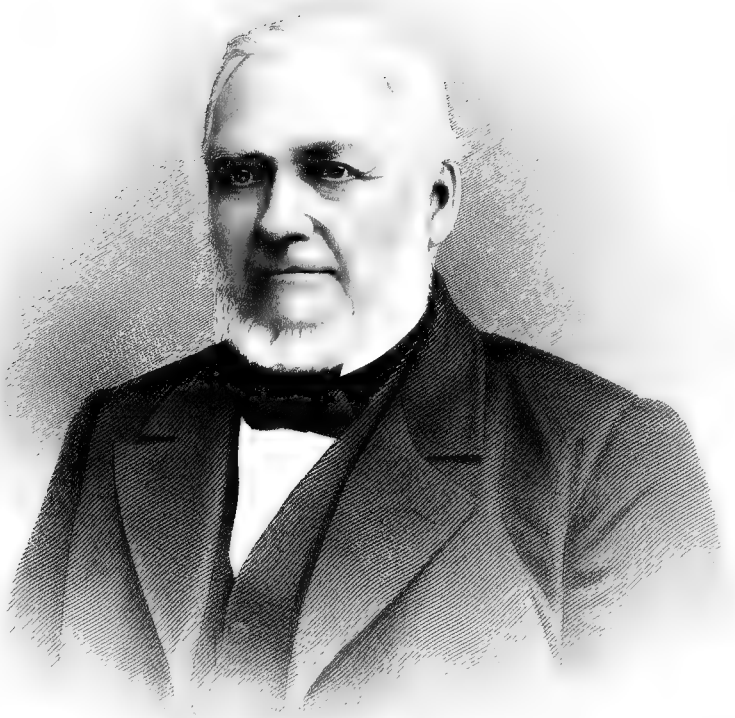
Mr. Mann was born in Worcester in 1797. He was the son of Joseph and Mehitable (Billings) Mann. His father was a clothier, and he worked with him dressing cloth. He thus became familiar with the details of his subsequent business. His education was that of the common school. On the 21st of July, 1822, he married Jemima, the daughter of Eliot and Jemima Wight, of Bellingham, Mass., by whom he had one daughter, who was married to Maj. Theron E. Hall. The same year, at the age of twenty-five, he began the manufacture of woolen cloth in Fitchburg. In 1828 he removed from Fitchburg to Worcester, and engaged in manufacturing with Mr. Gunn. In 1837 he was in the business in West Rutland. The next year, 1838, he first came to Leicester, and, as has been elsewhere stated, was associated with Mr. Amos Earle in the manufacture of satinets. In 1841 he associated himself with his brother-in law, Mr. Albert Marshall, in the same business, in Holden, as the firm of Mann & Marshall. Here he remained till 1853, when, with Mr. Marshall, he came to Leicester. They purchased the mill property and commenced the manufacture of satinets, as elsewhere stated.

Mr. Mann's home, to the time of his death, was on the corner of Earle and Mulberry Streets, the place which Ralph Earle had occupied in 1717.

[2] By Rev. A. H. Coolidge.

E. Sargent

Billings Mann



Alonzo White

His first wife died July 21, 1822, and on the 21st of July, 1828, he married Harriet L., the daughter of Josiah Daniel, of Dedham, by whom he had seven daughters and three sons, two of whom, George and Billings, are successors in the business. Mrs. Mann was a woman of rare excellence and beauty of character. She presided over her large household with queenly dignity and grace, and of her, with full truth, it could be said, "Her children rise up and call her blessed." She died February 20, 1878. Her illness was protracted and her sufferings intense, but she endured them with a truly Christian spirit of resignation and cheerfulness.

For twenty-two years Mann & Marshall carried on a prosperous business, but after the "Boston fire," in which they were heavy losers, they were forced to abandon the enterprise, which they did in 1878.

Mr. Mann was a business man of strict integrity, and the affairs of the company, in prosperity and adversity alike, were conducted on the highest principles of business honor. He was genial and kind, and his home at Mulberry Grove was one of generous hospitality. He died December 2, 1879, and his funeral at the First Congregational Church was largely attended. He was a member of the order of Knights Templar, and he was buried with Masonic honors.

ALONZO WHITE.[1]

Alonzo White was born in Almond, Allegany County, N. Y., May 6, 1808. His father was a native of Spencer, Mass., and had emigrated to New York three months before. This was then "The West." Almond had all the characteristics of a new country. There were no school-houses, no church buildings, and few of the conveniences and comforts of older settled communities. The girls of the family rode on horse-back thirty miles to purchase their gowns; and the parish of the Presbyterian minister extended from Rochester to the Pennsylvania line.

Mr. White was born, and lived when a boy, in a log-house. He worked upon the farm until he was twenty years of age. He then determined to seek his fortune elsewhere, and first went on foot to Danville, twenty miles distant, where he earned the money for his proposed journey by carting wood, spending his extra time in making brooms. In the fall of 1828 he came to Spencer, where his uncle resided, and worked on the farm. In February of the next year he came to Leicester, and commenced his apprenticeship as a card-maker with Reuben Merriam & Co. There was then no card-setting machine in the establishment, although the newly-invented machine was coming gradually into use. The holes and the teeth were made by machines and the teeth set by hand. The next year card-setting machines made by Mr. Merriam were introduced.

After remaining with Mr. Merriam a year, Mr. White was engaged at one hundred dollars per year by Colonel Joseph D. Sargent, who was then making cards on the Auburn Road, in Cherry Valley. The machines were moved by dog-power. Upon Mr. Sargent's removal to the Brick Factory, Mr. White came with him, and was in his employ seven years. In 1836 he, with his partners, bought out Colonel Sargent, and commenced business as the firm of Lamb & White. Colonel Sargent highly valued the services of Mr. White, and expressed his appreciation in a substantial manner. He expressed his confidence in him at this time by furnishing him the capital for the new enterprise. Mr. White's subsequent business career is given in the notice of the firm of White & Denny, and White & Son.

Mr. White has served the town in the offices of selectman, assessor, etc. He was the contractor for the new town-house. For a short time he was a director of the bank. He united with the First Congregational Church in September, 1831.

In 1834, April 10th, he married Elizabeth Lincoln, the daughter of Aden Davis, of Oakham, Mass., by whom he has had six children, four of whom, two sons and two daughters, are living. He has been to them a generous parent, and to the community and the church a free and generous helper.

He built his house on the corner of Main and Grove Streets, in 1848. Here he, with his wife, with whom he has been united for almost fifty-five years, still reside, in the enjoyment of the fruits of their industry and enterprise, and the society of their friends. He has the satisfaction of seeing his children and his grandchildren all settled in good homes of their own in Leicester.

SALEM LIVERMORE.[2]

John Livermore, ancestor of all the Livermores probably in the United States, embarked at Ipswich, Old England, for New England, in April, 1634, then twenty-eight years old, in the ship "Francis," John Cutting master. He was admitted freeman of the Massachusetts Colony May 6, 1635. On the list of freemen his name was written Leathermore, and in other old documents and records sometimes Lethermore and Lithermore. He was a potter by trade. He was many years selectman, and filled other offices of trust and honor in Watertown, where he first settled and last resided, he being, for about eleven years, from 1639 to 1650, a resident of New Haven, Conn., after which he returned to Watertown, Mass., where he died, April 14, 1684, aged seventy-eight, and his wife, Grace, died there in June, 1691. He was probably son of Peter and Marabella (Wysback) Livermore, of Little Thurloe, Suffolk County, England, about seven miles north-

[1] By Rev. A. H. Coolidge.

[2] By Caleb A. Wall.

west of Clare. On his removal from Watertown to Connecticut he was made a freeman of that colony, October 29, 1640, and he sold out his estate in New Haven May 7, 1650, and went back to Watertown. Four of his nine children—Samuel[2], Daniel[2] and two daughters—were baptized in New Haven, and his oldest child, Hannah[2], who married John Coolidge, Jr., was born in England in 1633, the others in America. His four h child, and oldest son, John[2] Livermore, Jr., born in 1640, settled on an estate of fifty-two acres, called the "Cowpen Farm," in Weston, near the border of Sudbury, which estate was given him by the father.

This John[2] Livermore, Jr., who was a lieutenant in the military, had in Weston, by his first wife, Hannah, who was mother of all his children, five sons and four daughters, born between 1668 and 1690, of whom the fifth child and third son was Daniel[3] Livermore, born in Weston June 8, 1677, ensign, an original proprietor and settler in Leicester before 1720, on lot No. 29, which included what has since been called Livermore Hill. This Daniel[3] Livermore died March 26, 1726, aged forty-nine, and by his wife, Mehitabel, afterwards wife of John Parmenter, of Sudbury, had five sons and three daughters, born between 1707 and 1726, as follows:

1. Daniel[4], Jr., born in Weston June 16, 1707, by wife, Mary, had in Weston three sons and three daughters, born between 1734 and 1748; 2. Jonas[4] born in Weston May 13, 1710, married, October, 1735, Elizabeth Rice, of Sudbury, and settled near the foot of Livermore Hill, in Leicester, on the east side of the road running north and south through his father's lot, No. 29, where Jonas[4] died in 1773, and his wife died in 1790—parents, in Leicester, of five sons and three daughters; 3. Mehitabel[4], born March 13, 1713, married, May 14, 1736, Eliakim Rice, an early settler in Worcester, son of Elisha Rice, who was brother of Jonas, Gershom, James, Ephraim, Thomas and Josiah Rice, original proprietors and settlers in Worcester (see Caleb A. Wall's "Reminiscences of Worcester," pages 40 to 43); 4. Sarah[4], born March 7, 1717; 5. Isaac[4], born May 11, 1720, resided on the west side of the road, opposite his brother Jonas, near the foot of Livermore Hill, where, by his wife, Dorothy, he had four sons and two daughters; 6. Hannah[4], born April 16, 1723; 7. Abraham[4], born November 9, 1724, died of scarlet fever September 4, 1742; 8. Nathan[4], born March 26, 1726, married, May 7, 1755, Lucy Bent, of Sudbury.

The above-named Ensign Daniel[3] Livermore's sister Hannah[3], born in Weston, September 27, 1670, married, February 22, 1689, the above named Ephraim Rice, then of Sudbury, who was an original proprietor of Worcester, where his children settled, near his brothers, on Sagatabscott Hill.

Jonas[4] and Elizabeth (Rice) Livermore had in Leicester these eight children:

1. Jonas[5], Jr., born February 28, 1736, carpenter and farmer, married November 10, 1761, Sarah, daughter of Hezekiah and Sarah (Green) Ward, and resided in the south part of Leicester, near Auburn, where Jonas' son, Salem Livermore, afterwards lived, and where Jonas[5] died, January 31, 1825, aged eighty-nine, and his wife, Sarah, died Sept. 10, 1832, aged ninety-four, parents of ten children; 2. Micah[5], born in 1738, settled in Oxford; 3. Mary[5], born 1743, married Thomas Scott and resided on the estate in Auburn, near Leicester, where his father, John Scott, had lived, and where Thomas' son, David Scott, Sr., afterwards lived; 4. David[5], born 1745, married, in 1770, for his first wife Anna Heywood, of Holden, and settled on the south part of lot No. 59, in Spencer, where they had seven children, and he died there December 13, 1818, and she died June 12, 1794, his second wife being her sister, Mrs. Mary Osborne, of Holden, who died January 5, 1842, aged eighty, by whom he had three children, one of them, Melinda, wife of the late Benjamin H. Brewer, of Worcester; 5. Elizabeth, twin, born 1745, married Samuel Tucker, Jr., of Leicester; 6. Elisha, born 1751; 7. Beulah, born 1753, married Levi Dunton; 8. Lydia, born 1755, married Asa, son of David Prouty, of Spencer, and had there Aaron, Asa, Jr., Persis, Jonas and Joel Prouty, born between 1776 and 1784, of whom Persis was wife of Eli Mussy, son of John Mussy, Jr., of Spencer.

Jonas[5] and Sarah (Ward) Livermore had in Leicester these nine children:

1. Hannah, born May 13, 1762, died August 24, 1767; 2. Jonas[6], born April 13, 1764, died unmarried, at Leicester, April 20, 1790; 3. Sally, born June 28, 1766, died unmarried, February 17, 1833; 4. Patty, born October 22, 1768, married in 1791 Captain Samuel Upham, Jr., of Leicester, and removed soon after 1800 to Randolph, Vt., where he died in 1848, aged eighty-seven, the oldest of their three children being the late Hon. Wm. Upham, Senator in Congress from Vermont, from 1843 till his decease, January 14, 1853, in Washington, aged sixty-one; 5. Salem, born September 26, 1770, married, first, Nancy Walker, who died March 2, 1838, and he married, second, Ruth Livermore, and resided on his father's estate in the south part of Leicester near Auburn, where he died April 20, 1858, father of nine children, all by his first wife; 6. Bathsheba, born July 23, 1772, married John Page, and settled in Cambridge, Vt.; 7. Louisa, born April 27, 1774, died December, 1800, married Abner Gale; 8. Daniel, born June 10, 1776, married May 29, 1801, Betsy, born in 1777, daughter of Thomas Parker, of Leicester, and resided on the estate of his grandfather, Jonas Livermore, Sr., near the foot of Livermore Hill, where Daniel Livermore died August 31, 1869, aged ninety-three, and his wife, Betsy, died November 2, 1846, parents of Jonas Livermore, of Camden, N. J., Rev. Daniel Parker Livermore, of Melrose, Mass., Diantha, wife of Daniel Henshaw, Mary, wife of

Salmon Chase

David McFarland, late of Worcester, and Eliza, residing with her brother, Rev. Daniel P., in Melrose; 9. Rebecca, born November 13, 1778, married Lebbeus Turner, from Bennington, Vt., and had in Leicester, Stillman, now deceased, Jerusha, now in Spencertown, N. Y., Caroline, wife of Dexter Converse, and Roxana, wife of Thomas Wall, all now deceased.

Salem[6] and Nancy (Walker) Livermore had in Leicester these nine children:

1. Mary, born August 25, 1795; died September 6, 1841; married Jonathan Warren, and had, in Leicester, Jonas L. Warren, formerly railroad station agent at Rochdale; now in Shirley.

2. Sarah, born August 31, 1797; died May 1, 1827; married, August 10, 1823, Samuel Bottomly (his first wife), and had a daughter, Sarah, who married a Schofield.

3. Nancy, born October 13, 1800; died December 27, 1875; married, first, Moses Rockwood, of Grafton, and had John, Angeline and David Rockwood; married, second, February, 1837, Stephen Adams, and had in Paxton, Maria, June and Aaron Adams.

4. Hannah, born May 21, 1804; died July 29, 1836; married, January 9, 1828, Samuel Bottomly, and had, in Cherry Valley, Cornelia, Sarah, Levinah and Nancy Bottomly.

5. Thomas, born September 7, 1805; died young.

6. Salem, Jr., born April 23, 1809; died in Rochdale Village March 4, 1865; married, November 26, 1833, Roxa Darling, their only child being their son, Thomas Salem Livermore, born July 22, 1836; married, September 26, 1871, Mary Symons, daughter of John H. and Sarah (Crossley) Symons, of Rochdale, and owns and occupies the homestead erected by his father in Rochdale Village, nearly opposite the railroad depot.

7. Seraph, twin of Salem, Jr., born April 23, 1809; married James Hollingsworth, and died April 4, 1832.

8. Tamason, born May 28, 1812; married Liberty Beers, and died February 8, 1840.

9. Moses, born March 11, 1815; died June 20, 1854; resided on his grandfather's old place, near Auburn.

Rev. Daniel P. Livermore, son of Daniel[5] and Betsy (Packer) Livermore, of Leicester, is a Universalist clergyman in Melrose, ordained in 1841. He married, May 6, 1845, Mary, daughter of Timothy and Zebiah Vose (Ashton) Rice, of Boston; since that time distinguished as an eloquent lecturer and speaker on temperance, women's rights and other reforms. Their two surviving children are: Mary Elizabeth and Henrietta W., the latter wife of John Oscar Norris, master of East Boston High School.

Dexter and Caroline (Livermore) Converse resided in Leicester, near Charlton, where they had a family of twelve children, among their sons being Edmund, Harrison and Lebbeus T. Converse, of Worcester.

Salem[7] Livermore, Jr., like his father and grandfather before him, was a carpenter, as well as a thrifty and industrious farmer and operator in real estate, in which kinds of business Salem, Jr., is well represented by his son, Thomas S. Livermore, who succeeded to and improves upon the five hundred acres of land in Leicester, Oxford and Auburn, including the homestead at Rochdale Village, on which he resides with his mother. Jonas[5] Livermore, Jr., was originally a Baptist, one of the pillars of the old Greenville Church; his son, Salem, Sr., was a Universalist, as well as the latter's brother Daniel, and Salem, Jr., was a member of the Episcopal Church at Rochdale.

Thomas S. Livermore has a specialty in the musical line, having officiated in a choir since he was fourteen years of age, and for the past few years he has been chorister and organist of the Unitarian Church at Leicester.

CHAPTER XCV.

CHARLTON.

BY HON. RUFUS B. DODGE.

THE town of Charlton is situated in the southwesterly part of the county, about thirteen miles from Worcester, and may with good reason be called one of the "hill towns." The surface is very uneven, and it has within its limits the highest land in the south part of the county. The Boston and Albany Railroad runs through the north part of the town, and the highest point on that road is a short distance east of Charlton Depot. The highest land in the town is the summit of the hill called Little Mugget, a short distance southeast of the depot. The large hill east of Charlton Centre, known as Mugget, and formerly called Mashey Mugget, affords a better view of the surrounding country, and has for that reason, perhaps, been considered by many higher land. There are several other hills in the town nearly as high as the ones mentioned, and a number of broad, deep valleys. About three-fourths of the present territory of the town was formerly a part of Oxford, and was set off from that town in 1755. The remainder was a part of a tract of land adjoining the town of Oxford on the north, said to contain ten thousand acres, of which no persons had obtained a grant, and that had not been included in any of the adjoining towns when incorporated and called the "Country Gore." About seven thousand acres of this tract was annexed to Charlton in 1757. The part taken from Oxford contained about twenty-three thousand five hundred acres. In 1788 about three hundred acres, and in 1807 about forty acres were taken from the southeast corner of the town and set to Oxford. In 1792 a small tract of land was taken from

the southwest corner of the town and set to Sturbridge; and in 1816 about three thousand acres were taken from the same part of the town to form a part of the town of Southbridge. On this latter tract was valuable water-power afforded by the Quinebaug River. No alterations have since been made in the town lines, although in 1831 an attempt was made to have a large tract from the east part set to Oxford. The project met with strong opposition from a large majority of the inhabitants of the town and was defeated. According to a survey made since the last tract was set off the town now contains a little over twenty-seven thousand acres, and is exceeded by few, if any, of the towns of the county in area of territory.

It has been said that the soil of the part taken from Oxford was considered as inferior in quality, and for that reason did not attract settlers, but the manner in which the land was held accounts sufficiently for its tardy settlement.

All the land formerly belonging to Oxford had been granted in 1683 to Daniel Cox and others. About twelve thousand acres on the east part of the grant was allotted to settlers and called the village; the remainder was reserved by the proprietors. In 1788 Daniel Cox and Robert Thompson, of London, Joseph Dudley, of Roxbury, William Stoughton, of Dorchester, John Blackwell, of Boston, and Thomas Freake, of Hannington, England, were the owners of all the grant lying west of what was called the village line. In that year a survey and division of the land was made. According to this survey, the tract contained thirty thousand acres. By the terms of the deed of partition, Joseph Dudley took six thousand acres on the south side of tract, extending from the village line on the east to Sturbridge on the west. John Blackwell took an equal quantity of land north of and adjoining Dudley's lot. William Stoughton took a like quantity of land north of Blackwell's. North of Stoughton's land Blackwell took a second lot of about seventeen hundred acres. North of Blackwell's second lot Daniel Cox took about twenty-six hundred acres. North of the lot taken by Cox, Thomas Freake took about seventeen hundred acres. Robert Thompson had the remaining lot, which contained six thousand acres, and lay between Freake's lot and the "Country Gore." When Dudley was incorporated, in 1731, the six thousand acre tract of Joseph Dudley was included in that town. All the other tracts, with the exception of a strip of each, one mile wide, bordering on the village line, were taken from Oxford to form the district of Charlton. Mary Wolcott, of Salem, became the owner of the Freake land, and in 1730 sold it to Edward Kitchen, of the same place, who caused the land to be divided into one hundred acre lots, and soon commenced disposing of his land to settlers. In October, 1733, Ebenezer McIntire, of Lynn, and Obadiah McIntire, of Salem, each purchased one of these lots, and they were probably the first settlers of the town. Daniel McIntire and Eleazer McIntire both purchased land of Kitchen soon afterwards. The two tracts of land that Blackwell had by the division were sold by his heirs, in 1720, to Captain Peter Papillion, of Boston. In 1727 they were divided into lots of suitable size to sell to settlers, and in 1738 were divided, by commissioners appointed for the purpose, among the heirs of Papillion. In 1735 Richard Dresser, of Thompson, bought one of the lots, and was probably the first person to settle in the south part of the town. The land purchased by Richard Dresser was part of the well-known Dresser Hill farm. His brother, John Dresser, soon afterward bought land lying west of Richard's. Isaiah Blood, Richard Blood and Nathaniel Blood, from Bellingham, at about the same time purchased land, on which they settled, lying south of Dresser Hill.

In 1750 probably thirty families were in the westerly part of Oxford, and two-thirds of that number had settled in the Gore. In that year a petition was presented to the General Court, signed by seventeen of the inhabitants of the westerly part of Oxford and by nine of the inhabitants of the Gore, requesting "to be erected into a separate township." The petitioners met with opposition and were defeated. The inhabitants of the easterly part of Oxford, as appears by a vote passed in town-meeting, were willing the westerly part should be set off by a line one mile farther west than the line insisted upon by the petitioners.

In 1754, William Alton and thirty-six other inhabitants of the west part of Oxford presented a petition to the Governor, Council and House of Representatives setting forth the difficulties under which they labored on account of the distance they lived from a place of public worship and by reason of being taxed for schools from which they received but little benefit, and from other causes stated in the petition. "They therefore prayed that his Excellency and the Honorable Court would be pleased to take their distressed circumstances under their wise consideration and erect them into a town or district, or otherwise relieve them as in their wisdom they should think best." A committee reported in favor of the petitioners and an act for making a district of that part of Oxford lying west of a line running parallel to and one mile west of the village line, and that part of the Gore lying north of the part of Oxford to be set off; but the act as finally passed included no part of the Gore in the district. The act passed January 10, 1755, and was as follows:

"Be it enacted by the Governor and Council and House of Representatives that the inhabitants with their lands on the westerly part of Oxford, beginning on the south side of Oxford, one mile west of the village line, so-called, thence running north parallel with said village line to Oxford north line, be and hereby is set off and erected into a separate district by the name of Charlton, and that said district be invested with all the privileges, powers and immuni-

ties that towns in this province do or may enjoy, that of sending a representative to the General Assembly only excepted, and that the inhabitants of said district shall have full power and right from time to time to join with said town of Oxford in the choice of a representative or representatives, who may be chosen either in the town or district in which choice they shall enjoy all the privileges which by law they would have been entitled to if this act had not been made."

By virtue of a warrant from Moses Marcy, of Sturbridge, issued by order of the General Court to John Dresser, a principal inhabitant of the district, "the freeholders and other inhabitants" were warned to meet at the house of Ebenezer McIntire on the 12th day of March, 1755, to choose such town officers as the law required, and to see if the district would let swine run at large. At this meeting Richard Dresser was chosen clerk; William Alton, treasurer; Richard Dresser, Lieutenant Obadiah McIntire, Jonathan Ballard, John Dresser and Ebenezer McIntire, selectmen; Samuel Streeter, tything-man; Isaiah Blood, constable; Ebenezer McIntire, clerk of the market; Ebenezer Lamb and Edward Chamberlain, fence-viewers; Nathaniel Blood, Nathaniel French and Nathaniel McIntire, surveyors of highways. Hog-reeves, deer-reeves and a brander of horses were also chosen, but no assessors. The name of the moderator was not recorded. On the 24th of May, as recorded, the selectmen of the town of Oxford and the selectmen of Charlton, with William Young, surveyor, and Captain Elisha Moore and John Nichols, chainmen, mutually agreed upon and sworn, run the dividing line between said Oxford and Charlton. On the 27th day of March of the same year, the second district-meeting was held, at which eight pounds, lawful money, was voted for schooling, and six pounds thirteen shillings and four pence for necessary charges. In April following it was voted "that the centre of the district should be the place to build a meeting-house upon, if a convenient place, and if not, the nearest convenient place to the centre should be the place to build upon." At the same meeting it was voted that the schools should be kept in two places—one on the north side, the other on the south side of the district. At this time there were no inhabitants of the district living farther north than the north line of the Kitchen land, which ran just north of the house now owned by Wm. S. Wakefield, at Charlton Centre. Between the Kitchen land and the Gore lay the Thompson land, on which there were no inhabitants. This land had been divided in 1749 amongst the devisees of Joseph Thompson, but at the time the district of Charlton was established none of the land had been purchased by settlers, and, in 1760, when a tax of two-pence per acre was granted by the General Court on the lands of the non-resident proprietors toward paying for building the meeting-house, sixty acres of the land were sold to pay the tax on three thousand five hundred and seventy-seven acres, still owned by non-residents.

The Stoughton land, in 1718, was purchased by Samuel Brown, of Salem, and was afterwards owned by his son, William Brown. Elizabeth Danforth, Samuel Danforth, Elijah Dunbar and others became part owners, but no division was made nor any part of the land disposed of to settlers until after the right and interest of William Brown had been confiscated by the General Court in 1782. An agent was appointed to ascertain the right and interest of said Brown and to make and execute division deeds, so that the Commonwealth as well as the other proprietors might hold their several rights in severalty. A division of the land was made and the part taken by the Commonwealth was sold at auction in 1785 by a committee chosen by the General Court, Caleb Ammidown, of Charlton, being one of the committee. Ebenezer Davis bought eight hundred acres of the confiscated land, Jacob Davis three hundred acres, Ebenezer Crafts three hundred acres; James Wolcott, Erasmus Babbitt and others were also purchasers. After this time the lands of the Danforths, Dunbar and others were gradually disposed of.

The land of Daniel Cox descended to his heirs, and was surveyed and divided into lots in 1751. Before this time some of the land had been sold for taxes, but no sales appear to have been made by the heirs for many years afterward. Most of the land was taken possession of and improved, and finally the occupants claimed ownership and refused to give up the lands. A suit-at-law, lasting several years, finally settled the matter in favor of the heirs, and the lands were sold by an agent or attorney.

In December, 1755, Edward Chamberlain and Nathaniel French were chosen a committee to provide preaching, and in January, 1756, a grant of seven pounds for the support of the Gospel was made. In June following the district voted seven pounds to provide a stock of powder, bullets and flints, and also voted that the schools should be kept in three places, but refused to allow any part of the money granted for schools to be laid out for hiring a school-dame in summer, as petitioned for by some of the inhabitants. March 14, 1757, it was voted that the district's stock of ammunition should be kept at Richard Dresser's, and, from a list reported by the selectmen, selected the names of such as they judged most suitable to serve as jurors. The persons selected were Obadiah McIntire, Nathaniel Blood, John Dresser, Eleazer McIntire, Samuel Streeter, Ebenezer Twiss, Isaiah Blood, John Stevens, Ebenezer Foskett, Joseph Twiss and Ebenezer Chamberlain. As soon as the district was organized the work of building a place of public worship and of providing schools was undertaken, but beyond deciding that the centre of the district should be the place to build a meeting-house upon and making slight provisions for schools nothing was accomplished. Timber for a meeting-house had been pre-

pared before the separation from Oxford. The warrant for a meeting to be held December 8, 1755, contained an article as follows: "To see if the district will agree to build a meeting-house, and if so, to agree upon the bigness to build the same;" and also the following: "To see if the district will choose a committee to take care of the timber that was hewed some time ago for a meeting-house, as also to provide materials for the same as may be thought most convenient if the district agree to build a meeting-house." At the meeting held under this warrant it was voted to take no action on these articles; and at a meeting held February 7, 1757, it was voted to raise no money either for schools or for the support of the Gospel, for the reason probably that it was expected that the petition that had been presented to the General Court for the annexation of the Gore would be granted. The inhabitants of the district had become satisfied that they were not in a condition to carry on the affairs of a town or district, and, judging from the tenor of their petitition, did not consider their situation had been improved by their separation from the town of Oxford. The district had voted, January 1, 1756, not to accept the Gore or join in a petition that it might be added to the district. A different spirit soon prevailed.

The petition was as follows:

To the Governor, Council and House of Representatives in General Court assembled at Boston, January, 1756:

The petition of the subscribers inhabitants of Charlton and a place called the Gore Humbly shows, That the inhabitants of Charlton are now very sensible that it is wholly impracticable if not impossible for them to carry on the affairs of a district or in any measure support the charge necessarily arising from setting the Gospel amongst them. That the inhabitants of the Gore are so situated that they can't be laid to any town with the least advantage and are so small as not to be fit for a district by themselves, but if they were added to Charlton they would make a good town or district and be able to support public charges. And as they lie very handy to be laid to Charlton, they humbly pray that the land called the Gore with the inhabitants thereof lying westward of a line extending from the northeast corner of Charlton, northerly the same course as the east line of Charlton till it meets the south bounds of old Leicester, be added to the district of Charlton, there to do duty and enjoy privileges as other inhabitants of said district do enjoy. And as in duty bound will ever pray, etc.

The petition was signed by Solomon Harwood and thirty-three others of the district of Charlton and by Jonathan Wheelock and twelve others of the Gore. John Chandler and twelve other non-resident owners of real estate joined in a request that the petition might be granted. June 8, 1756, the answer of Jonathan Tucker, Nathaniel Jones and others was read with the petition, and the matter referred to the next fall session and further notices ordered. June 3, 1757, a committee having considered the matter, reported that the petition ought to be granted. "The report was read and accepted, and ordered that the inhabitants of the said Gore and the land within the bounds petitioned for, be, and hereby are, annexed to the district of Charlton and made part thereof, to do duty and enjoy privileges as the other inhabitants of said district do or by law ought to enjoy." The territory added to the district was about six miles in length and one mile in width on the east line and nearly three miles in width on the west line. All the "North Side" village, except the few houses on the road to Charlton Centre south of the school-house, is on the Gore territory. The number of persons taxed in the district of Charlton in 1756, as shown by the tax-list for that year, was fifty-three, and they were: William Alton, Richard Blood, Isaiah Blood, Nathaniel Blood, Jonathan Ballard, John Ballard, Edward Chamberlain, Joseph Clemence, Jonathan Clemence, Philip Clemence, Philip Clemence, Jr., Richard Dresser, John Dresser, John Davidson, William Coburn, Lemuel Edwards, Ebenezer Foskett, Nathaniel French, Benjamin Hobbs, Solomon Harwood, Adam Johnson, Ebenezer Lamb, James Lamb, Obadiah McIntire, Ebenezer McIntire, Eleazer McIntire, Eleazer McIntire, Jr., Daniel McIntire, Thomas McIntire, Thomas McIntire, Jr., Nathan McIntire, Joseph McIntire, Philip McIntire, Ezra McIntire, Noah McIntire, Zebulon McIntire, Robert McIntire, Nathan Moore, John Oaks, Jacob Parker, Elisha Putney, George Pike, Paul Rich, Samuel Rogers, Obadiah Sabin, Samuel Streeter, Samuel Streeter, Jr., Samuel Scott, John Stevens, Ebenezer Twiss, Joseph Twiss, Joseph Twiss, Jr., John Warfield.

The number of persons living on the Gore land that were assessed a tax the spring after it was set to Charlton was thirty-nine. They were: Joseph Baldwin, James Blanchard, David Brown, William Cummins, John Convers, Nathaniel Dewey, Nathan Dennis, Samuel Eustis, Nathaniel Eustis, Philip Gage, Aaron Gleason, Ebenezer Hammond, Jonas Hammond, David Hammond, Nathaniel Jones, Henry Merritt, Ephraim Morey, Joseph Parker, Thomas Parker, Thomas Parker, Jr., Malachi Partridge, William Parker, Nehemiah Stone, Jonathan Tucker, William Tucker, John Thompson, Ebenezer White, Josiah White, Daniel Weld, Job Weld, Noah Weld, Daniel Williams, Benjamin Ward, Uriah Ward, Jonathan Wheelock, Paul Wheelock, David Wheelock, Peter Sleeman and Jonathan Upham. Of the persons above named who were prominent in public affairs, and whose names appear frequently on the records, Jonathan Tucker, Daniel Williams and the Welds were from Roxbury, Nehemiah Stone and the Hammonds from Newton, the Wheelocks from Mendon, and the Wards from Roxbury.

A committee was chosen by the General Court in 1719 to sell the Gore land, and it was divided into lots of three hundred acres, but, so far as the records show, no person living on the land at the time it was annexed to Charlton became an owner prior to 1735. In that year Jonathan Tucker, of Roxbury, deeded to his son Jonathan one-half of three hundred acres in the Gore, and the same year Jonathan Wheelock bought one hundred and fifty acres, and they were probably the first settlers in the north part of the town. The Hammonds bought land adjoining Tucker's on the

west in 1739, and Nehemiah Stone became the owner of land in 1746 that was afterwards owned by his son Nehemiah, and by his grandson, Nehemiah B. Stone. Although Charlton, after the Gore was added, contained a larger population than many of the towns in the State, it remained a district, without the right of sending a Representative to the General Court, until a law was enacted in 1775, making all districts in the Commonwealth towns.

With the addition of population and resources secured by the addition of territory, the inhabitants considered themselves in a condition to carry on successfully public affairs. Accordingly, July 28, 1757, a meeting was held, and the district voted ten pounds, lawful money, for the support of the Gospel, and thirteen pounds six shillings and eight pence for the support of schools. Ebenezer McIntire, Jonas Hammond and Isaiah Blood were chosen a committee to provide preaching, and Ebenezer White, Ebenezer Hammond, John Stevens, Eleazer McIntire and Nathaniel Blood, School Committee. The district also voted "to build a meeting-house at the centre of the district, if a convenient place; if not, at the nearest convenient place thereto." The district before the Gore was annexed had passed a similar vote, but the large addition of territory made it necessary to select a new location, but failing to agree as to where the centre of the district was or the nearest convenient place thereto, at a meeting held November 22, 1757, a committee was chosen, consisting of Dea. Thomas Wheeler, of Worcester, Samuel Chandler, Esq., of Woodstock, and Col. Hezekiah Sabin, of Thompson, "to state a place for a meeting-house." The district voted to pay Richard Dresser six shillings eight pence for entertaining the committee, but refused to accept the "place stated." An article in the warrant for a meeting held January 16, 1758, was as follows: "To see if the inhabitants of the district will vote that the meeting-house shall stand at a stake that is set up north of Ebenezer McIntire's house, and if not, to see if the inhabitants of the district will agree in sending to the General Court for a committee to find the centre of the district, and to state the place for the meeting-house." At this meeting it was voted "to build the meeting-house at the stake a little north of Ebenezer McIntire's house."[1] It has been stated that a committee from the General Court staked out a place for the meeting-house; but if the district records are to be depended on, the statement is incorrect. As recorded, the vote for accepting the place was sixteen to nine. Ebenezer McIntire gave the district an acre of land, but it was stated in the deed that it was for the use of said district "for the meeting-house to stand upon and for a training-field, and for no other uses." This piece of land, as described in the deed was twenty rods long and eight rods wide, and bounded easterly by the road. For many years it has not been used for either of the purposes specified. The first meeting for the choice of district officers after the Gore was annexed was held March 20, 1758. At this meeting Jonathan Tucker, Richard Dresser, Jonas Hammond, Isaiah Blood and Ebenezer McIntire were chosen selectmen; Richard Dresser, clerk, and Jonathan Wheelock, treasurer.

At the same meeting it was voted to build a meeting-house fifty feet long and forty feet wide and to cover the whole with shingles. One hundred pounds was granted toward the expense of building and Nathaniel Blood, Isaiah Blood, Jonathan Upham, Jonathan Ballard and Ebenezer Hammond were chosen a meeting-house committee for the year and were authorized "to set a price upon materials and upon labor and to choose a master workman to set up the frame." In July, 1759, it was voted "to let out the framing of our meeting-house by the great," and for twenty-six pounds, thirteen shillings and four pence, Jonathan Upham undertook "to set up the frame and assist in raising the same." In September following the district voted "to provide victuals and drink for the raising of the meeting-house and other necessaries," and a committee was chosen to see that provisions were suitably prepared. In March preceding forty pounds had been voted toward defraying the charges of building. In 1760, upon the petition of Jonathan Tucker and other residents of the district, a tax of two pence per acre for one year on land of non-resident proprietors was granted by the General Court "in order to enable the inhabitants to finish the meeting-house." Nearly nineteen thousand acres of land in the district was at this time owned by non-resident proprietors, as the tax authorized amounted to one hundred and fifty-three pounds, fourteen shillings and eight pence. Although not completed, the house was in a condition to be used as a place of public worship by January, 1761. A meeting of the inhabitants for district business was held in it January 6th. There had been expended upon it, as reported by a committee, two hundred and eighty-two pounds, five shillings, three pence and two farthings. In February following twenty pounds was voted "toward finishing the meeting-house." Before the district was incorporated some of the inhabitants had attended public worship at Dudley and a part at Sturbridge. Afterward money had been voted from time to time for the support of the Gospel and meetings had been held probably at the house of Ebenezer McIntire, where all meetings for the transaction of district business were held until the meeting-house was in a condition to be used. May 26, 1761, the district voted to concur with the church[2] in giving Rev.

[1] Ebenezer McIntire owned all the land on Charlton Hill, on which the Centre Village stands, and he and his sons and their families were the only residents until 1775. His house was on the west side of the road that runs on the east side of the Common, and probably a little farther south than the house where George F. Cummins now lives, and stood on land that now is part of the Common.

[2] The members of the church were: Richard Blood, Jonathan Up-

Caleb Curtis a call to settle in the ministry, and voted to give him one hundred and thirty-three pounds, six shillings and eight pence as settlement, and sixty pounds salary, so long as he should supply the pulpit. Mr. Curtis accepted the call and was ordained October 15, 1761.

In 1762 the district voted to put pillars under the gallery beams and to build seats from alley to alley, and appropriations were made from time to time to pay expenses. In 1766 a petition was presented to the General Court for a tax on the land of non-resident proprietors towards finishing the meeting-house, but no tax was granted.

In 1772 the district voted to give Jacob Davis £163 12*s.* to finish the inside of the meeting-house, "the work to be done as well and complete in all respects as the work was done in the meeting-house at Oxford and to be completed in eighteen months." It appears that the work was completed according to the agreement, and in September, 1773, a committee was chosen "to Dignifie all the pews in the meeting-house." The business of this committee, judging by their report, which was accepted, was to number and appraise the pews. It was voted "that the man who paid the highest tax on real estate towards the meeting-house should have his first choice, paying the appraisal and so on by succession until all were disposed of." By this arrangement the choice fell to tax-payers in the following order: Jacob Davis, Ebenezer Hammond, Jonas Hammond, Paul Wheelock, Nehemiah Stone, Ebenezer McIntire, Nathaniel Blood, Jonathan Tucker, John Stevens, David Wheelock, Nathaniel Goodell, David Hammond, Daniel Weld, Ebenezer Foskett, Henry Merritt, William Tucker, John Nichols, Jonathan Mower, John Edwards, Benjamin Marsh, Benjamin Alton, James Blanchard, John Marble, Jonathan Ballard, Edmund Bemis, Joseph Parker, Ebenezer White, Jr., John Farley. As one pew was reserved for the use of the ministry, it appears there were twenty-nine pews in the house at this time. Besides the pews there were seats in the house for the use of persons who were not pew-owners.

In 1788 it was voted to take up three of the body seats and sell at auction the room for pew ground. In 1790 Daniel Williams was granted leave to put a pew in the west end of the men's body seats. In 1793 General John Spurr paid £6 2*s.* for pew ground. In 1775, as has been stated, the district of Charlton, by an act of the General Court, was made a town. March 11, 1776, the church voted to dismiss Rev. Caleb Curtis, according to his request. The town, at a meeting held March 25th, voted not to concur with the church, but in July following voted in favor of dismissal. October 29th an ecclesiastical council, after considering the reasons of Mr. Curtis for asking a dismission and finding that at his desire, the church and the town had voted to dismiss him, the council approved of what had been done and accordingly declared Mr. Curtis dismissed. Mr. Curtis, like many other clergymen of the time, owned a farm.[1] After his dismissal he continued to live on his farm until his decease, in 1802, at the age of seventy-five years. He was active in public affairs and was chosen a delegate to the Provincial Congress in 1775 and a representative to the General Court in 1787.

The town continued to support ministers of the standing order until 1782. In that year the warrant contained an article, as follows: "To see if the town will vote to support for the future the public teacher, or teachers, of piety, religion and morality of said town by taxation or by free contribution." On this article the vote was, "for taxation, 55; for free contribution, 106." After this time no money was raised by the town for the support of preaching. A congregational society was incorporated in 1784. The act of incorporation was amended in 1786, and in 1798 the amended act was repealed, and an act passed, incorporating Israel Waters, Salem Town, John Spurr, Jonas Ward and others a religious society, by the name of "The Proprietors of the New Congregational Centre Meeting-house in Charlton." A meeting-house was built for the society by Deacon Jonas Ward, which was probably raised about the 1st of June, 1798, as May 24th the society chose three stewards, "to provide such drink as they should think necessary for raising day," and three "to deal out the drink," and voted "that the carpenters on raising-day should inform the stewards what time to refresh." The house was dedicated November 26, 1799. It was very large, having one hundred pews on the lower floor, and fifty in the gallery, and stood where the Universalist meeting-house now stands. The pews were divided amongst the proprietors by lot.[2]

After Mr. Curtis was dismissed there was no settled minister until January, 1783, when Rev. Archibald Campbell was installed, and remained until April, 1793, after which time there was no settled pastor for about four years. In 1797 Rev. Erastus Learned was ordained; he was dismissed in 1802. In November, 1803, Rev. Edwards Whipple accepted a call from the church and society at a salary of four hundred dollars a year. He was ordained January 25, 1804, and remained until February 20, 1821.

The successor of Mr. Whipple was Rev. Thomas

ham, Timothy Barton, Josiah Towne, Jonathan Ballard, Jonathan Mower, Jonas Hammond, Nehemiah Stone, Ebenezer Lamb, Elisha Putney, Nathanial Blood, John Farlee, Josiah Robinson, Samuel Baker, Ebenezer Hammond, John Edwards, John Coburn, Aaron Gleason, Samuel Chamberlain, Jonathan Dennis, James Blanchard, Johanah Blood, Ruth Blood, Lucy Chamberlain, Elizabeth Hammond, Esther Hammond, Mehitable Dennis, Susanna Towne, Eunice Gleason, Elizabeth Baker, Martha Upham, Deborah Coburn, Alice Ballard, Hepsibeh Barton.

[1] The farm is now owned by Reuben S. Eastman.

[2] The first meeting-house was sold, in 1803, to Levi Davis for three hundred and fifty dollars, one-half of which was paid to the pew owners, the other half to the town. The house was taken down and the materials used for a barn on the farm now owned by Moses D. Woodbury.

Rich, whose term of service ended in 1825. A majority of the proprietors had become dissenters from the Calvinistic Congregationalist doctrine, and, by an arrangement with the minority, became the owners of the meeting-house. In October, 1826, the minority and other residents of the town organized a society and took the name of "The First Calvinistic Congregational Society of Charlton." Meetings were held in the hall of William S. Weld (afterwards called "Craig's Hall") until a meeting-house was built. The house was commenced in 1826, and completed in time to be dedicated June 5, 1827. The same day Rev. John Wilder, who had been invited by the church and society to become their pastor, was installed. Mr. Wilder remained until February, 1833. Since that time the pastors have been—Rev. William H. Whittemore, from June, 1833, to September, 1835; Rev. Isaac R. Barbour, from August, 1836, to June, 1839; Rev. George W. Underwood, from June, 1840, to March, 1843; Rev. John Wilder, from April, 1843, till his decease, in 1844; Rev. Alanson Alvord, from February, 1845, to March, 1846; Rev. Nelson Clarke, from June, 1846, to December, 1849; Rev. John Haven, from April, 1850, to October, 1879; Rev. Frank Jenkins, from January, 1881, to July, 1882; Rev. Charles M. Pierce, from August, 1883, to November, 1886. Rev. William Sewall, the present pastor, was installed June 24, 1887.

In 1855 the meeting-house was remodeled and improved. The society has an income from a fund of about two thousand dollars, a bequest from Sally Willis, who died in 1887.

As early as 1757 there were people in Charlton who held Baptist sentiments. In that year the following certificate was filed with the assessors:

LEICESTER, November 15, 1757.

This may Sertify all People to whom it may concern that Obadiah Mackintire, Sener., and Eleazer Mackintire, Sener., and Ebenezer Twiss and Solomon Harwood, all of Charlton, do Usually and frequently attend the annabaptis Meeting under the Pastoral care of Elder Thomas Green and do Desire the Liberty the Law gives in Being Clear[d] from paying of Rates to those of other Way of thinking And Lickwise Eleazer Mackintire, Junr.

Test. Wee who are Chosen by the Church to Give Setificates.

Elder THOMAS GREEN,
SAMUWILL GREEN,
THOMAS HOLEMAN.

The same year Nathaniel Jones obtained a similar certificate from the Baptist Church in Sutton. In 1761 twenty-three tax-payers in Charlton had filed such certificates with the assessors and, in consequence, were exempted from paying taxes for the support of the standing order. In July, 1762, a Baptist Church was formed at what is called the North Side, composed of members from Charlton, Leicester and Spencer. There is nothing in the society or church records to show when the first meeting-house was built, but, as in all warrants for district or town-meetings prior to 1780, the inhabitants had been warned to meet at the meeting-house in said Charlton, and after that date at the Centre meeting-house, it may reasonably be inferred that it was built in 1779. The society, for a time, increased quite rapidly in numbers, and, in 1793, a new house was built on land given for the purpose by Captain Levi Davis.

The society voted to give to Elder David Rathbun the old meeting-house for a dwelling-house, provided he should settle with them, but at a subsequent meeting this vote was reconsidered. And when the new house was ready for use the old one was sold to Moses Dodge.[1]

Elder Nathaniel Green, of Leicester, was the first minister. He was ordained October 12, 1763, and labored with the church and society until his decease, March 20, 1791. After the death of Elder Green the pastors were Elder David Rathbun, from 1792 to 1795; Elder Charles Thompson, from December, 1802, till his decease May 1, 1803; and Elder James Boomer, from 1803 to 1834, when his health failed and he was obliged to give up preaching. He died February 24, 1837. He was the last minister of the church and society. Soon after his decease letters of dismission and recommendation to other churches of the Baptist denomination were given the remaining members.[2]

Elder Boomer is remembered by the old residents of the town as an earnest, effective preacher, who labored faithfully for the welfare of his parishioners. He enjoyed the respect and confidence of his townsmen, and was twice elected a representative to the General Court. Several causes contributed to the decline of the society. There were many removals from town. Some were so situated that they could more conveniently attend other churches of the denomination, and with a considerable number there was a change of religious sentiment.

It is said that a Methodist Church was organized in the southwest part of the town in 1792, and that circuit preachers served the society until 1810, after which the society ceased to exist. Meetings were held in the hall at Dresser Hill and in other places in the south part of the town for a considerable number of years before a house of worship was built. Some of the preachers were: Hezekiah Davis, Stephen W. Hammond, Otis Perrin and Joseph S. Ellis. In 1855, when it was decided to build a church at Charlton City, a legal organization was effected, and measures taken to carry out the project. The house was completed in 1856. Since the organization of the society the pastors have been as follows: William B. Olds, 1855–56; Jarvis Wilson, part of 1857; Daniel Dorchester, 1858–59; C. H. Hanaford, 1860–62; J. S. Thomas, 1862; John Noon, 1863; J. W. P. Jordan, 1864; A. M. Osgood, 1865; D. K. Banister, 1866-68; N. A. Soule, 1869–71; N. F. Stevens, 1872;

[1] The house was taken down and the materials used for a dwelling-house on the farm now owned by George J. Dodge.

[2] The last meeting-house after the dissolution of the society was taken down and removed to the easterly part of Leicester and set up for a factory.

J. J. Woodbury, 1873–75; S. H. Noon, 1876; F. T. George, 1877; G. W. H. Clarke, 1878; P. C. Sloper, 1879–80; W. A. Braman, 1881–83; G. O. Crosby, 1884–85; O. W. Adams, 1886, '87–88.

The society has an income from a liberal bequest from Sally Willis, lately deceased.

After the division of the Congregational Society in 1825, the meeting-house was purchased by the town, but was sold in 1826 to Dr. Dan Lamb, Samuel D. Spurr, John Davis and others, and passed under the control of the Unitarians. In 1827 a society and church of that denomination was organized, of which Rev. Edward Turner became the pastor. He was installed June 18, 1827, and remained until May, 1831. He was the only pastor of the society, and soon after his services ended the society ceased to exist. Many of the members joined the Universalists in organizing the First Union Society of Charlton.

A Universalist Society was formed in 1827, and held meetings at the North Side. The preachers were Rev. Massena B. Ballou, Rev. Gilman Noyes and Rev. John Boyden. In 1838 a society was organized, composed of Universalists and Unitarians, that took the name of "The First Union Society of Charlton," and voted to hold meetings at Charlton Centre. The old meeting-house was purchased of the proprietors and taken down, and a new house built on the spot where the old one stood. The basement was built by the town according to the terms of an agreement with the society, and is used as a place for holding town-meetings and for public uses. The house was completed and dedicated in December, 1839. In 1851 the society took the name of "The First Universalist Society of Charlton." Rev. Aurin Bugbee was pastor of the society from 1838 to 1851. Since that time the pastors have been Rev. M. E. Hawes, 1851–52; Rev. Lyman Maynard, 1853; Rev. J. H. Willis, 1854–55. From 1855 to 1858 there was no regular pastor; the pulpit was supplied by Rev. Z. Baker and others. In March, 1858, Rev. Lucius Holmes became the pastor, and continued until March, 1863; Rev. Clarence Fowler was pastor the remainder of 1863 and 1864; Rev. Edward Smiley, 1866–74; Rev. Anson Titus, 1875–78; Rev. I. P. Quimby, 1879–83. In 1883 Rev. Lucius Holmes a second time became pastor and still continues in that office.

Nehemiah B. Stone, who died in 1866, left by will five thousand dollars to the society, the interest of which was to be used for the support of preaching.

In 1858 a society was formed at Lelandville of people of various religious beliefs. A meeting-house was built and religious services held regularly on the Sabbath for several years. Rev. William B. Olds supplied the pulpit most of the time. From some cause interest in the meetings declined, religious services were discontinued, and the meeting-house, after remaining unused for a considerable time, was sold and removed.

About 1865 a Second Advent Society was formed in the southeast part of the town. A chapel was built in which meetings have since been held. There has been no permanent minister. The preaching has been by clergymen of the denomination from other towns.

The Roman Catholics held meetings at Charlton Depot for several years. In 1887 a building was purchased at Charlton City in which their meetings are now held. The church is under the care of Rev. Father Donahoe, of Southbridge.

At the first meeting held in the district March 12, 1755, no money was appropriated for any purpose. The second meeting was held the same month. An article in the warrant for the second meeting was "To make such grant or grants of money as the district may think necessary for the district's use as for schooling the children in the place or for other things that may be thought needful." Eight pounds, lawful money, was voted for schooling. At a meeting held in April following it was voted that the schools should be kept in two places, the one on the north side, the other on the south side of the district. At that time there were no inhabitants living farther north than the Centre Village now extends. It is probable that the school for the south part was on or near Dresser Hill, in the neighborhood of the Bloods and the Dressers. The school for the north part was without doubt farther south than what is now Charlton Centre. In 1756 it was voted that the schools should be kept in three places, and that no part of the money should be laid out for hiring a school-dame in summer, as petitioned for by some of the inhabitants who had small children. The Gore having been annexed to the district in 1757, in July of that year £13 6*s.* 8*d.* was voted for schooling, and Ebenezer White, Ebenezer Hammond, John Stevens, Eleazer McIntire and Nathaniel Blood were chosen School Committee. It was voted that each part should provide its own school-house and that the committee should provide schooling as each part should choose. In 1760 the selectmen were chosen School Committee, and the appropriation for schools was fifteen pounds. In 1761 a committee was chosen "to state places for school-houses in the several parts of the district." The committee reported that they had agreed on six places, three on the east side and three on the west side of the district, and that the house for the southwest part should stand where it was already built. The report was accepted.

For several years after this time the number of schools was not increased, and the sum appropriated for their support in any year did not exceed twenty pounds. In 1767 the district was divided into eight school wards, one of which was called the Middle Ward, the school-house for which was to be at the southwest corner of the burying-ground. Before this time it does not appear that there had been a school at the Centre. The district voted that each ward should build its own school-house. In May, 1773, Ebenezer Hammond, Jacob Davis and Isaiah Blood

were chosen a committee to act in defence of the town on an indictment for not keeping a grammar school. As the population increased additional schools were provided and the appropriations for their support were increased.

In 1780 there were ten school-wards in the town. In 1778 the sum voted for schools was one hundred pounds. The currency had become of so little value in 1780 that twenty-five hundred pounds was voted. In 1781 the appropriation was "60 pounds in hard money or current exchange." In 1786 a committee was chosen "to regulate the schools for each ward and to select a place for a school-house in each ward where a school-house had not been built, the places selected to be reported to the town for acceptance." The committee were authorized to expend, under the direction of the selectmen, the money that each ward was entitled to receive. In 1788 the town granted the petition of the "middle ward" for leave to build a school-house with the share of money raised for schooling belonging to said ward. The same privilege was granted the "east ward" the year following. In 1795 three additional school-wards were made and the sum of two hundred pounds was voted for providing schooling. A few years later two more school-wards were made and fifteen schools were supported until 1836, when the number was reduced to thirteen by uniting two at the Centre and two in the northeast part of the town.

As for many years each ward or district provided its own school-house and the money raised for schools was divided amongst the several wards, in proportion to the amount of tax paid by the inhabitants of each, the wards or districts really provided the schooling. In 1854 a more equitable method of dividing the money was adopted, a portion of the money raised for school purposes being divided equally among the districts. In 1869 the town voted to abolish the school-district system and since that time has owned the school-houses. A sufficient number of schools to accommodate all the school-children of the town are maintained thirty weeks each year. For several years the number of schools has varied from eleven to thirteen. The annual expense for their support is about $3800.

The No. 3 School District has a fund of $1000, a bequest by Jesse Smith, who died in 1835. The interest of this fund is used for the benefit of the school in the district.

The No. 2 District has a fund of the same amount, the bequest of Nehemiah B. Stone, the income from which is used in like manner.

Capt. Julius E. Tucker, who died in 1873, left a legacy of $1000 to the town, the interest of which will, according to the terms of his will, be mainly used for school purposes.

In 1860 a Library Association was formed for the purpose of establishing a library. The undertaking proved quite successful and a good collection of books was secured. In order that its use might be enjoyed by the public generally, in 1882 it was made over to the town for a Free Public Library, on condition that an annual appropriation should be made for the purchase of books and for necessary expenses. Since that time the town has annually appropriated $200 for its benefit. April 1, 1888, the library contained 1168 volumes, for circulation and 365 books of reference. In the future, in addition to the appropriations made by the town, the library will have the income from a fund of $500, bequeathed by Mrs. Emeline Munroe, said income to be expended for the purchase of books.

Pauperism was rare in the early history of the town. Occasional aid was rendered persons in indigent circumstances. In 1766 Nathan McIntire was paid two shillings two pence "for a pare of mittens and footing; 2 pear of stockings for James Butler." Other small amounts were paid from time to time. In 1773 Dr. William Ware was allowed twelve shillings three pence for doctoring the poor. Some families were warned to leave the town to prevent their acquiring a settlement. In 1766 it was voted "to allow Solomon Harwood, for warning out three families, by vertu of a warrant from the selectmen, fore shillings." Several times the town voted to build a work-house, but the votes were never carried into effect, and for a considerable time homes were found for paupers with such persons as were willing, for a stipulated price, to undertake the support of one or more of them for the year. Later they were "auctioned off to the lowest bidder." In 1836 a farm of two hundred acres was purchased, on which, since that time, the unfortunate poor of the town, in sickness and in health, have been comfortably provided for. In 1864 a new house was built on the farm, at a cost of $6125.

According to tradition, the first place of burial was on the southwest corner of the farm of Obadiah McIntire, which is now owned by David O. Horn. The land is now covered by a growth of wood of considerable size, but the rough, unlettered stones, set to mark the graves, can readily be found. In 1762 it was voted "to lay out a burying-ground as near our meeting-house as the land will admit of, if the land may be had." In 1763 it was voted "to accept an acre of land, a little south of Ebenezer McIntire's barn, for a burying-ground for y^{e} district to bury their dead."

A little later a burial-place was provided at the north part of the town, called the North Side Burying-ground, and another in the south part, called the Dresser Hill Burying-ground. All these lots have been enlarged, and are still used as burial-places. Any family or person in town has had the privilege of selecting any unappropriated lot when needed, but no person has been allowed to select a lot until wanted. The town has an income from a legacy of five hundred dollars from Thomas J. Spurr, and also

from a legacy of two hundred dollars from Mrs. Ruth Twiss, which, according to the terms of the bequests, are used mainly for the improvement of the Centre Burying-ground.

In the war of the Revolution Charlton bore its share of burdens resolutely. There was no failure in furnishing the quotas of men required. Liberal bounties were paid the soldiers who served in the army, and they were, as far as possible, supplied by the town with clothing and blankets, and their families were provided for during their absence. A meeting was held August 19, 1773, to take into consideration a letter from the Committee of Correspondence of Boston. A committee was chosen, consisting of Deacon Jonas Hammond, Captain Richard Dresser and Captain Nathaniel Blood, "to draw up resolves relating to the unconstitutional burdens laid on the province." The report of the committee was as follows:

Gentlemen,—We have taken into serious consideration the pamphlet sent us from Boston, wherein the rights and privileges of this province are clearly stated, and the infringements made thereon justly pointed out. We return our sincere thanks to the town of Boston for the vigilance and firmness in support of the country, which has been very conspicuous in that metropolis, and will heartily join in all such meaaures as may appear most conducive to the restoration of our invaluable privileges from the hand of oppression.

The report of the committee was approved, and Jonas Hammond, Richard Dresser, Nathaniel Blood, Ebenezer Hammond, Stephen Fay, John Dresser and Ebenezer Foskett were chosen a Committee of Correspondence.

September 12, 1774, it was voted to provide one hundred and fifty pounds of powder, three hundred pounds of lead and fifty dozen flints, and eighteen pounds, lawful money, was voted to pay for the same. Ezra McIntire, constable, was instructed to make no return of jurors, according to the late order. October 10, 1774, Captain Jonathan Tucker was chosen delegate to attend the Provincial Congress to be held at Concord the second Tuesday of the month. At the same meeting it was voted to furnish the regular troops with no implements, labor, etc. December 22d the constables were directed to pay what province money they had collected, or might collect, to Henry Gardner, of Stow, for the use of the province, agreeable to the advice of the Provincial Congress. January 9, 1775, Captain Jonathan Tucker was chosen delegate to attend the Provincial Congress to be held at Cambridge the 1st day of February following. And at the same meeting Captain Samuel Curtis, Captain Richard Dresser, Lieutenant William Tucker, Ezra McIntire and Ebenezer Foskett were chosen a committee to see that the directions of the Continental and Provincial Congresses were strictly adhered to. It was also voted to aid and assist and protect the constables in collecting the province tax. March 6th it was voted "to make the men in the district some allowance for disciplining themselves." May 22, 1775, Rev. Caleb Curtis was chosen a delegate to attend the Provincial Congress to be held at Watertown. March 4, 1776, Nathaniel Jones, Ebenezer Foskett and Thomas Parker were chosen a Committee of Correspondence, Inspection and Safety, and in June following Ezra McIntire and Caleb Ammidown were added to the committee. At the meeting in March Daniel Streeter was allowed one pound and eight shillings for carrying blankets to the army. June 17, 1776, the town voted to support the Continental Congress in declaring independence of Great Britain.

March 18, 1777, the town voted to give their men who should enlist into the Continental service for the term of three years, or during the war, the sum of twenty pounds each, in addition to the bounty given by the Continental Congress and the State, and that the money for the purpose should be raised by a general assessment, in order that all the inhabitants and estates should pay an equal proportion in defending civil and religious privileges. This vote was passed in accordance with the recommendation of a committee chosen to devise means to raise the quota of men required of the town as speedily as possible.

June 9, 1777, Lieutenant John Edwards was chosen "to procure and lay before the court the evidence that might be had of the inimical disposition of any inhabitant of the town towards this or any of the United States who might be charged by the freeholders, or other inhabitants, with being a person whose residence in the State was dangerous to the public peace and safety."

By a vote of the town, the names of Obadiah McIntire, Eleazer McIntire, Eleazer McIntire, Jr., and Jesse McIntire were placed on the list of suspected persons. It is not known that any evidence was ever procured and laid before the court tending to prove that the residence of either in the State was dangerous to the public peace and safety.

January 20, 1778, it was voted to raise by tax the sum of eight hundred and eighty-nine pounds seven shillings and six pence, and to pay said sum into the treasury of the State by the 1st day of the next April, agreeable to an act of the General Court.

February 2, 1778, Captain Richard Dresser, Lieutenant Ebenezer Hammond and Daniel Williams were chosen a committe to receive subscriptions for the Continental soldiers enlisted for the town, and to convey to them, as soon as possible, such things as should be subscribed.

March 2, 1778, Nathaniel Jones, Ebenezer Foskett, Caleb Ammidown, Ezra McIntire and John Dresser were chosen a Committee of Correspondence, Inspection and Safety, and Ebenezer Hammond, Nathaniel Blood and Nathaniel Goodell were chosen to provide for the families of the men from the town enlisted into the Continental army for three years, or during the war. April 2, 1778, Peter Sleeman, Reuben Davis and Benjamin Alton were chosen a committee to provide shirts, stockings and shoes for the town's quota

of men in the army, and to appraise said articles according to their quality. The committee valued the articles collected by them at one hundred and ninety-six pounds six shillings, and the town voted two hundred pounds to pay for the same.

March 1, 1779, John Dresser, John Edwards and Caleb Ammidown were chosen a Committee of Correspondence, etc., and Isaiah Blood, David Wheelock and Stephen Fay a committee to provide for the families of soldiers. In September following the town voted to raise nine hundred pounds to enable the committee to provide for said families.

March 6, 1780, Stephen Fay, David Hammond and Ezra McIntire were chosen to provide for the families of the Continental soldiers.

June 29th, the same year, the town voted six hundred and fifty pounds, old lawful money, to pay their soldiers for six months' service, and July 4th voted to pay such men as should enlist for three months forty shillings per month each, "to be paid in capital, articles of produce, or money equivalent thereto."

October 9, 1780, the town voted to raise three hundred and fifty pounds of the new or late emission, or other money equivalent thereto, to procure the town's proportion of beef, and Salem Town and David Rich were chosen to procure said beef, and in December following seven hundred pounds were voted for a like purpose, and a committee chosen to procure the beef.

June 3, 1781, it was voted to furnish each soldier that should enlist from the town for three years, or during the war, with forty hard dollars, or other money equivalent thereto.

July 16th, voted to give the men raised to go to Rhode Island forty shillings per month, and the men raised to go to headquarters for three months fifty shillings per month, and it was voted to raise three hundred and thirty pounds in silver and gold to provide the town's quota of beef, and Salem Town was chosen to purchase the beef. The pay-rolls, descriptive lists and other papers in the office of the Secretary of State, at Boston, contain the names of two hundred and fifty different soldiers from Charlton who were in service in the army. Of this number forty-one were in Colonel Larned's regiment at Roxbury from April, 1775, till December 26th following, and twenty-eight were in Colonel William Campbell's regiment for a shorter period. In December, 1775, thirty men were raised to reinforce the army. In 1776 forty men enlisted for one year. In March, 1777, forty-eight men were raised to complete the quota of the town. In August of the same year one-fourth of the militia (thirty-six men) were marched to Rhode Island under command of Captain Abijah Lamb.

There were enlistments of men for three years, or during the war, in 1780, and twenty-four men were drafted. Other drafts from the militia were made of men for short terms of service.

Jacob Davis, Reuben Davis, John Nichols, Samuel Curtis, and Abijah Lamb each held a captain's commission in the service, and Jonathan Tucker, William Tucker, David Rich and Robert Kelley were lieutenants.

According to a return made by the selectmen in 1788, in compliance with a resolve of the General Court, the town paid in bounties to soldiers who served in the war a sum equal to seven thousand nine hundred and twelve pounds silver money.

In May, 1782, the town voted to instruct their representative "to adhere strictly to the whole of the resolves and recommendations of the late county convention, held at Worcester, for the removal of divers grievances, which the good people of the commonwealth labored under, and to take prudential care relative to the impost act, so-called, and also to use his best endeavor that there might be a more equal mode of taxation come into in the commonwealth, so that the laborer might not bear more than his just proportion of taxes." In 1783, and again in 1784, the representative was given similar instructions. A town-meeting was held August 10, 1786, to take into consideration a letter from the committee of the convention held at Leicester June 26th. Caleb Curtis and Caleb Ammidown were chosen delegates to attend a convention to be held at Sutton, August 15th. The people of the town were earnest in their efforts to secure a removal of the grievances complained of, and there is no doubt that the men who organized the "Shays' Rebellion" had the sympathy of many of the prominent men of the town. Rev. Caleb Curtis, who had been a delegate to the conventions held, and who was arrested and held in custody for a short time for alleged encouragement of armed resistance of the State government, was elected a representative to the General Court in 1787.

In July, 1787, the town voted that "the selectmen, in the name and behalf of the town, should petition the Governor and Council to grant a full and free pardon to Capt. Henry Gale, of Princeton, who had been convicted of treason for his participation in the Rebellion, if it could be done consistent with the honor and dignity of the Government."

Interest was taken in the War of 1812, and pay in addition to what was received from government was voted men in service.

At a town-meeting held September 14, 1812, the following article was acted on: "To see what sum of money the town will raise to pay each non-commissioned officer and private soldier per month who has been, or may be, drafted or detached from the militia of the commonwealth, who is a resident of Charlton while the present war with Great Britain continues, provided they perform the duties of the field."

It was voted "to allow seven dollars per month in addition to the common pay to the militia that have been drafted, or that may be drafted in future to serve in the present war with Great Britain and her dependencies."

Dr. Ebenezer Borden, Dr. Dan Lamb, John Brown and John Spurr; Jr., were chosen a committee to take into consideration the measures of government. A Committee of Safety was also chosen.

No action was taken by the town in regard to the war with Mexico.

During the War of the Rebellion the town was ever ready to respond to any call and to furnish men to fill any quota assigned it.

At a town-meeting held May 9, 1861, the sum of ten thousand dollars was appropriated for raising a military company and for aid to the families of those who entered the service. Volunteers were to be paid one dollar per day for time spent in preparatory drill and ten dollars per month in addition to government pay while in service, to commence when they left town. And one dollar and fifty cents per week was to be paid to the wife of any volunteer or to his family, and fifty cents per week to each child under twelve years of age. If any volunteer was killed, his pay was to be continued during the time his company was in the service. If the town failed to raise a company, volunteers might join other companies on the same conditions, and any resident of the town who had joined a company of any other town and did not receive pay from said town was to be paid the same as persons joining a company of the town. R. B. Dodge, Erastus Winslow, Dexter Blood and Judson McIntire were chosen a committee to take charge of the funds and to make payments. It was also voted to furnish such uniforms, equipments, etc., as the State did not provide.

July 28, 1862, the town voted to pay each volunteer one hundred and ten dollars when mustered into the United States service. R. B. Dodge, Levi Hammond and Jonas Bemis were chosen a committee to aid the selectmen in obtaining recruits. August 2d, voted to pay one hundred and fifty dollars to volunteers and forty dollars to all who had previously enlisted, in addition to what they had previously been paid.

At a meeting held August 20, 1862, "to see what action the town would take relative to the call of the President for 300,000 additional volunteers for nine months," it was voted to pay each volunteer one hundred dollars when mustered into service, and that the first five to enlist should be a committee to assist the selectmen in procuring enlistments. In accordance with this vote, Rufus N. Moffit, Henry G. Lamb, Salem A. Spurr, Daniel S. Robbins and John A. Ward became the committee. The sum of four thousand dollars was appropriated to pay the bounties.

August 29th it was voted that the town clerk should make a record of all the soldiers that had enlisted or should enlist from the town, with the company and regiment of each, the time when mustered into service and term of enlistment.

September 24th, voted to pay the bounty to the wife or family of any volunteer who should go into camp and die before being mustered into service.

At a meeting held December 15, 1862, "to see what measures the town would take relative to furnishing their quota of men," it was voted to pay two hundred and fifty dollars to volunteers who should enlist for three years, and four thousand dollars was appropriated to meet such payments.

January 15, 1864, the town voted to pay one hundred and fifty dollars for each volunteer to fill its quota under any call issued prior to March, 1865.

The following is from "A History of Massachusetts in the Civil War," by William Schouler: "Charlton furnished two-hundred and thirteen men for the war, which was a surplus of eighteen over and above all demands. One was a commissioned officer. The whole amount of money appropriated and expended by the town on account of the war, exclusive of the State aid, was twenty-two thousand dollars. The amount of money raised and expended by the town during the war for State aid to soldiers' families and repaid by the Commonwealth was as follows: In 1861, $221.94; in 1862, $2455.99; in 1863, $4115.53; in 1864, $3153.22; in 1865, $1800. Total amount, $11,746.68. Population in 1860, 2047; in 1865, 1925. Valuation in 1860, $872,454; in 1865, $909,729. The selectmen in 1861 were R. B. Dodge, Almon Sampson, Hiram Willis; in 1862, J. H. Hathaway, Erastus Winslow, Alfred E. Fiske; in 1863, J. H. Hathaway, R. B. Dodge, Gilbert Rich; in 1864, J. H. Hathaway, A. H. Marble, Andrus March; in 1865, J. H. Hathaway, Alfred E. Fiske, Reuben Rich. The town clerk and town treasurer, during all the years of the war, was Alfred E. Fiske.

J. H. Hathaway, who was chairman of the Board of Selectmen for four years, was an efficient agent in obtaining volunteers for the service.

Soldiers who were killed or who died from disease contracted in the service: Seymour Adams, Hezekiah Aldrich, Elisha W. Buxton, Francis Clarke, Alvan B. Dugar, Henry W. Dunn, George P. Davis, Cornelius Davis, Calvin J. Darling, Manson Gould, Patrick Gillespie, Michael B. Hayes, William H. Kinney, George Knight, Nelson Harris, Chauncy Harris, Van Buren McKinstry, Harry March, Andrew Moore, Livingston Mower, Hartwell Newton, William O'Connell, Elbridge S. Perry, Elliott H. Robbins, Wilson D. Stone, Orman Stevens, Luther Spooner, Charles F. Sanger, Samuel Tourtellotte, Albert L. Williams, George W. Willard, Frederick E. Young, John A. Young, Juan Young, Charles H. Waite, Herbert Fuller, Henry S. Dealing.

William H. King, who enlisted as a private soldier at the commencement of the war and continued in service until its close, was commissioned captain before his services ended.

Dr. George H. Taft was a surgeon in the army in 1862.

Mills for grinding grain and for sawing lumber were built at an early date. Before 1759 there was a mill owned by Jonathan Ballard on the place afterward owned by Captain David Rich, and later by his

son, John H. Rich. Other mills were in use soon after this time, and at a date not much later there were several places where potash was made.

In 1790 Thaddeus Marble and Aaron Marble commenced the manufacture of scythes at the place now called Millward. In 1804 Aaron sold his interest to Thaddeus, who continued the business alone. Aaron afterwards with a son engaged in the same business at the North Side.

At about the same time William Smith had a shop and manufactured scythes on the stream below what is now called Lelandville, in the southeast part of the town. The shop was afterward run by Joab Maynard and perhaps others.

A tannery had been established at the North Side before 1770 by Jonathan Wheelock. In that year Wheelock sold to Ebenezer Davis. It was afterwards owned by Israel Waters, who carried on the business of tanning and currying to a considerable extent for several years. It was afterwards owned and run by Colonel Asa Bacon and by his sons, Berthier Bacon, Alvin Bacon, and Fiske Bacon.

The business of distilling gin was quite extensively carried on at the North Side for a considerable time. Isaiah Rider and William P. Rider owned and run the first distillery there. Aaron Marble and Charles Marble commenced the business a little later, and Abner Wheelock was the last in the business at the place.

In 1828 Charles Preston and Stephen Bartlett bought land and water-power in the southeast part of the town and built a stone mill for the manufacture of cotton thread. Before the mill was put in operation Preston became the sole owner, and for a time carried on the business alone. Afterward Asa Baldwin and James Boutwell were associated with him in business, which was continued until the decease of Preston, in 1839. After the death of Preston the property was purchased by Philip Potter, who continued the manufacture of thread until the mill was destroyed by fire in 1849. It was never rebuilt.

For many years there was in the easterly part of the town a mill where "home-made cloth," such as used to be made in almost every house, was dressed or finished. The last person who owned and run the mill was Amos Williams. There was a mill at Charlton City used for the same purpose owned by Henry Puffer. The property was at a later date purchased by Caleb Torry, who built a mill for the manufacture of woolen goods. In 1848 Michael Coogan bought the mill and run it until 1856, when Andrus March purchased the property and leased it to Baker & Bottomly, who run the mill about three years, making a cheap grade of satinets. In 1860 Baker and March entered into partnership and run the mill about six years, when Baker withdrew from the firm. March continued the business alone until 1875, and then rented the mill to Edward Akers and Nathan Norris, who manufactured a grade of goods that could be sold at a low price and afford the manufacturers a profit. In 1878 Mr. Akers withdrew from the firm. Mr. Norris purchased the mill and continued the business alone until the mill was burned in 1885. He rebuilt the mill and commenced manufacturing again, but continued in the business but a short time.

In 1877 Mr Akers purchased the Thayer privilege on the stream above the March Mill and built a factory with a capacity for two sets of machinery, and when the firm of Akers & Norris was dissolved, in 1878, he commenced business alone. In 1882 Fred. S. Taylor was taken as a partner in the business. The firm commenced making a better grade of goods, the buildings were enlarged and the machinery increased. Substantial picker and store-houses have been erected on the Berry privilege below. Eighty hands are employed. The monthly pay-roll is two thousand dollars, and forty thousand yards of satinet are manufactured monthly.

In the spring of 1888 Akers & Taylor and William B. Carpenter purchased the Norris Mill and commenced business under the firm-name of the Cady Brook Manufacturing Company, making the same kind of goods that are made by Akers & Taylor. Thirty-five hands are employed, and thirty thousand yards of cloth made monthly. In 1880 M. D. Aldrich fitted up a mill for the manufacture of satinets a short distance west of the city. In 1882 the mill was leased to Nathaniel Taft and J. O. Copp. In 1886 Taft withdrew from the firm, since which time Copp has continued the business alone. His business affords employment to forty hands, and twenty-eight thousand yards of satinets are made monthly.

Joel A. Chapman, at Charlton City, runs a satinet-mill, employing twelve hands and making twelve thousand yards of cloth monthly.

George Pike commenced the manufacture of satinet at Millward in 1887. He runs one set of machinery and makes about twelve thousand yards of cloth monthly, employing twelve hands.

About 1815 Harvey Dresser, a young man of great enterprise and capacity for business, engaged extensively in the manufacture of furniture, carriages, harnesses and farming implements on Dresser Hill. He continued the business until his death in 1835.

In 1843, John P. & Samuel J. Leland commenced the manufacture of augers and bits in the southeast part of the town, at the place since called Lelandville. They continued in this business until 1861, when they engaged in making ramrods for the government. This government contract lasted about three years, in which time they manufactured three hundred thousand ramrods. While the Lelands were in business, quite a village was built up. In 1865 they sold their shops and buildings to Henry H. Stevens, at that time the owner of the Dudley Linen Works. For several years some part of the work connected with his business was done in the shops, but of late no use has been made of them.

Granite of good quality for working is abundant on "Rockey Hill," in the southeast part of the town. Before 1800, Rufus Wakefield and Sylvanus Wakefield commenced working the quarries. Since that time the business has been continued and has been carried on by Gibbs Dodge, Joseph Woodbury, Horace Lamson and others. At the present time, W. Y. Woodbury, J. L. Woodbury and Horace L. Lamson, who carry on business under the firm-name of Woodbury Bros. & Co., are the only persons working the quarries. Their business affords employment to about twenty men.

George Marsh engaged in the manufacture of carriages at Charlton City, about 1831. At a later date, Horace P. Hicks carried on the same business there.

The sash and blind business has been carried on to a considerable extent, first by Harvey Forbush in the west part of the town, later by Charles Taft at Charlton City, and still later by Knight & Rich at the same place.

Charles E. Morse commenced the manufacture of boots and shoes at the place that has since been called Morseville about 1850. He built large shops for his business, and dwelling-houses for the use of the help employed. The business was carried on quite extensively until the shops were destroyed by fire in 1884. For several years Rufus Dodge was associated in business with Mr. Morse. At a later date Andrew Partridge was a partner in the business. After he retired, C. E. Morse, Jr., and William C. Haven were members of the firm of C. E. Morse & Co.

Jonas L. Rice was engaged in manufacturing shoes at the North Side from 1850 till 1861, doing considerable business.

In 1853 a company was formed at the North Side for the manufacture of boots and shoes, called the Charlton Boot and Shoe Company, of which Berthier Bacon was agent. The business was continued until 1855, when the company was dissolved.

The manufacture of boxes for boots, shoes, cloth and other merchandise has been an important business for a number of years, affording employment to a considerable number of men and a market for a large amount of lumber. Zina Grover, Henry C. Putnam, George Pike and William H. Young have been engaged in the business. Henry C. Putnam commenced in 1863, and is the only person in town now doing any considerable amount of business. He employs about twenty-five men and uses two million feet of lumber yearly.

In 1867 Emory S. Southwick built a large shop at Charlton Depot, in which he manufactured boots and shoes for several years, doing quite an extensive business. In 1871 the shop was destroyed by fire and was never rebuilt.

In 1875 H. G. Lamb and A. N. Lamb commenced the manufacture of shoes at Charlton Depot. In 1880 A. N. Lamb retired and Charles Damon became a partner in the business, and remained until 1884, when he retired. In 1885 A. N. Lamb and William H. Lamb were admitted as partners in the business, which is still continued. The business affords employment to about thirty hands and about two hundred pairs of shoes of fine quality are made daily.

In 1865 the manufacture of wire was commenced by Ira Berry on Cady Brook, below Charlton City. In 1868 George C. Prouty entered into partnership with Berry and continued with him until 1871, when the partnership was terminated. Berry continued the business but a short time after the withdrawal of Prouty. In 1871 Prouty built the wire-mill at Charlton City, and commenced business alone. He has built neat, substantial dwellings for the use of help employed. About one hundred and sixty tons of fine card-wire is made yearly.

Although several men of enterprise and capacity for managing business successfully have engaged in manufacturing enterprises within the last few years, and have contributed essentially to the prosperity of the town, agriculture is the principal business of the inhabitants. The soil is of average fertility and there are some excellent farms owned and cultivated by enterprising, progressive farmers, who contribute largely to the annual exhibitions of the agricultural societies held at Worcester, Sturbridge, Oxford, Spencer and other places more remote. The town has been noted for its fine cattle, especially for its large, well-trained oxen, and although horses have, to a considerable extent, taken the place of oxen for farm-work, there are still some farmers that rear and train oxen that compete successfully with any found at fairs.

According to the statistical tables of agricultural products and property, prepared by Carroll D. Wright, Charlton ranks fourth among the towns of Worcester County in the value of agricultural products.

Daniel H. Tucker is the owner of the three hundred acres of land which was owned by his great-grandfather, Jonathan Tucker. The one hundred and fifty acres of land which was the farm of Ebenezer Hammond is now owned by his great-grandson, Henry Hammond. Edward D. Blood is the owner of the farm on which his ancestor, Richard Blood, settled. The land bought by Ebenezer Foskett in 1739, and on which he lived, is now the property of his great-grandson, Dan Foskett, and Edwin Phillips owns the farm on which his great-grandfather, Jonathan Dennis, settled. No other farm in the town is now owned by a descendant of the first occupant.

Representatives to the General Court have been as follows: Isaiah Blood, 1775; Jacob Davis, 1776; Jacob Davis, Caleb Ammidown, Isaiah Blood, 1777; Caleb Ammidown, 1778–79; Jacob Davis, 1780; Ebenezer Davis, 1782; Caleb Ammidown, 1783; Ebenezer Davis, 1784; Caleb Ammidown, 1786; Samuel Robinson, Caleb Curtis, 1787; Samuel Robinson, 1788; Ebeezer Davis, 1789; Salem Town, 1790–91–92–93; Caleb Ammidown, 1794; Salem Town, 1795; Ebenezer Da-

vis, 1796; Salem Town, 1797; Ebenezer Davis, 1798; Salem Town, 1799; Levi Davis, 1800; Salem Town, 1801–2–3–4; Gen. John Spurr, 1805; Gen. John Spurr, Samuel Robinson, 1806–7; Gen. John Spurr, Dr. James Wolcott, 1808; Gen. John Spurr, Thaddeus Marble, 1809; Gen. John Spurr, Thaddeus Marble, Ephraim Willard, 1810–11; Thaddeus Marble, Ephraim Willard, Wm. P. Rider, 1812; Gen. John Spurr, Isaiah Rider, 1813; Gen. John Spurr, Wm. P. Rider, 1814; Gen. John Spurr, Isaiah Rider, 1815; Ephraim Willard, Isaiah Rider, 1816–17–18–19; Samuel Hall, 1821–22; James Boomer, 1823; John Spurr, 1824; James Boomer, 1826; Samuel D. Spurr, 1828; Samuel D. Spurr, John Hill, Jr., 1829; John Hill, Jr., Issachar Comins, 1830; Jonathan Winslow, 1831; Ebenezer White, Issachar Comins, 1832; Ebenezer White, Rufus Mixer, 1833; Rufus Mixer, Paul Rich, 1834; Paul Rich, Jonas Tucker, 1835; Jonas Tucker, William P. Marble, 1836; William P. Marble, Amasa Stone, 1837; Amasa Stone, Moses Williams, 1838; Moses Williams, Aaron Marble, Alpheus White, 1839; Aaron Marble, Alpheus White, Simeon Lamb, 1840; John P. Marble, 1841–42; William B. Boomer, 1843–44; William Marble, 1845–46; Simeon Lamb, 1848; Nehemiah B. Stone, 1849; Luther Litchfield, 1851–52; Levi Hammond, 1853–54; Alfred Mower, 1855; Mason Marble, 1856; Rufus B. Dodge, 1857; Aaron H. Marble, 1858; Gilbert Rich, 1860; Dexter Blood 1862; Henry Clark, 1864; Albert C. Willard, 1866; J. H. Hathaway, 1868; Alfred E. Fiske, 1871; Moses D. Woodbury, 1873; Andrus March, 1876; George D. Woodbury, 1879; Dr. George H. Taft, 1882; Henry G. Lamb, 1885.

In 1857 Charlton was joined with Sturbridge to make a representative district. In 1866 the towns of Auburn, Charlton, Leicester, Spencer and Southbridge were formed into a representative district. In 1876 Oxford, Southbridge, Charlton and Spencer were made a district. In 1886 Charlton, Dudley and Southbridge were united, the three towns being entitled to but one representative.

The men prominent in public affairs until the close of the Revolution have been mentioned. They were mainly men who were among the first settlers. Quite a number who became large land-owners acquired considerable wealth. Ebenezer Davis, a man of sound judgment, prudent and exact in all his business operations, a large dealer in real estate and other property, left at his decease a larger estate than was ever acquired by any other man in the town. The late Hon. Emory Washburn, who was for several years Governor of the State, was his grandson, as was also the late Ebenezer D. Ammidown, of Southbridge. Jacob Davis, a brother of Ebenezer, was a man of remarkable enterprise, who dealt largely in real estate. He was one of the founders of Leicester Academy, and aided liberally in its establishment. Gen. Salem Town, Sr., was long in the public service. He was a representative to the General Court eleven years, several times a member of the State Senate, and one of the committee in 1807 to locate the Worcester and Stafford Turnpike, to assess the land damages, and to superintend the building of the road. He held other offices of trust and responsibility. His son, the late Gen. Salem Town, had command of a regiment of militia called out by the Governor in 1814, and stationed at South Boston. He was State Senator in 1821, '22 and 56, being in the latter year the oldest member. Caleb Ammidown, who was a resident of that part of the town which was taken after his decease to form part of the town of Southbridge, was five years a representative to the General Court. He did much business as a land surveyor and conveyancer, and was one of the agents of the State for selling confiscated lands.

Gen. John Spurr, one of the "Boston Tea Party," was a prominent, influential man, and represented the town in the General Court ten years. Major John Spurr, a son of Gen. Spurr, was active in public affairs, much interested in political matters, and an efficient worker in the party to which he belonged. Isaiah Rider and William P. Rider were men of note and enterprise. Rufus Mixer and William P. Marble were men of prominence, well versed in the laws relating to town and Probate matters, and were careful, competent conveyancers and did much business in the settlement of estates.

Mention may properly be made of Amasa Stone, a man of great enterprise and business ability, who accumulated a large fortune in railroad business and other important enterprises; Daniel Phillips, one of the pioneers in the express business, in which he was eminently successful; Moses D. Phillips, a brother of Daniel, and enterprising bookseller and publisher, and who was the head of the firm of Phillips, Sampson & Co., the founders of the *Atlantic Monthly;* Linus B. Comins, a capable, successful man of business, who represented his district in Congress several terms, and Albern N. Towne, a noted railroad manager, who were natives of the town, as were Samuel D. Spurr, Dwight Woodbury, John P. Marble, Jerome Marble, Salem T. Russell, Daniel Stevens and Charles P. Stevens, all sagacious, capable business men.

Franklin Gale, who was a lawyer of distinction in Columbus, Ohio, and for many years a judge of a State Court; Turner Ellis, who was a lawyer of eminence in Indiana; Stephen P. Twiss, who was for several years judge of the United States Territorial Court in Utah; Dr. W. T. G. Morton, generally regarded as the discoverer of the use of ether as an anæsthetic in surgical operations; Rev. Julius H. Ward, a writer of distinction; Rev. Caleb Blood, Rev. Ebenezer Lamson, Rev. David R. Lamson, Rev. Darius Gore and Rev. Lewis W. Hicks, clergymen of ability, and Joseph Whipple, a graduate of West Point, and who died in service in Mexico, were also natives of Charlton.

The town has been represented in the State Senate by General Salem Town, Sr., General Salem Town,

Jr., Major John Spurr, Rev. Aurin Bugbee and Rufus B. Dodge.

Jacob Davis, General Salem Town, Sr., and Samuel Lamb were delegates to the convention to form the State Constitution in 1779. Major John Spurr was a member of the Constitutional Convention of 1820, and William P. Marble was delegate to the Convention of 1853.

DISTRICT AND TOWN CLERKS.—Richard Dresser, the first clerk, held the office eleven years; Nehemiah Stone, the second, served fourteen years and was treasurer seventeen years. Samuel Lamb, Dr. Ebenezer H. Phillips, Dr. Dan Lamb, Leonard Towne, Julius E. Tucker, Luther Litchfield and Alfred E. Fiske, each held the office many years; the latter was clerk thirty years and treasurer twenty years.

The early physicians of the town were William Ware, Abel Waters, Ebenezer H. Phillips, James Wolcott and Ebenezer Borden. Later there were Dan Lamb, Charles M. Fay, Isaac Porter, Henry H. Darling, Albert Potter, George H. Taft and L. D. Fuller. Others have been in town for a short time. The only physician at the present time is Dr. George H. Taft.

There have been four lawyers in the town—Erasmus Babbitt, Liberty Bates, William Stedman and John Davis. Since the death of John Davis, in 1840, the inhabitants have been obliged to go out of town for legal advice.

The population in 1765 was 739; in 1776, 1310; in 1820, 2,134. After 1820 the census showed but little variation until 1840; since that date there has been a gradual falling off in numbers. In 1885 the population was 1,823. Number of families, 471. Number of dwelling-houses, 459. Assessor's valuation 1888: real estate, $758,760; personal, $155,710. Number of polls, 512.

CHAPTER XCVI.

LUNENBURG.

BY EZRA S. STEARNS, A.M.

Location—Ponds and Drainage—Original Grants—Settlements—Incorporation—Proprietary Affairs—Roads—The Town Divided—Personal Notices.

LUNENBURG, situated in the northeast part of the county of Worcester, is bounded on the north by Townsend, on the east by Shirley, on the south by Lancaster and Leominster, and on the west by Fitchburg and Ashby. The adjoining towns, Ashby, Townsend and Shirley, are in the county of Middlesex. The centre of the town is twenty-four miles north from Worcester, forty-three miles northwesterly from Boston, and is in latitude 42° 35′ 30″ and in longitude 71° 43′ 30″ west from Greenwich. By the survey of Cyrus Kilburn, in 1831, the town contained an area of seventeen thousand four hundred and ninety-four acres, and by the estimate of the assessors, exclusive of water, fifteen thousand nine hundred and forty acres. Within the town are five natural ponds and three of them bear names of Indian origin. The one situated near the re-entrant angle in the line of Leominster contains ninety-five acres, and its name has experienced many orthographical changes. In the proceedings of the Colonial Legislature, in 1713, it is written Unkachewalwick, and, ten years later, Francis Fullam, in the records of the committee of the General Court, writes Unkechewalom, and about the same time comes Edward Hartwell, who wrestles with the name, and leaves upon the records Uncachawalonk, while Rev. Peter Whitney, in the "History of Worcester County" (1793), in writing Unkeshewalom nearly repeats the record of Francis Fullam, which has been the prevailing orthography of modern times. Wilder's "History of Leominster" (1853), dodges the issue and abbreviates the word into Chualoom, and frequently of late, when the name is expressed in vocal terms, only the last two syllables are employed. At best the old Indian name is not like the one loved and described by the Elder Weller as "an easy word to spell," and it is not wholly imaginative to say that in the olden times, when a new settler in these parts began to wrinkle his face and twist his mouth and utter a volley of hard and guttural sounds, his hearers knew he was not cursing, but only trying to tell them where he caught a string of fish.

Massapog Pond, of sixty-two acres, also near the Leominster line, is one mile and nearly one-fourth southeasterly and receives the overflow from Unkechewalom. In 1713, in the records of the General Court, this word is written Masshapauge, and in Mashaporg the same sounds are preserved by the records of Nathan Heywood and Edward Hartwell, but from the earliest mention to the present time it has been spelled with considerable uniformity. From an early survey of a small marsh on the north, in 1750, a marsh near the pond is described as "not land nor water and partly both." The overflowing stream bears northerly, easterly and southerly, receiving tributaries on either hand, and empties into the Cataconameg, in the southeast part of the town, about one hundred rods from the line of Shirley. By Francis Fullam the name of the third pond is written Cataconamog, by Rev. Peter Whitney, Catatoonamog, and by Rev. Henry Chandler, in the "History of Shirley," Catecunemaug. The stream from this pond, having gathered the drainage of more than one-half the town, flows through Shirley and empties into the Nashua River. A little more than one mile east from the centre of the town is Lane's Pond, and nearly an equal distance south of that is Dead Pond. Neither of them exceeds five or six acres in area. They are not mentioned in the early records and it is not known when they were first discovered.

The northern part of the town is drained by Mulpus Brook. The course of this stream is easterly and nearly parallel to the line of Townsend. It flows through Shirley and empties into the Nashua. Pearl Hill Brook, in the west part, flowing into Fitchburg, and Baker's Brook, flowing through the southwest corner, drain small areas in this town.

At the time the territory constituting the town of Lunenburg was severed from the wilderness and fell into the possession and under the control of its grantees, the locality was well known to the dwellers in the older towns. Lancaster on the south and Groton, including Shirley, on the east, had been settled many years. The echoes from the activities of those hardy pioneers and the presence of many scouting parties of white men, explorers and hunters within the confines constitute the first and the unwritten chapter of the history of the town. The earliest official act immediately appertaining to the soil of Lunenburg, of which any record appears, is a grant of two hundred and four acres to Nathaniel Walker, June 6, 1663. The limits of this chapter will exclude details. It was surveyed in October, 1666, and the title was confirmed by the General Court, May 27, 1668. This tract of land was situated near the present line of Shirley. It was subsequently owned by Ephraim Savage, and November 5, 1714, it was purchased by James Kibby, of Reading.

In May, 1672, a grant of one hundred and fifty acres was made to Frances Adams, wife of James Adams, which was located in the east part of this town, and also was purchased by Mr. Kibby. A further account of these two early grants within the town of Lunenburg will be employed in explanation of later and more important events. In 1664 the General Court granted two thousand acres to the town of Woburn. The title was suffered to lapse, but was renewed in 1716. In May, 1717, this extensive grant was surveyed by Captain Joseph Burnap, of Reading, assisted by Edward Hartwell, then of Lancaster. It was located south of the centre of the town. Beginning at a point in Leominster line about mid-way between Unkechewalom and Massapog Ponds, the boundary line extended easterly almost one mile, thence northerly a little more than two miles, thence westerly one mile and one-half and then southerly to a point in Leominster line about two hundred rods west of the angle at Unkechewalom Pond. The north line of this grant was about one-half mile south and nearly parallel to a section of the old Northfield road. It included the pond and an important section of the town, but it remained unimproved until many settlers were located around it. In 1717 one thousand acres were granted to the town of Dorchester. It was immediately surveyed and located west of and adjoining Woburn Farm. Its western boundaries were near Fitchburg. Such were the conditions when the grant of the township was made. The region for many years had borne the name of Turkey Hills, and the ponds and the rivers were known by their present Indian names. The major act was not deferred. On the 7th of December, 1719, the General Court, in one act, granted "two new towns on the west side of Groton west line." William Taylor, Samuel Thaxter, Francis Fullam, John Shepley and Benjamin Whittemore, then members of the General Court, were selected to conduct a survey of the grants, to allot the same and to admit the grantees. The grant appears in Torrey's "Fitchburg" and in Sawtelle's "Townsend," but many interesting details of the early proceedings remain unpublished. Three of the committee, Fullam, Shepley and Whittemore, with Samuel Jones, surveyor, and four chain-men, began the survey of the boundary lines of the two townships December 22, 1719, and completed the work in eight days. In April following, in connection with another committee, they established the west line of Groton, or the east line of the new towns. Continuing a work well and seasonably begun, the committee, all being present, met at Concord May 11, 1720, and proceeded to admit settlers or grantees, or, in the language of the record of their proceedings, "to allott & grant out y^e^ Lands contained in Each of y^e^ Two Townships." By the committee the townships were styled North Town and South Town. The former at that time included Townsend and a part of Ashby, and the latter embraced the present towns of Lunenburg, Fitchburg and a part of Ashby. This statement, however, should be qualified with a mention of the fact that the north line of Townsend and the west line of Lunenburg (now Fitchburg) were subsequently amended. At this meeting eighty proprietors were admitted. This number was subsequently increased, but never exceeded ninety. In October, 1720, a house-lot was surveyed for each proprietor and for the two ministerial rights, but the school and college lands were not defined until a later day. The remainder, and much the greater part, of the township was owned in common by the proprietors, and mainly distributed among them from time to time in second, third and fourth division lots. During the years that intervened between these proceedings and the act of incorporation the affairs of the township were conducted by the committee appointed by the General Court, and frequent meetings were held at the inn of Jonathan Hubbard, in Concord, and at the houses of Samuel Page and of Josiah Willard, in this town. Meanwhile the settlement slowly increased. The early settlers were exposed to constant danger, and their hardships were many. The following petition, now published for the first time, represents that there were nine families here in 1725. It was one of the first papers sent out from Lunenburg, and it presents a vivid picture of an infant settlement on the exposed frontiers. It is superscribed "to Honor^le^ Wiliam Dummer, Esgur, Boston."

To the Honorbl Lnt. Govner:

Sir,—We desire with thanks to acknowledg your Honours care of us as well in time past as this presant spring in sending Colo. Buckmaster

to se what postur of defence we war in & in furder desiring to know our Afayrs which we should be glad to enform your Honour oftener of had we opertunity. we have here this spring 9 famelis posted in 5 garisons which are all wiling to stand their ground if they can; they have the liberty if 2 garisons will come together to haue the solders belonging to each garison with them for ther suport. Our manner of emproving the solders has been by scouting & sumtimes garding men at ther woork, sumtimes 2 or 3 days together in the woods, but wee think it more for our safety to scout round the town so as to cum in the same day for the strengthing our garisons at night & when our men gos out to woork they must have a gard or expose themselves & we must leave sume in our garisons or else they are exposed so that we canot keep a scout always out except we have more solders. We have made no discovrey of the enemy yet among us, but live in dayly expectation of them; but knowing they [Indians] are in the hands of god who is abel to restrain them to whos name we desire to give the praise of our presarvation the year past & in whos name we desire still to trust with dependance on your Honour's protection, a means under god of presarvation; if your Honour shall think it needfull to make any adition to our number of solders we leve it to your Honour's wise concedration & remain your Honour's most humbel servants.

JOSIAH WILLARD.
PHILIP GOODRIDGE.

Turkey Hils, May ye 10: 1725.

Continuing their trust in God and Governor Dummer and measuring their faith by the number of the soldiers, the settlement was prospered during the ensuing summer. In March of the following year, at a meeting of the committee held at Concord, it was recorded: "The Information ye Settlers then Gave ye Commtte Was that there was 26 Houses Raised and Ten of them Settled and Inhabited." Concerning the actual number of residents in the town during the next few years the records present no accurate information, and omitting for the present particular mention of those known to be residing here, there remains ample evidence that the infant settlement made continued progress in population and improvements. With each year a few families arrived and new openings were made in the forest and in the rising smoke above the clearings they saw the assurance of an enlarged community and the promise of increasing harvests.

The town was incorporated August 1, 1728. The name of Lunenburg was suggested by one of the titles of George II., who had recently succeeded to the British throne. By this proceeding South Town was supplanted by a more sonorous term, and while Turkey Hills was perpetuated in the local vocabulary, the term no longer designated a community. Compared with the history of many towns, Lunenburg was incorporated at an early stage in the progress of the settlement. The reason of a successful petition for incorporation is probably found in the fact that within the settlement and among the petitioners were a few men of influence and character whose solicitation was potent with the Governor and the General Court. The cause which led the petitioners to desire an early act of incorporation is not concealed. From the first the affairs of the propriety had been ordered and controlled by the committee to whose proceedings frequent mention has been made. Their authority over the municipal and proprietary affairs of the settlement was absolute and in them was vested all power of legislation in the concerns of the settlement. Therefore, when the committee, in the autumn of 1727, ordered the proprietors to build a meeting-house, stated the dimensions and dictated its location, the issue was boldly met, and in the act of incorporation the authority of the committee was dissolved. The proprietors considered apart from the town owned in common all the undivided land in the township. They were either the original grantees or their successors, and their number could not exceed the number of grantees admitted by the committee, and generally the number was less, because a few owned more than a single right. The proprietors were not necessarily residents of the town and only a part of the original grantees ever lived here, but within a few years nearly all the non-resident owners sold their rights to men living in this town. The proceedings of the proprietors constitute an important chapter in the annals of Lunenburg and Fitchburg. First they re-surveyed all the lots that had been distributed by the committee and entered the title to each lot in a large record-book, which was the height of the art of book-making in those times and is now in an excellent state of preservation. Then they gave the five members of the committee collectively one thousand acres of land in compensation for their services. This tract was subsequently located in the southwest corner of Fitchburg, bounding four hundred rods on the line of Leominster and four hundred on the line of Westminster, the other sides being parallel to these. That the committee had left the affairs of the proprietors at loose ends is seen in the following proceedings.

By an adjustment of town lines a considerable tract was severed from Lunenburg, or what was supposed to be, and added to Lancaster new grant (now Leominster). Several house-lots had been located by the committee within this area, and to the unfortunate owners the proprietors gave an equivalent from the undivided land within the town. Then, to compensate themselves, they applied to the great fountain of land supply. The General Court granted their petition October 2, 1728, as appears in an extract from the court records: "A petition of Josiah Willard and Hilkiah Boynton, agents for the town of Lunenburg, praying that the said town may be allowed an equivalent for two thousand nine hundred and twenty acres of land lately taken out of said town and added to Lancaster new grant, etc."

October 2, 1728, "In the House of Representatives read and ordered that the town of Lunenburg have liberty by a Surveyour and Chainmen on Oath to lay out two thousand nine hundred and twenty acres of land on the west side of said town and contiguous thereto by a parallel line to their west line throughout, for an equivalent for the land taken from said town for and within Lancaster new grant."

A portion of this addition is now in Ashby, but enough remains to constitute a considerable part of the area of Fitchburg. On account of this proceed-

ing the township of Ashburnham was subsequently located nearly a mile further west than otherwise would have been the case.

In a former account of the grant and survey of the Walker and the Adams farms it was stated that they fell into the possession of James Kibby, of Reading, several years before the grant and settlement of the town. Soon after acquiring possession of these grants Mr. Kibby became insane and for several years no reference to the owner or to the grants is found. In the mean time, unconscious of the existence of any prior rights, the committee had overrun the obscured boundaries and had completely absorbed both grants in the distribution of land in that portion of the town. Soon after the incorporation of the town Zachariah Fitch, the guardian of Mr. Kibby, demanded possession of the two tracts of land owned by his ward. To protect the titles of the new owners who were in possession, the proprietors compromised with the guardian by giving him one hundred and two pounds and a grant of three hundred acres in the southwest part of the town. This land, known for many years as the Fitch farm, was next north of the committee farm of one thousand acres, and was bounded on the west by the west line of Fitchburg and on the south by a line four hundred rods from and parallel to the Leominster line. It was subsequently purchased by William and Joseph Downe. In this proceeding, in addition to money paid, the proprietors had suffered the loss of three hundred acres and again sought indemnity of the General Court. The appeal was not in vain. A grant of four hundred acres was immediately made, which in two parts was located on the east bank of the Connecticut River. This land was subsequently deeded to Josiah Willard and Edward Hartwell in consideration of the money paid the guardian of James Kibby. By the conditions of the grant of the township two hundred and fifty acres each was reserved for the benefit of Harvard College and for schools.. In 1729 the proprietors gave Harvard College two hundred and fifty and forty-one hundredths acres which was located in the northeast part of the town, adjacent to Townsend, but did not extend east to the line of Shirley. In 1774 the college sold the lot to Joseph Bellows for one hundred and twenty pounds. One hundred and sixty-nine acres of the school lot was located in 1764 on the easterly side of Pearl Hill. In 1764 a part of this lot fell in the limits of Fitchburg. The remainder of the school lands was located by a vote of the proprietors "at a place called Toffet swamp" now in the south part of Fitchburg. For ministerial lands the proprietors laid out four lots. The town, apart from the proprietors, assumed control of the school and ministerial lands, and near the close of the past century disposed of them in small parcels.

'Torrey, in his admirable sketch of Fitchburg and Lunenburg, expresses surprise that with a grant of six miles square, the proprietors managed to secure a township so large. The General Court expressed an equal surprise one hundred years earlier, and ordered them to make a new measurement and report. What was subsequently done is briefly told in the Court records:

November 28, 1729. A petition of Josiah Willard, Esq., and others, a committee of the town of Lunenburg, in the county of Middlesex, showing that the inhabitants have been at the charge of a new and more exact survey of the said Town and find thereby that they have Four thousand and one hundred and ninety-seven acres of Land within the limits of their Township above the original grant of six miles square, and forasmuch as they have been at great expense and Difficulty in their settlement by reason of the War; Therefore praying that the plan of said Town may be accepted and confirmed notwithstanding the said overmeasure.

In the House of Representatives read and ordered that the said plan be accepted and that the land therein delineated and described be and hereby is confirmed to the Grantees of Lunenburg, their Heirs and Assigns, provided it exceed not the contents set forth and does not interfere with any former grant.

In Council read & approved.

Consented to

WM. DUMMER.

In this measurement no account was made of three thousand acres in the Woburn and Dorchester grants. They were included in the municipality; but they were no part of the six miles square granted the proprietors. The ponds also were excluded. By the surveys of 1830 and 1831 Fitchburg has an area of 17,879 acres; Lunenburg, of 17,494 acres; and estimating the area donated to Ashby at 1627 acres, the amount is 37,000 acres. Then to six miles square add the confession of the proprietors and the two independent grants, — the amount is 30,237 acres. Compared with other ancient surveys, the excess is not unusual. Not that acres then were larger than now, but that the practice of the time was liberal, and the methods of measurement not as exact. In the early surveys there was also an intentional allowance for uneven ground and generally one rod in fifty for what the early surveyors styled "swag of y° chain."

The proprietors continued an organization over one hundred years and as long as any undivided land remained in Lunenburg, Fitchburg or a defined portion of Ashby. At a meeting in May, 1833, they adjourned to meet the next May at the house of Dr. Aaron Bard, and there the record ends. They received the grant from the General Court in community, and sold or donated it to individuals, and in their proceedings is vested the title to all the real estate within the original township. Except to receive the school and ministerial lands, the town, as an organization, had no part in these proceedings. In two or three instances the proprietors sought the friendly offices and the superior influence of the town, which, through a kinship of interest, was invariably granted. In this manner a few votes relating to matters purely proprietary appear in the early records of the town.

On the day following the act of incorporation the General Court adopted an order instructing Captain Josiah Willard to call the first town-meeting. Im-

mediately the inhabitants of Lunenburg were duly warned to meet at the house of Ensign Jonathan Willard. This house was on the Lancaster Road and not far east of the Woburn grant. The first election ever made in this town called Captain Josiah Willard in parliamentary terms to the chair, but more probably he sat upon a block or stood throughout the meeting. The selectmen were: Lieutenant James Colburn, Captain Josiah Willard, Mr. Hilkiah Boynton, Mr. Ephraim Peirce and Mr. Samuel Page. Lieutenant Edward Hartwell was town treasurer, and for minor town officers choice was made of Isaac Farnsworth, Noah Dodge, Joshua Hutchins, Jonathan Willard, Nathan Heywood, Eleazer Houghton, Samuel Johnson, James Jewell, John Fisk, Jeremiah Norcross, Jacob Stiles and Jonathan Whitney. Isaac Farnsworth, who was the town clerk the first nine years of the town's history, made a record of the meeting and probably was chosen at this time, but either through modesty or carelessness he made no record of his first election. The record of the meeting preserves the names of many who were residents of Lunenburg in 1728. Others who are known to be residents at this time are: Rev. Andrew Gardner, Philip Goodridge, David Peirce, David Gould, Moses Gould, Benoni Boynton, Jonas Gillson, Daniel Austin, John Grout and the sons of Samuel Page and Philip Goodridge. The town increased rapidly during the years immediately ensuing, introducing many new names, but quite nearly all who were here at the date of incorporation are included in the foregoing list. The second town-meeting, to raise money to meet public charges and to direct the building of the first meeting-house, was convened in September. The next meeting assembled in January, 1729. "It was voted and chose Capt. Josiah Willard Agent for y^e^ Town of Lunenburg aforesaid to Join with Such other men as y^e^ several neighboring towns shall appoint to Consider what may be best in order to divide y^e^ County of Middlesex into two Counties." This proposition was met in 1731 by the incorporation of Worcester County. Excepting Woodstock, Conn., which, for some years, was considered a part of the county and State, Lunenburg in the order of age was the thirteenth and youngest town in the new county.

Omitting mention of many roads extending from house to house within the town, one of the earliest exploits of the town was to make a road or amend the existing bridle-path, from Lunenburg Centre to the line of Lancaster. In 1743 a road was cut to the west line of the town "for the accommodation of Dorchester Canada (Ashburnham), Ipswich Canada (Winchendon) and the towns above us." In 1745 the town voted that the men living in Captain Hartwell's company build a bridge over the North Branch "in the way that goes to David Goodridge's," and another bridge over the North Branch "in the way that goes to David Page's." The first place was at or near the bridge at South Fitchburg, and the other at the bridge on Laurel Street, in Fitchburg. At the same time the men residing in Captain Willard's company were directed to "build a bridge over Mullepus, in the way by or near Hezekiah Wetherbee's, and a bridge over said Mullepus in the way that goes to Townsend below Widow White's Mill." Subsequently, money was raised at short intervals for repairing and building bridges at these points, but after the Indian wars the militia was not again detailed to do the work. The town refused to build a short piece of road for the accommodation of John Scott, and on his petition the court appointed a committee, who reported in 1754 that, "having viewed the said road, have laid out y^e^ same to y^e^ great satisfaction of Mr. John Scott and the owners of the land the road goes through, who freely gave their land for the road." This was a short and unimportant piece of road wholly within Fitchburg, and is described in the court records as "beginning at the land of said John Scott and running northeast on John Bridge's land, described by marked trees, then on land of Mr. Mead, then on land of Joseph Eaton, then on land of Joseph Spofford to the road that comes from Isaac Gibson's." The presumption that it was a thoroughfare from Lunenburg Centre to the house of Mr. Scott is not sustained by the record.

In the building of the Northfield road the town did not participate, yet this ancient road receives frequent mention in the records. In 1733 a township bounding on Northfield was granted to Josiah Willard and his associates, many of whom were residents of Lunenburg. The early name of the grant was Earlington and Arlington (now Winchester, N. H.), and the road became known both as the Northfield and the Earlington road. It was conditioned in the grant of the township that the grantees within two years "clear and make a convenient travelling Road, twelve feet wide, from Lunenburg to Northfield, and build a house for receiving & Entertaining travellers on said Road, about midway between Northfield & Lunenburg afores^d^.— And for the Encouragement of a Sutable Family to settle in s^d^ House, It is resolved that there shall be granted to him that shall Dwell in s^d^ House for the space of seven years from the Grant one hundred and fifty acres of land."

Many residents of Lunenburg, of Townsend, and of "the lower towns" were employed, and the road was nearly or quite completed in the summer of 1733. There yet are many traditions handed down through several generations from ancestors who, in perpetual fear of the Indians, were engaged in this enterprise. The farm of one hundred and fifty acres on which was the house of entertainment was surveyed by Nathan Heywood, and located not far from where the west line of Winchendon was subsequently established. The survey was made October 7, 1733. In the autumn of 1734 Benjamin Bellows, Hilkiah Boynton and Moses Willard, a committee of the

grantees of Arlington, petitioned the General Court for another tract of land on which to build another house of entertainment at a convenient point on the line of the road. This petition sets forth that the road from Lunenburg to Northfield is forty-two miles; that about twenty-four miles from Lunenburg there "is a house of entertainment set up to the great ease and comfort of persons travelling that road, and your petitioners, apprehending it would greatly accommodate Travellers, more especially in the winter season, to have another House of Entertainment between Lunenburg and that already set up." The General Court promptly granted four hundred and fifty acres, which was surveyed by David Farrar and located on the line of the road in the northwest part of Ashburnham. In 1735 a house was built, and for a few years a family occupied it. The Enos Jones farm is a part of this grant. After the obliterating influences of one hundred and fifty years, an attempt to accurately trace this ancient thoroughfare cannot be wholly successful. The ready voice of tradition offers too many suggestions, and frequently points out roads that are known to have been built subsequently, and for other purposes. At several points the location is well-established by contemporaneous records. The old Northfield Road began at a point more than a mile southeast of the centre of Lunenburg, and probably on and using the Lancaster Road, it continued past the Old or South Cemetery, and bearing northerly as far as the North Cemetery, and near that point making an angle, its course was nearly due west to near the present line of Fitchburg; then, possibly to avoid the rivers beyond, it bore north, and passed where John Fitch was subsequently captured, now the residence of Paul Gates, in Ashby; thence it bore westerly, and from the west line of Lunenburg, now in Ashby, to the east line of Northfield, it was cut through a wilderness of unappropriated land. The survey of an ancient grant in Ashburnham locates the road in its continued course at a point not far from where the present road from Rindge to Fitchburg crosses the line between Ashburnham and Ashby. Then passing north of the North Branch of the Nashua and the South Branch of Miller's Rivers, its course, by the farm (formerly) of Enos Jones in Ashburnham, and near Spring Village in Winchendon, is established by early records.

In 1757 an effort to divide the town was inaugurated. The eastern section was first settled, and continued to be the most populous. Here was the meeting-house, the pound and the stocks. Here was the repository of the records and of the standard weights and measures, and, in fact, the seat of government. The situation clearly demanded that in the event of a division by a north and south line, the western portion must be created into a new town. In harmony with these conditions the issue was made. While the incorporation of a town was solely within the province of the General Court, the petitioners desired to fortify their solicitations by the consent and approval of the whole town. For a few years public sentiment was divided by the proposed geographical line of division, and the larger number of voters in the eastern section denied the early petitions for a new town. The effort was continually renewed and vigorously prosecuted, until in January, 1764, the consent of a majority of the whole town was obtained, and a line of division substantially the present town line was agreed upon.

Immediately the inhabitants of the proposed town instructed John Fitch, Amos Kimball, Samuel Hunt, Ephraim Whitney and Jonathan Wood, who had been prominent in this affair, to obtain from the General Court an act of incorporation. Their mission was eminently successful, and Fitchburg, including more than one-half the area of the original township, was incorporated February 3, 1764.

The limits of this sketch, excluding voluminous material and many interesting events and incidents in the early history of the town, has forbidden a frequent repetition of the names of committees and many other prominent characters; but no appreciative chapter of the early annals of Lunenburg can fail to associate the actors with the events, and to give some account of the early residents of the town.

Of the committee of the General Court prominent in the early proceedings, Hon. William Tailer was a member of the Council, and the remaining four were members of the House of Representatives. Hon. William Tailer was born March 10, 1677. He lived in Dorchester, where he died March 1, 1732. He was prominent in the early Indian Wars. In 1712 he was chosen commander of the "Ancient and Honorable Artillery." He visited England, and returned with a commission as Lieutenant-Governor, and subsequently he was acting Governor of the Province. The name is here written "Tailer" to correspond with the usage of his time. Samuel Thaxter was of Hingham, and a son of Samuel and Elizabeth (Jacobs) Thaxter. He was a colonel, a magistrate, and from 1716 to 1719 a delegate or member of the House of Representatives. He died previous to 1741.

Francis Fullam was a magistrate and an influential citizen of Watertown. He was a member of the House of Representatives 1717–24, and a selectman of Watertown many years. At the incorporation of Weston his homestead fell in that town, where he died subsequent to 1752. He was the clerk of the committee and his clear, ornate penmanship is preserved. He wrote his name as here given, but in many records it is Fulham. Francis Fullam, who was residing in Fitchburg at the date of incorporation, was his grandson.

John Shepley was a son of Thomas, and was born in Charlestown. He settled in Groton, where he died September 4, 1736. He was a prominent citizen and a member of the House of Representatives many

years. This name in early records is written Shippie, Shiple and Sheple.

Benjamin Whittemore, the fifth member of the committee, was born in Charlestown, September 1, 1669. He was a son of John and Mary (Upham) Whittemore, of Charlestown and of Cambridge. Benjamin settled in Concord, where he became an active citizen, a selectman and a Representative several years. He died September 8, 1734. At the meetings of the committee Mr. Tailer was sometimes absent. The others, almost without exception, were present.

Samuel Page, the first settler in Lunenburg, was born in Groton, June 4, 1672. He was a son of John and Faith (Dunster) Page. In 1719, when the committee surveyed the township, they found him residing on the province land and were entertained at his house. This Selkirk of the wilderness began a clearing on the Marshall place in 1718 or a year or two previously, and when discovered by the committee his family consisted of a wife Martha and seven children, the youngest an infant of ten months. Five other children were born in this town. In the admission of grantees, he and his son Joseph became original proprietors of the town. He was a selectman, 1728 and 1731; collector, 1732; and School Committee, 1738. The first pound was at his homestead, and he was chosen pound-keeper. He died September 7, 1747. In sketches of the man and in tradition he is styled "Governor" Page, in recognition, perhaps, of the fact, that while his family constituted the population of the locality he was the chief executive officer of the domain, but there is no evidence that the title was employed during his life. Very probably, it is one of the pleasant fictions of tradition.

Josiah Willard, whose active career would fill a volume, was a son of Henry and Dorcas (Cutler) Willard. He was born in Lancaster, 1695. He removed to Lunenburg, 1723 or the following year, and was foremost in the affairs of the settlement. He was a captain on the frontiers and subsequently was a colonel and for a season was commandant at Fort Dummer. In 1733 he obtained, with others, many of them residents of this town, the grant of a township adjacent to Northfield (now Winchester), N. H., and thither he removed, probably in 1737. During the remainder of his life his active energies and achievements are conspicuous in the annals of New Hampshire. He died December 8, 1750. The following lines are copied from a journal announcing his death: "He was a gentleman of superior natural powers, of a pleasant, happy and agreeable temper of mind, a faithful friend, one that paid singular regard to ministers of the Gospel, a kind husband and tender parent. His death is a great loss to the public and particularly on the western frontiers."

Edward Hartwell, son of John and Elizabeth (Wright) Hartwell, was born in Concord May 25, 1681. In early life he lived a few years in Lancaster, where he was a sergeant in the Indian wars in 1722, and a lieutenant a year or two later. He was in Lancaster in the spring of 1725, but in August of that year he wrote the Governor of the Province that he had removed to Turkey Hills, where he had built a house and made improvements upon his land. He closed the letter with an assurance that at his new home he was "in a good capacity to serve his King and country." He was one of the grantees of the town, and probably he had been engaged in clearing land and building a house during a part of the years 1721–24. He settled on the Lancaster Road, over three miles from the centre of the town.

He was a man of great size and physical strength and power of endurance. Possessing an equally strong mind, energy and force of character, he continually exercised a commanding influence over the rising fortunes of the settlement. In the troublous times on the frontiers he was much employed in the service, and rose to the rank of major. He was a deacon of the church, selectman, town treasurer, School Committee and frequently was elected to important committees and to other office in town affairs. He was a Representative many years, serving in this capacity at eighty-five years of age.

From an early date he was a magistrate, and in 1750 he was appointed judge of the Court of Common Pleas, succeeding Judge Joseph Dwight, and was continued on the bench until a reorganization of the court, in 1762. In addition to these accumulating trusts and responsibilities, it is a surprise that a single life-time afforded opportunity for his well-managed private affairs and many other active employments. With Colonel Willard and Colonel Benjamin Bellows, he was a manager of the Northfield Road, and was a grantee of several townships. Among the proprietors of Dorchester Canada (Ashburnham) he was a controlling spirit from 1736 to '44, serving on nearly every committee, and was one of the men who cut a road from the Lunenburg line to the centre of the town. For many years he was the clerk of the proprietors of Lunenburg, and recorded the original title to every lot of land in the township, except a small area of undivided land, which remained unsold at the time his successor was chosen. He died February 17, 1785, "as full of piety as of days." He lives in every page of the early records, and there is found his only monument. He rests in an unknown grave.

Isaac Farnsworth, son of Benjamin and Mary (Prescott) Farnsworth, was born in Groton July 4, 1701. He settled near the centre of the town in 1724. At this time his home was enlivened with a wife and one child. Six children were born in this town. He was an influential man, and was the first town clerk, serving nine years. He wrote a fair hand, and had more regard for the laws of orthography than many of his associates. About 1740 the family returned to Groton.

Widow Jane Boynton came to this town in 1724 or '25, bringing with her the memory of a deceased husband and fourteen living children. She did much to advance the settlement. She and her family came from Rowley, and, owing to the number of her grown-up sons, they settled in several places. One of her daughters became the wife of John Grout, a useful citizen, the owner of house-lot No. 83, and a selectman several years. Another daughter married Zachariah Whitney, who died in this town, 1781.

David Page, a son of Samuel, who settled in the western part of the town, and often said to be the first settler in Fitchburg, married a daughter of this numerous family. Mrs. Boynton, the mother, died in 1761, aged only a few days less than one hundred years. Benoni Boynton, probably the eldest son, settled nearly a mile north of the North Cemetery. He married in Rowley, and lived a few years in Groton before he came to Lunenburg. His name is frequently met in the early records. He died December 30, 1758.

Hilkiah Boynton, another son, was much employed in town affairs, and was connected with some of the land speculations of his time. He died November 16, 1745.

Philip Goodridge, born in Newbury in 1668 or '69, settled here about 1724, and died January 16, 1729. On his tomb-stone is engraved "The first man interred here." His descendants to the present day have been numerous in this town, and are found throughout New England. This name is frequently written Goodrich. They have been distinguished by industry, ability and character.

Benjamin Goodridge, eldest son of Philip, was born in Newbury February 3, 1701. He lived in the southwest part of the town, and was a most active and influential man, and prominent in both proprietary and town affairs. The number of his elections to office is without a parallel in the history of the town. He was a selectman thirty years, town clerk twenty-two years, and constable, collector, member of School Committee and a magistrate several years, and a captain in the French and Indian War. He died April 19, 1773.

Samuel Johnson, son of Edward and Esther (Gardner) Johnson, was born in Woburn, February 21, 1692. He was an influential man in the affairs of the settlement, the first deacon of the church, a town officer many years, and by occupation an inn-holder. He accumulated a good estate and was one of the proprietors of several townships in New Hampshire.

Nathan Heywood, son of John and Sarah Heywood, was born in Concord, September 24, 1698. He was a noted surveyor, and his name is attached to the surveys of many townships. He was one of the first settlers of the town, living at No. 175 on the Kilburn map. He was a town officer, a lieutenant and a deputy-sheriff. He was living here at the beginning of the present century, but there is no record of his death.

Thomas Prentice, born in Lancaster, 1710, a son of Rev. John Prentice, was a man of ability, and while he remained here he was evidently popular and respected. About 1750 he returned to Lancaster, and subsequently removed to Newton. His mother, by a former marriage, was the mother of Rev. Andrew Gardner, the first minister of Lunenburg.

Ephraim Wetherbee early settled in this town. He was a captain, a town officer and actively engaged in land speculations. His name appears in the lists of grantees of townships in New Hampshire. He died in Boston, November 7, 1745.

Benjamin Bellows, son of John and Mary (Wood) Bellows, born 1677, married, 1704, the widowed mother of Col. Josiah Willard. They resided in Lancaster (now Harvard), where their four children were born. In 1728, or immediately following, the family removed to this town. He settled in the centre of the town, on the estate known as the Dr. King place, and in a few years he owned many acres of land in this town. One daughter married Moses Gould, another married Fairbanks Moore, and the youngest became the wife of Ephraim Wetherbee. He died 1743; his widow died September 8, 1747.

Col. Benjamin Bellows, only son of Benjamin, was born in Lancaster, May 26, 1712, and removed to Walpole, N. H., 1752, where he died, July 10, 1777. From the time of his majority until he removed from this town he was the recipient of many honors, and in the conduct of public affairs he was associated with Col. Josiah Willard, Major Edward Hartwell, Benjamin Goodridge, Esq., and other worthies of the town, and among them all, except in years, he found no superiors. He was a surveyor, a farmer and was earnestly enlisted in the land speculations which were rife in those times. His subsequent career in Walpole and the eminent public services of many of his descendants enliven the annals of New Hampshire.

CHAPTER XCVII.

LUNENBURG—(*Continued.*)

Indian Alarms—The French and Indian Wars—Capture of John Fitch—The Revolution—The War of the Rebellion.

FROM the time a number of men, sufficient to attract the vigilant attention of the colonial government, had gathered in the settlement until the declaration of peace in 1763 the town was almost continuously represented in the military service. In addition to stated service in the wars of the period, rumors of the presence of Indians at a near or remote point, and the frequent necessity of scouting through the unsettled country to the north and the west were continually calling the hardy settlers to arms. In seasons of more imminent danger the men at work in the fields were attended by an equal number of soldiers, and

sometimes the harvests of the town were garnered by armed men going in a body from field to field. Many of the military rolls are not preserved, and the history of much of this desultory service cannot be recalled. The military affairs were directed by the government, and ignoring the agency of towns, it made demands upon the able-bodied men of the province at large. For this reason the local records furnish very little information of an important feature of the history of the time. Beginning with the French and Indian Wars, many of the rolls are preserved in the archives of the State, and these contain the names of many Lunenburg men. In a record of deaths is found the name of one of the sons of the first settler of Lunenburg, who was a soldier in the unfortunate expedition under Admiral Vernon to the West Indies: "John Page, the son of M^{r} Samuel Page, of Lunenburg, Dyed at Jamaica, Being there in y^{e} Spanish Expedition, December y^{e} twenty-ninth A. D. 1740, as they hear."

It is certain there were several Lunenburg men in Col. Samuel Willard's regiment, who participated in the capture of Louisbourg in the summer of 1745; among these was Jonathan Hubbard, who was recommended for promotion and who subsequently was a major. He lived in Lunenburg from 1732 to 1756. He was a deacon, a town officer and a most influential citizen. Immediately after the capture of John Fitch, Capt. Jonathan Willard, of this town, was ordered by Col. Samuel Willard to scout through the "upper towns." The following Lunenburg men were in this service July and August, 1748: Jonathan Willard, captain; Timothy Bancroft, Thomas Brown, John Dunsmoor, Isaac Gibson, David Goodridge, Nehemiah Gould, Samuel Johnson, Amos Kimball, Ebenezer Kimball, Ephraim Kimball, Jonathan Page, Samuel Poole, William Porter, Thomas Stearns, Samuel Stow, Jonathan Wood, Paul Wetherbee, Ezekiel Wyman and Zachary Wyman. This John Dunsmoor subsequently was a noted physician in this town. Jonathan Wood was a captain in the Revolution, and several of these men were then residing in the west part of the town, now Fitchburg. Between 1736 and 1744 a considerable number of families had settled in New Ipswich, Rindge, Ashburnham and Winchendon. Their presence on the border lent a feeling of comparative security to the dwellers of Lunenburg, who for a season were protected from the dangers of the extreme frontier.

In 1744 the younger towns were deserted and again Lunenburg assumed her former position on the border. For the defence of the undeserted frontier a series of block-houses or garrisons on the exterior lines of Townsend, Lunenburg and Westminster were built, and here a line of defence was drawn. Soldiers under the pay of the province were detailed for the support of the garrisons. In 1748 a company of forty-seven men, under command of Captain Edward Hartwell, was raised for this service, and, while under one command, were distributed along the border of the defended towns. Ten of this company were assigned to the block-houses in Townsend, ten to Lunenburg, fifteen to Westminster and three to Leominster. The remaining nine was a staff of inspection, comprising the officers and a body-guard. Fortunately, the official roll is preserved: Edward Hartwell, captain; John Stevens, lieutenant; John Holden, sergeant; James Johnson, clerk; Joseph Baker, Timothy Hall, Fairbanks Moore, Jr., corporals; Abner Holden, William Bemis, Jonathan Farnsworth, Elias Stone, Ephraim Dutton, Simon Farnsworth, Ebenezer Hadley, John Thomson, Elisha Pratt, Ebenezer Wood, Jonathan Pett, Zaccheus Blodget, Samuel Wood, Joseph Jennings, Stephen Farnsworth, John Nichols, Nehemiah Wood, Benoni Boynton, Benoni Boynton, Jr., Joseph Platts, Nicholas Dyke, Abel Platts, William Smith, James Preston, Ephraim Stevens, Joshua Benjamin, John Rumrill, Nehemiah Holden, Oliver Barrett, William Gilford, James King, William Graham, Jonathan White, Joseph Wheelock, Thomas Wilder, Thomas Stearns, David Dunster, Joseph Holden, Jr., Stephen Holden, Elisha Bigelow. Of these, thirty enlisted in April, two in May, the eight last named June 24th and the rest in June, July and August. In the column of expiration of service Zaccheus Blodget and Joseph Jennings are marked "July 5;" five were discharged at different dates and the remainder were mustered out the middle of October. A minute upon the muster-roll announces that the five last named were added to the Westminster detail, making fifteen in all, and that Jonathan White, Joseph Wheelock and Thomas Wilder were stationed in Leominster.

Notwithstanding these measures of precaution, on the morning of the 5th of July the Indians made a sudden attack upon one of these fortified places. The one selected by the enemy was the most northern of the garrisons upon the line of Lunenburg, which stood where Paul Gates now resides in the present town of Ashby.

The house was on the Northfield road, seven miles from Lunenburg Centre, and was owned and occupied by John Fitch, whose family consisted of a wife and five children. The ages of the children were: Catharine, thirteen years; John, eleven years; Paul, six years and six months; Jacob, four years; and Susannah, sixteen months. Four soldiers were stationed at this house or garrison, but, on the day of the assault, only Zaccheus Blodgett and Joseph Jennings were present. The story of the capture has been told many times, and generally with the Surdody embellishment. Admitting that Surdody is a good name for an Indian, it remains very probable that the Indians made an attack at the most exposed and solitary point in the line of defense, and if they came in the last stages of their march over the Northfield road, they were led directly to the point of attack. Previous to the moment of the assault no considerable number of the Indians had been discovered at

any point in the line, while during the following days they were found in several localities in this immediate vicinity. Mr. Fitch, in a petition to the General Court December 10, 1749, says he had no neighbors within three and one-half miles to join with him in fortifying his house, "yet divers of the inhabitants of Lunenburg, knowing the great security that a garrison at his place might be, urged him to build one and assisted him in it." After making known that four soldiers were stationed at his garrison, in 1748, he proceeds in modest terms to give a narrative of the eventful day: "And on the fifth of July in the same year, by reason of bodily infirmity, there were but two soldiers with him, although others with the scouts were to come in that day. On that day, before noon and before the scouts came, the Indian enemy appeared and shot down one soldier upon being discovered and immediately drove him [John Fitch] and the other soldier into the garrison. And after besieging the same about one hour and a half, they killed the other soldier through the port-hole in the flanker. Then your petitioner was left alone with his wife and five children and soon after he surrendered." The Indians burned the house, killed an ox and conducted the family to Canada. It has been stated that the family were ransomed by "friends in Bradford, where he formerly resided." It has not been shown that Mr. Fitch ever lived in Bradford, and the fact is he was returned by the French with others at the suspension of hostilities. In company with five French officers and other prisoners, he arrived in New York, by the way of Albany, September 23, 1748, not yet three months after his capture. When the complete exchange of prisoners was made is not known, and the feeble health of his wife might have delayed his progress home. She died in Providence, R. I., December 24, 1748. The capture was probably made and the house was in flames about noon, yet it is current tradition that no resident of the town was informed of the event until the following day. This is improbable. It is certain, however, that Captain Hartwell called his company together and that an alarm and great excitement pervaded the town. On the 8th of July, 1748, the inhabitants of Lunenburg and Leominster joined a petition to Governor Shirley setting forth that the Indians "very lately have been among us," and earnestly praying for an additional number of soldiers. Four days later the commissioned officers and selectmen of Lunenburg forward a similar petition announcing that the family of John Fitch was captured and two soldiers killed on the 5th instant, and that on the 7th instant the Indians "discovered themselves in a bold, insulting manner three miles further into town than was the garrison which they had destroyed, where they chased and shot at one of the inhabitants, who narrowly escaped their hands." They further state that three days the people were rallied by alarms and hurried into the woods after the enemy. It was David Goodridge who was the hero of this exploit, and the scene was within the limits of Fitchburg. Mr. Goodridge subsequently was a lieutenant in one of the Crown Point expeditions.

Joseph Jennings, one of the soldiers slain at the Fitch garrison, was a drafted man from Western (now Warren). He was an apprentice to Samuel Bliss, and when he came to Lunenburg he brought Mr. Bliss' gun, which fell into the hands of the Indians—perhaps the hands of Surdody. Mr. Bliss sent a communication to Governor Shirley alleging that the gun was worth ten pounds, and beside, that he had lost the time of his apprentice, and made it apparent that all in all he was neither blissful nor satisfied. The government was tender and compassionate, and while there appeared to be no spare men on hand, they sent him a new gun.

Zaccheus Blodget was probably from Dracut. Oliver Blodget was residing there in 1749 and gave an order for the wages due his deceased brother, "who was killed by the Indians last year."

John Fitch was born in the part of Billerica now in Bedford, February 12, 1707–8. His father, Samuel Fitch (a son of Samuel, grandson of Dea. Zachary Fitch, of Reading), married Elizabeth Walker and settled on a part of the Winthrop grant in Billerica, which he inherited from his maternal grandfather, Job Lane. John was the sixth of nine children. He was a second cousin of Zachariah Fitch, who was the guardian of James Kibby. Joseph Fitch, the father of the wife of William Downe, was a brother of Zachariah. John Fitch came to Lunenburg a few years after the date of incorporation. He married Susannah Gates, a daughter of Simon and Hannah (Benjamin) Gates, of Stow, and in 1735 he purchased a part of an original house-lot, No. 66, adjoining the lot of Ephraim Pierce, about two miles south of the centre of the town (near No. 188 on the Kilburn map). Here he lived until 1739, when he bought of Ephraim Wetherbee one hundred and twenty acres "at a place called Rendevous in Lunenburg and adjoining Townsend." This land, now in Ashby, is the homestead of Paul Gates. Subsequently he bought a considerable adjoining land. Upon his return from captivity he built a house on or very near the site of the garrison, and there resided over twenty years. He married, February 14, 1750–1, Elizabeth (Bowers) Peirce, widow of David Peirce, of Lunenburg. About this date he received a substantial legacy from the estate of Simon Gates, the father of his first wife. By the division of Lunenburg in 1764 his homestead became a part of Fitchburg, and in 1767 it was included in the new town of Ashby. Occupying the same house, he was a citizen of three towns within a short space of time. He was the chairman of the committee to procure an act dividing Lunenburg and creating a new town, and in his honor the name of Fitchburg was bestowed. In his estate he was prospered, and for several years was one of the few names on the tax-

lists assessed for money at interest. He was moderator of the first town-meeting in Ashby, a constable and a member of the first Board of Selectmen. He became engaged in land speculation, and deeds of land bought or sold by him are very numerous in the registry of Worcester County and Cheshire and Hillsborough Counties in New Hampshire. In 1772 he removed from Ashby to Rindge, N. H., where he lived until 1779, when he removed to Harvard. In 1780 he removed to Jaffrey, N. H. His wife was living in 1774. She probably died in Rindge or in Harvard. Alone and aged, and for some cause in poverty, the closing and fading scene of an active, eventful and useful life only remains. In 1785 he returned to Ashby, and finding a home in the family of a relative, he was supported in part by the town. He died April 8, 1795, aged eighty-seven years.

Succeeding these stirring times, a truce was maintained a few years between England and France, and until 1755 very few men from this town are found in the service.

In Col. Willard's regiment (a part of the expedition to Crown Point) was a company commanded by Capt. Samuel Hunt, containing twenty-four men from this town, eight from Townsend, four from Leominster and ten from other places. These men were in the service from August 11, 1755, to January 1, 1756. The names of the Lunenburg men are as follows: Samuel Hunt, captain; Samuel Poole, ensign; Jonathan Bradstreet, sergeant; Gilbert Thornton, sergeant; Samuel Hutchins, corporal; Samuel Stow, Timothy Bancroft, Archelaus McIntosh, Phinehas Divol, Thomas Wetherbee, Stephen Foster, Timothy Darnell, Ephraim Peirce, Nathaniel Carlton, Jonathan Stevens, Moses Spofford, Scripture Frost, Thomas Stearns, Thomas Rand, Bezaleel Wood, William Chadwick, Eliphalet Goodridge, Jewett Boynton and Thomas Holt.

In another company, but serving a longer time, were Patrick Delany, Pearson Eaton, John Scott and Thomas Jewett.

An undated roll in the Crown Point service, and probably a part of this expedition, bears the names of Ebenezer Hart, Nathaniel Page, Silas Dutton, Abijah Wetherbee, Jonathan Wetherbee, John Martin, Solomon Bigelow, Samuel Cummings, Jr., Reuben Wyman, Simon Smith, John Henderson and William Kimball. The last named was a servant or an apprentice of George Kimball, who enlisted under a name borrowed of his master.

Among the rolls of the following year a company commanded by Capt. James Reed, containing thirty-eight men, was in Col. Ruggles' regiment at Fort Edward. The roll is valuable, containing the name, age, birth-place, residence and occupation of each man.

The names of the Lunenburg men are Thomas Brown, ensign; John Harriman, sergeant; John Moffet, clerk; Samuel Hutchins, corporal; Nehemiah Bowers, Timothy Darling, Joseph Gilson, Manassah Litch, Joseph Platts, Joseph Reed, Robert Spear, John Scott, Bradstreet Spofford, Reuben Smith, Benjamin Scott, Jonas Tarbell, Michael Wood, Phinehas Wheelock, William Holt. In this company Philip Goodridge was lieutenant, but he was sick and not with the company when the foregoing pay-roll was made up. John Harriman died in the service. On the roll two others are reported dead who are known to have returned.

In 1757 Jonathan Page, William Jones and Moses Spofford were in the service, and a part of the time were stationed at Castle William.

On the rolls of 1759 are many Lunenburg names. These men were also in the Crown Point service, and omitting names who are found in the preceding roll, there remain David Pierce, David Carlile, Moses Page, Patrick Delany, Jonathan Peabody, Moses Ritter, Jr., Moses Platts, Dean Carlton, Zephaniah Buss, Simeon Burnham, Samuel Gibson, Samuel Parker, Nathaniel Page, Jr., Samuel Hammond, Josiah Dodge, Jr., David Chaplin, Jr., Benjamin Gould, Richard Fowler, John White, Patrick White and John Wyman. John Wyman died in the service. During the years 1760 and 1761, and in the final and successful effort for the conquest of Canada, a martial record is continued. Among the names of new recruits appear the names of William Kendall, Samuel Hutchins, Moses Platts, Samuel Hilton and Nathan Platts, and in the company of Captain Aaron Brown, of Littleton, were John Martin, sergeant, Jonathan Boynton, Samuel Downe, Timothy Parker, John Simonds, Ezekiel Simonds, William Simonds and Simon Smith; also in the company of Captain Beaman, of Lancaster, Joseph Reed and Samuel Wyman are reported among "the invalids brought home from the westward." Other men in this company were Daniel Carlile, Patrick Delany, Joseph Gilson, John Hogg, Aaron Hodgkins, Jonathan Page, Samuel Peabody, Daniel Ritter, Ebenezer Wyman, Reuben Wyman, Oliver Powers. About this time John Spear and Silas Wyman died in the service. Five Lunenburg men in 1761 were in the company of Captain Aaron Willard: Jeremiah Stiles, drummer, John Hill, William Henderson, Joshua Page and Israel Wyman. These extended lists do not contain the names of all the residents of Lunenburg who were in the service, yet the most of them have never appeared in print before. With limited space at command, in some instances only one enlistment is given of those who entered the service again the succeeding year. It will be found that many of the persons named were subsequently residents of other towns, but they lived in Lunenburg at the time the service was performed.

The Revolutionary history of Lunenburg should include a series of patriotic resolutions which were debated and adopted during the months of active thought and excitement immediately preceding an open declaration of hostilities, and which, with the

space at command, cannot be quoted. They cover several pages of the records and are clearly expressive of a sentiment and purpose that animated and sustained the patriots of Lunenburg through the trials and sacrifices of the war. Two companies of twenty-seven men each, exclusive of officers, were organized October 25, 1774. In the choice of officers all males over sixteen years of age were allowed to vote. The town approved of the selection made by the men as follows: George Kimball, captain; David Wood, first lieutenant; Jonathan Peirce, second lieutenant, and Benjamin Redington, ensign of the first company. Abijah Stearns, captain; Jared Smith, first lieuten ant; Moses Ritter, second lieutenant, and Phineas Hutchins, ensign of the second company. The terms first and second did not have an ordinal significance. A geographical line divided the town in two parts and a company was organized in each section. On the 18th day of April the minute-men were called out for drill and a practice in the manual of arms. After a dinner, provided by the officers, they were marched to the meeting-house, where a sermon was delivered by Rev. Zabdiel Adams, from the text: "Though a host should encamp against me, my heart shall not fear."—Psalm xxvii. 3.

The spring of 1775 was unusually warm and forward. On the morning of the 19th of April, the farmers of Lunenburg were sowing grain and plowing their fields. On the preceding day they had learned from their chosen commanders the discipline and from their esteemed pastor the duties of the soldier. In arm and mind the rustic toilers became the patriot soldiers. As they toiled on the war had begun, yet they knew it not. The swift messages of the morning were not long delayed. Some time in the forenoon, tradition says at nine o'clock, the alarm was fired in this town.

A full company from Lunenburg marched for Concord—tradition says so early that they reached Concord and beyond that evening, but the muster-roll would indicate that they proceeded with more preparation and deliberation:

"A Muster Roll of a company or party of men that marched from Lunenburg on y^{e} 20th of April, 1775, for the Defense of the Colony against the ministerial troops under the Command of George Kimball, Cap^{t} of a company in Lunenburg, who marched in Consequence of an alarm made the 19th of April, 1775. George Kimball, captain; David Wood, first lieutenant; Samuel Kimball, second lieutenant; Boman Brown, sergeant; John Searle, do.; Benj. Darling, do.; Samuel Farrar, do.; Samuel Hutchinson, corporal; Samuel Hilton, do.; Daniel Holt, do.; Barnabas Wood, do.; David Chaplin, drummer; Silas Gibson, John Wood, Abijah Page, Nathan Johnson, Isaac Bailey, Andrew Mitchell, Edward Richards, Moses Sanderson, Charles Gilchrist, Pearson Eaton, John McCarty, Benj. Redington, William Prentice, Jacob Stiles, Solomon Hovey, Eli Dodge, Zebulon Wallis, Moses Ritter, Thomas Simonds, David Houghton, Jonathan Peirce, Obediah Walker, William Gilchrist, Jacob Sanderson, John Dole, Nehemiah Lane, Nathaniel Hastings, Joseph Hartwell, Joshua Reed, Benjamin Goodridge, Asa Carlton, Amos Page, Thomas Wetherbee, Thaddeus Cummings, Phinehas Divol, Benoni Wallis, George Henry, John Little, John Campbell, Joseph Foster, Caleb Taylor, Jeremiah Willard, Curwin Wallis, William Goodridge, Samuel Johnson, Joseph Priest, Nathan Chapman, Seth Harrington." Here are sixty names, and beside some who hastened forward independent of organization, there were two officers and five men from this town in the Leominster company, as follows: Joseph Bellows and Thomas Harkness, lieutenants; Noah Dodge, Phinehas Carter, Israel Wyman, Richard Fowler and Jonathan Martin.

From the men and companies thus gathered at Cambridge and from new recruits constantly arriving an army for the siege of Boston was organized. A full company, composed of Lunenburg and Fitchburg men, were in Colonel Asa Whitcomb's regiment a part of the time at least and remained in the service at Boston until the close of the year. The roll is as follows: John Fuller, of Lunenburg, captain; Ebenezer Bridge, of Fitchburg, lieutenant; Jared Smith, of Lunenburg, lieutenant.

Men from Lunenburg:—Josiah Hartwell, Samuel Farrer, Samuel Litch, Ephraim Martin, John Wellman, John Wason, John Hill, Jonathan Taylor, Eleazer Priest, Adonijah (or Darius) Houghton, Solomon Boynton, Manassah Divol, Timothy Carlton, Francis Henry, Sewell Dodge, Benjamin Walker, Jonas Hazeltine, David Wetherbee, Joseph Foster, Jeremiah Willard, William Goodridge, Caleb Taylor, Thomas Hazeltine, Cheever Fowler, Henry Cockman, Samuel Johnson, Curwin Wallis, Joseph Priest, Nathan Chapman, Ephraim Holden, Stephen Wyman, Abraham Carlton, Abijah Goodridge, James Carter, William Ritter, William Alexander.

Men from Fitchburg:—Jonathan Hunt, Edward Hartwell, Thomas Gary, Joseph Gilson, Ebenezer Harrington, Joseph Polley, Eleazer Priest, Nathaniel Gibson, William Bean, Ebenezer Polley, Samuel Downe, Jonathan Gibson, Daniel Harris, Stephen Bailey, Joseph Farwell, Thomas Platts, Roger Bigelow, John Goodridge, Clark Bancroft, Stephen Fuller, Aaron Hodgkins, Thomas Kimball, also John Taylor, of Hillsborough; Thomas Ball, of Concord; and Charles Raley, residence not stated on the roll.

In the same service and in Colonel Doolittle's regiment Captain Josiah Stearns, of Lunenburg, commanded a company of sixty-one men. In this company William Thurlo, of Fitchburg, was lieutenant and the following were Lunenburg men: John Searle, Joshua Martin, John Hall, Jacob Stewart, Barnaby Wood, Joseph Chaplin, Benjamin Bailey, John Brown, William Clark, Levi Dodge, James Darling, Pearson Eaton, Asa Jones, John Moffat, William

Prentiss, Thomas Peirce, John Ritter, John Stearns (died in the service), Joseph Simonds, Moses Sanderson, Aaron Taylor, Seth Wyman, William Wyman, Joab Wetherbee; also five from Fitchburg and thirty from other places.

There were other men from this town in the service during the summer and autumn of this year. The residence is stated upon the original rolls and there is no room for doubt concerning the identity of the men. While the following list increases the number of Lunenburg men who served in the siege of Boston, it is not presumed to include every one: Elnathan Sawtell, Timothy Darling, Joshua Goodridge, Samuel Priest, Richard Gilchrist, Elijah Gould, Nathan Pushee, Joshua Reed, Peter Davis, Abraham Ireland, Abner Mitchell, William Hennessey, Joseph Chaplin, Joseph Chaplin, Jr., Thomas Hovey, Isaac Baily and Zebulon Willis. The last named probably is the same person as Zebulon Wallis in the roll of minute-men.

On the 23d of May, 1775, Dr. John Taylor was elected a Representative to the Assembly, which convened at Watertown on the 19th of July.

1776.—At the annual election of town officers in March a Committee of Correspondence, Inspection and Safety was chosen. They were: William Stearns, Abijah Stearns, George Kimball, Benjamin Redington, Joseph Hartwell, Josiah Stearns and Daniel Gardner. From this time town-meetings were no longer called "In His Majesty's Name," but "in the name of the government and the people of Massachusetts Bay," they found a greeting more congenial to a sentiment of independence. By a vote of the town Stephen Gorham was allowed "to take earth from under the meeting-house for to make salt peter." During the remaining years of the war the inhabitants often assembled in town-meeting and the records furnish abundant evidence of a continued and patriotic effort in raising men to renew the decimated ranks of the army and in meeting the increasing burdens of taxation. The enlistments in 1776 were many and the rolls, to a considerable extent, repeat the names of the preceding year. A partial list of the soldiers for a longer or shorter period during the succeeding years include: William Pope, Aaron Buss, John Fuller, George Kimball, David Carlisle and Joshua Martin, who were captains in the service, and also the following lieutenants: Thomas Harkness, Jared Smith, David Wood, Jonathan Peirce, Benjamin Redington, Moses Ritter, Phinehas Hutchins and John Little. A partial list of soldiers not yet named are: Thomas Wetherbee, Zephaniah Wood, Abraham Lowe, Thomas Hill, David Wallis, Benoni Wallis, John Buss, George Landers, Benjamin Stewart, Abijah Wetherbee, Ebenezer Wallis, Jonathan Messer, William Lowe, Ephraim Wetherbee, Daniel Wetherbee, Nathaniel Hastings, Isaac Wetherbee, Calvin Graves and George Martin; Peter Bathrick, Abraham Carlton, Jr., James Carter, William Gilchrist and Charles Gilchrist, who died in the service.

Col. Abijah Stearns was prominent in military affairs during the Revolution, and during a residence of many years in this town he was an active citizen and a worthy man. He was the youngest brother of Rev. David and Dea. William Stearns, of this town, and was born in Watertown, December 19, 1724. He came here as early as 1751, living at the centre of the town. He was often elected to office and during the war he commanded a regiment in two or more campaigns. He died November 6, 1783.

Col. Joseph Bellows, a son of Col. Benjamin, the founder of Walpole, N. H., and a brother of Gen. Benjamin Bellows, was born in this town June 6, 1744. After the family removed to Walpole he returned in early manhood to this town. He was a captain in the Revolution and commissioned lieutenant colonel of the militia by Governor Hancock. He was a man of influence and popular among his townsmen. Being bondsman for some failing contractors, his property was attached and his pride was humiliated in the loss of the paternal acres. Feeble health and discouragement unfitted him for active life, and from 1784 until his death, May 13, 1817, he lived near his relatives in Walpole.

Hon. Josiah Stearns, another of our Revolutionary worthies, was the son of Thomas and Abigail (Reed) Stearns. He was born in Littleton, July 18, 1747, and removed to this town several years before the Revolution. He commanded a company of minute-men and was a captain in the siege of Boston. He was a selectman fifteen years, treasurer nine years and a School Committee, collector and town clerk, as well as a deacon and a magistrate. He was a representative four years, and in 1792 he was chosen to the Senate to fill a vacancy occasioned by the death of Hon. Abel Wilder, of Winchendon, and was subsequently elected. He was a member of the Governor's Council, 1797 to 1799. He died April 7, 1822.

Dr. John Dunsmoor, who was a surgeon in the army, was a native of Scotland, where he was born in 1720. He was a physician of skill and ability and occupied a prominent position among the profession. Apparently he enjoyed the esteem of his townsmen and he was many times nominated on committees, but he generally declined to serve and probably found full employment in his calling. After a practice of many years in this town, he died November 22, 1794.

Dr. John Taylor was a man of brilliant qualities. He was a controlling spirit in the town and a leader in the colony. He was born 1734 and probably in Townsend. Preceding Dr. Dunsmoor, he was the first physician of note in this town. Finding active employment in his other business and in public affairs, it is probable that he was not engaged in active practice many years after the arrival of Dr. Dunsmoor. He was frequently chosen to town office, and was twice elected from this town to the Provincial Congress

and excepting General Ward, his name appears upon the journals more frequently than that of any of his associates. At the session which convened at Cambridge, February 1, 1775, it was through his influence, as stated by his colleagues, that an adjournment to Concord was accomplished. He was named on the most important committees, being associated with Colonel Prescott, Governor Brooks and Vice-President Gerry. He was a brilliant debater, and in all the deliberations of the convention he displayed an ability of thought and expression that permitted few superiors. He was a member of the committee which drafted the spirited reply to the proclamation of General Gage extending a promise of pardon to all except Samuel Adams and John Hancock, and also one of the commission that took the historic depositions concerning the affray at Lexington and Concord, which were sent to Dr. Franklin, then in England. Preceding and in the midst of this loyal and brilliant service Dr. Taylor, however successful in his professional treatment of his fellow-men, did not subdue in himself a deep-seated fever for land speculations, and omitting mention of many transactions of considerable magnitude, in 1774 he bought a tract of land in Maine containing thirty-four thousand five hundred and sixty acres, now the town of Union. He employed many men to clear and improve the land, and by frequent visits he personally directed the work. During the Revolution he removed from this town and in 1780 he was residing in Pomfret, Conn. Subsequently he removed to Douglas, and was a delegate from that town to the convention of 1788, which ratified the Federal Constitution. From the printed proceedings it is known that he opposed the Constitution and made a vigorous objection to several articles. Following the announcement of the final vote, standing one hundred and eighty-seven to one hundred and sixty-eight, he said that "while he had uniformly opposed the Constitution, he would now go home and infuse a spirit of love for the measure and harmony among the people." The closing years of his life were neither prosperous nor peaceful. About 1780 he sold his township in Maine, and in this and other business transactions he met accumulating troubles and became involved in vexatious and endless litigation. Several times he was committed to jail, and for a season, at least, his courage was undaunted. He died at Dudley from an overdose of laudanum April 27, 1794.

General James Reed, who was a captain in the French and Indian Wars, and whose name appears in the early part of this chapter, was a resident of this town several years. He was a son of Joseph and Sarah (Rice) Reed, and was born in Woburn, 1723. He came from Brookfield to Lunenburg, 1751, and lived a part of the time at or near the centre of the town. On the earliest military roll on which his name is found he is described by occupation a "Taylor." Subsequently he was a licensed inn-holder, and in April, 1753, the selectmen petition for a license to Joshua Hutchins "in place of Captain James Reed, who is now going into His Majesty's service." In 1756 he was a captain in Colonel Ruggles' regiment. He held the same rank in two or more subsequent campaigns. He was a selectman of Lunenburg, 1763 and 1764, being elected the last time in March, and a full month after the incorporation of Fitchburg, and in a conveyance of land executed March 4, 1765, he is called James Reed, of Lunenburg. These records are not propitious to a current tradition that during these years he was living at the site of the City Hall in Fitchburg. He removed to Fitzwilliam, N. H., before the close of the year 1765. In June, 1775, he was appointed colonel of a New Hampshire regiment, and the following year was named by Congress a brigadier-general. In an illness, at Crown Point, he lost his eye-sight and was retired from active service soon after his promotion. He subsequently resided in Keene and in Fitzwilliam, N. H., several years, and later he removed to Fitchburg, where he died February 13, 1807.

Lunenburg, in the War of the Rebellion, was in full sympathy with the unexampled patriotism that pervaded the loyal States. The ardor and zeal of April, 1861, the ready response of the volunteers to the call of the President, the voice of loyalty upon the street and in public meetings and many general features of a patriotic record require no assertion. It would be a thankless task and a useless offering to summon the record in support of such a measure of good works, the summary of which will crowd the limits of this chapter. On the morning of April 22, 1861, a flag was raised on Mount Pleasant by Micah W. Boutwell, Andrew Riley and Albert S. Marshall, and another, later in the day, between the Congregational and Unitarian Churches. Within a few days thirty-eight flags were displayed within the town. Attending the second flag-raising a public meeting was organized, with Cyrus Kilburn chairman and George A. Cunningham secretary, and a series of resolutions, after several speeches, were adopted. Other meetings, both informal and official, followed, and in the proceedings appear the names of Nathaniel F. Cunningham, Daniel Putnam, Cyrus Kilburn, Thomas Billings, George A. Cunningham, James Putnam, Frederic M. Marston, Lemuel Pitts, Daniel Lowe, Otis P. Abercrombie, John Howard, Merrick Wetherbee, William Baker, Ephraim Jones, Charles A. Goodrich and other citizens of the town. Five men enlisted for three months, as follows: Charles Kilburn, John E. Lyons, George H. Stall, Ansel W. Stall and Russell O. Houghton.

Seventy-six enlisted upon the early calls of the President for three years' men. They were: Joseph C. Riley, Alfred Billings, Amos Billings, Charles C. Walker, Charles D. Litchfield, William F. Harris, Thomas Larghee, George L. Curtis, Henry L. Burnell, B. Frank Clark, Henry O. Adams, Francis A.

Hildreth, Joseph H. Pearson, William S. Boynton, William Hodgman, Amos N. Gleason, Isaac Newton, Jr., Roswell G. Adams, Marcus M. Spaulding, Charles Kilburn, Henry P. Kilburn, John E. Lyons, Charles B. Longley, James M. Hildreth, Peter Smith, Charles E. Oliver, Ansel W. Stall, William B. Stall, George V. Ball, Samuel Hartwell, Noah F. Winn, John A. Gilchrist, Calvin D. Sanderson, Alonzo Whiting, George Hudson, George A. Lancey, Luther A. Lancey, Gilbert Cook, Russell O. Houghton, Dana P. Spaulding, James D. Fairbanks, William H. Boynton, George S. Smith, William D. Perrin, Albert W. Haynes, George H. Haynes, Henry Sanderson, William R. Graves, J. Frank Boynton, Charles Albert Harris, Hiram W. Longley, Joseph L. Proctor, Albert Houghton, David Morrill, John Catin, Richard H. Wyeth, Joseph R. Graves, Foster E. L. Beal, George H. McIntire, Leonard O. Bruce, Gardner Vaughan, George H. Merrill, Eli S. Lancey, Lemuel Pitts, Jr., George S. Pitts, Charles H. Neal, Orlando Holman, Ezekiel G. Bailey, James H. Smith, David N. Kilburn, Charles E. Marshall, Alvin Seidelinger, William H. Wyeth, James L. Litchfield, Charles D. Page, John F. Butters.

On the call of August 4, 1862, for three hundred thousand men for nine months', twenty men volunteered: Henry P. Kilburn, Forester M. Jewett, George A. Howard, Levi Parker, George E. Brown, Clark Dutton, Henry H. Whitney, Frederic J. Lawrence, Benjamin F. Marshall, Samuel Wallis, Franklin O. Cady, Oliver F. Brown, Edward E. Carr, Levi W. Goodrich, George W. Conant, Merrill B. Carlton, Andrew J. Green, Jesse A. Sargent, George H. Stall, Noble Fiske.

Thirty-three re-enlisted veterans and new recruits were credited upon the early calls of 1864: Alfred Billings, Charles C. Walker, Charles D. Litchfield, George L. Curtis, John E. Lyons, James M. Hildreth, George V. Ball, Samuel Hartwell, Luther A. Lancey, Gilbert Cook, Dana P. Spaulding, James D. Fairbanks, William D. Perrin, J. Franklin Boynton, Albert Houghton, Joseph R. Graves, Charles H. Neal, Orlando Holman, William H. Wyeth, John F. Butters, Charles E. Oliver, Richard H. Wyeth, Eli S. Lancey, who were veterans. The following were new recruits: Edward C. Goodrich, Richard F. Burton, Thomas Billings, Josiah S. Houghton, John Snow, Albert Stall, Edward P. Hadley, George N. Burrage and Drs. C. C. Topliff and E. C. Merriam, who were commissioned assistant surgeons.

Seven volunteered in response to the call of July 5, 1864. There were also twenty hired recruits, whose names are not included in this record. The volunteers were: John J. Ramsdell, Charles Boynton, Martin Sanderson, George C. Jewett, Albert L. Heywood, William R. Neal, Jesse A. Sargent. The whole number of credits upon the several quotas, including re-enlistments and hired recruits, is one hundred and sixty-one, and the number of residents included in this record is one hundred and two. Of these, thirty died in the service or immediately after their return, from wounds or from disease contracted in the service; fourteen survived wounds, and fifty-eight were discharged at expiration of term of service without wounds or serious disability.

CHAPTER XCVIII.

LUNENBURG—(*Continued.*)

ECCLESIASTICAL HISTORY—SCHOOLS—THE CUNNINGHAM PAPERS.

To build a meeting-house and settle a minister were among the first duties of a New England settlement. The requisites were a hill on which to set the primitive house of worship and a learned orthodox minister. Generally a hill and a minister of a suitable elevation were selected with rare unanimity. In these proceedings the dutiful pleasure of the settlement was enjoined by the General Court and incorporated in the grant of the several townships. In accepting the grant of Turkey Hills the settlers were "obliged to build a good, convenient house for the worship of God within the term of four years." The conditions of the grant for several years remained unfulfilled. This failure, on the part of the proprietors, did not pass unnoticed. In November, 1727, the committee of the General Court, who had continued to exercise a certain supervision of the settlement, ordered that "The Proprietors shall forthwith proceed to the erection of a meeting-house, to be not less than forty-five feet in length and thirty-five in breadth." Immediately succeeding this action of the committee of the General Court, and before there was an opportunity to enforce the command, the proprietors secured an act of incorporation. By this procedure the resident proprietors and settlers of Turkey Hills became the independent inhabitants of the town of Lunenburg. Liberated from the conditions of the grant, and from the authority of the committee of the General Court, our worthy ancestors proceeded at once to perform voluntarily that which they had neglected to do when enjoined.

September 24, 1728, not yet two months after the date of incorporation, the town voted "Two Hundred Pounds Money for y^e^ building and finishing of a meeting-house in said town, so far as it will do or answer therefor." The site of the first meeting was where the orthodox church now stands. Concerning the progress and manner of building this primitive structure the records are silent until early in the year 1731, when money was raised and a committee appointed "to build a pulpit and as many seats as there is convenient room for." In accordance with a recognized custom of the time, it was not intended by this

sweeping vote to build "seats" in front of the pulpit and through the central part of the floor. This space was reserved for more dignified structures, denominated pews, which were constructed at the expense of the individual, and located by a committee according to the wealth and dignity of the future occupant. Possibly through fear that their committee would not manifest a proper regard for the dignity of their minister, our worthies took primary action in this particular. It was ordered in town-meeting that the "ministerial pew be located adjoining to y^e^ foot of y^e^ Pulpit-stairs, at y^e^ Right hand of y^e^ Pulpit." In the same spirit, they next promptly granted a request, and courteously recognized the dignity of Mr. Gardner, their former pastor, who still remained a resident of the town. For his accommodation it was ordered that there be reserved "a Place in y^e^ meeting-house at y^e^ Right hand of y^e^ Great Doors to build a Pew." These proceedings toward the building and completion of the first meeting-house occupied the space of four years, and while they were in progress it is reasonably certain that the edifice had been occupied for public worship from and after the summer of 1729.

The names of the early and occasional preachers in the settlement are not known. The first settled minister was Rev. Andrew Gardner, who was installed over the church then organized, May 15, 1728. This date is over two months previous to the act of incorporation and a year or more before the building of the meeting-house. By the terms of the grant of the township, Mr. Gardner, at his settlement, came into possession of one right of land, which he subsequently sold, and enjoyed the benefit, if any, of the use of the ministerial lands, and in addition he was promised twenty pounds as a settlement and a salary of eighty pounds. Of the character of the ministry of Mr. Gardner and the causes which led to an early dismissal, little is known. The records are silent. Torrey's "History of Fitchburg and Lunenburg," written after one hundred years had obscured the facts and weakened the voice of tradition, says:

> The reasons of his dismission, so far as I have been able to learn them, appear to be these:—He was not a man of that grave and sober demeanor, which the people of his time thought essential to the sacredness of his office. He was apt to indulge in a levity of manner on the Sabbath which was not in keeping with the solemnity of the day. He had also quite a predilection for hunting, and, it is said, wild turkeys and other game, even on the Sabbath, sometimes bore evidence of his skill as a marksman. For the truth of these reports I cannot vouch.

This estimate of Mr. Gardner has been frequently quoted, and sometimes with the omission of the last sentence, which qualifies and mitigates the severity of the whole. One important fact demands attention. The first reference to any dissatisfaction found in the records appears in the letter of Mr. Gardner, asking a dismissal, and while he admits the existence of considerable indifference on the part of the people, he boldly assumes the initiative in reference to a dissolution of the pastoral relation. The letter bears date of September 18, 1730. It should be read in connection with the fact that the town, only three months previously, had voted him his annual salary, without any expressed hesitation or qualification.

To the Brethren of the Church of Christ in Lunenburg:

> Beloved Brethren:—I cannot but think, from what I have heard and also from what I have observed of the transactions and behaviour of this people, relating to me and my affairs, that there is not that affection borne towards me that there should be from a people to their Gospel minister; or that there is where a people are likely to profit under their minister. The consideration whereof has been very grievous and discouraging to me, and, therefore, think it best to separate. I do, therefore, propose a separation. And if effectual care be taken that my dues be honestly paid me, the first settled minister's lot with its appurtenances put upon record and attested, and a sufficient pew at the right hand of going in at the great doors of the meeting-house,—I shall be free to be dismissed from my pastoral relation, office and obligation to you, as soon as it can regularly be performed.
>
> From your loving pastor, who wisheth you the Divine direction and blessing and desires your prayers for the same to him.
>
> Andrew Gardner, Pastor.

In the event the conduct of the pastor had grieved the faithful and either the church or the parish desired a separation, no recorded action appears until February 7, 1732, or nearly a year and a half after the suggestive letter of Mr. Gardner.

At this time the town in its capacity as a parish "voted and granted to Rev. Andrew Gardner a dismission from his pastoral or ministerial office, according to his request." At the same meeting the selectmen were instructed to pay Mr. Gardner whatever was his due. Possibly the money was raised with difficulty, but it was not paid until the following October. The sum paid at this time was three hundred and ninety-four pounds, twelve shillings and three pence, which included twenty pounds due him for a settlement and the amount of his salary from the beginning. It was the first money the poor man had received from the aggrieved inhabitants of Lunenburg. If it is true, as alleged by Torrey, that he was frequently in pursuit of wild turkeys and other game, it is probable that hunger taught him "skill as a marksman," and that he was oftener compelled by necessity than enticed by a love of the chase. However, the full sum was paid, and the church took the necessary action for the dismissal of their early pastor November 3, 1732.

Rev. Andrew Gardner, the first minister of Lunenburg, was born in Brookline, 1694. He was a son of Rev. Andrew Gardner, the third minister of Lancaster, who began his ministerial labor in that town, 1701, and previous to an installation he was accidentally killed during an Indian alarm in October, 1704. His widow, Mary, however, became the wife of Rev. John Prentice, the fourth minister of Lancaster. A daughter of this marriage was the wife of Rev. Job Cushing, of Shrewsbury, and the mother of Rev. John Cushing, D.D., of Ashburnham. Rev. Andrew Gardner, Jr., was graduated at Harvard University, 1712, and was ordained the first minister of Worcester in the autumn of 1719, and was dismissed October 31, 1722. After preaching in Rutland, and possibly in other places, he was settled over the church in Lunen-

burg, as heretofore stated, from May 15, 1728, to November 3, 1732. While a resident of this town he built a house near Clark Hill, where Martin Johnson resides, which was considerably in advance of the dwellings of his time, and which, with its quaint windows and after-years of dilapidation, is remembered by many still living. After his dismissal he remained a few years in this town, and was at times employed by the town as "Grammar School Master," the school being held at his house. In addition to the land granted the first settled minister, he acquired many acres by purchase and apparently maintained close business relations with Benjamin Bellows, Josiah Willard, Edward Hartwell, and his half-brother, Thomas Prentice. He was one of the grantees of Charlestown, N. H., under the Massachusetts charter, which subsequently was vacated. In 1737 he removed to Earlington or Arlington, now Winchester, N. H., where he was a prominent citizen, receiving frequent and honorable mention in the records. Occasionally he was employed as chaplain at Fort Dummer, where he met many of his early associates from Lancaster and Lunenburg. About 1746 he removed to Charlestown, N. H. In 1761 his name was first in the list of the grantees of Bath, N. H., and thither he removed about 1765, and became a controlling spirit in the new settlement. He lived between the Central and Upper Villages, and overlooking the scene of his declining years Gardner Mountain perpetuates his name and memory. He lived to an advanced age, but a record of his death has not been found.

At a meeting assembled November 10, 1732, one week after the dismissal of Mr. Gardner, the town chose "Dea. Samuel Johnson, Dea. Ephraim Peirce and Isaac Farnsworth a committee to provide a minister, from time to time, to supply the town with preaching." Rev. David Stearns was immediately employed, and that the first impressions of the candidate were not unfavorable is found in a record of a meeting on the 4th of the following month, when it was ordered that the committee hire Mr. Stearns to preach two months, after an existing engagement had expired. The conditions attending the frontier settlements at this time reminded them that the approach of a winter season would defer the ordination until another spring. A call was extended in February, and the candidate was ordained April 18, 1733. The pastorate of Mr. Stearns was the continued succession of palmy days; The town increased in population, the people were prosperous in temporal affairs, and the church, preserved from any serious contention, was increased in membership. The town voted him £300 as a settlement, and a salary of £120 the first year and £5 added yearly, until it reached the sum of £140. In 1736, and a few subsequent years, an additional sum was voted to make good the depreciation of the currency in which his salary was paid. At the close of twenty-eight years of successful labor he died, March 9, 1761.

Rev. David Stearns, a son of John and Abigail (Fiske) Stearns, was born in Watertown December 24, 1709; graduated at Harvard University, 1728. He married, April 7, 1736, Ruth Hubbard, a daughter of Major Jonathan and Rebecca (Brown) Hubbard, of Lunenburg. She married (2d), November 9, 1768, Rev. Aaron Whitney, of Petersham, who died September 8, 1779, and she died in Keene, N. H., at the home of her youngest daughter, November 1, 1788. Rev. David Stearns was intimately connected with many families of the town. He was a brother of Colonel Abijah, Benjamin and William Stearns, and the wives of Benjamin Bellows, Joshua Goodridge and Samuel Johnson, Jr., were his sisters. His wife was a sister of John and Jonathan Hubbard, Jr., and of the wife of Colonel Josiah Willard. Mr. Stearns lived north of and near the present Methodist Church, where William Howard now resides. There is remaining evidence that he was a man of good ability, a faithful and devoted minister, a friend of the people, and laborious for the public good. It is the testimony of Rev. Zabdiel Adams, who wrote with a full knowledge of his life and character, that "he lived greatly beloved, and died no less lamented."

In 1736 the town "voted and granted all that Room behind y^e^ seets in y^e^ Front Gallery in y^e^ Meeting-House in Lunenburg to Jonathan Wood, Samuel Reed, Phinehas O-good, Ezekiel Wyman, David Page, Stephen Boynton, John Fitch, Jonathan Abbit for to Build a Long Pew or Seet for themselves and wives forever to set in." The vote savors of a protracted meeting, and in it and in other measures of a similar character providing for an enlargement of its seating capacity is read the doom of the first meeting-house of Lunenburg, which already was too small for the accommodation of the growing settlement. The building of the second meeting-house was a prolific subject of town legislation. No less than forty-three votes concerning the location, manner of building, appropriations and disposal of the pews were passed and recorded within the space of three years, and doubtless an equal or greater number of motions were made and seriously debated that did not pass and were not recorded. Omitting reference to many votes that were reconsidered at a future meeting, the narrative is abbreviated. May 22, 1749, the town "voted that they will Build a new Meeting-House in said Town," and May 25, 1752, it was ordered "that they will meet in the new Meeting-House Next Sabbath day come fortnight to attend the public worship there." It was finally determined that the building should be located "in the end of the lane by the school-house," which was within the limits of the present Common and opposite the residence of the late Sawyer Kimball. The necessary land was donated in part by Benjamin Bellows, and the remainder was purchased of Thomas Prentice. It was a spacious house, sixty by forty-five feet, having porches on the east, south and west, and containing forty-eight pews on the floor and twenty-one in the galler-

ies. The frame was raised in the summer of 1750, and it was demolished in 1831, and many relics of the second meeting-house in Lunenburg are still preserved.

Immediately after the decease of Mr. Stearns Rev. Josiah Bridge, who was subsequently settled over the church in East Sudbury (now Wayland), was employed a few Sabbaths. He was succeeded by Rev. Samuel Payson, a brother of Rev. John Payson, of Fitchburg. He was ordained September 8, 1762, and died February 14, 1763.

The fourth pastor was Rev. Zabdiel Adams, who was ordained September 5, 1764. He died in the thirty-seventh year of a successful ministry March 1, 1801. Mr. Adams was born in Braintree (now Quincy), Mass., November 5, 1739. He was a son of Ebenezer and Ann (Boylston) Adams and a double cousin to President John Adams, their fathers being brothers and their mothers being sisters. He graduated at Harvard University in 1759. He was a thoughtful and impressive preacher, and among the clergy of his time he was held in high esteem. At the inauguration of Governor John Hancock, in 1782, he preached the first election sermon before the Executive and both branches of the Legislature. This discourse was printed. He married, June 5, 1765, Elizabeth, daughter of Rev. David Stearns. Their descendants are numerous and distinguished in many callings.

Succeeding a brief season of temporary supply Rev. Timothy Flint was ordained October 6, 1802. He was a son of William and Martha (Kimball) Flint and was born in Reading, Mass., June 17, 1780. He graduated at Harvard University, 1800. At the time of his ministry here and often at subsequent periods he was in feeble health. At times there was only one service on the Sabbath, and occasional evidence of dissatisfaction is found in the records. He was dismissed June 6, 1814. He removed from this town to Alexandria, La., where he established a young ladies' seminary and subsequently lived and traveled extensively in the West until he returned to his native town, where he died April 18, 1840. Mr. Flint was the author of a geography and of several standard works of fiction and once was editor of the *Knickerbocker Magazine.* He married in 1802 Abigail Hubbard, a sister of a later minister in this town.

Soon after the dismissal of Mr. Flint a call was extended to Rev. David Damon, who was ordained with the customary solemnities February 1, 1815. He was born in Wayland, Mass., September 12, 1787, and was graduated at Harvard College in the class with Hon. Edward Everett, 1811. He was a man of great simplicity of manner and an equal strength of character. An earnest faithful minister, he secured the respect and love of the church and the parish. He was dismissed at his request December 2, 1827. Subsequently he was settled at Amesbury and at West Cambridge (now Arlington), Mass., where he died, June 25, 1843. The greater part of the time covered by the ministry of Mr. Damon was a memorable era in the religious history of New England. The Trinitarian and the Unitarian were engaged in a hot dispute and many churches were divided. Mr. Damon was a Unitarian, yet his pacific nature invited no contention, and finding a majority of his church and congregation were not in full sympathy with him, he withdrew before any serious discussion had begun. The controversy and the establishment of two churches was only deferred. In 1819 and during the peaceful ministry of Mr. Damon the First Congregational Parish was organized, and after ninety years of loyal service the town was relieved from a further control of parochial affairs. For several years the society was vigorous and prosperous. In 1830 a new meeting-house, sixty-four by fifty feet, was erected and was dedicated December 25th of that year. The cost was nearly three thousand dollars, which was fully met from a sale of the pews. The land for its accommodation was presented by Daniel Putnam, Esq., and a bell was procured by subscription. The entrance, with a recess and two imposing pillars, was at the east end, and in all respects it was a fair expression of the architecture of the time.

Rev. Ebenezer Hubbard was the next minister. He was installed December 10, 1828. Compared with the closing scenes, the first three years of this ministry were uneventful, yet in the records appear the mists of a gathering cloud that soon obscured the horizon of their former prosperity. In the rapid progress of events, numerous personal differences developed into open hostility, which, like an infection, spread throughout the town. In the mean time the society suffered in membership. Of one hundred and fifty-eight members in 1831, only forty-two remained at the end of two years. Apparently only the most pugnacious remained, who found a lively exercise and an equal combat in the fighting qualities and skilled parries of their irritated pastor.

An acrimonious correspondence between the committee of the parish and the minister was succeeded by ecclesiastical councils, lawsuits and arbitration. In the mean time Mr. Hubbard continued to preach to a decreasing congregation, even after the society had voted that they considered his relations with them terminated, and that they would no longer pay his salary. After the door of the meeting-house was locked he regularly went to the steps on the Sabbath, displayed a sermon and continued to demand his salary and damages for the treatment he had received. A full account of this unfortunate controversy, employing all the interesting material at hand, would fill a volume. The end was found in a compromise, in May, 1834. Rev. Ebenezer Hubbard, son of Rev. Ebenezer and Abigail (Glover) Hubbard, was born in Marblehead, Mass., November 12, 1783. He graduated (as did all his predecessors in the ministry in Lunenburg) at Harvard University, 1805. He read divinity in this

town with Rev. Timothy Flint, was ordained over the Second Church in Newbury, May 11, 1809, and dismissed October 16, 1810. He was installed over the church in Middletown, November 27, 1816, and was dismissed April 29, 1828. After his residence in this town he was engaged in teaching and in farming in Tennessee and in Kentucky. He died from a disease of the brain in an asylum near Nashville, Tenn., September 2, 1858. Immediately succeeding these troublous times, and possibly hastened by them a considerable number of those entertaining Trinitarian proclivities organized an independent church and society. Without action on their part, the Unitarians, formerly in the minority, but including families of influence, remained in succession and continued to be the First Parish of Lunenburg. The decade was an era of temporary supply. Rev. Thomas H. Pons and a score of others appear in the list of those who were briefly employed.

May 12, 1847, Rev. William G. Babcock was installed, and was dismissed at his own request, April 7, 1855. During the succeeding ten years Rev. James Thurston, Rev. Charles B. Josselyn, Rev. Jacob Caldwell, Rev. William Farmer, who died in this town June 24, 1862, and Rev. John B. Willard supplied the desk, and their ministry completed a chapter in the annals of Lunenburg, fragrant of the religion and suggestive of the customs of former generations. The closing act was not long deferred. In 1867 the parish sold the meeting-house to the town, when it was removed about seventy yards north of its original site and remodeled into a spacious and convenient town-hall.

THE EVANGELICAL CONGREGATIONAL CHURCH was embodied June 10, 1835. The first pastor was Rev. Thomas Bellows, born in Walpole, N. H., September 23, 1807, a son of Thomas and Eleanor (Foster) Bellows, and a grandson of Colonel Benjamin Bellows, prominent in the early annals of this town. He graduated at Dartmouth College, 1827, and pursued a course of study at Andover and New Haven Theological Seminaries. Succeeding a pastorate in Greenfield, he began to preach in this town early in 1835, and through his efforts a church was organized. On account of failing health he was not installed, and the following year he retired to a farm in his native town. The society connected with this church was organized in May, 1835. It purchased, and for a season occupied, the meeting-house of the First Parish. An influential minority of the old society was dissatisfied with the disposal of the house, and, after a few scenes of boisterous contention, the sale was rescinded, and the meeting-house was returned to the control of the First Parish. In the autumn of 1843 the society was reorganized, and while plans for building a new meeting-house were maturing, services were held in the hall of a private house. The present meeting-house was built on land purchased of Daniel Putnam, Esq., and completed in 1844.

Early in 1837, and during the time in which services were held in the old meeting-house, Rev. Eli W. Harrington began a successful ministry. He was ordained April 26, 1837, and dismissed, at his request, April 8, 1847. He was born in New Braintree, November 28, 1804, and was a son of Nathaniel and Nancy (Townsend) Harrington; graduated Amherst College, 1833; Andover Theological Seminary, 1836. Subsequently he preached in Mason, N. H., Rochester, N. Y., and in Beverly, Mass. He now resides in Pepperell, Mass. The next pastor was Rev. Asaph Boutelle, who was installed in the spring of 1848, and remained three years. He was a son of Asaph and Anna (Stearns) Boutelle, of Fitchburg, where he was born October 7, 1804; graduated Amherst College, 1828; Andover Theological Seminary, 1831. Previous to his faithful ministry here he had preached in Ohio sixteen years, and subsequently he was fifteen years pastor of the church in Peacham, Vt., where he died January 12, 1866.

Mr. Boutelle was succeeded by Rev. Edwin R. Hodgman, who was installed February 8, 1852. On account of failing health he asked a dismissal, which was approved by a council, March 26, 1855. He is a son of Buckley and Betsey (Pratt) Hodgman, born in Camden, Me., October 21, 1819; partial course at Amherst and a graduate of Dartmouth College, 1843; Andover Theological Seminary, 1844. His next pastorate was in Lynnfield and later in Westford and Townsend. He is the author of a "History of Westford."

Rev. William A. Mandell was installed January 2, 1856. In an eminent degree he enjoyed the merited esteem of the parish and of the town. He was dismissed at his request November 16, 1865, and supplied the pulpit until the close of the year. He is a son of Daniel and Eliza (Patrick) Mandell and was born in Hardwick, July 13, 1811; graduate Amherst College, 1838; Union Theological Seminary, 1841. He was city missionary in Philadelphia, Pa., and pastor at Dartmouth, Mass., from 1846 until he removed to this town. Since 1868 he has resided without charge at North Cambridge. Succeeding Mr. Mandell, the desk was supplied by Rev. Alfred Goldsmith and others about four years. Rev. William H. Dowden was installed February 2, 1870, and was dismissed February 22, 1875. He is a son of Thomas and Eunice (Simons) Dowden and was born in Fairhaven, January 15, 1836; graduate Andover Theological Seminary, 1866. His earlier pastorates were in Pelham and Carlisle and later he has supplied at East Jaffrey, N. H., and Rowley. Mr. Dowden was succeeded by Rev. Walter Rice, who was installed in May, 1875, and remained about five years. He is a son of Silas and Almira (Corey) Rice, born in Ashburnham, December 25, 1836; graduate Beloit College, 1862; Newton Theological Seminary, 1865; Andover Theological Seminary, special course, 1874. He has been a successful pastor in Brandon, Vt., since

May, 1880. The past eight years has been an era of temporary supply.

Methodist preachers have been stationed here, and a society has been maintained since 1803. The first preacher was Rev. Joshua Crowell, who was followed by the Revs. Thomas Rawling, Hezekiah Field, William Stevens, John Tinkham, Benjamin S. Hill, and to the present time about seventy-five names in all. The school-house in which the service was held several years failed to accommodate the increasing congregation. In 1813, and during the ministry of Rev. Barzillai Peirce, a native of this town, a meeting-house was built upon a frame of a building presented by Jonathan Peirce. It was situated on the old Northfield road, and beyond the North Cemetery. Previously the building had been used for the storage of bark, and after it had been dedicated to a more sacred use it was called by the profane the "Lord's Bark-house." Under the provisions of recent law a society was organized in 1825. In 1829 the present house was built on land purchased of Daniel Putnam, Esq. It is recorded by George A. Cunningham, Esq., that the frame was raised sixteen days after the first tree was felled in the forest. It was dedicated May 1, 1830. In 1870 it was thoroughly repaired. There were seasons of unusual religious interest—in 1821, when a camp-meeting was held here; in 1857, under the ministry of Rev. John Goodwin; and in 1871, under the ministry of Rev. J. F. Bassett. With hope and with courage this society has been continuously maintained, and sometimes under embarrassments that have overcome more populous organizations. In 1842 Josiah Litch, a native of this town, delivered a series of discourses announcing the second advent of Christ, and Rev. Samuel Heath, the Methodist minister, embraced the faith. From the pulpit, with the ardor of a new convert, he began to preach the doctrines of Millerism. Many of the congregation became affected, and while he remained the steadfast attended church elsewhere. The world, however, was preserved, and with it the church in Lunenburg, but it was a season of trial and anxiety to many. William Harlow, in early life a sea-captain, and later a zealous steward of the church, in reference to these events has written: "The Millerite seceders from the Methodist Church in Lunenburg, after having worked themselves up to such a pitch as to believe they could not be saved while they remained on board the old ship 'Zion,' and thinking her unseaworthy, jumped overboard at the risk of their spiritual lives, and desired to have their names erased from the shipping papers, but notwithstanding their fears, and the storms of fanaticism, the old ship has weathered them all and has since landed many souls in the broad bay of Heaven, and has a full freight of others bound to the same place."

Schools were established in this town at an early date. From December 11, 1732, when it was "voted that Col. Josiah Willard, Capt. Edward Hartwell and Mr. Benjamin Goodridge be a Com^tte to Provide a School and School-Master for to teach children and youth to read and write," down to the last annual appropriation of $1850 for school purposes, the education of the youth of the town has been a subject of earnest legislation. In general features, the recorded history is like that of other places and presents no feature not common to the records of a New England town. In March, 1733, Nathan Heywood, Benjamin Goodridge, Hilkiah Boynton and Josiah Willard, Jr., were granted seven pounds and one shilling "for keeping of school in said town." There is a tradition that Mr. Gardner, the early minister, was the first school-master. It may be the truth, but his name does not appear in the records as a school-teacher until the following vote, December 31, 1733: "Voted and chose Mr. Andrew Gardner to be y^e School-Master to Keep y^e School y^e Term of Three months, and voted that y^e School shall be Kept at y^e House of Mr. Gardner." The following year it was ordered that three schools be held at the houses of Lieut. James Colburn (near Clark Hill), Jonathan Willard (a short distance southerly from the centre) and Edward Hartwell, on Lancaster Road (about three and one-half miles from the centre), and for this purpose forty pounds was appropriated. In 1735 the selectmen were instructed to provide a school "according to the best manner for the town's safety and interest," and the following year they were instructed "to hire school-dames as they shall see meet." A vote in 1739 directed that one school be kept either in the house of Mr. Dowse, or of John Jennison (at the centre), and another at the old house of Ephraim Peirce. The house of Mr. Peirce was nearly two miles south or southeasterly from the centre of the town. When the first school-house was built is not revealed. In 1740 the town voted to build "two school-houses," but beyond this expression of a good resolution nothing was accomplished; but soon after there was a vote to build one school-house, to be located near the meeting-house. It was built without delay, and probably in 1741. In 1783 five school-houses were built, and in the progress of years the number has been increased to nine. Nearly fifty years ago an academy was sustained several years. The building was erected by Daniel Putnam, Nathaniel F. Cunningham, Thomas Wiley and Dr. Otis Abercrombie. John R. Rollins was the first and a very successful principal, and while a resident of this town was the town clerk several years. He was succeeded by Rev. Jacob Caldwell, a native of this town, William H. Boynton, James J. H. Gregory, now of Marblehead; Charles A. Goodrich, an esteemed citizen of this town, and George E. Dunlap. In 1866 the academy building was sold and removed to Fitchburg. The town has a valuable public library, and one of its institutions is its Farmers' Club, which was organized in 1848.

Several meritorious sketches and well-matured pa-

pers relating to the early history of Lunenburg have been printed. Upon the open records, easily accessible, a constant draft has been made by previous explorers. The quaint and curious and many striking incidents in the records are familiar to the local reader, and are not here repeated. In the preparation of this sketch the writer has been crowded out of the accustomed paths of research, and has found the ordinary fountains drained by earlier and vigilant gleaners of material. And while dates and certain facts of necessity have been drawn from the original and worn records, very much of the material incorporated into the narrative of the early grants—of the proceedings of the proprietors, of the military record of the past century and many incidents connected or explanatory—have been drawn from the State archives and from records which have escaped earlier notice. Many facts in the earlier history of the town are here printed for the first time. From an historical standpoint, Lunenburg, the mother of towns and the ancestral home of many families, occupies an important position among the older towns of Northern Massachusetts. For many years with the line of defense on the outer side, Lunenburg was on the border between the settlements and the wilderness. Many, pursued by the mania of immigration, were often temporarily delayed upon the borders within this town, and a few years later, when the younger and outer settlements for a season were abandoned, the fugitives from danger found safety and a temporary home within the defences of this town. By frequent intermarriage, these sojourning strangers became allied to Lunenburg families, and at their departure, were often attended by many to the manner born. And, in addition to this accidental overflow from the town and during the burning fever of immigration that warmed the blood of the older towns, and which was only briefly allayed by the French and Indian War, there was a swelling tide of immigration from Lunenburg to the growing settlements in New Hampshire and elsewhere. In such numbers and in such types of sturdy men did the living current flow, that Winchester, Walpole and, in less degree, Charlestown, in New Hampshire, were New Lunenburgs on the border of the receding wilderness. In these vigorous movements the blood of the mother-town was widely disseminated. Two-thirds of the early population of Rindge were descendants of the early families of Lunenburg. It is impossible to find a town within an extended radius or to name a State in the Union that does not contain many who trace their ancestry through the records of Lunenburg. For the pleasure and benefit of the multitude, the genealogical records of the parent-families have not been published. Continuous inquiries by interested persons have been kindly answered by obliging town clerks until the original records were defaced and restored by new copies. In a comprehensive study and arrangement of the genealogical records of the Lunenburg families, George A. Cunningham, Esq., was laboriously engaged many years. In its scope, completeness and accuracy, his manuscript copy is not excelled by any published work of a similar character. The vigor of an intelligent mind and the earnest labor of a life-time were exhausted in this treasury of genealogical knowledge. Mr. Cunningham also completed a manuscript history of the town. It is a voluminous supplement to the Torrey sketch, and quotes that work for the early history of the town. The supplement is brought down to the time when death stilled his tireless pen. The names of the soldiers in the War of Rebellion, enumerated in this paper, are drawn from his work. To Mr. William E. Cunningham, through whose generous favor these valuable manuscripts have been consulted, I extend a grateful acknowledgment.

CHAPTER XCIX.

SHREWSBURY.

BY WILLIAM T. HARLOW.

EARLY LAND GRANTS.

THE history of Shrewsbury properly begins with certain land grants of the Great and General Court of the Massachusetts Bay, in New England, located within the territory of which the town was afterwards formed. These grants, called farms, named after the grantees and five in number, were: (1) Davenport's Farm, 650 acres; (2) Haynes' Farm, otherwise called Quinsigamond Farm, 3200 acres; (3) Malden Farm, 1000 acres; (4) Rawson's Farm, 500 acres, and (5) Sewall's Farm, 1500 acres. But the quantity of land in these grants was, in fact, greatly in excess of the number of acres named, and the aggregate was, doubtless, more than 10,000 acres,

1. The Davenport Farm, granted to Captain Richard Davenport, commander of Castle Island, in Boston Harbor, in consideration of public services, was laid out to him in the valley of the Nashua River, in that part of Shrewsbury now West Boylston and Boylston, and included very valuable mill-sites, as well as the finest parcel of intervale land lying in a body to be found in Massachusetts east of Connecticut River. Its final confirmation to the grantee was May 28, 1659.[1] Capt. Davenport came to Salem with Gov. Endicott in 1628, and after many years of public service was killed by lightning ("tooke away by ye solemne strooke of Thunder"), while sleeping by his magazine, with only the wainscot between him and the powder. His son Richard, with his two sons, William and Nathaniel, came to Shrewsbury about 1736 and settled upon this grant.[2]

[1] Colony Records IV., Part I, 314 and 372.

[2] For rude plans, see Worcester Reg. Deeds, B. 3, p. 95.

2. The grantees of the Haynes' Farm, who did not themselves give their own name to their grant, but called it by the more euphonious title given by the Indians to "ye Greate Pond that lyeth West Pointe to ye sd farm," were the brothers John and Josiah Haynes, of Sudbury, and their brother-in-law, Nathaniel Treadway, of Watertown. The Haynes brothers, with their sisters, Sufferance and Mary, were the children of Walter Haynes, a Wiltshire linen-weaver, who, with his wife Elizabeth and children, all under sixteen years, came in the good ship "Confidence" from England in 1638, and settled in Sudbury. This grant was originally made to Isaac Johnson in consideration of "£400 adventured by the said Mr. Johnson in the comon stock of The Governor and company of ye Massachusetts Bay in New England," which, to begin with, was little else but an incorporated trading company founded on the East India plan. Johnson dying, this grant, as yet unlocated and accounted personal estate, came into the possession of his executor, Increase Nowell. Johnson and Nowell were both original patentees of the colony charter of 1628 and had part with Winthrop in importing it to New England. Nowell also dying before location of the grant, his executor sold it to John Haynes and his brother Josiah and their brothers-in-law—Nathaniel Treadway, who married their sister Sufferance and Thomas Noyes, who married their other sister, Mary. It was finally laid out to the Haynes brothers and Treadway (Noyes having died), and confirmed by the General Court May 27, 1664.[1] The southwest corner of Haynes' Farm was at the going out of the Nipnapp River from the southernmost end of Quinsigamond Ponds, and both the islands there belonged to the farm and so to the town of Shrewsbury to this day. Another corner was where the town bound between Northborough and Shrewsbury now stands, by the Great Road near the house of Mr. William U. Maynard. The northwest and southeast corners of the grant cannot be fixed with exactness, but cannot have been very remote from where the two school-houses, Nos. 3 and 5, now stand. The northern boundary curved northward and crossed the Boylston road near where Mr. Lowell Walker now lives, and thence passed on to the Northborough line. I have been thus particular to trace the origin and show the location of the Haynes Farm, because it was much the largest of the five grants, because it was the owners of this large tract of land that formed the nucleus of the Marlborough colony that settled Shrewsbury, and because the facts are not well known.

3. One hundred of the one thousand acres of Malden Farm were in Worcester. Its southern boundary line was three hundred and seventy rods long, and the southernmost point of West Boylston was the centre of this line, and the line running northerly for about two miles from this point, between the two towns of Boylston and West Boylston, divided this farm into two equal parts. Its northwest corner is said in the lay-out to be about a mile distant from the Davenport Farm. The original grant to the town of Malden, made May 9, 1662, was on condition that "ye ministry of Maulden do cause it to be bounded out and put on improvement within three years next ensewing." The location of the grant by metes and bounds was duly made and confirmed within the time prescribed, May 3, 1665, but the only improvements made were marking forest trees, at the corners, with the letter M.[2] On this ground, want of improvements within three years, the validity of the grant was disputed by the proprietors of Shrewsbury, and their records contain frequent references to this grant as the "pretended Malden Farm." In 1736 Rev. Joseph Emerson, of Malden, and minister of God's Word there, brought suit in the Worcester Common Pleas against Ephraim Wheeler and David Crosby, of Shrewsbury, for possession of the nine hundred acres of this grant which lay in Shrewsbury. This suit was defended by the proprietors, by whose direction Wheeler and Crosby had taken possession of the land, and Nahum Ward, one of the proprietors, acted as their counsel in the suit. On trial in the Common Pleas the verdict and judgment were for the defendants, but Mr. Emerson appealed and prevailed in the Superior Court, final judgment for the plaintiff, October Term, 1736. But the proprietors were not content, and the next year Mr. Ward was sent to the Great and General Court to re-open the question determined in the suit, and for four years Mr. Ward continued to press petitions for a new trial and for re-location of the grant, in vain. Malden Hill and Malden Brook were both named from this grant, though neither hill nor brook is in it. From uncertainty about the location of the grant, it may have been supposed or claimed that its location was so as to include the brook and hill.

4. Secretary Edward Rawson received from time to time grants of several parcels of land to eke out his pitiful salary, and among the rest a rectangle of five hundred acres lying between Marlboro', Lancaster and Worcester, about half a mile north of Haynes' Farm, and Deacon John Haynes located it for him. It was one mile (three hundred and twenty rods) long by two hundred and fifty rods wide. Rawson's Hill, called in the grant by its Indian name of Ashant's Hill, was in it and Cold Harbor Brook ran through it. Some years before this grant to him the secretary had spent some money to no profit in experiments with saltpetre or something he thought was saltpetre, and the General Court, to encourage such patriotic experimenting and compensate him for his losses thereabout, granted him five hundred acres of land "near Pequot,"

[1] Colony Records III. 189 and 435; IV., Part I. 295; IV., Part II. 7 and 8 and 111. See plan in Secretary's office, vol. —, Maps and Plans.

[2] Col. Rec. IV. Pt. II. 45 and 148.

but afterwards gave him thirty pounds instead of the land. As no consideration is expressly named in the grant which was located in Shrewsbury, and the quantity is the same, it is probable that this grant was a renewal of the other, modified so that it might be "layd out in any free place not prejudicing a plantation." The lay-out and confirmation of this grant was May 13, 1686.[1]

5. Sewall's Farm lay on the westerly side of Shrewsbury, with a narrow strip between it and Worcester line. Its south boundary line was a little south of the Great Road, its southwest corner near the head Quinsigamond Pond. Its given dimensions were seven hundred and eighty rods long, south to north, and three hundred and forty rods wide, east to west, or not quite two miles and one-half long by a little more than a mile wide—extending from its south line, before mentioned, beyond and including Grass Pond, (once so-called, but for three generations last past known as Sewall's Pond), in Boylston. It was bounded for a considerable distance on its west side by Malden Farm, and also for a less distance on the east by Haynes' Farm, and so connected the two. It had on it two mill-sites,—one a little below Sewall's Pond, where Banister's Mills were built, and the other, now unoccupied, but much the better water-power of the two, near the house of Mr. Frederick E. Abbott, where once stood Harlow's Mills, burned nearly forty years ago. Sewall's Hill, as well as Sewall's Pond, is within the farm limits, and both took their name from the grantee, Samuel Sewall, chief justice of the old Superior Court of Judicature, one of the judges who tried the Salem witches and the only one of them that is known to have repented thereof; author of Sewall's Diary, etc.

The south part of Sewall's Farm—one thousand acres—was laid out and confirmed November 20, 1695, to James Russell, sometime colony treasurer, to whom the grant (originally made to Deputy-Governor Francis Willoughby, in consideration of public service) came, unlocated, by descent from his father, Richard Russell, also sometime colony treasurer, who had bought it of the Deputy-Governor. Chief Justice Sewall's title to this part of his farm in Shrewsbury was by purchase of Treasurer James Russell. His title to the north part—five hundred acres—was in right of his wife, who was the only daughter of Mintmaster John Hull, who "by minting made a mint of money" for himself, as well as for the colony, and became the richest man of New England. Hannah Hull married Samuel Sewall long before he was chief justice, or hung the witches, or had made much progress in his famous diary, or was famous for anything, and brought her husband a marriage-portion of £30,000, all duly counted out to him on the wedding-day in "pine-tree" shillings, fresh from her father's mint.[2] This grant, which had come to Madam Hannah Hull Sewall through her father, in some way that I have not yet been able to trace, was confirmed to her and her husband, May 27, 1696. A rude plan of Sewall's Farm may be seen in the Worcester Registry of Deeds,[3] with a deed, dated June 1, 1732, of a moiety thereof from William Pepperell, of Kittery, *et ux. et als.* to Nahum Ward, of Shrewsbury. This was thirteen years before the famed exploit of Louisbourg, and the thrifty trader of Kittery was then only a hero *in posse*, and tenant, in common with others, of fifteen hundred acres of real estate in Shrewsbury, in right of his wife, who was Mary Hurst, and one of Chief Justice Sewall's three granddaughters, and so coparcener of the real estate aforesaid. This plan was made, as appears from the deed, from a survey made in November, 1714, by David Haynes, youngest son of Deacon John, of Sudbury, and one may read in the Sewall Diary the following entry, under date "1714, 8^{r} 6. Mr. David Hayns dines with us. . . . Gave him the Bounds of Quanssicamon Farms, that he may review and refresh them."

Whereby one may note that the Indians' name for Long Pond (whatever may be the Indians' spelling of it) was once applied to Sewall's Farm, as well as to Haynes'. Probably it was to distinguish the two that at a later period they were called after their respective grantees.[4]

CHAPTER C.

SHREWSBURY—(*Continued.*)

THE MARLBOROUGH MEN AND WHEN SOME OF THEM SETTLED.

It will aid to a better understanding both of what precedes and what is to follow to give a brief account of the road through Shrewsbury anciently called the Connecticut Road,—in later times the Country Road, the Stage Road, Post Road and Great Road. The original road from Massachusetts Bay to the Con-

[2] So Hutchinson i. 165, to which tradition adds that the bride, being set in the scales, exactly balanced the silver pine-trees. Merely suggesting to the reader that a pine-tree shilling's prescribed weight was three pennyweights, Troy, I leave him to compute "exactly" what was Mrs. Sewall's weight on her wedding-day.

[3] Book 3, page 91.

[4] Since the above was in the hands of the publishers, I have discovered, under date of June 20, 1715, another grant of sixteen hundred and eighty-three acres to the heirs of John Haynes, lying in the southerly part of Shrewsbury and adjoining "Haynes' Old Farm" on the south side. This is what is called in the Proprietors' Records "Robbins' Farm," so named from Joseph Robbins, a "Praying Indian" of Hassanimisco, whose title Deacon Haynes in his life-time had bought, of which title this grant was a confirmation. See Court Records, 1715, and Maps and Plans, Vol. 5, page 3, Secretary of State's office. See also a plan of the original grant to the Shrewsbury Proprietors, vol. 16, page 518, on which this grant, under the name of "Haynes' Indian Farm," is laid down.

necticut River did not pass through Shrewsbury at all, but to the south of it. It was merely the old trail of the Indians. The new Connecticut Road was laid out by Major John Pynchon, whose father William had founded a town at either end of it.[1] The "worshipful" major's authority was an order of the General Court, under date March 30, 1683, in these words:

"WHEREAS the way to Kornecticut, now used, being very hazardous to travelers by reason of one deepe river that is passed fower or five times over, which may be avoided, it is referred t› Major Pynchon to order ye said way to be layd out & well marked. He having hyred two injins to gu de him in the way for fifty shillings, it is ordered that the Treasurer pay them the same in country pay towards effecting this worke."[2]

The principal change of the old way consisted in passing north instead of south of Quinsigamond Pond, and so through Shrewsbury. Departing from the old way, it passed northerly of Little Chauncey Pond in Northborough into Shrewsbury exactly where the Great Road enters the town to-day, and thence through the town to the head of Quinsigamond Pond, on substantially the same line as the present road. But in 1726 it was re-located by a jury sent out by the Middlesex Court of Sessions, whose accepted return, so far as relates to the re-location in Shrewsbury, is as follows (what immediately precedes relates to the way in Worcester): "And thence in Shrewsbury, keeping the old way, crossing the Brook, running into Long Pond, and so keeping the old way south of Gershom Wheelock's house, and between the house and barn of Daniel How, & so still keeping the old road till it comes out of the woodland east of said How's, on the edge of the Great Rocky Plain, and so keeping very nigh a straight line a little south of Mr. Cushing's house, on the east side of the aforesaid Plain, and then in the old way till it come to Capt. Keyes' fenced land, and so crossing a small corner of said Keyes' fenced ground, and then in the old way running between said Keyes' house and barn, and so keeping the old road south of Widow Blair's, and so to the Westborough[3] line in the old road, passing between Daniel Barnes' house and barn," etc.

That is to say, the re-located road crossed the town line in exactly the same place where the old road crossed it, nor has there been any change had, either in the road or the town line from that time (1726) to this day, and the town bound by the road here stands precisely where it was established in 1717 by the viewing committee's report "at a heap of stones, called Warner's Corner, which is the most easterly corner of Haynes' Farm by the Country Road." Daniel Barnes occupied the sixteenth house-lot of the proprietors' records, "bounded easterly by the town line, northerly by Haines' old Farm . . . and" (the lot) "lyeth where Mr. Warner formerly improved." This is the place where Mr. William U. Maynard now lives, and is without doubt the earliest place in Shrewsbury occupied by a white man.[4]

Whoever Mr. Warner may have been, and whatever may have become of him, certain it is that he had no title to the land "where he formerly improved." His corner makes a very noticeable and unexplained jog into the boundaries of Haynes' Farm laid out in 1664, and he was probably some daring pioneer who was either driven out or perished during King Philip's War. Widow Mary Blair, mentioned also in the relocation of 1726, lived with her children on the place where Mr. Samuel Johnson now lives. It was house-lot No. 12, "situated near where Warner formerly improved, bounded northerly on Haines' old Farm, easterly by the 16th House-Lot," etc. The widow's husband, William Blair, died shortly after coming to Shrewsbury, and the Barnes and Blair families both certainly here in 1726, not long afterwards returned to Marlborough.

The germ of the movement for settlement of Shrewsbury is described in a deed of partition[5] of Haynes' Farm, dated April, 1717, which, after reciting the "orderly" meeting of the owners, twenty-three in number, heirs and purchasers of the rights of Deacon John Haynes, Lieutenant Josiah Haynes and Mr. Nathaniel Treadway, all deceased, the appointment of a committee to go with John Brigham, surveyor, and divide the farm into three parcels ready to draw lots, and a second meeting of said owners December 10, 1716, at David How's house in Sudbury, then sets out the committee's report that they had divided the farm by east and west lines into three parts or squadrons—whereupon, lots being drawn, the North Squadron fell to the heirs and purchasers of the right of Deacon John Haynes, the South Squadron to the heirs of Lieutenant Joshua Haynes and the Middle Squadron to the heirs and purchasers of the right of Mr. Nathaniel Treadway. Of the twenty-three signers of this deed, the following or their children settled in Shrewsbury: John Keyes, Joseph Noyes, Moses Newton, Daniel How, Elias Keyes, Samuel Wheelock, Thomas Hapgood, Edward Goddard and William Taylor.

Samuel Wheelock's son Gershom is reputed to have been the first permanent settler of Shrewsbury, and the place where he settled was on the share of his father in Haynes' Farm—on the north side of the Great Road, between where Mr. Levi Prentice and Mr. William Fitzgerald now live. Tradition represents

[1] Roxbury and Springfield.

[2] Colony Records, V. 394.

[3] Now Northborough.

[4] Distinguished also by a recent archæological find of much interest. Ditching in his meadow in 1884 Mr. Maynard came upon the fossil molars of a mastodon, and the next year, in the margin of the ditch, which it was known was to be explored by the amateurs of the Worcester Natural History Society was found a human skull, doubtless the plant of a practical joker, of which not only the amateurs, but a learned professor of Harvard became eager victims.

[5] "Cambridge Registry," Book 29, page 44.

him as sleeping aloft in his cabin during the winter nights of 1716–17, and drawing up his ladder after him, "whistled an air did he," doubtless to keep up his courage. How long he continued to live there I have not ascertained, but certain it is that he was still there in 1726, as appears from the re-location of the Great Road at that time. In 1720 his father gave him a deed of this lot, and February 10, 1729, house-lot No. 26, which "lyeth near the west bounds of Hains' old Farm," was in possession of Samuel Wheelock.[1] Gershom Wheelock, the first settler, who had both a son and a grandson of the same name, was commonly called in his life-time Captain Wheelock, from his militia rank, and his father was called the deacon from his office in the church, of which he was one of the founders. Deacon Wheelock was a member of the first Board of Selectmen and a very active man in church and town affairs for many years.

Mr. Cushing, mentioned in the re-location, is Rev. Job Cushing, who and whose place of abode will be further noticed later.

John Keyes, whose house, barn and fenced land is referred to in the re-location of 1726, son of Elias Keyes, of Sudbury, and grandson of Robert Keyes, of Watertown, who came from England in 1633, had his share of Haynes' Farm assigned to him on the south side of the Great Road, nearly opposite where the currier's shop stands in the Lower Village. In 1723 he built a new house a few rods east of the rude and primitive cabin that he first lived in, but before it was finished both houses were burnt in the night and Mr. Keyes' three sons and two apprentices of Ebenezer Bragg, the carpenter, who was building the new house, perished in the flames. Mr. Bragg, also sleeping in the same house, barely escaped. The old house was also burned, but the inmates, Mr. Keyes and wife and four daughters, were awakened by Mr. Bragg just in time to flee out of it.

John Keyes held commissions as captain and major in the militia, and is traditionally known as the famous Major John Keyes. He is not to be confounded with Deacon John, his cousin, who settled in the North Parish. In 1726 he evidently had built another house, as the relocated Great Road passed between it and his barn. A very active and energetic man, member of the first and many subsequent Boards of Selectmen. He bought a moiety of Sewall's Farm, and thus became tenant in common with Nahum Ward, who was his uncle, of that large tract of land.

Elias Keyes, who was the cousin of famous Major John, had his share of the farm assigned him near his cousin's, but, in 1741, with his family, joined another colony that swarmed out of the Marlborough hive and followed the star of empire on its westward way to New Marlborough, in far-off Berkshire. The surname of Keyes is now extinct in Shrewsbury. But the Flaggs, of Boylston, are descendants of famous Major John, by his daughter Hannah, who married Gershom Flagg.

Daniel Noyes, of Sudbury, who settled on the South Squadron of Haynes' Farm, was descended both from Ensign Thomas Noyes and Lieutenant John Haynes. He was the son of Joseph, who signed the partition deed. His grandfather, also named Joseph, was the son of Ensign Thomas, and his grandmother was Ruth Haynes, daughter of Lieutenant Joshua.

Neither of the Newtons, Moses nor Thomas, settled in Shrewsbury. They sold their shares in Haynes' Farm to Nahum Ward, who was their cousin, but their children came to Shrewsbury at an early day and settled here. Elisha Newton, son of Moses, was grandfather of the late Calvin Newton, of this town, and settled on the place, part of Sewall's Farm, where Peter Gamache now lives, where also Mr. Newton (Calvin), whose three sons, still living in this town, were all born there, lived and died. Elisha Newton's brother, Aaron, also settled in the North Parish (Boylston), and so also did Thomas Newton, son of Thomas, who signed the partition deed.

Nahum Ward, who bought the Newtons' share of Haynes' Farm, though not one of the twenty-three owners in 1717, was one of the first comers here and his purchase, a large tract, lay on the south side of the road opposite the Common, extending thence both easterly and westerly. His great-grandson, author of a history of Shrewsbury, supposes he was here before 1718, and living near the Jonas Stone house (now owned by Mr. Frederick Stone, of Boston), but William Taylor at that time owned the land where that house stands, and Mr. Ward owned no land nearer than the south side of the Great Road. Mr. Ward was colonel of a militia regiment in the Provincial Line, and chairman of the first and member of many subsequent Boards of Selectmen; many times representative to the General Court, and a justice of the Worcester County Court of Common Pleas, 1745–62. He was admitted to the Worcester bar in 1731, but I have not found a case of his acting as counsel except in the Malden suit elsewhere mentioned. He was father of General Artemas Ward and ancestor of all who ever bore the Ward name in Shrewsbury. William Ward, who came from York, England, to Sudbury, about 1640, was his grandfather. The Newtons, of Shrewsbury, also are descended from William Ward.

Daniel How settled on the North Squadron, and kept a tavern on the Great Road, where the Shrews-

[1] Ward, pp. 20 and 266–268, and see the deacon's deed of 1720 to his son in "Worcester Registry," Book 23, page 214. Mr. Ward is very wide of the fact in supposing this deed to relate to house-lot No. 26 of the proprietors' records, and in supposing this lot (26) to be the place where Erastus Wheelock, great-great-grandson of the first deacon, now lives.

bury Poor-House formerly stood, on land now belonging to Mr. George H. Harlow. He was son of Josiah How, of Marlborough, and grandson of John How, who came from England and settled in Sudbury in 1638, or earlier, and on his mother's side he was grandson of Deacon John Haynes, one of the original grantees of Haynes' Farm. His mother, whose maiden-name was Mary Haynes, was in 1713 owner of a share of the "farm at Quinsigamond," and under the name and addition of Mary Prescott, of Lancaster, conveyed it to "her true and well beloved son, David How, of Marlborough." The North Squadron, by lot, as we have seen, fell to the heirs and purchasers of the right of Deacon John. In explanation of his mother's name and addition, it should be added that her first husband, Josiah How, Daniel's father, dying young, she afterwards married John Prescott, of Lancaster, son of the famous blacksmith, miller and Indian fighter, who was the first settler and founder of the first town in the county of Worcester. Daniel How was the first town treasurer, and held the office several years, and he was many years a member of the selectmen, and let the reader note the re-location, in 1726, of the Great Road between his house and barn as showing where he lived and kept tavern, and also where the road then was. From his militia office he usually went by the name of Captain How.

Thomas Hapgood was great grandson of Nathaniel Treadway, one of the original grantees of Haynes' Farm, to whose heirs fell the Middle Squadron, and he settled in Shrewsbury and built his house near where Mr. Albert Clapp now lives, and Mr. Clapp's farm is part of Thomas Hapgood's share of the Middle Squadron. He was son of Thomas Hapgood, of Marlborough, who lived to see his great-great-grandchildren, and had three hundred and thirteen descendants living at his death, and his (the said Thomas, of Shrewsbury) grandfather was Shadrach Hapgood, of Sudbury, who married Treadway's daughter Elizabeth, and was killed in the Indian fight at Brookfield, in 1675. Thomas Hapgood's name is twice signed to the partition deed with a cross —once for himself and again as attorney for another. He was a militia captain, and commonly called Captain Hapgood, town treasurer ten years and often a selectman. His three sisters, Mary,[1] Elizabeth and Hepzibah, who were, of course, of the same descent with him, married and settled in Shrewsbury.

Edward Goddard, who married the said Hepzibah Hapgood, was born in Watertown, where his father and grandfather—both also named Edward—lived, and where the latter, who married Elizabeth Miles and came with her from England about 1650, first settled. He settled in the North Squadron, on the place which Edward Howe now owns, and built the house in which Mr. Howe still lives, and which, under its modernized exterior, I suppose, retains the frame of the oldest house in Shrewsbury. The Goddard farm extended to and was bounded on the northernmost boundary line of Haynes' Farm. Mr. Goddard, who is distinguished from most of the other new-comers to Shrewsbury by having no military title, was an active man in church and town, held the office of selectman and other town officers, and was a man of considerable means.

William Taylor, who married Captain Hapgood's other sister, Elizabeth, was also a man of considerable means for his day, but did not wholly escape, like his brother-in-law, militia honors. His name in town and church-records, I believe, has the uniform prefix of sergeant. He settled on a lot of the North Squadron, adjoining Goddard's, being the place where Mr. Charles A. Holman now lives, and where the late Amasa Howe, great-grandson of Taylor, lived; where lived also Amasa's father, Nathan, and his grandfather, also named Nathan, who was son of Captain Daniel How, and married Sergeant Taylor's daughter, Hepzibah. The house which William Taylor built was taken down by Amasa Howe in 1849. The Taylor farm or share which he had in the North Squadron extended south to the Great Road, and included the site of the house in which his great-great-grandson, Thomas Harlow, now lives, and all the other land to and including the Common and the site of the Sumner house. The Great Road was substantially on the line between the North and Middle Squadrons, and this was Taylor's south line. The name Taylor as a surname died in Shrewsbury with the first comer, but his descendants, by six daughters, are very numerous. His father and grandfather both lived in Marlborough, and were both named William Taylor. He was many years a selectman of Shrewsbury.

[1] Mary Hapgood was the first wife of John Wheeler.

CHAPTER CI.

SHREWSBURY—(*Continued.*)

GRANT OF TOWNSHIP—LAY-OUT OF LOTS—INCORPORATION—ORIGIN OF THE NAME OF THE TOWN.

In colony and provincial records and early deeds recorded at Cambridge and Worcester one meets frequent reference to a tract of land, larger than any existing town of this Commonwealth, as "lying between Marlborough, Worcester and Lancaster," or "joyning ye west side of Marlborough town bounds," or "lying east pointe to Quonsigamon Ponds," or as "Quonsiccamon Farms," or a "meete place for a plantation near Quansiggamog," the Indian name in our times uniformly written Quinsigamond, one to two hundred years ago, being differently spelt almost every time it was written, and being applied to the vicinity of Long Pond as well as to the pond itself—much oftener, too, as it were quite easy to show, to the

east side, notwithstanding the complacent appropriation of it by our neighbors of Worcester, than to the west side of the pond. The question why formation of this large tract of land into a town was delayed till after all the other territory in the vicinity was formed into towns has been often asked, but the answer is not far to seek, and in truth has been already given. The choicest portions of it had been already granted, and in the language of the report of a viewing committee sent out to find a meet place for a plantation at Quinsigamond, it had been "spoiled by the granting of farms."

After the death of the original grantees of the Haynes' Farm, several of their heirs sold their rights or shares therein, and in 1716 the owners of it, twenty-three in number, living mostly in Marlborough, but some of them in Sudbury and other towns, with a view to division and settlement of their three thousand two hundred acres at Quinsigamond, caused it to be surveyed and divided up. Their surveyor was John Brigham, of Marlborough, who was the grantee of a large "farm" in the West Parish of that town, and was at that very time pushing a scheme for setting off that parish as a new town, to be called Westborough, and the owners of the Haynes' Farm employed Mr. Brigham to draw up and present to the General Court a petition for the grant of the whole of the large tract between Marlborough and Worcester as a township. This petition, which was signed by John Brigham himself and thirty others, is said to have been lost, and it is not known who all of the petitioners were nor exactly what they asked for, but it was referred, together with another petition of which also John Brigham was the first signer, for incorporation of his new town of Westborough, to the same viewing committee, who reported favorably on both petitions. But it is easy to see that Mr. Brigham and his committee, of which John Chandler, of Woodstock, was chairman, and to which the reference of both these petitions was of course no accident, were looking mainly to the interest of the new town and less to those of the new township. A good slice from the latter—to wit, a strip between the former boundary of Marlborough and Haynes' Farm—was added to the former by the committee, who thought that the petitioners for the township were competent members and likely to make a speedy settlement, and that the slice proposed to be taken would not so disadvantage the township but that it might make a good town—that is to say, if the owners of all the five farms at Quinsigamond would make common cause with the petitioners, there would be plenty of land left after parting with the slice in question.

November 2, 1717, the General Court accepted the committee's report and "ordered that the tract of land protracted and described, together with the farms heretofore granted to particular persons contained in the plot, be made a township, excepting" the slice referred to, and appointed a committee to lay out the whole of said lands (except the lands before granted) to persons most likely to advance settlement of the place, who were to pay not exceeding twelve pence per acre to the use of the Province and the committee's charge for laying out.

The committee, of which Jonathan Remington was chairman, laid out forty-five lots of about seventy acres each, with a fifty-acre right to each, by which I understand a right in the settler to have fifty acres more in the undivided lands, and also laid out for each lot about six acres of valuable meadow often quite remote from the lot. The "valuable meadow" was swamp land, and is at the present day less highly valued than it once was. And the proprietors, March 28, 1722, granted "the committy to settle the town" fifteen hundred acres for laying out the lots. The Committee's Farm, so-called, was a parcel of good land in the northwest corner of the township, called the Leg, on the Stillwater River, now a part of Sterling. Many persons have been misled by Ward's "History of Shrewsbury" into supposing that it was upon the lots laid out by the Remington committee that all the first-comers to Shrewsbury settled, and such appears to have been the belief of Mr. Ward himself. The number of the proprietors in 1718, as appears from the apportionment of a tax, was forty-five, and a lot was laid out for each one, and a few of the men to whom lots were assigned no doubt settled upon them personally. But it was upon the Haynes' Farm, which covered all the land on both sides of the Great road, extending southerly beyond where the Worcester turnpike was afterwards laid, that most of the new-comers from Marlborough settled. The lots numbered one to sixteen, were laid out on a strip of land extending along the south and east boundary lines of the town—that is between Haynes' Farm and the town of Grafton on the south, and the towns of Westborough and Northborough on the east—and if one will carefully examine the description of these lots, as taken by Mr. Ward from the proprietors' book, he will find frequent recurrence to the "town lines" and "Haines' Old Farm" as boundaries. Lots Nos. 17, 18 and 19 lay east of Rawson's Farm, whose locality has been before given, and Nos. 21, 22 (which was the minister's lot) and 23 lay between Haynes' Farm and Rawson's Farm, and the description of all these lots refer to these so-called "farms" as boundaries. The other lots are more difficult to locate with exactness. Most of them were in that part of Shrewsbury now Boylston and West Boylston. No. 24 is "bounded westerly by Judge Sewall's Farm;" No. 26 "lyeth near the west bounds of Haines' Old Farm;" No. 30 "Lyeth near the North End of Davenport's Farm;" Nos. 31, 32 and 34 are bounded by the "pretended Malden Farm," etc., etc. Mr. Ward has copied these descriptions containing these references to the farms without inquiry as to what or where they were.

Ten years after the township grant the town of

Shrewsbury was incorporated—not by a formal act, but by an order upon application of the inhabitants for incorporation dated December 19, 1727. Mr. Ward thinks it was so called from the English town of that name, whence may have come the ancestors of some of the proprietors. Before Saxon scholars gave the true etymology of the name it was said to mean the borough of shrews, which may be either a kind of moles or a kind of wives. The Saxons, who took the English town in the fifth century, derisively changed its Welsh name to Scrobbes-Byrig (scrub town), of which the name Shrewsbury is a euphonious corruption. But there is neither evidence nor reason for supposing any of the proprietors' ancestors came from the English Shrewsbury. Like many other towns, probably Shrewsbury took its name from a prominent man of the time when it was in want of one. Our neighbor on the south is well known to have been named from the Duke of Grafton, damned to everlasting fame in the letters of Junius. Charles Talbot, titular Earl of Shrewsbury by birth, was one of the Seven who signed the declaration inviting over the Prince of Orange on the abdication of James II., and became Secretary of State to King William, with title of Duke of Shrewsbury. On account of his winning manners Talbot is said to have been named by William of Orange King of Hearts, and habitually called by this pleasant title by the whole royal court. Under Queen Anne he held the offices of First Lord Chamberlain and Lord-Lieutenant of Ireland, and finally with her dying breath the Queen gave him the staff of Lord High Treasurer, that a sure hand might hold the helm of state at her death and safely transmit the Protestant succession. As soon as the Queen had drawn her last breath Charles Talbot, Duke of Shrewsbury, August 14, 1714, proclaimed George Lewis, Elector of Hanover, King of England and Ireland. The Duke died 1718, between which time and Queen Anne's death our town was settling, and as a child born in some historical crisis is named from a prominent actor in it, so the town of Shrewsbury took its name from the statesman who, notwithstanding public apprehension of the Pretender, had safely transmitted the English crown in the Protestant line. But if the same partiality for Indian names had existed in early times as now, probably Shrewsbury and Grafton would have continued to be called Quinsigamond and Hassanimisco to this day.

CHAPTER CII.

SHREWSBURY—(*Continued.*)

THE MEETING-HOUSE LOT AND THE HOUSES THAT WERE BUILT THEREON—THE PARISH FUND—ITS ORIGIN AND GROWTH.

OCTOBER 27, 1719, the proprietors of Shrewsbury voted "that the meeting-house be on Rocky Plain, near the Pines, and if the said spot cannot be obtained on reasonable terms, that then the meeting-house be set on Meeting-House Hill," whereby it appears that the hill laid down on maps and known to this day as Meeting-house Hill was so called as early as two years and a half after the first comers were here—doubtless because public opinion had designated this hill as the site of the house of worship that was to be. It belonged to the proprietors—which Rocky Plain did not—and it was nearer to the centre of the township. Rocky Plain was part of Haynes' Farm and the portion of it which the proprietors wanted belonged to one of their number, William Taylor. Its name, Rocky Pine Plain, indicates the boulders and forest trees that the pioneers had to deal with. On the 4th of May, 1721, the very month when the first meeting-house in Shrewsbury was built, William Taylor conveyed to the proprietors, of whom he was one and retaining an equal right therein with any one single proprietor, fifteen acres of land situate on Rocky Plain and lying within the bounds of a farm purchased by him of one of the heirs of John Haynes, bounded westerly by land of John Balcom, northerly by land of Edward Goddard, southerly by the squadron line and every other way by the remaining parts of said Taylor's own land. The squadron line here was the Connecticut Road, then so called. In making this conveyance Sergeant Taylor was actuated mainly by public spirit, though no doubt he expected advantages from having the meeting-house, which was sure to be the village centre, near where he had settled. On the 20th of May, sixteen days after his conveyance to them, the proprietors granted to him in satisfaction of his fifteen acres "5 acres and 24 rods of land on Pine Plain, westerly of Haynes' Farm on the south side of the country road," remote from the centre and of trifling value—a mere make-weight or nominal *quid pro quo* granted from some supposed legal necessity for a consideration. This fifteen acres, called "the common," beside the church site, the land around it and the graveyard, contained several other parcels, some of which were sold by the proprietors and some of which were appropriated without sale. The lot on which the Sumner house stands, and which was the southwest corner of the original Common, was sold in 1754 to Artemas Ward, who afterward sold it to Dr. Joseph Sumner. The house where Mr. A. J. Gibson lives, where formerly stood the old Crosby house, occupies the southeast corner. Both the Town House and the High School house are on the Taylor grant. Nor can any record of any conveyance or grant of the proprietors be found of the sites of these public buildings. The site of the Andrews house and the field in rear of it are entirely within the old Common limits; so also is a part of the site of the Jonas Stone house, but the sites of these two houses and the field were sold by the proprietors, as by their records appears.[1]

[1] More than forty years ago Nathan Howe pointed out to two of his

Under date May 13, 1766, the day of raising the second meeting-house of the First Parish, Dr. Sumner has a memorandum of the fact, accompanied with a note, that "The first meeting-house in Shrewsbury was Erected in ye mounth of May, 1721." The site of the first meeting-house, according to tradition, was a little northerly and easterly of where the present house now stands. Its dimensions, given in the proprietors' records, were "40 feet in length by 32 in breadth, 14 feet stud." And the proprietors voted, June 22, 1720, to lay an assessment of five pounds on each,—aggregate of forty-two proprietors, two hundred and ten pounds. This house had neither steeple nor bell. The first sermon ever preached in Shrewsbury was by Rev. Robert Breck, of Marlborough, June 15, 1720, and the record of the meeting of the proprietors, when the assessment before referred to was voted, contains also the proprietors' vote to apply to Mr. Breck for the notes of his sermon, in order to have them printed.[1]

For forty-five years (1721–66) the first meeting-house served its original purpose, but during the last five years or more there had been a growing feeling that a new house of worship was needed. The town had grown, and, notwithstanding it had been divided into two parishes, the old house was too small. The building of the second meeting-house was long debated at town-meetings. Finally resolved upon, in the spring of 1766, it was commenced in earnest and speedily completed. It was not jobbed off to the lowest bidder, but built by a building committee, who employed Daniel Heminway, of Shrewsbury, the famous meeting-house builder, who built the Old South, in Worcester, and many other meeting-houses and public buildings, to frame it. The committee was instructed, by vote of the town, in employing labor and in purchase of materials, to give the preference to inhabitants of the town. All the carpenters of Shrewsbury worked upon the meeting-house. All the lumber grew in Shrewsbury woods, and was sawn in Shrewsbury mills. All the nails were made by Shrewsbury blacksmiths. The record of a town-meeting immediately preceding the meeting-house raising reveals the municipal estimate of the magnitude of the undertaking. The question whether the town would procure a ginn to raise the meeting-house with was debated, and "determined in ye negative." But the committee were directed to procure a lot of new spike poles; also "voted that ye committy provide Drinks & Provisions," and "voted to commence the raising at six o'clock in the morning." And lest ye committee should mistake their instructions, and also probably to encourage a good attendance and make everybody stay till the last rafter was in place and the last pin driven home, it was further "voted to provide a Good Supper, and to send to Boston for a Barrel of Rhum."

The new house was fifty-five feet in length by forty-three in breadth, and had entrances on the east and west ends and on the south side. Like its predecessor, it had neither steeple nor bell. If one take a lantern and go up into the attic and look at the enormous plates and roof-timbers, resting where they were raised by the new spike-poles one hundred and twenty-two years ago, he cannot but wonder how they were ever got there with the use of no other machinery.[2] The original site where the house was raised, and stood till 1834, was about fifty feet south of its present location, and its longest dimension was east and west. Many hands make quick work, and just two months after the raising Dr. Sumner says, "July 16, 1766, Being Lord's day, we met ye first time in the New House, upon wh. occasion I Preached from Genesis 28 chapter & ye 17 verse."

In 1807 the porch on the west end of the meeting-house was replaced by a steeple with a belfry and dials

grandsons the corners and boundaries of the Taylor grant, and told them that they were pointed out to him when a boy by his grandfather Taylor. These grandsons were then school-boys, of the age of seven teen years, studying surveying in the Shrewsbury High School, and one of them, a youth of rare promise and mathematical capacity, surveyed and plotted the old Common as his great-great-grandfather originally granted it, and his plot lies before me on my desk while I write. His field notes are "Began at S.W. corner on the road and ran east 31 rods, N. 4° W. 72½ rods, S. 70° W. 43½ rods, S. 17° E. 68½ rods, to where we began,—area, 16 acres, 42 rods." The other boy was the writer, who alone, of all William Taylor's descendants, has the honor to bear his name. His cousin, who made the survey, and whose name was Nathan Howe, so called after his grandfather, untimely died at the age of twenty-one years of a malignant typhus. I have recently discovered in the files of the Supreme Judicial Court, October Term, 1812, at Worcester, First Parish in Shrewsbury *vs.* Daniel Smith, a carefully made plan of the "Meeting-House lands," by Henry Snow, for the use of the court on trial of that case, showing all the roads, buildings, horse-sheds, tombs and fences. and the site of the meeting-house as it was in 1832, and I am both gratified and surprised at the almost exact coincidence of the survey of this accurate and painstaking surveyor with that of my youthful cousin.

A history of Shrewsbury ought not to omit some notice of the famous lawsuit of the parish with Daniel Smith, and I must crowd in somewhere a brief account of it,—here perhaps as well as anywhere. In 1830 Daniel Smith, who was a grandson of William Taylor, claimed title to the Common as his heir, plowed it up and sowed it with rye, whereupon the parish brought an action of trespass against him. Of course Taylor himself had no title after his conveyance to the proprietors, except as one of them, and even this title, since the proprietors were a corporation, did not descend to Taylor's heirs; and, even if Taylor had never conveyed the Common at all, Smith would have had no other title than as one of Taylor's many descendants. But the proprietors were all dead, and their quasi-corporate organization was extinct. And they had never, either personally or corporately, conveyed the Common to either the town or the parish, nor to anybody. In the action brought against him by the parish, Smith's lawyers, Rejoyce Newton and Levi Lincoln, finding he had no title to stand on, boldly challenged the title of the parish. But the Court held that the parish was the legal successor of the proprietors to at least so much of the Common as had been actually used for parochial purposes, and, being in actual possession, could maintain its action against a stranger. The case is a leading authority upon parish law, 14 Pick., 297.

[1] The sermon was printed, and a single copy of it still survives, in possession of Mr. George Sumner, of Worcester.

[2] Unless "rum done it?" It was at this raising that Artemas Ward, whose active drilling of his regiment directly after passage of the Stamp Act had come to the ear of Royal Governor Bernard, received the revocation of his commission as colonel. The reply which the reduced officer sent the Governor that he had been twice honored is worthy of inscription on his monument—where it is.

for a clock. The bell, for which the money was raised by subscription, was not hung until next year. The clock was added still later. Why the steeple was built on the west end, thereby giving the building the appearance of facing Dr. Sumner's back-yard, it is difficult to say; but so it was and so it stood until 1834, when the house was swung quarter round so as to face the south and moved to its present site, raised up so as to construct a vestry underneath and remodeled. Its porches were taken off so as to conform, outside and inside, to the then prevailing style of church architecture.

In 1801 Jonah Howe and eight others were incorporated as trustees of a fund for the support of a Congregational minister in the town of Shrewsbury, by an act of the General Court passed February 18th of that year. The act recites the former appropriation of certain securities and moneys, amounting to nine hundred and twenty dollars, by the town, and the recent subscription of $2,243 for support of the minister, limits the fund to a maximum of eight thousand dollars, the interest of which only is to be applied to the minister's salary, provides for an annual meeting of trustees in April, each year, to elect a treasurer and clerk and fill vacancies in trustees, and makes the trustees responsible to the town. If the interest should ever amount to more than enough to pay the salary of the minister, it was to be applied to the schools of the town. Dr. Sumner has left a memorandum that shows the origin of the fund:

April, 1792.—According to a vote of the town of Shrewsbury, the hinder seats in the meeting-house was taken up, and six pews built, which sold for about £140, which is to remain as a fund, the interest of which to be appropriated for support of the Gospel.

Sundry contributions have, from time to time, been made by different persons to this fund, and the amount of it is now more than double the maximum prescribed in the original act. By chapter 50, Acts of 1866, its name was changed to a "Fund for the Support of a Congregational Minister in the First Congregational Parish and Religious Society in the Town of Shrewsbury," and the limitation of the original act to eight thousand dollars was raised to twenty thousand dollars, and the trustees are made accountable to the parish, instead of the town. Jonathan H. Nelson, who died in 1872, gave this fund a legacy of five thousand dollars, the largest contribution given by any donor at any one time, but less than the aggregate sums given by Amasa Howe, who in his lifetime (1869) gave eighteen hundred dollars, and who, dying in 1883, was found by his will, made in 1872, to have given a legacy of twenty-two hundred dollars to this fund, and also by a codicil made in 1882 another legacy of two thousand dollars,[1] making a total of six thousand dollars. And Thomas Rice, who died May 29, 1888, has left a legacy of one thousand dollars in trust with the trustees of this fund, one-half of the interest of which is to be applied by the trustees to the care of the testator's lot and monument in the cemetery, and the other half to be applied to the payment of the salary of the minister of the Congregational parish. I am unable to give the amounts of any other donations or the names of the donors. The present total of the fund is about eighteen thousand dollars and its income about nine hundred dollars.

[1] The writer, who was the testater's nephew and one of his executors, being consulted by his uncle about this legacy, advised him against it. His reply, characteristic of the whole life of the man—then eighty-eight years old—will interest all who knew him: "I want the same kind of preaching kept up in Shrewsbury after I am dead and gone that there always has been, no matter how many rum-sellers and Roman Catholics come into the town." And he brought his aged fist down upon the table at which we were sitting with a vigor that silenced all further advice of that kind.

CHAPTER CIII.

SHREWSBURY—(*Continued.*)

THE FIRST PARISH AND ITS MINISTERS: CUSHING, SUMNER, INGERSOLL, WHIPPLE, GEORGE ALLEN, AVERELL, WILLIAMS, McGINLEY, DYER, SCUDDER, FRANK H. ALLEN.

THE three years within which Shrewsbury was required to have at least forty families and an orthodox minister began to run November 2, 1717. The forty families were here in due season, but the first minister, Rev. Job Cushing, was not settled till December 4, 1723,—more than six years after the time began to run. It would seem from the church records that the church was organized and a covenant adopted at Mr. Cushing's ordination. Let us note in passing that this covenant does not contain any creed—unless the following be regarded as such.

"We resolve to make the blessed Scriptures our platform, whereby we may discern the blessed mind of Christ and not the new-framed inventions of men,"—a favorite form of words with those who did not wish either to commit themselves to dogmatic theology nor to repel others from uniting with them by an iron-clad creed. This liberal covenant, probably drawn up by Mr. Cushing himself, closely resembles that of many of the early churches of New England, commencing with the earliest, whose platform, brought in the "Mayflower" and landed in 1620 on Plymouth Rock, remains unchanged in any clause or letter, the creed of the liberal First Church of Plymouth, to this day.

It does not appear that at Mr. Cushing's ordination or afterwards any question was raised as to his being an "orthodox minister," within the meaning of those words in the act of the General Court, but tradition is that some of the brethren suspected him of favoring the Arminian heresy. During his ministry only one controversy arose of which any memory has reached our times. This was not theological.

One Simon Goddard, who came to Shrewsbury in 1731, from Framingham, with the aid of his two brothers, who were here before him, and five or six others, whom he converted to his views, kept Mr. Cushing and the whole church in hot water for more than ten years about ruling elders. According to Brother Goddard, it was indispensable that every Christian church should have two elders to rule both it and the minister, and he wrote to Mr. Cushing and the church long letters about it and talked about it till one wonders at the long-suffering patience of pastor and people with such a crank and such a bore as he was. This contemptible controversy finally resulted in an ecclesiastical council, but what was the "result" of the council was unknown at the time and has never been discovered to this day.

Rev. Job Cushing, whose father and grandfather were both named Matthew Cushing, and the latter of whom came from Norfolk, England, in 1688, was born at Hingham, July 19, 1694, and graduated at Harvard College in 1714. He was a farmer as well as minister, and at the moment of his death he was at work in his field binding sheaves of grain, where, without sickness or premonition, he fell dead. The minister's lot, No. 22, laid out on Meeting-house Hill when it was expected that the meeting house would be built there, being found after it was built on Rocky Plain too remote for the minister to live on, Mr. Cushing bought twenty acres and one hundred and fifteen rods of William Taylor, adjoining on the east side the meeting-house lot or Common, and built his house where Mrs. Arunah Harlow now lives. Mr. Cushing also bought of Nahum Ward fifty-six acres and seventy-one rods on the south side of the road opposite his house.[1] What with these purchases and his lot (No. 22), "made up the full of ninety acres," and second and third division lands received "in right of his lot" he became in time the owner of considerable real estate, which he cleared and tilled as well as any of the other original farmers of Shrewsbury. A portion of Mr. Cushing's land on both sides of the Great Road, together with a moiety of Jordan's Pond laid out to him as second division land "equal," say the records, "to six acres of valuable meadow," has descended to his great-grandson, Mr. Josiah G. Stone, and still remains in his possession. At the time of Mr. Cushing's settlement in Shrewsbury he was twenty-nine years old, and at his death, which occurred August 6, 1760, he was sixty-six.

In the interval between the decease of Mr. Cushing and settlement of his successor, the church covenant was re-enforced by the addition of the Calvinistic tenets. After the words in the extract before given, "new-framed inventions of men," were added the following, "And yet we are of the judgment that the whole of the well-known Westminster Catechism, as explained by Calvinistic divines, contains a just summary of Christian doctrine as revealed in God's Holy Word," and after the name of Christ was inserted the words, "whom we believe to be God, equal with the Father and the Holy Ghost." Among the minority who protested and voted against these additions to the fair original, as incongruous therewith as patch of sow's ear upon silk purse, I note the name of Colonel Job Cushing, true to the teachings of his sainted father.

Before settling or even calling another minister, being jealous not only of ruling elders, but of the minister as well, the church voted not to settle any minister with power to negative its vote. At the same meeting when this vote was passed the church extended a call to Rev. Joseph Sumner as pastor, and his ordination took place June 23, 1762. For want of room in the old meeting-house, and because it was not considered safe to crowd the old house with a large audience, the ordination services were conducted in the open air on a platform erected on the Common. Rev. Joseph Sumner was born at Pomfret, Conn., June 30, 1740, being son of Deacon Samuel Sumner, of that town, and graduated at Yale College in 1759. The degree of D.D., was conferred on him by Harvard College in 1814, and shortly afterwards by Columbia College, S. C. Like his predecessor, he was a man of liberal views and tolerant practice, and if all the ministers of New England had been like them, no division of the churches on the basis of mere theological dogma would have ever taken place. During Dr. Sumner's time the Calvinistic additions to the covenant were erased by vote of the church—doubtless through his influence. He was a man of great authority with his people, and of great personal dignity and weight of character. Of colossal stature—six feet four inches in height—he presented a most imposing presence. To the last he wore the costume of the last century: knee-breeches, silver buckles, cocked hat, white wig and all. A child was once so awe-stricken at sight of Dr. Sumner, as to run away and tell his mother that he had seen God. A characteristic story is told of him and Dr. Samuel Austin, of the First Worcester Parish. In a conversation at the house of the former, in Shrewsbury, where the latter had made a call, Dr. Sumner said, "I was brought up in the orthodox faith, and have always lived in it, and I expect to die in it." "But," said Dr. Austin, "you clipped off its corners." "Yes," was Dr. Sumner's reply, "and they need clipping more." Let me add another story characteristic of Dr. Austin as well as Dr. Sumner. At a meeting of the Worcester Ministerial Association Dr. Austin and Dr. Aaron Bancroft, pastors respectively of the First and Second Parishes in Worcester, were both proposed for membership. Dr. Austin having been admitted without objection, he vehemently opposed the admission of Dr. Bancroft, and a majority of the association voted against it, whereupon Dr. Sumner arose, and declaring that he would not belong to such

[1] Middlesex Registry of Deeds, Book 25, Pages 123–124.

an illiberal body, withdrew from the association, and it never met again.

It was during Dr. Sumner's time that division of Congregational Churches into Trinitarian and Unitarian took place. In the last years of his ministry he had repeatedly suggested to his people the expediency of selecting a colleague pastor, and January 18, 1820, the church chose Rev. Samuel B. Ingersoll as colleague to Dr. Summer, and the parish concurring, the ordination took place June 14, 1820. This ordination being a sort of milestone in the history of the Congregational schism then in progress, I must give a brief account of it. Of the fifteen ministers who formed the ordaining council, five—namely: Dr. Aaron Bancroft, of Worcester; Rev. John Miles, of Grafton; Rev. Ward Cotton, of Boylston; Dr. Joseph Allen, of Northborough; and Rev. William Nash, of West Boylston—were Unitarians. At the examination of the candidate it appeared that he was a pronounced Calvinist. To his ordination on this account the Unitarian members of the council made no objection, but asked if he would fellowship with Unitarians. Mr. Ingersoll's reply was "I would not trust a Unitarian in my pulpit one hour." This was explicit enough for Dr. Bancroft, who arose and was followed by all the Unitarian members of the council, pastors and lay delegates, nine in number, down the long aisle out of the meeting-house. A majority of the council was still left, and the ordination proceeded. Such is the account of this ordination given to the writer nearly forty years ago by Dr. Eleazer T. Fitch, professor of divinity in Yale College, who was a member of the council.

Mr. Ingersoll, after his ordination, preached but one Sunday, and died of consumption, November 14, 1820, at Beverly, where he was born in 1787. He graduated at Yale College in 1817, and was thirty years old at the time. He was at his death thirty-three. Before going to college he had been a sailor and shipwrecked at sea. It is said that as he lay floating and perishing on a piece of wreck in mid-ocean he heard a call to go and preach the gospel, and answered it with a solemn vow that if he were saved from perishing then he would obey the call. A funeral service was held simultaneously at Beverly and at Shrewsbury. "I preached and Dr. Bancroft and Mr. Cotton prayed." Such is Dr. Sumner's brief entry in the church records. I wonder if prayer or sermon contained any allusion to the drama played within the same walls only five months before. This ordination of Mr. Ingersoll was followed by important consequences both in Shrewsbury and elsewhere. In Shrewsbury, as we shall see later, a portion of the parish withdrew and formed a new society. Dr. Sumner was greatly annoyed at what had taken place. Doubtless he had hoped, by bringing together the clergy of the vicinity who were of opposing views, to do something towards healing the schism that was dividing and weakening the churches of New England.

After Mr. Ingersoll's death Rev. Edwards Whipple was settled as a colleague to Dr. Sumner. He had previously been ordained and settled in Charlton, and dismissed at his own request. His installation took place September 20, 1821. He died September 17, 1822, of a fever after a sickness of only seven days, aged forty-four years. He was born in Westborough, November, 1778, graduated at Williams College in 1801, and studied his profession with the famous Dr. Nathaniel Emmons, of Franklin. Dr. Sumner continued in his ministry in Shrewsbury till his death, which occurred December 9, 1824, a period of more than sixty-two years, being at the time of his death nearly eighty-five years old. His funeral sermon was preached by his life-long friend, Dr. Bancroft, pursuant to an understanding between them that whichever might die first, the other should preach his funeral sermon.

But before Dr. Sumner's death still another colleague to him had been settled in Shrewsbury. Rev. George Allen was ordained here November 19, 1823. He was the son of Hon. Joseph Allen, born at Worcester, February 11, 1792, and graduated at Yale College in 1813. He remained in his pastorate at Shrewsbury till June 18, 1840, when he was dismissed by advice of an ecclesiastical council. For sixteen of the seventeen years of his life here Mr. Allen's relations with his church and parish were exceptionally pleasant and amicable. At his funeral said Rev. Dr. Buckingham, of Springfield, formerly settled in Millbury: "Years ago, when Mr. Allen was pastor of the church at Shrewsbury, we" (meaning the clergy of the vicinity) "remember to have thought that parsonage an ideal one. Looking off from that hill-top with his wife and children about him and a large and intelligent congregation listening to him, it seemed as if such love and influence and happiness ought to satisfy any mortal. They did satisfy him so long as he was permitted to enjoy them." But in the seventeenth year of his ministry there arose in Shrewsbury one of the most implacable minister quarrels in the history of New England. It had its origin in a scandal about Mr. Allen's family, of which want of space, if no other reason, would forbid detail here. Indignantly denying the truth of the scandalous stories in circulation, Mr. Allen in the pulpit and out of it castigated their circulators with a severity of language such as few men can equal and none ever exceeded, and his unsparing denunciations of all who had talked about his family, which included probably the entire inhabitants of the town, had the effect to estrange many of his warmest friends and to cause them to become disaffected. In a few months the disaffected party grew, so as to number full one-half the parish, "signed off," hired a preacher and a hall and had religious services on Sundays by themselves. It was a bitter feud, causing enmity between old friends and near neighbors, and finally resulted in an ecclesiastical council, before which the opposition to Mr. Allen, under leadership

of Mr. Henry Dana Ward, laid charges against him. The council fully vindicated Mr. Allen from all intentional wrong and recommended him to the confidence of the churches; but, on account of the widespread disaffection which had impaired, if not entirely destroyed, his usefulness in Shrewsbury, they advised his dismissal with payment of full salary for the current year. These proceedings were directly followed by a slander suit brought by Mr. Allen against Mr. Ward. At the trial of this suit in the Supreme Court at Worcester, April term, 1841, the town of Shrewsbury turned out and packed the court-house. Nor was interest limited to the town. No trial at Worcester, for years, had excited such general interest. Verdict for plaintiff, damages $700, which, at the time, was regarded as heavy and exemplary.

Rev. George Allen was unquestionably the ablest man whom Shrewsbury can boast to have ever had for a citizen. After his dismissal he returned to Worcester and lived there till his death, which occurred March 31, 1883. His age was ninety-one years. He had long survived his wife and children, of whom he once had four, two of whom had died within a year and a half before his dismissal at Shrewsbury, and one of whom was the subject of the scandal before referred to. For about thirty years Mr. Allen was chaplain of the State Lunatic Hospital at Worcester. A man of great learning and accurate scholarship, and holding the pen of a ready writer, he became in Worcester a public and influential man. He was interested in and performed efficient service in all the reformatory movements of the times. In the anti-Masonic movement which followed the murder of Morgan in Western New York, where he preached a few years before he came to Shrewsbury, he took an active and prominent part. He was one of the earliest and most pronounced anti-slavery men, and on formation of the Free-Soil party in 1848 he gave valuable aid to his brother, who, more than any other man, must be regarded as founder of that party. Though maintaining his connection from first to last with the Orthodox Congregational Church, he was a man of extremely liberal views, and had the honor to have his orthodoxy challenged many times in his life. Before settlement in Shrewsbury he was rejected by an ordaining council at Aurora, N. Y., where he had received a call, for "unsoundness on original sin." All his life he publicly repudiated the Westminster Catechism, and in 1865 at Plymouth, where the National Council of his denomination met, in eloquent words he solemnly protested against its reaffirmation as being too sectarian for the catholic spirit of the Pilgrim Fathers, over whose ashes they had met, and too narrow to comprehend the breadth of their principles of religious freedom.

Mr. Allen's successor in the ministry at Shrewsbury was Rev. James Averill, who was born at Griswold, Conn., May 29, 1815. He graduated at Amherst College in the class of 1837, studied his profession at the Yale Theological School and was ordained over the church and parish in Shrewsbury, June 22, 1841. He was dismissed at his own request November 15, 1848. Mr. Averill died in 1863 in the service of his country, chaplain of a Connecticut regiment.

Rev. Nathan Witter Williams was the successor of Mr. Averill. He was the son of Rev. Joseph Williams, and born at Providence, R. I., March 12, 1816; graduated at Yale College in 1842; studied theology with Rev. Albert Barnes, of Philadelphia; was ordained at Shrewsbury, February 28, 1849, and dismissed at his own request April 27, 1858. After Mr. Williams' dismissal he was elected Representative from Shrewsbury to the General Court and served as a member of that body in the session of 1859.

The next minister of the Congregational Church and Parish in Shrewsbury was Rev. William A. McGinley, who was ordained June 2, 1859, and dismissed by his request July 27, 1865. He was an accomplished scholar and eloquent preacher. He had originally selected the law for his profession and had read a year or more for admission to the bar before he studied divinity. He is now settled in Portsmouth, N. H.

Rev. Ebenezer Porter Dyer was the successor of Mr. McGinley. He was born at Abington, August 15, 1813, graduated at Brown University in the class of 1833, studied divinity at Andover and was first settled and ordained at Stowe, where he began preaching in 1835, and where he remained till 1846. Installed at Hingham in 1848, he remained there till 1864. He was again installed here November 7, 1867, and resigned his pastorate June 19, 1877. Beginning at Stowe in his youth, afterwards at several other places, Boston, Winter Hill, Somerville and elsewhere, he performed missionary labor, founding, it is said, by his direct efforts, three churches, and indirectly causing to be founded three others. He was author of several books, among others a metrical version of "Pilgrim's Progress," published by Lee & Shepard, Boston, in 1869, while he was in Shrewsbury. He died at Abington, August 22, 1883, aged seventy years.

Rev. John L. Scudder, who succeeded Mr. Dyer, was born in 1855, in India, where his father, Dr.—— Scudder was a missionary of the American Board. He graduated at Yale College in 1874, and pursued his professional studies at Union Theological Seminary. Ordained here December 26, 1877, he remained till March, 1882, when he requested a dismissal and went to accept a call to Minneapolis. He is now settled at Jersey City.

The successor of Mr. Scudder was Rev. Frank H. Allen, a graduate of Amherst College in the class of 1874, and a classmate of his predecessor at Union Theological Seminary. He was ordained here October 25, 1882, and resigned his office as pastor August 23, 1888, to accept a call to Milwaukee.

CHAPTER CIV.

SHREWSBURY—(*Continued.*)

THE SECOND PARISH—THE BAPTIST, UNIVERSALIST AND METHODIST SOCIETIES—THE ROMAN CATHOLICS.

FROM December 17, 1742, to November 1, 1786, there were two parishes in Shrewsbury, and the separate history of both is part of the history of the town. Both were territorial, and included all the inhabitants,—*nolentes volentes*. The South or First Parish was identical with the present town of Shrewsbury. The North or Second Parish included most of Boylston and West Boylston and all of the original town not within the limits of the South. The church in the North Parish was organized October 6, 1743, Rev. Job Cushing and his deacons going over to "assist y^e^ Bretheren in the north part to gather a church." A meeting-house was built, and Rev. Ebenezer Morse was ordained in the same month (October) of the same year. The house was of the rudest and cheapest pattern, and at the ordination had neither floor, door nor window. It was completed later by voluntary contributions of labor and materials, and the interior being apportioned off into spaces for pews, each one built him a pew to suit himself. Mr. Morse was a man of varied learning and superior capacity, graduate of Harvard College 1737, and master of all the learned professions,—law and medicine as well as divinity. He was a native of Medfield, born March 2, 1718, and twenty-five years old at his settlement in Shrewsbury. The relations of pastor and people appear to have been mutually satisfactory till the popular dissatisfaction about taxation of the Colonies, in which Mr. Morse did not participate, being a pronounced loyalist from first to last. The trouble between him and his parish began in 1770, and culminated in 1775. Of the action of the town in regard to Mr. Morse, an account will be given elsewhere. The parish, June 12, 1775, voted (thirty-seven yeas to twelve nays) "to dissolve the pastoral office of Rev. Ebenezer Morse." November 10, 1775, six ministers, being present attending a day of fasting and prayer, recommended dismissal of Mr. Morse, and the parish voted to dismiss him "agreeably to y^e^ advice of the Council." Of course, these proceedings were irregular and revolutionary; but they were sustained by an irresistible public opinion, and Mr. Morse submitted under protest. He continued to live in the Second Parish and in the town of Boylston after it was incorporated as such to the end of his life, making a livelihood practicing medicine and fitting boys for college. It has been said derisively of Mr. Morse that he continued to style himself "settled minister of God's word in Boylston" as long as he lived, and often so signed marriage certificates. But nothing is clearer than that, according to law and congregational theory, he had a right to so style himself and so sign his name. In 1775 the parish appointed a committee "to notify Mr. Morse of his dismissal and to see that he do not enter the desk any more." He died at Boylston in 1802, aged eighty-three years.

Before incorporation of the Second Parish as the town of Boylston, two other ministers were called in that parish,—Rev. Jesse Reed and Rev. Eleazer Fairbank, and the latter was settled there March 27, 1777. He was born in Preston, Conn., graduated at Brown University, and was dismissed at Boylston at his own request, April 22, 1793; afterwards settled at Wilmington, Vt., and again dismissed. He removed to Palmyra, N. Y., where he died in 1821.

The founder of the Baptist Society in Shrewsbury was Luther Goddard, grandson of Edward, the proprietor. Simon Goddard, who so troubled the peace of good Mr. Cushing about ruling elders, was a brother of Edward and so great-uncle of Luther. The latter, called captain from his rank in the militia, later in life called also Elder Goddard, from his powerful gift as a Baptist exhorter, was by trade a watchmaker and carried on his trade with thrift and profit, first at Shrewsbury and later at Worcester. I mention his kinship to Simon on account of his marked resemblance to him. What with speaking in meeting and endless letter-writing, Simon had kept church and pastor in hot water upwards of ten years, and now fifty years afterwards Mr. Cushing's successor hath a like trouble. Captain Luther also can speak in meeting, likewise he can write letters, and he did both. He could not find in the blessed Scriptures either precept or example for baptism of infants, and he talked about it in meeting and out of meeting, and wrote long letters to the church and pastor about it, subscribing himself "your poor unworthy Brother, L. Goddard." This began before, and reached a climax in 1808, when Capt. Goddard was baptized by immersion and organized himself into a Baptist Church. He even requested by letter Dr. Sumner to allow him the use of his meeting-house for such organizing, &c. Mild Dr. Sumner's reply, lately printed,[1] is the most remarkable instance of mildness on record, and is witty as well as mild. He could not see the necessity or propriety in the use of the meeting-house when there was no place within two miles where baptism by immersion could be administered.

After his baptism Capt. Goddard wrote another letter to Joseph Sumner, pastor, wishing him "to pointe out some way for him to leave the church in this town and joyn to another of a different denomination." And shortly afterwards he wrote another letter of great length to the church, to which the church by a committee replied that Mr. Goddard's connec-

[1] Memorials of Rev. Joseph Sumner, D.D., printed for private distribution by his grandson, George Sumner, of Worcester.

tion with it was dissolved by his own act. From this time Elder Goddard preached in Shrewsbury and elsewhere as occasion offered. In 1813 a society of thirty-three members, called the Shrewsbury and Boylston Baptist Society, was formally organized, and the next year built a house of God. And there Elder Goddard often exercised his gifts, but no regular preacher was employed till 1818, when Rev. Elias McGregory was ordained over the church and society, and remained its minister till 1821, after which no other was ever regularly settled over it. Rev. Samuel W. Vilas was hired to supply the Baptist pulpit, and did so for about two years, when July 15, 1823, he died. About this time Elder Goddard removed to Worcester, and the Boylston Baptists withdrew and organized a society of their own.

The Shrewsbury Baptists, however, kept up their organization and continued to hold services at their house for several years with more or less regularity, but had no regular minister. The Baptist clergy of the vicinity, who regarded the church here as a sort of missionary outpost in the midst of the Gentiles, frequently came here and preached. This continued till 1835, when the church and society were formally dissolved. The Baptist house of worship is still standing, though so altered as to be no longer recognizable. It stands where it was built, on the Worcester Road, and is now owned and occupied by Mr. George G. Dowe as a dwelling-house.

I have before referred to the ordination of Rev. Samuel B. Ingersoll as a milestone in the history of the Congregational schism. And now we run against this stone again. April 11, 1821, a religious society was formed in Shrewsbury under the name of the First Restoration Society. One of the main factors that contributed to the formation of this society was the avowal of extreme Calvinistic opinions by Mr. Ingersoll, and his refusal to exchange with the neighboring clergy of more liberal views. Among the solid men who formed this society were the Knowltons, Dr. Seth and his brothers, Asa and Joseph Hastings, who were sons of Deacon William, and grandsons of Deacon Ezekiel Knowlton, and had been brought up on the Westminster Catechism. Dr. Knowlton was chairman of most committees and boards of officers of the new society during his life. Full one-half of the members of this society were residents of other towns. The Universalist Society in Worcester was not formed till twenty years later, and the Shrewsbury society had among its members several strong men from Worcester, among others Mr. Joseph Pratt and Mr. David Sargent, the latter of whom was one of the deacons of the Restoration Church. The other deacon was Joseph H. Knowlton, before named. There were also several members who lived in Sutton, more still who lived in Grafton, and a few who lived in Boylston. The first business committee of the society were Dr. Seth Knowlton, Captain Thomas Harrington, Sr., Gershom Flagg, of Boylston, Abner Stowe, Jr., of Grafton, Captain Silas Allen, Jr., Lyman Howe and John Richardson. The church building was located at the junction of the Grafton Road with the Worcester Turnpike, as a central point of a rather scattered parish.

This society was organized under the statute of 1811, which guaranteed most of the advantages of incorporation to societies so organized, and made them, as was afterwards held by the Supreme Court, *quasi* corporations. The house of worship, begun in 1822, was completed and publicly dedicated to "Our Father which is in Heaven," June 17, 1823, at which time also was installed Rev. Jacob Wood, who served as minister of this society till 1829. For the next ten years there was no settled minister. Rev. Thomas J. Greenwood, who was settled in Marlborough, for about three years supplied the pulpit here on alternate Sundays, preaching also in his own pulpit in a similar way. During this period, 1829–39, several other ministers, for longer or shorter terms, were employed, but I have not been able to ascertain even their names. In the spring of 1839 Rev. Jacob Baker was ordained over this society, and preached regularly for three years. After 1843 the society had no settled minister nor regular preaching. There were, however, occasional services in the church till about 1864. In 1868 the few surviving members met and voted to sell their house and dissolve the society.

If organization of the First Restoration Society had been delayed till after the death of Mr. Ingersoll, it probably would never have been organized at all, and if Dr. Knowlton and others, who withdrew from the Congregational Society, had remained in it, there can be little doubt that that society would have taken the Unitarian instead of Trinitarian side of the schism that was then taking place. The fate of the First Restoration Society in Shrewsbury is substantially the same as that of all the other Universalist Societies of the smaller towns. The one idea of the Universalists, seemingly an inadequate foundation for a separate denomination, has unquestionably permeated and leavened the whole lump of religious thought of the present age, and though in Shrewsbury and elsewhere the dogma of wretched doom for all but an elect few of our race may still linger in creeds, not even heathen congregations will tolerate its preaching. When the American missionary for whose outfit Shrewsbury Christians have contributed, goes to far India's coral strand to bear the lamp of life to men benighted, he has to graft the infernal tenet of his written creed with the scion of future probation—a version of restoration heresy taken from Buddha himself. And straightway all Andover takes up the cudgels to champion the Light of Asia. Shade of John Calvin! methinks the smell of a burning Andover professor would be scarcely less grateful to thy nostrils than was that of Servetus himself.

In the spring of 1845 a Methodist preacher and temperance lecturer, held some religious meetings, interspersed with a temperance lecture or two, at

School-house No. 5, in the western part of Shrewsbury, which were attended by Alonzo Stiles and Amasa Hyde, both members of the Congregational Church in Shrewsbury. Mr. Hyde, who lived to be known to the younger as well as the older of the three generations of living men, has recently died, at an advanced age. He was an excellent man and a leading member of the Methodist Church for many years. Mr. Stiles died nearly forty years ago while crossing the Isthmus of Panama on his way to California. He had formerly been an intemperate man and was at variance with the church of which he was a member on the score of temperance. He objected to and remonstrated against the use of intoxicating liquors in the communion service because it excited his appetite and tempted him to return to his former habit of intemperance. It was a common zeal for temperance that first brought Mr. Stiles in contact with the preacher and lecturer aforesaid—whose name I am unable to give—which contact resulted in the school-house meetings, where a Methodist class was formed, of which Mr. Stiles and Mr. Hyde were both members. Then and there was planted the grain of mustard seed out of which grew the fair tree of Methodism in Shrewsbury.

In the fall of the same year came from Holliston Rev. Gardner Rice, a Methodist clergyman, to teach a high school in Shrewsbury. He was a graduate of Wesleyan University, and taught school in Shrewsbury for many years, and more than one generation of children bless the memory of Master Rice. Directly on coming to town Mr. Rice took charge of the Methodist movement, which before had lacked guiding and organizing leadership, and preached Sundays in a hall in the Haven tavern, which stood where the Town House now stands; in the spring of 1846 the Methodist Society was formally organized and connected with the Worcester Conference, and Rev. John W. Wheeler came to Shrewsbury under a regular assignment to duty here according to Methodist usage, and held services Sundays at the tavern hall till completion of the Methodist house of worship. The building of this house was said by an irreverent jester to have been the greatest instance of something made out of nothing since the Creator made the world. Neither jester nor laughers at his jest knew the history of the Methodist Church. True it was, none of the original Methodists in Shrewsbury were rich men, nor had a single one of them any visible treasure laid up where moth and rust doth corrupt. But what the Methodists did in Shrewsbury is only a single instance of what the denomination has done all over the United States. Everywhere it has organized its churches and built its houses of worship in very literal imitation of the way the Creator is commonly supposed to have made the world.

It was during building of the Methodist Church (1847–48) or immediately afterwards that Rev. Jefferson Hascall, presiding elder of the Worcester Conference, whose discerning eye saw a field here white for the harvest, moved into town and thrust in his sickle. Under his labors there was a great revival of religion, and over one hundred persons professed conversion. Mr. Hascall was born in Thompson, Ct., November 6, 1807, and died at Medford November 6, 1887. He graduated at Wilbraham Academy about 1829, and immediately entered upon the ministry. He lived in Shrewsbury about twenty years in all, and most of the time was in the presiding eldership. He was a man of great ability, energy and influence, a powerful preacher of his faith and a public-spirited citizen of the town. Interested in and favoring education and all public improvements, and an earnest advocate of a vigorous prosecution of the war to suppress the slaveholders' rebellion, he was universally respected and beloved by the people of the town. I should be glad to add here some brief separate mention of each of the Methodist pastors who have ministered to the church in Shrewsbury, and regret my inability to do so. According to the itinerant usage of the denomination, only ministering here for two years or less each, they have come and gone, and after considerable unsatisfactory inquiry I reluctantly abandon my purpose to notice them separately and merely subjoin a list of their names with times of service :

Rev. D. K. Banister..... 1848-49, '57-58	Rev. Jefferson Hascall..... 1871
Rev. David Shuman.....1850-51	Rev. Edwin Chase..... 1872

	Rev. O. C. Poland..... 1888

January 16, 1872, the Catholics of Shrewsbury bought three-eighths of an acre of land for three hundred and fifty dollars and built a church thereon. The deed of this parcel of land runs "to Patrick T. O'Reilly, of Springfield, To Have and To Hold the same to him, the said O'Reilly, his heirs and assigns, to their own use and behoof forever."[1] Patrick T. O'Reilly, of Springfield, is a Right Reverend Bishop of the Holy Roman Catholic Church, and his diocese includes the town of Shrewsbury. Nor does his tenure of the church property in this town differ at all from that of all other property of the Catholic Church in his diocese. He is tenant in fee simple of it all. The local (?) pastor of the Catholic flock here, as well as the Right Reverend Bishop, is a non-resident of this town.

If the reader be not content with this history of the Catholic Church in Shrewsbury, and shall attempt to pursue it farther, I hope he may be more successful in his inquiries than I have been.

CHAPTER CV.

SHREWSBURY—(*Continued.*)

THE FRENCH WARS, THE REVOLUTION, THE WAR OF 1812 AND THE MEXICAN WAR.

Of the two wars between England and France for possession of Canada (1744–63) the first was called by our fathers the Old War and the second the Last War. Only very meagre materials exist for showing the part taken by the people of Shrewsbury in these wars. That Artemas Ward, as lieutenant-colonel, Marshall Newton, as lieutenant, Nathan Howe, as ensign, and Dr. Edward Flint, as surgeon, all of Shrewsbury, served in expeditions to Canada in the last war is well known, but this implies much more. If there were officers to command there were soldiers to follow and obey. Doubtless from Shrewsbury there accompanied these officers the number of non-commissioned officers and privates appropriate to their rank. Colonel William Williams, whose diary and letters are quoted by Parkman, was commander of the regiment in which Lieutenant-Colonel Ward and Lieutenant Newton served. This regiment was in the disastrous campaign of the incompetent Abercrombie against Ticonderoga. Published extracts of a journal kept by Lieutenant-Colonel Ward fully bear out all that has ever been said or written of the disorder of the march, the lack of discipline of the army, the confusion of the battle and the folly of the retreat.

Dr. Edward Flint was chief chirurgeon of the regiment of Colonel Timothy Ruggles, which served in the expedition of 1758 against Crown Point. Ensign Nathan Howe, who was a brother-in-law of Dr. Flint, served in the campaign of 1756 at Lake George, and with his regiment assisted in building the ill-fated Fort William Henry, which the brave Lieutenant-Colonel Monro, a Scotch veteran, was forced to surrender to the French, who, after the surrender, abandoned their prisoners to be pillaged, tortured, murdered and eaten by their Indian allies. John Wheeler, of Shrewsbury, who was one of the prisoners, survived the massacre and returned home. Ensign Howe had been sent home before the siege and capture with a detachment of sick and wounded men. The town records of Shrewsbury show that the town granted him £5 16*s.* 9½*d.* on account of his sickness. At the same time, and for like cause, to William Howe, brother of Ensign Nathan, an allowance was made by the town of £6 6*d.*; also to Ephraim Smith, on account of the sickness of his son Aaron, £3 4*s.* 4*d.*, and to widow Sarah Smith for medical attendance of her late husband, Joshua Smith, upon sundry sick soldiers, £1 14*s.* 8*d.* Caleb Parker, a youthful soldier from this town, of only sixteen years, was killed in this campaign.

One soldier at least from Shrewsbury went on the romantic expedition in the old war against the Fortress of Louisbourg, on Cape Breton Island, built by the grand monarch of France to commemorate his grandeur in America, as well as to guard one of the avenues to New France, besieged and taken in forty-nine days by raw levies of New England fishermen and farmers, under command of General William Pepperell, a Piscataqua trader, who had never had before the least experience in war—one of the most amazing exploits in all the annals of time. From the volunteering of the soldiers to surrender of the fortress the campaign has all "the cloud and glamour of romance," and was called a crusade. While Governor Shirley was mustering his battalions like another Peter the Hermit, the eloquent Whitefield went up and down the land preaching the Holy War.

Nil desperandum, Christo duce.

The heart of New England took fire and sent the flower of its youth, only sons not excepted, to assault the Dunkirk of America, garrisoned by the veterans of France. Away with the crusaders went Jonah Taylor, of Shrewsbury, only son of his father, William, and his mother, Elizabeth, only brother of nine sisters, and fell mortally wounded in the first assault upon the King's Bastion. He died on Cape Breton September 23, 1745.

The first overt act of Shrewsbury in the Revolutionary War was to send delegates to the first Provincial Congress, holden at Concord October 11, 1774. Artemas Ward had been chosen Representative from Shrewsbury to the General Court, which Governor Gage had ordered to meet at Salem October 5th. The Governor countermanded his order, but the Representatives met at Salem all the same and adjourned to Concord. Phineas Heywood was chosen by Shrewsbury as a delegate to go with the Representative-elect to the Congress at Concord. The recommendations of this Congress to the towns were forthwith carried into effect by the inhabitants of Shrewsbury. 1. They organized three companies of militia, one in the North Parish, Captain Asa Beaman, and two in the South Parish, Captain Job Cushing and Captain Asa Brigham. 2. They voted not to pay taxes to Mr. Treasurer Harrison Gray, but to Henry Gardner, of Stow, whom Congress had designated as its new Receiver-General. 3. They adopted the non-consumption agreement as to India teas and appointed an inspection committee of fifteen, five to be a quorum, whose duty it was to be to find out all such persons as sell or consume so extravagant and unnecessary an article of luxury and post their names in some public place. The town also chose a committee of five to examine Rev. Ebenezer Morse, minister of the Second Parish, William Crawford and three others, all members of that parish, "as being suspected of Toryism." At an adjourned meeting the committee reported favorably as to the three others, but as to Rev. Ebenezer Morse, they said it appeared to them that he was not so friendly to the common cause as

they could wish, and as to William Crawford, it appeared to the committee that he was wholly unfriendly and inclined rather to take up arms for the King. Mr. Morse came before the town to answer for himself. He had prayed with much fervor in his pulpit for the King and royal family, and this was well known before to all the town. He now, in open town-meeting, declared himself a loyalist and reproved his fellow-townsmen for disloyalty. The town thereupon directed the committee to take away the arms, ammunition and warlike implements of both Mr. Morse and Crawford, and voted that said Morse do not pass over the lines of the Second Parish on any occasion whatever without a permit, and that said Crawford remain within the bounds of his own land except on Sabbath-days, and then not go out of his parish without a permit. There is nothing in the town records, nor has anything come down to our time by tradition to indicate that any other inhabitants of Shrewsbury were ever "suspected of Toryism," and it was doubtless due to Rev. Ebenezer Morse, of the Second Parish, who was a strong man and had previously possessed the entire confidence of his people, that there was any opposition in any part of the town to the prevailing spirit of resistance to the British Crown.

In the time of the Revolution, regiments in Massachusetts were territorial—so many towns to a regiment. The county of Worcester was divided into seven regiments, and Shrewsbury, Grafton, Northborough, Westborough and Southborough were the Sixth Worcester Regiment, Jonathan Ward, of Southborough, colonel. Artemas Ward, of Shrewsbury, formerly colonel of this regiment, was elected by the first Provincial Congress, of which he was a member, with two others, to organize and command the militia, and the next Congress issued to him a commission as commander-in-chief of all the forces of Massachusetts and the other colonies, and shortly afterwards he was appointed by the Continental Congress major-general and commander-in-chief. Meantime the war had begun, and Captain Job Cushing, of Shrewsbury, had marched with his company to Lexington. About ten o'clock in the forenoon of April 19, 1775, passed like a flash through Shrewsbury a white horse, bloody with spurring and dripping with sweat, bearing a post-rider shouting as he rode: "To arms! to arms! the war has begun!" I have often heard my grandfather, Nathan Howe, the younger of that name, tell the story. He was then a boy fourteen years old, at work in the field with his father plowing, the team being a pair of oxen and a horse. His father, Ensign Howe, of the last war, now lieutenant of Captain Cushing's company, immediately detached from the team and mounted his horse and set off to rally the company.

There was hurrying to and fro and mounting in hot haste. The younger Nathan wanted dreadfully to go, too, and cried because his father would not let him. Of course the company, like many others as remote, did not arrive in time to take part in the fight. Immediately after the Lexington alarm the principal occupation of able-bodied men in the province of Massachusetts Bay was organizing and drilling, and before the battle of Bunker Hill, June 17, 1775, a large body of troops was at Cambridge, under command of General Artemas Ward, of Shrewsbury. Captain Ezra Beaman and Captain Job Cushing, with three companies from Shrewsbury, were both there.

Who commanded at Bunker Hill? There was General Artemas Ward over at Cambridge, commander-in-chief—such was his sonorous title—but this was before his commission by the Continental Congress, and all his authority was subordinate to that of the Massachusetts Committee of Safety, nine in number, who occupied the same headquarters with him,[1] and "planned the battle." And there was Putnam, and Prescott, and Warren, and Pomeroy and Stark, each fighting the British on his own hook, and with very little regard to what others were doing. Plainly there was nobody in command—in the sense of giving direction to the battle as a whole—that is, to compare small things with large, as Meade and Lee commanded their respective forces at Gettysburg. If only there had been somebody in command—some competent body—who had ordered over from Cambridge Captain Beaman and Captain Cushing, with their companies, and put them where they could do the most good, the author of this history might have had something to say about the men of Shrewsbury at Bunker Hill. The reason why re-enforcements were not sent over from Cambridge is not far to seek. The Committee of Safety made a mistake in supposing the attack of the British at Charlestown was a mere feint, and held fast where they were, expecting that the real attack would be directly made at Cambridge. In his "History of Shrewsbury" Mr. Andrew H. Ward —evidently in defence of his ancestor from criticism —gives a prolix and not very satisfactory explanation, of which the substance seems to be that General Ward's order-book shows that Colonel Jonathan Ward, with his regiment, was sent over by way of Lechmere's Point to Charlestown during the battle. For some reason it never reached its destination. Captain Aaron Smith, of Shrewsbury, whom we met in the last war returning home sick from Crown Point, whom also we shall shortly meet again, and who, on the 17th of June, 1775, was a private in Captain Cushing's company, and ran away without orders from Cambridge over to Charlestown, and alone, of all the Shrewsbury men, actually fought at Bunker Hill, fighting on his own hook, as every body else did, is given as authority for the statement that Colonel Ward, on his march, was met and halted by Dr. Benjamin Church, a member of the Committee of Safety, who afterwards turned out to be a traitor.

[1] The house in our times known as the birth-place of the poet Holmes.

General Washington arrived at Cambridge July 2, 1775, having been promoted over General Ward, and took command of the American army—about twenty thousand men. General Ward continued in the service as a subaltern under Washington till the evacuation of Boston by the British, May 17, 1776, when he resigned. The position of the British in Boston had become untenable by Washington's occupation of Dorchester Heights. Here Nathan Howe, of Shrewsbury, commanding a company, performed a service of great value, of great hardship also, working nights and in the cold rains of the spring months of 1776, throwing up fortifications on the heights, and contracted a severe cold that gradually developed into pulmonary disease and finally resulted in his death. In the latter part of the year 1777 he came home to die, but directly sent his son and namesake, then sixteen years old, to serve as a private in his regiment.

The cause of General Artemas Ward's resignation was a painful disorder,[1] which rendered all active exercise, particularly horseback-riding, an excruciating torture. At the request of Washington, who, after the evacuation of Boston by the British, went with the greater part of the army to New York, General Ward remained in command of the Eastern Department till December 31, 1777, when his resignation was accepted by Congress. Notwithstanding the superhuman pinnacle now occupied by Washington in public esteem, certain it is that in his life-time he was quite human and not at all reticent in his correspondence of unworthy reflections upon the personal courage of the officer over whom, for reasons of public policy, he had been promoted, and between whom and himself he was obviously conscious of popular comparison. Some time afterwards, when Washington was President and Ward was a member of Congress, then sitting in New York, the latter having obtained one of Washington's letters containing offensive allusions to him, proceeded to the President's house and asked him if he was the author of the letter. Washington looked at it for some time without making any reply. While he was still looking at it, Ward impatiently said, "I should think the man that was base enough to write that would be base enough to deny it," and abruptly turning on his heel, left the house.[2]

Job Cushing, of Shrewsbury, was promoted from rank to rank in the Sixth Regiment till he became its colonel. This regiment was from time to time recruited partly from the towns where it was originally formed and partly elsewhere. I think most of the Shrewsbury soldiers served in this regiment. After the success of Burgoyne at Ticonderoga public alarm was at the highest pitch, and Colonel Cushing went with his regiment to reinforce General Schuyler and took part in the battles of Bennington, August 16th, and Saratoga, October 16, 1777, when Burgoyne surrendered to General Gates, who had superseded General Schuyler in command. Ezra Beaman, of Shrewsbury, was also present at Burgoyne's surrender (but in what rank I am unable to say), and probably also at Bennington. Colonel Job Cushing, of Shrewsbury, and his regiment were a part of the body of troops that General Benedict Arnold undertook to betray to Sir Henry Clinton at West Point. The materials for giving details of the service of Shrewsbury men in the Revolutionary War are as meagre as for the French Wars. Before the Government gave pensions, besides the many who had died or been killed in the service, many more had doubtless died in the course of nature. A list of pensioners, prepared by Nathan Howe, who for many years acted as agent for his comrades in the army in obtaining pensions, contains exactly forty names. Of course, it is a mere remnant of the whole number who were in the Continental service from Shrewsbury.

In the time of President Madison, when occurred the War of 1812, a large majority of the people of Shrewsbury were of the Federal party, and wholly disapproved of the war, and I cannot find that the town or any citizen thereof in any manner participated therein.

And the Mexican War was generally considered morally wrong by the people of the town, always very radical in their opposition to slavery. Not a single citizen of Shrewsbury volunteered to go to Mexico, and I think the views of Mr. Hosea Biglow as to the Mexican War and its recruiting service, then newly printed for him in the *Boston Courier*, were exactly coincident with those of the whole town.

CHAPTER CVI.

SHREWSBURY—(*Continued.*)

SHOWING THE PART WHICH SHREWSBURY TOOK IN THE SHAYS' REBELLION.

DANIEL SHAYS had a strong following in Shrewsbury—in numbers. The regulators, as the Shays' men were called, controlled the action of the town with irresistible majorities; but its two most eminent citizens, Gen. Artemas Ward and Col. Job Cushing, were conspicuous by pronounced opposition, and had entered on the town-records, where one may read it to-day, their protest against the insurrectionary proceedings of the town adopted at a town-meeting in 1786. Wisdom may have been with the minority, but the men who took up arms with Shays were not unprincipled and aban-

[1] Gravel.

[2] This story, having been preserved only by tradition, and having passed for now four generations of men from one to another, has come to have slightly differing versions. The one above given is taken from "Reminiscences of Rev. George Allen, by F. P. Rice, 1883." Another, differing in some details, may be seen in "Drake's Historic Mansions and Fields of Middlesex," page 260.

doned wretches of the criminal class, and it was not for nothing that they took up arms. Shays himself, as well as Ward and Cushing, was a veteran of the Revolutionary War, and so also were every one of his captains, so far as I have been able to ascertain. Adam Wheeler, of Hubbardston, who in Shays' absence acted in this county as commander of the regulators, was a captain of the Continental Line and deacon of the Congregational Church in Hubbardston. He was born in Shrewsbury and was the great-great-grandson of the famous Captain Thomas Wheeler, of the Indian fight at Brookfield in 1675, and the great-grandson of Thomas Wheeler, the younger, also a hero of the same fight, who, himself severely wounded there, rescued his more severely wounded father from the Indians, who were about to dispatch him, threw him upon the horse of the slain Shadrach Hapgood, and with his father escaped by flight. Captain Wheeler, of the Shays' Rebellion, was also on his mother's side a great-grandson of the slain Shadrach, four of whose descendants settled in Shrewsbury.[1]

The leader of the Shrewsbury regulators was a brother-in-law of Wheeler, having married his sister, and a veteran whom we first met as a boy serving his apprenticeship as a soldier in the French War, and who fought for the independence of his country from Lexington to Yorktown—Captain Aaron Smith, and the company which he raised for Shays in Shrewsbury were his former companions-in-arms. They were the identical men who rallied to Lexington and Bunker Hill, Bennington and Saratoga. Their purpose was not to overthrow the government, but merely to restrain the courts temporarily from entering up judgments and issuing executions. The people of Shrewsbury were very poor. They had spent their little all for country. Acting under the advice of Governor Bowdoin and influenced by speculating Boston lobbyists, the General Court had laid an enormous tax with a view to pay off the public debt. Most of the public creditors were holders of State securities or soldiers' certificates purchased at less than twelve per cent. of their face value. Claims against the bankrupt citizens of the town were in the hands of lawyers and deputy-sheriffs, who held them under contracts for large percentages if collected. In the year 1784 and 1785 about four thousand suits were entered in the courts at Worcester. Lawyers' offices were thronged with suitors, and the neighborhood of them presented the appearance of a public fair. Real and personal property was sold on execution at ruinous prices, nobody having money to buy with at sales. And the jails were crowded with debtors. Only twelve years before exactly the same thing had been done at Worcester—with universal approval—which the regulators now attempted. In 1774 about five thousand men, mostly armed, had assembled at Worcester to prevent and did prevent the sitting of the courts, and no courts were held for two years. This then recent precedent suggested to the distressed people of Shrewsbury the means of relief from their distresses.

The first demonstration of the insurgents at Worcester, in September, was successful in preventing the sitting of the courts. It was upon this occasion that General Artemas Ward, of Shrewsbury, then chief justice of both the Courts of Sessions and Common Pleas, performed the act which will go to posterity as the crowning act of his life. Wheeler's company, which had marched into Worcester on Monday afternoon, September 4, 1786, the day before the courts were to sit, took up quarters in the court-house Monday night, so as to be sure to be in possession when the judges should arrive next morning. Smith's company marched in from Shrewsbury early Tuesday morning, and was deployed and posted as sentries on Court Hill and around the court-house. An immense crowd of people had assembled thereabouts. Approaching the court-house, the judges were challenged by an armed sentry at the foot of Court Hill. At the order of his old commander, now chief justice, the sentry recovered his musket, presented arms, and the judges proceeded past him to the court-house. There, upon the broad step at the south entrance, stood Captain Wheeler and Captain Smith, with drawn swords in their hands, and five soldiers with fixed bayonets. Right well did Artemas Ward know the men he had to deal with. Smith was his near neighbor, and lived on the opposite side to him of the Great Road through Shrewsbury. Wheeler, who was about Ward's age (nearly sixty years), had been his schoolmate in youth, and had formerly been a member of the same church. In his younger days, as a militia captain, Ward had drilled, in left foot and shoulder arms on Shrewsbury Common, the very men now in array against him. Smith and Wheeler had both served under Ward at Cambridge and at the siege of Boston, and long after his retirement as major-general he knew that they had, in humbler rank, endured the hardships of the Revolutionary War like good soldiers to its very close, and had been paid off in Continental paper. And he knew, too, that they were both poor, deeply involved in debt and harassed with suits.

Proceeding to mount the court-house steps, the further progress of the judges was, by order of Captain Wheeler, arrested by the soldiers, who brought their bayonets to bear directly on the chief justice's breast, so that their points even penetrated his clothes. After a parley, the officers consented to allow him to mount the steps and address the crowd. Though Artemas Ward, of Shrewsbury, had been much in public life, he was a man usually of slow and hesitating speech, had rarely taken part in debates and had never been accounted an orator. He was a graduate of Harvard College, but, though a judge, he was not a lawyer by profession. As soon as he had looked his audience in the face there

[1] See page 785.

seems to have come over him a sort of inspiration, and, with great fluency, fervor and eloquence, he forthwith proceeded to reason with the people, whose grievances he did not deny upon their mistaken method of relief. The newspaper man was not there to report, nor had the speaker in his pocket an extemporaneous manuscript to privately send to the press, and only by tradition has any word of what he said survived the more than hundred years since the event; but more than anything he did say or could say—more than anything the greatest of orators could have said—was the dauntless courage and dignity of his conduct as a magistrate,[1] of which to find a historical parallel you will have to make a far research—reminding one of Horace's "Just and determined man, unshaken in his firmness either by wrath of citizens commanding wrongful things or by tyrant's frown or raging seas or thunder-bolt of Jove, whom the ruins of a crumbling world would strike undismayed."—Carmina, III. 3. But Captain Wheeler was as unshaken as his old commander, and continued firm in his determination that the judges should not enter the court-house, and they did not. At the conclusion of the chief justice's speech, which had been interrupted by cries "Adjourn without day," the judges retired to the United States Arms, opened court there and adjourned.

In the last week of November following, Shrewsbury became the rendezvous of all the insurrectionary forces.

Rub a dub dub, Rub a dub dub,
The sojers are coming to town.

And what with the drumming and fifing, marching and countermarching, tented fields and the ear-splitting fife of morning reveille breaking slumber, you would have thought it a garrison town. Col. Cushing, chairman of the selectmen, had prudently removed the town's stock of gunpowder from the powder-house and concealed it. The regulators surrounded and searched his house, but found neither powder nor selectman. The purpose of this assembling of the Shays' men was to prevent the sitting of the courts at Worcester on the first Monday of December, and both courts were adjourned to January the 23d. The crisis and climax of the rebellion was a week of unprecedented snow-storms; without blankets, rations, quarters or money, in the public highways of Worcester, in the dead of winter, with the snow three feet deep under foot and more falling, what could the Shays' men do but disperse? It was the weather and the elements that put down the Shays' Rebellion, and not the distracted and inefficient Gov. Bowdoin and his militia, who, before the dispersement of his followers at Worcester, had shown their heels to Daniel Shays every time they caught so much as a glimpse of him.

The Governor crowed lustily over his victory, arrested great numbers of the rebels and had fourteen of them convicted of treason and sentenced to death. But the Shays men shortly had their innings—at the spring election of 1787, when Gov. Bowdoin and his party were overwhelmingly defeated by the popular vote. In the previous year James Bowdoin had received a large majority of the votes of Shrewsbury; this year his votes in that town bore the exact ratio of one to five to those for John Hancock, who, after taking his seat as Governor, pardoned all his predecessor's convicts.

Aaron Smith, of Shrewsbury, like Shays himself, and many of the more prominent of the rebels, went into exile in unknown parts—somewhere out of Massachusetts, doubtless—till after passage of the amnesty act, when he returned, and spent the remainder of his days (not a few) in Shrewsbury. He died May 9, 1825, aged eighty-nine years, and to his last expiring breath gloried in the part he took with Daniel Shays. Less than a year before his death he walked to Worcester to meet his old commander, the Marquis Lafayette, who immediately recognized and greeted him with kisses and embraces, bringing tears into the eyes of all who witnessed the fraternal salutation. None of the regulators that I ever heard of ever took the attitude of repentant rebels. Within the recollection of the writer a considerable number of them were still living, among the rest his grandfather Howe, who was no more ashamed of his part in the Shays Rebellion than he was of his part in the Revolutionary War, and God forbid that his grandson should offer apologies for him and his comrades or tell their story otherwise than he told it himself.

CHAPTER CVII.

SHREWSBURY—(*Continued.*)

THE SLAVEHOLDERS' REBELLION.

THE news of Sumter taken came to Shrewsbury Saturday, April 12, 1861. Before the people of this town will feel such another shock as this news gave them, generations will come and go. Somehow or other the people of this town, until they heard this news, had never really believed that the slaveholders actually meant war. When, on the morning of the 19th of April, 1775, the post-rider just from Lexington Common, on his foaming steed, dashed through Shrewsbury and rallied her minute-men to arms, it was just what everybody expected,—just what the minute-men were for. But when the news of Sumter came to town there were no minute-men listening for rallying cry to arms. Nevertheless, as soon as the

[1] McMasters says he cursed and swore, but an examination of the authorities he cites only shows that in his parley with Captain Wheeler, before he mounted the steps and commenced his speech to the people, the judge said he did not care a damn for their bayonets. Hist. People of the U. S., Vol. I., p. 307.

news was duly authenticated, the people of Shrewsbury were just as resolved on what to do as their fathers had been eighty-six years before. And such a perfectly unanimous determination as there was! When one looked in his neighbor's face he saw fight in his eye before he had time to speak. And Shrewsbury, in this respect, probably did not much differ from other towns. But there is an aspect in which this town seems to me quite unique—different from other towns. In all the other towns that I know of, somebody, taking advantage of the war spirit so suddenly awakened, started round with an enlistment paper to raise a company and be captain of it. Here patriotic spirit was wholly unalloyed with any taint of self-seeking or personal ambition. Plenty of volunteers there were already to enlist as soon as they could find out how to do it and meet somebody willing to be an officer and take command of them.

May 2, 1861, was held in Shrewsbury a war-meeting, first of many. At this and subsequent meetings held during the four years of the war, money was appropriated to pay volunteers for drilling, to pay for uniforms, to support the families of volunteers, to pay bounties, to bring home the bodies of deceased soldiers, to refund money contributed by citizens for bounties, and for like purposes to the amount of about twenty-two thousand dollars. According to the "Record of our Soldiers," kept by the town clerk of Shrewsbury, pursuant to an act of the General Court of 1863 (ch. 65), this town furnished one hundred and forty-seven volunteers. No man was drafted in Shrewsbury during the war, the quotas demanded of the town being filled even before they were demanded, and at the close of the war it was found that the town had furnished twenty men above its requirement. The one hundred and forty-seven volunteers of Shrewsbury enlisted, a few in this regiment and a few in that, the earliest in the Thirteenth Massachusetts. They and their deeds are credited to companies raised in other towns and cities, largely to so-called Worcester companies, and the services of our soldiers reflect honor on our neighbors of Worcester and other places.

If the Shrewsbury volunteers had organized themselves into two companies and named six of their members for commissions as line officers, and one or two more for field or staff commissions, and insisted that they would only enter a regiment with these organizations and commissions, they would have done just what others did, and would have been gladly received and their requirements granted. Our soldiers might not have accomplished any more towards putting down the Rebellion then they did, and the town of Shrewsbury might not be entitled to any more credit or honor on their account than it now is. But what with the exploits of these companies, and their officers, and their promotions, and their record in published reports, letters and official documents, the writer of this history would have found better material for making a good showing for Shrewsbury in the war than he now can.

The early officers of the volunteers were mostly taken from the militia. Shrewsbury had no militia company. In 1861, as was natural, a little knowledge of the tactics, such as militia officers were supposed to have, was immensely overestimated. If one could say "Shoulder arms!" with the militia accent, he was accepted as a proper commander to lead a thousand men to an assault upon artillery. It was doubtless from an overestimate of the mystery of the tactics that none of the Shrewsbury volunteers sought positions as officers.[1] The writer himself, being a native of Shrewsbury, and though not, in 1861, a resident of the town, having inborn in him much of the native modesty of Shrewsbury men, declined a commission as captain. On entering the service in a lower rank, finding the army full of brigadiers not fit for second lieutenants, he plainly saw that he had been too modest. The real difference between the officers and men of the volunteer army of the War of the Rebellion was far less than has been commonly supposed. In 1861 two major-generals were wanted from Massachusetts, and two noted politicians, both Presidential aspirants, were appointed. They had both figured in the militia, and practiced the militia accent for the manual of arms at the dress parade of militia musters. Such was their preparation to cope with Lee and Jackson. When the President was looking for two men to trust with the fate of his country and the lives of his countrymen, he had much better have looked over those one hundred and forty-seven men from Shrewsbury and made his selection from them than to have looked where and selected what he did. I don't believe that Lee would have bottled one of them up with a great army at Bermuda Hundred, nor that Stonewall would have caught another napping and sent him skedaddling, pell-mell, helter-skelter, head over heels, panic-stricken, out of the Shenandoah Valley, nor that one would have been the hero of both Big Bethel and Fort Fisher, nor that the other would have both planned and executed the Red River campaign.

Twenty-nine soldiers of Shrewsbury gave their lives for their country in the War of the Rebellion, to whose memory the town has erected an enduring monument, with their names inscribed thereon, on the Common fronting close upon the public thoroughfare.

Several natives of Shrewsbury were officers of rank in the War of the Rebellion, and their services for their country reflect lustre on their native town, though their residence was elsewhere.

Calvin E. Pratt, of New York, who is the son of

[1] Since this statement, which was based upon examination of the published rolls of Massachusetts Volunteers, was in print I have learned that William E. Shaw, of Shrewsbury, served as a second lieutenant in the First North Carolina Volunteers, otherwise called the Thirty-sixth United States Colored Troops, Colonel Edward Beecher.

Mr. Edward A. Pratt, late of this town, was born here in 1827. A practicing lawyer in the city of New York in 1861, he laid aside his practice to recruit a regiment and had it all ready for muster in June. As colonel of this regiment, which was the Thirty-first New York Volunteers, he was commissioned June 20th to rank as of May 21st. With his command he took part in the first battle of Bull Run; with it also he served in the Peninsula campaign of 1862 and participated in the Seven Days' Fight before Richmond. At the battle of Gaines' Mills he was severely wounded. He was promoted brigadier-general September 13, 1862. General Pratt studied law in Worcester in the office of the late Judge Henry Chapin, was admitted to the bar in this county in 1853 and practiced his profession in Worcester till about a year before the war, when he removed to New York city. He has been for many years and still is a justice of the Supreme Court of the State of New York.

John Baker Wyman, of Chicago, Ill., son of the late Seth Wyman, of Shrewsbury, was born here November 18, 1816. He had been engaged in railroad business for several years and was, at the breaking out of the Rebellion, superintendent of the Illinois Central Railway Company. With the Chicago Light Guard, a military organization of which he was commander, as the nucleus, in the spring of 1861 he recruited the Thirteenth Illinois Infantry and was mustered into the United States service with that regiment as its colonel May 24th of that year. After a series of the most gallant and meritorious services he was killed at the siege of Vicksburg.

Charles Edward Hapgood, born in Shrewsbury, December 11, 1830, and son of Captain Joab Hapgood, was at the breaking out of the war engaged in mercantile business at Amherst, N. H. He recruited a company for the Fifth New Hampshire Volunteers, and was mustered into service with it October 12, 1861. He served with his regiment till October 14, 1864, when, on account of severe wounds, he resigned, having been promoted lieutenant-colonel, December 14, 1862, and colonel July 3, 1864. The Fifth New Hampshire was one of the famous regiments of the army of the Potomac and did distinguished service. Its first commander, Colonel Cross, was killed at Gettysburg July 1, 1864.

Dr. Henry Putnam Stearns, son of the late Asa Stearns, and born in Shrewsbury in 1827, entered the service of the United States April 18, 1861, as surgeon of the First Connecticut volunteers, a three months regiment, and was mustered out August 1st of the same year, when he was appointed surgeon of volunteers and ordered to report to General Grant in the Department of the West. The next spring he was assigned to duty as Medical Director of the Right Wing of the Army of the Tennessee, was afterwards Inspector of Army Hospitals at St. Louis, also medical director of the general hospitals of the Northern Army of the Mississippi. He was afterwards in the same position at Nashville, Tenn., where he remained till the close of war when (August, 1865,) he was mustered out of service with rank of brevet lieutenant-colonel. Dr. Stearns graduated at Yale College in the class of 1853, studied his profession in the medical schools of Harvard and Yale, and also at Edinburg, Scotland, and received his degree as M.D. at Yale in 1855; practiced medicine in Marlborough, Mass., till 1860 when he removed to Hartford, Conn., where, with the exception of the period he was in the United States service, he practiced till January, 1874, when he was appointed superintendent of the Hartford Retreat for the Insane, which position he still holds. He has also been lecturer on insanity in the medical department of Yale College since 1877.

Charles Grosvenor Ward, who was the son of the venerable Thomas W. Ward, Esq., and born in Shrewsbury December 30, 1829; was mustered into the service of the United States September 2, 1861, as second lieutenant in the Twenty-fourth Massachusetts Volunteers, the favorite regiment of the city of Boston, where he had resided for some years previous. He was promoted first lieutenant June 27, 1863, and assigned to duty as adjutant of his regiment. After participating unharmed in sixteen of the great battles of the war and without having ever received any promotions at all commensurate with his long and meritorious service, he was killed in the battle of Drury's Bluff May 11, 1864. His name is on the soldiers' monument.

All the above, except Colonel Wyman, were about the writer's age and companions of his youth, and he takes pride in this opportunity for brief memorial here of their honorable and patriotic services. He will leave to others to recount his own humble efforts to save his country. He cannot claim to reflect honor upon his native town by high rank or great exploits, and it would be presumptuous to name himself in a list of natives of Shrewsbury who performed distinguished service.[1]

CHAPTER CVIII.

SHREWSBURY—(*Continued.*)

AGRICULTURE—THE STAGE BUSINESS—THE TANNING AND CURRYING BUSINESS.

AGRICULTURE has always been the leading industry of the people of Shrewsbury. According to tradition, or, perhaps, it were better to say according to the best information that can be obtained from living men as to what their grandfathers told them,

[1] Major Harlow recruited a company in 1861, in Spencer, Mass., where he was then practicing law, for the Twenty-first Massachusetts Volunteers, with which he was mustered into the United States service, and participated with that regiment in its engagements at Roanoke Island, New Berne, Camden Court House, second Bull Run, Chantilly, South Mountain, Antietam, and Fredericksburg.—EDITOR.

which covers a period of more than one hundred years, most of the lands now in use for pasture and tillage was cleared of wood before the Revolutionary War and then used for pasture and tillage. In the earliest times all meadows which, without improvement or any kind of tilling, produced grass, though of the coarsest quality, were considered "valuable," and farmers often had a few acres of "valuable meadow" quite remote from their farms. These meadows, to begin with, were generally free from wood, or, at any rate, from large trees, and the quantity of natural meadow was much increased and a much better kind of hay produced by bringing water whenever it could be done, by ditches upon uplands. Down until within the memory of living men, farm products in Shrewsbury were chiefly consumed within the town. Families were large and home consumption was large. Nor was there any market to buy or sell in, nor much money in farmers' pockets to trade with. But early in the present century it was discovered by Shrewsbury farmers that, there was a market in Boston for butter, cheese, eggs, chickens, veal and pork, and for beef on the hoof in Brighton, and a class of middle men called drovers and market men, began to pass and repass back and forth from Shrewsbury and the market. From this time farming began to improve. Farmers were not so absolutely destitute of money. There were better tools, better methods of farming, better cattle and better crops, and with industry and economy it was possible for the Shrewsbury farmer to rise a little above the chill penury of the beginners. Rye, oats, Indian-corn and hay were the chief crops. Apple-trees were planted at the very outset, and, before 1776, nearly every farm had its orchard, and if good fruit was not abundant, there was no lack of cider. About 1820 market-wagons began to run regularly every week from Shrewsbury to Boston, and returning they hauled for the storekeepers the groceries and dry-goods that they dealt in. This continued till about 1845, when it was found that the town of Worcester was a better market than Boston as well as much nearer, and everybody could be his own market-man, and so put in his own pocket the commissions on sales. Before the use of coal became common in Worcester, the Shrewsbury farmer had a near and growing market for wood as fuel, and before the great forests of Canada and the west were connected by rail with the east, the demand of Worcester for Shrewsbury lumber was beyond the supply. But times in recent years, with the Shrewsbury farmer have greatly changed, and there is but one farm product in respect to which he is not obliged to compete with producers of remote States. On account of its quickly perishable nature, milk, which is in demand the year round, is in no danger of remote competition. It is to-day the chief product that goes to market from Shrewsbury farms. Except milk, and possibly apples, of which in alternate years the orchards of Shrewsbury produce a large quantity and of famous quality, I do not suppose there is any other farm product of sufficient amount to supply more than the home market.

In recent years the salable value of farm lands in Shrewsbury has been steadily diminishing, and, in fact, they cannot be sold at all. Nobody will buy and many want to sell. There is not, probably, a farm in the town that would sell for enough to pay the cost of the buildings and fences standing on it. The reasons are not far to seek. "To diversify industry" the manufactures of Massachusetts have been so favored at the expense of agriculture that the natives of Shrewsbury have been enticed away from the homes and occupations of their fathers to enter shops. The "home markets" which the cities and manufacturing centres of the State are reputed to furnish, are flooded with the farm products of other States, and the Shrewsbury farmer has to pay tribute not only to other occupations for every article of clothing he wears and every tool that he uses, but even for farm products to farmers of sunnier climes and more fertile soils than his own living within his own country. Not a pound of sugar or rice can he buy without paying the favored growers of these necessities of life double prices. Protection *for everybody else's* products and free trade *against* his have ground the Shrewsbury farmer like upper and nether millstones, and no wonder he wants to sell his farm and no wonder nobody wants to buy it.

In 1860 was formed in Shrewsbury a Farmers' Club, for the purpose of promoting the best methods of farming. The club holds occasional meetings in the winter season for discussion of agricultural topics, and its annual cattle shows, held in October, have become famous and the favorite resort of the people of neighboring towns. In 1815 was formed in Shrewsbury a like association, called the Agricultural Associates of Shrewsbury, and the next year another, with the name of the Agricultural Associates of Worcester, was formed in Worcester. In 1818 the two societies were merged in a county society and incorporated under the name of the Worcester Agricultural Society, which directly took and has ever since maintained a prominent position in the esteem, not only of the farmers, but of all the people of Worcester County of whatever occupation.

Of other branches of business, such as the manufacture of guns, of watches and of boots and shoes, which, to some extent never large, was formerly carried on here, the limits of this work do not admit of more specific mention. But I cannot omit some brief account of the famous stage business, whose founder and manager lived here, and with Shrewsbury as his headquarters, carried it on to places far remote; nor of the tanning and currying business which, begun here in an humble way more than a century ago, has grown to a very extensive business.

Captain Levi Pease, the founder of stage business

in this country, moved from Boston to Shrewsbury in 1793. He was a son of Nathaniel Pease, born at Enfield, Conn., in 1739, and was by trade a blacksmith. His father was a sailor, and reported to have been lost at sea. His mother married a second husband, named Parsons, after which her first husband returned. After one glance at the situation Nathaniel Pease went off to sea, and was never heard of at Enfield again. Levi's title as captain was earned in the Continental line. At the beginning of the Revolutionary War he was living at Blandford, Mass. He served with General Thomas in Canada, and later with General Wordsworth in the Commissary Department,—often employed in perilous enterprises, to bear dispatches and obtain supplies,—a resolute and tireless man, up early and down late. After the war he kept a tavern for some years at Somers, Conn. Afterwards he kept the Lamb in Boston, whence he removed to Shrewsbury, where he bought the tavern stand of Major John Farrar.

But more than ten years before Captain Pease came here, he had projected and was running a stage line from Boston to Hartford. Farrar's Tavern in Shrewsbury had been from the beginning a night stopping-place on the line, and after becoming familiar with his route, he selected it as the best point from which to operate his business. He took into partnership with him a young native of Somers named Reuben Sykes, who was also a blacksmith. No man of capital would invest a dollar with Pease and Sykes in their visionary stage line. Said a solid man of Boston to Captain Pease: "The time may come when a stage line to Hartford will pay, but not in your day." The partners commenced business with an outfit of eight horses and "two convenient wagons," and their first trip was performed October 20, 1783. Pease drove one wagon from the Lamb Tavern in Boston at six o'clock Monday morning, and reached Hartford on Thursday; and Sykes drove the other, leaving Hartford at the same time, and arriving also in Boston in four days. Two of the night stopping-places were Farrar's, in Shrewsbury, and Pease's, in Somers. The other—when Tuesday night they met—was at Rice's, in Brookfield. And they ran in fair weather and in foul, in mud and in snow, passengers or no passengers, punctual as the stars in their courses. In two years this stage line was a great success, and was extended to New York. In 1786 Pease and Sykes established a line of stages from Portsmouth to Savannah, and carried the mails. They also had, for several years, an exclusive contract with the government to carry the mails for all New England, re-letting to numerous others, who on branch lines collected and distributed the mails. It was Pease and Sykes that made punctual as the mail a proverb.

Captain Pease learned his punctuality in one lesson, and his teacher was George Washington, who, when he was at Cambridge in 1776, wanted to buy a pair of horses, and made an appointment with Pease who had a pair of horses to sell. Pease was a few minutes too late for the appointment, and Washington did not wait for him. It was the last time Levi Pease ever got left.

The founder of stage lines was also the first projector of turnpikes. Of all the many companies chartered in Massachusetts about the beginning of this century to build turnpikes, it was the First Massachusetts Turnpike Corporation whose charter (1796) was to Levi Pease and his associates, authorizing them to build a turnpike through Palmer and Western.[1] He put in his earnings and savings, and made a good road where there was a very bad one; but the turnpike never paid, and in consequence of his investments in its stock Captain Pease died a poor man. But he lived and ran his stages many years. His death took place in Shrewsbury January 28, 1824, and his age was eighty-four years. His honor and integrity, which were as famous as his punctuality, were inborn, and therein Washington himself could have taught him nothing. Often in the army, often in his business as tavern-keeper and stage-driver trusted with uncounted money, the trust was sacredly inviolate.

For many years four stages a day, two going east and two going west, passed through Shrewsbury on the Great Road. In 1806 the Worcester Turnpike Association was chartered to build a turnpike from Worcester to Roxbury. Its course was as straight as possible, and ran through the south part of Shrewsbury. After its completion in 1808, four stages—two each way also—ran daily on the turnpike. Another turnpike, having Shrewsbury for one of its termini, and Amherst for the other—the Sixth Massachusetts—sometimes called the Holden Turnpike—was built in 1800. A line of stages also ran daily on this turnpike. Both of these turnpikes were abandoned many years ago by the corporations that built them, and were laid out by the county commissioners as highways.

Col. Nymphas Pratt, whose father, Capt. Seth Pratt, was the founder of the tanning and currying business in Shrewsbury, was born April 5, 1786, in the old house owned by Henry Harlow, standing near the brick house in which he lives. The tannery was on the south side of the road opposite the houses, and was sold in 1796 with the old house then comparatively new, and about twenty-two acres of land, by Capt. Pratt to the writer's grandfather, Thomas Harlow, who came from Duxbury, when he was twenty-one years old, to buy it, and paid $1000 for it. Here was the place where, and Seth Pratt was the man by whom the tanning business was begun in Shrewsbury. After sale of his tannery he moved to Barre, dammed the Ware River, built woolen-mills and founded the vil-

[1] Changed to Warren.

lage of Barre Plains. Deacon Thomas Harlow, who was a farmer as well as tanner, carried on the tannery for nearly fifty years in connection with his farm, which he bought piece by piece of his neighbors.

Col. Pratt, Capt. Seth's son (military titles both derived from militia commissions), about the year 1810 built a new tannery in the Lower Village in Shrewsbury, where the business or the currying branch of it has been continued to the present day. Here Col. Pratt did the business, both tanning and currying, till from a small beginning it grew into a very large and prosperous one, and the owner of it became a man of great influence and was accounted to possess immense wealth. People said he was worth one hundred thousand dollars, which sounded bigger than a million does now. Col. Pratt was one of the principal founders of the Citizens' Bank in Worcester, incorporated in 1836 with a capital stock of $250,000, and was its first president. In 1839 he failed in business and this bank, which had discounted a large amount of his paper, was a heavy loser. But the failure of Col. Pratt was due not so much to his own business as a tanner and currier as to his courageous and honorable though rash attempt to sustain through such a financial crisis as that of 1837–40, the firm of S. H. Allen & Co., of which the partners were his son, William Pratt, who was a lawyer and lived in Worcester, and his son-in-law, Simon Hapgood Allen, who was the active manager of the firm business and lived in Shrewsbury. The business of this firm, which was formed in 1833 and carried on at the brick store in the Lower Village in Shrewsbury, was mainly the manufacture of ready-made clothing. Mr. Allen may be said to have been the founder of the ready-made clothing business. The firm employed a large force of tailors, who cut out the garments, which were taken home and sewed by women at their houses. Many of the sales of the firm were on credit at places far remote—in the South and West. In such a crisis as that of 1837 no wonder the firm failed. If Col. Pratt had allowed this firm to go down into its inevitable bankruptcy, probably he might have saved himself and his own proper business.

Upon the winding up of Col. Pratt's affairs in bankruptcy, Lucius H. Allen, who was his foreman, bought of his assignees the tanning business, and continued to carry it on till 1862, and Jonathan H. Nelson and Thomas Rice, who had learned the trade of curriers in Col. Pratt's shop, took the currying business. With no capital except their trade to begin business with, by industry, laboring untiringly with their own hands they, by degrees, built up a very large and profitable business. In 1862 Mr. Allen, who had also done a large and profitable business, sold out to Nelson & Rice his tannery. During the war the business of this firm became enormous and its profits immense—many times exceeding anything that Col. Pratt had ever done or dreamed of. Mr. Nelson died in 1872, leaving a large estate, and his partner, Mr. Rice, has recently died, leaving, doubtless, a much larger. The business is still carried on by Mr. Charles O. Green, who, after the death of Mr. Nelson, was associated with Mr. Rice as partner. Col. Pratt, Mr. Allen, Mr. Nelson and Mr. Rice were all men of public spirit, and deeply interested in all that concerned the town of Shrewsbury and the Congregational parish; and they were, all of them, honored with the public trusts of selectmen and representatives to the General Court. Mr. Rice was also, in 1869, a member of the Massachusetts Senate, and, having been for many years a director of the First National Bank of Worcester and president of the Northborough National Bank, he had an extensive acquaintance among business men.

CHAPTER CIX.

SHREWSBURY—(*Continued.*)

THE MEDICAL PROFESSION—GRADUATES OF COLLEGES—PUBLIC EDUCATION.

THE first physician in Shrewsbury was Dr. Joshua Smith, 1719–56, who practiced here from about 1840 till his death. He held the offices of town clerk, selectman and assessor for several years, and specimens of his elegant chirography are preserved in the town archives. But he set the example, followed by so many of his successors, of cavilling at sound doctrine, and Deacon Isaac Stone laid a complaint before the brethren of the church "that y^{e} sd. Smith was defective in y^{e} fundamental article of original sin." And therefore a committee of three Orthodox divines was appointed to discourse with him. Now, Dr. Smith was son-in-law of Rev. John Prentice, of Lancaster, and brother-in-law of Rev. Job Cushing, of Shrewsbury, and I strongly suspect that the ecclesiastical discipline of Dr. Smith was aimed less at him than at his kindred by marriage, whose defectiveness upon the Calvinistic fundamentals Deacon Stone did not choose to directly attack. All the same, to argue original sin against three learned divines all at once was nuts for "ye sd. Smith," who according to tradition, unhorsed his antagonists as completely as he had his neighbor, the deacon.

Dr. Zachariah Harvey, who lived in "Shrewsbury Leg," now a part of Sterling, practiced here from about 1740 to 1750, when he removed to Princeton, and was directly chosen there moderator, clerk, selectman, assessor and delegate to the General Court. He is said to have been the introducer of the Harvey apple.

Dr. Edward Flint, 1733–1818, came here from Concord about 1756, shortly after Dr. Smith's death. Besides his service in the French War, elsewhere mentioned, he also served as an army surgeon in the

Revolutionary War. He was a famous doctor, had a large practice, and lived where Mr. George H. Harlow and his wife, who is Dr. Flint's grand-daughter, now lives. He was several years town clerk and one of the selectmen. His son, Dr. Austin Flint, 1760–1850, born here, practiced in Leicester many years and rose to eminence in his profession. At the age of seventeen years he enlisted in the Revolutionary War, marched to Bennington and served till the close of the war. Dr. John Flint, 1779–1809, another son of Dr. Edward and a native of this town, practiced in Petersham.

Of Rev. Ebenezer Morse's practice as a physician mention has already been made. His son, Dr. Eliakim Morse, 1759–1840, also practiced in the North Parish.

Dr. Amariah Bigelow, born here 1757, also practiced in the North Parish.

Dr. Samuel Crosby, born here 1732, lived on "Boston Hill," in the southeast part of the town, and practiced here till the Revolutionary War, when he entered the Continental service as an army surgeon. After the war he removed to Winchendon.

Dr. Paul Dean came here from Franklin about 1790 with his father, Captain Ebenezer Dean, who settled in the southeast part of the town on the place afterwards known as the Balch Dean Place, so called after Captain Ebenezer's nephew, who lived and died there within the memory of the present generation. Here in 1792, when the small-pox appeared in town, Dr. Dean opened a hospital, where people resorted to be inoculated and treated for that malady. He was a musician, taught singing-schools and led the church choir. After practicing here some years he went South and never returned.

Dr. Silas Wheelock, 1769–1817, came here from Northbridge about 1800, and practiced till his death. He lived on the place now owned by Mr. Lewis E. Colton, whose wife was Dr. Wheelock's grand-daughter. He had the reputation of a skillful physician and surgeon.

Dr. Seth Knowlton, 1781–1832, a native of Shrewsbury whom we have seen leading the heretical revolt of 1821, practiced here about thirty years. He was a man of strong intellect and great influence in the town, and he was noted as much for his positive opinions and his ability to maintain them against all opposers as he was for his skill as a surgeon and physician. He built and lived in the house where his successor, Dr. Adolphus Brigham, afterwards lived.

Dr. William Workman (Harvard College, 1825), came to Shrewsbury about 1826, and continued in practice here till about 1830, when he removed to Worcester, where he became eminent in his profession and had a large practice.

Dr. Azor R. Phelps practiced here from about 1835, to 1843, when he died. He lived in the house now owned by Mr. Leander Ware. and was proprietor of Phelps' Arcanum, once a famous panacea.

Dr. Adolphus Brigham came here from Marlborough in 1827, lived in the house built by Dr. Knowlton, on Grafton Street, and succeeded to his practice. He was, in his time, "the Doctor of Shrewsbury," and his practice extended to adjoining towns. A good man, and well skilled, both as a surgeon and physician, he had the respect and confidence of all who knew him, and died much lamented.

Dr. Alonzo Smith came here from Vermont about 1834. In 1837 he returned to Vermont and died there.

Dr. John Heard came here in 1847, and remained about a year.

Dr. Joel B. Fay came from Northbridge about 1850, and practiced here till his death, in 1860. He lived in the house now the congregational parsonage.

Dr. Dean Towne practiced here from about 1840 to 1850, when he removed to Worcester.

Dr. Frederick A. Jewett, who moved from Abington to this town in 1859, practiced here till 1870, when he removed to Grafton.

Dr. John T. Wetherbee, a native of Marlborough, came here from California in 1860, and continued in practice till 1863, when he entered the United States naval service as acting assistant surgeon. He died after a brief term of service on board the United States ship "Currier," in the Gulf of Mexico, and his name is on the Soldiers' Monument.

Dr. Emerson Warner practiced here from 1863 to 1865, when he removed to Worcester, where he still lives and has a large practice.

Dr. Franklin Whiting Brigham, born here in 1841, and son of Dr. Adolphus, studied his profession at Harvard Medical School, and, after serving two years as acting assistant surgeon in the United States navy, settled here in 1865, and remains in practice. He lives in the same house, built by Calvin R. Stone, where his predecessor, Dr. Warner, lived.

Dr. Jeremiah C. Foster, who was an army surgeon in the United States volunteer service during the Rebellion, settled here in 1867. In 1873 he removed to Barre, and died there.

Dr. J. C. Coburn came here in 1878 and remained till 1880, when he removed to Brooklyn, Conn.

Dr. George L. Tobey practiced here from 1879 to 1880, when he removed to Lancaster.

Dr. Charles Sumner Pratt, a native of Shrewsbury, and son of the late Nathan Pratt, Jr., opened an office here in 1879 in the "Old Store Block," and remains in practice. He is a graduate of the Medical Department of Michigan University.

The following natives of Shrewsbury have been graduates of colleges:

Rev. Jacob Cushing, 1730–1809 (Harvard College, 1748), son of Rev. Job Cushing, was settled in Waltham. In 1807 Harvard conferred on him the degree of D.D.

Rev. John Cushing, 1737–1823 (Harvard College, 1764), another son of Rev. Job Cushing, was settled in Ashburnham. He also received (1822) the degree of D.D. from Harvard.

Rev. Lemuel Hedge, 1734–77 (Harvard College, 1759), son of Elisha Hedge, who came to this town from Boston about 1730, and built a mill-dam and grist-mill, called in later times Harlow's Mills, after a successive owner, and removed to Hardwick in 1738, was settled in Warwick. He was the father of Professor Levi Hedge, over thirty years an instructor in Harvard College, and grandfather of the eminent Rev. Dr. Frederick H. Hedge, of Cambridge.

Rev. Nehemiah Parker, 1742–1801 (Harvard College, 1763), son of Stephen Parker, who came here from Roxbury in 1740 or sooner, was the first settled minister in Hubbardston.

Rev. Isaac Stone, 1748–1837 (Harvard College, 1770), son of Deacon Jonas Stone, was settled in Douglas.

Rev. Frederick Parker, 1762–1802 (Harvard College, 1784), son of Amos Parker, who removed from Lexington to this town about 1753, was settled in Canterbury, N. H., where, in the midst of his services as minister on a Sunday, he fell dead in his pulpit.

Rev. Aaron Crosby, 1744–1824 (Harvard College, 1770), son of Samuel Crosby, who lived on "Boston Hill," and was one of the first comers to Shrewsbury, was settled in Dummerston, Vt. Before his settlement there he had spent several years as a missionary among the Indians.

Rev. Otis Crosby, 1766–95 (Dartmouth College, 1786), nephew of the preceding and son of Dr. Samuel Crosby, was called to settle at Gloucester, Me., but died before ordination.

Rev. Samuel Sumner, 1765–1836 (Dartmouth College, 1786), son of Rev. Dr. Joseph Sumner, was first settled in Southborough, and afterwards at Bakersfield, Vt.

Professor Benjamin Stone, 1756–1832 (Harvard College, 1776), son of Jasper Stone, was the first preceptor of Leicester Academy, subsequently also of Westford Academy. Later in life he returned to this town, and died here.

Colonel Benjamin Heywood, 1746–1816 (Harvard College, 1775), son of Phineas Heywood, who came here from Concord about 1739, and lived in the northwest corner of Shrewsbury, where some of his descendants still live, served through the Revolutionary War, in all ranks from captain to colonel, and was a justice of the Worcester County Court of Common Pleas, 1802–11. He was father of the late Dr. Benjamin F. Heywood, of Worcester.

Rev. Wilkes Allen, 1775–1845 (Harvard College, 1801), son of Elnathan Allen, was settled 1803 at Chelmsford, and dismissed, at his request, 1832; after which he removed to Andover, and died there.

Nathan Goddard, 1746–1795 (Harvard College, 1770), son of Benjamin Goddard, was a lawyer, and practiced his profession in Shrewsbury, Newbury, Vt., and Framingham.

Hon. Calvin Goddard, 1768–1842 (Dartmouth College, 1786),—and so classmate of Rev. Samuel Sumner and Rev. Otis Crosby, before mentioned,—was son of Daniel and grandson of Edward Goddard, went from this town to Connecticut to practice his profession, the law; settled first at Plainfield, but afterwards removed to Norwich, where he rose to eminence at the bar and in public office. He was seventeen years mayor of Norwich and twice (1801 and 1803) elected to Congress. And he was chosen by the Connecticut Legislature, and served as a delegate to the Hartford Convention, 1814. In 1815 he was appointed a judge of the Supreme Court. In 1818 resigned his office as judge to resume practice of the law.

General Artemas Ward, 1727–1800 (Harvard College, 1748), was son of Colonel Nahum Ward. Besides the high civil and military offices which he held (to which reference has been made elsewhere), he received from his fellow-townsmen almost every mark of trust and honor they had to bestow. He was sixteen times elected Representative to the General Court. In the year of the Shays' Rebellion, being defeated as a candidate for Representative by Captain Isaac Harrington, an ardent Shays' man, General Ward ever afterwards refused to be a candidate for any office in Shrewsbury, but he was next year and twice afterwards elected to Congress.

Hon. Artemas Ward, 1762–1746 (Harvard College, 1783), son of General Artemas, commenced practice of law in 1785 at Weston, but afterward removed to Charlestown, and while there was several times elected a member of the Governor's Council. He next removed to Boston, and was thence elected to Congress. In 1820, on organization of the Court of Common Pleas as a State Court, he was appointed chief justice, and held the office till 1839, when he resigned it.

Henry D. Ward, 1768–1817 (Harvard College, 1791), another son of Gen. Artemas, settled in practice of the law at Charleston, S. C. He died at Middletown, Conn.

Andrew H. Ward, 1784–1857 (Harvard College, 1808), grandson of Gen. Artemas and son of Thomas W. Ward, who was about twenty years sheriff of Worcester County, practiced law at Shrewsbury from 1811 to 1829, when he removed to Boston. He afterward removed to Newton and died there. In 1826 he published in the *Worcester Magazine* a "History of Shrewsbury." But this is not the work commonly known as Ward's History, which, published in 1847 by Mr. Ward, is chiefly valuable for its family register.

Rev. Henry Dana Ward, 1797–1885 (Harvard College, 1816), was another son of Sheriff Ward. After his graduation he remained some time at Cambridge as scholar of the house, but was not settled as a minister till 1845, when he was ordained over the Episcopal Church in Portsmouth, Va. It was he whom we met before in connection with the dismissal of

Rev. George Allen and the law-suit that followed it. Mr. Ward was buried with his ancestors in the family lot in this town.

David Brighham, 1786–1843 (Harvard College, 1810), son of David Brigham, Sr., was a lawyer and practiced in New Braintree, Leicester, Greenfield, Shrewsbury and Fitchburg. From the latter place he removed to Iowa and died there.

David T. Brigham, 1806–69 (Amherst College, 1828), son of Edmund T. Brigham and nephew of the preceding, practiced law in Worcester a short time. He removed to St. Louis, Mo., and thence removed to Keokuk, Iowa, where he died.

Jubal Harrington, 1803–77 (Brown University, 1825), son of Fortunatus Harrington, practiced law in Worcester. He was an ardent partisan of President Jackson, who appointed him postmaster of Worcester. He left Worcester in the phrase of the times "between two days," and was next heard of in Texas. He died in Columbia, Cal.

William Pratt, 1806–39 (Brown University, 1825), son of Col. Nymphas Pratt, commenced the practice of law in Shrewsbury. In 1835 he removed to Worcester and formed a professional connection with Judge Pliny Merrick.

Francis Dean, 1804–85 (Brown University, 1826), son of Francis Dean, Sr., commenced the practice of the law at Southborough in 1830. He afterwards removed to Uxbridge, and again to Worcester, where he died.

Rev. William Addison Houghton (Yale College, 1840), came here in his youth from Berlin, and went to college from this town. He was first ordained and settled at Northborough. He afterwards was installed at Berlin, where he still resides.

Samuel B. Ingersoll Goddard, born here in 1821 (Amherst College, 1840), son of Perley Goddard, was admitted to the bar in 1848, and has practiced law in Worcester ever since.

William Taylor Harlow, born here in 1828, son of Gideon Harlow (Yale College, 1851), has practiced law[1] at Spencer, Red Bluff, Cal., and Worcester; was in the United States Volunteer service, 1861–63; an officer of the United States Internal Revenue about eight years, and since 1877 has held the office of assistant clerk of the courts for the county of Worcester.

For notice of Dr. Henry P. Stearns (Yale College, 1853), see page 802.

Rev. Edward Henry Pratt, 1826–78 (Amherst College, 1853), son of Nathan Pratt, Jr., began to preach at East Woodstock, Conn., and was ordained there in 1857. In 1867 he was appointed secretary of The Connecticut Temperance Union, and devoted the remainder of his life with unsparing self-sacrifice to the cause of temperance. He was brother of Dr. Charles S. Pratt of this town; brother also of Rev. George Harlow Pratt, now of Barnstable, born here in 1839, who left Amherst College in 1862, when he was a student in the Sophomore Class, to enter the United States service,[2] and who was first settled in the ministry in the town of Harvard; brother also of William G. Pratt, of New Haven, editor of the *New Haven Journal and Courier*.

Rev. Franklin Charles Flint, 1836–76 (Tuft's College, 1861), son of Henry H. Flint, was first settled in the ministry at Chatham, next at Southbridge, and again at Attleborough, where he died.

Rev. Benjamin Angier Dean, born here in 1840 (Amherst College, 1862), son of James Dean, after spending several years on the Western frontier in the Home Missionary service, is now preaching at Sanbornton, N. H.

Hollis W. Cobb, 1856 (Yale College, 1878), son of Albert Cobb, lives in Shrewsbury, but keeps an office and practices his profession as a lawyer at Worcester. He is one of the special Justices of the Central District Court of Worcester.

Florence H. Reed, daughter of Le Roy S. Reed, graduated at Wellesley College in 1885, and died in 1887, at Pasadena, Cal., where she had gone in vain pursuit of health.

Michael Edward Kelley, son of —— Kelley, graduated at Harvard College 1888.

Thomas Rice, son of Aaron B. Rice, graduated, 1888, at the Massachusetts Agricultural College.

In recent years the number of college graduates has been less than in former times. Without attempting to enumerate all the reasons therefor, probably the greatly improved opportunities afforded by the excellent schools of the town for education may be one, and doubtless the higher requirement of American Colleges for admission is another. In the day of Rev. Job Cushing there was no Shrewsbury High School where he could send his sons to be fitted for college, and probably Jacob and John, who both bore off the honors of Harvard, were prepared for admission by their father.

The original grant to the Shrewsbury proprietors provided for a lot for the school as well as one for the ministry, but the school lot, No. 20, laid out at Rocky Pond, was a worthless parcel of land which nobody wanted, and appears to have been assigned to the school for that very reason. And truth to tell, there can be little doubt that our fathers of the first generation, here in their poverty, and with many burdens resting heavily upon them, did discharge their duties as regards public education in rather a perfunctory way—not that they underrated the value of education to their children. Other parents, as well as Mr. Cushing, probably instructed their own children at home, and if they could not, like him, teach the classical tongues, they were mas-

[1] With such favor of his jealous mistress as she is wont to bestow on her votaries who *per intervalla interque alia* pursue her.

[2] In 1872 Amherst gave him the honorary degree of A.M.

J. H. Nelson

Thomas Bice

ters of the three Rs., and competent to transmit to posterity, reading, writing and arithmetic.

In the second generation, about the time of partition of the town into two parishes, the whole town was districted—divided into squadrons, as the districts were at first called, and public schools have ever since been maintained. For more than one hundred years, with only slight interruptions, a summer term for the younger children was kept by a female teacher, and a winter term for the older ones by a "master." These terms varied in duration from six weeks or less, to ten or more. Down until within the memory of people still living, young men and women frequently attended the winter term after they were twenty-one years old. It required an able man to keep a winter school in Shrewsbury in the olden time, and many a man who might have made a good mayor of a city or Governor of a State, failed in the attempt. A successful teacher bore the title of Master for life. The last bearer of the title in this town, Master Nathan Pratt, reputed to have been a model school teacher, both as regards government and instruction, died in 1847, in his eighty-eighth year. He was grandfather of Rev. Edward H. Pratt and his brothers before-mentioned. I well remember him—a venerable man of very benevolent aspect, much interested in and very kind to children.

But in later days the schools of Shrewsbury have undergone considerable changes. The common schools are now taught entirely by female teachers, and with necessary vacations, are kept throughout the year. In respect to appropriations for its schools, to rate of wages paid its teachers and regularity of its scholars' attendance, Shrewsbury ranks high among the towns of the State in the reports of the secretary of the Board of Education. For more than thirty years the town has supported a High School, though not required by law so to do, having never had even the minimum number of families (five hundred), upon which the legal obligation of towns to support such a school rests. In 1883 the town built a handsome and commodious building for its High School. The only fund or source of income which the town has for support of its schools other than an annual tax, is a legacy of one thousand dollars, given by the late Amasa Howe. The "dog fund," so-called, which cannot legally be used for other than for educational purposes, has been for many years applied by a vote of the town to a town library, which contains about one thousand two hundred volumes, and is an important educational force in Shrewsbury.

BIOGRAPHICAL.

JONATHAN H. NELSON.

Jonathan H. Nelson, son of Captain Jonathan Nelson, was born in Shrewsbury April 26, 1812. He died May 20, 1872, aged sixty years and twenty-four days. In person he was square built, thick set, with black hair and eyes, of full face and of firm and elastic step. From early years he was a lad of industry, of perseverance and high resolve. Fortified against manifold dangers and temptations by the counsel and care of one of the best of mothers, he began his life as an apprentice at the tanner's trade. He and his late partner, the Hon. Thomas Rice, were fellow-apprentices in the establishment of Colonel Nymphas Pratt, whose counsels and example proved of great value to their riper years.

Working more than the hours required, each of these young men accumulated a few hundred dollars. By diligence, industry, economy, prudence, perseverance and strict attention to business, these young men won the respect and confidence of the community. Mr. Nelson and his partner became at length the proprietors of the establishment in which they had been apprentices together, under the firm name of Nelson & Rice.

Endowed with remarkable energy and business tact, vigorous health and strong constitution, and devoting himself to personal labor daily, as many hours as required of any of their employees, prosperity crowned the establishment.

Mr. Nelson was a man of truthfulness, of sterling integrity and every way reliable as a manufacturer and a man. Having no children, and being strictly temperate and prudent in his habits, his means increased, his business expanded, and from time to time the manufactory was enlarged. From the commencement of the copartnership of the firm, in 1839, his wealth continued to increase, till, several years before his death, he was acknowledged to be the wealthiest man in Shrewsbury.

It is highly creditable to the firm of which he was the senior partner, that they had been associated in business for a period of forty-two years in all, with the utmost harmony. It is true, when, in 1839, their late copartnership was formed, they entered on a business already established. It is true, as already stated in public, that the business experience and judicious counsel and advice of Colonel Pratt were to them of inestimable value. On some men these would have been lost.

Something more, however, than the wisdom and counsel of the sagest adviser was requisite to enable these men to carry on successfully a business so extensive as to require, in various stations and services, the daily employment of one hundred and twenty-five men, and yet to maintain such promptness in the payment of all bills, that no bill, during the whole copartnership, was ever presented at their office a second time. Yet such, we learn, are the facts.

With all his devotion to business, Mr. Nelson was eminently a social, genial, condescending man. He was liberal and humane, accommodating, benevolent and kind. He was a constant attendant on the Sab-

bath services of the sanctuary, a liberal supporter of the Gospel and a generous contributor to the various objects presented for benevolent or charitable aid.

He made the following public bequests: To the Congregational Society, in Shrewsbury, $5000; Massachusetts Bible Society, $2000; Home Missionary Society, $2000; Society for the Promotion of Collegiate Theological Education at the West, $1000; American Missionary Association, New York, $1000.

HON. THOMAS RICE

was born in Marlboro', Mass., and came to this town when a young man and served as an apprentice to Colonel Pratt, who carried on the business of tanner and currier. Colonel Pratt failed in 1839, and Mr. L. H. Allen purchased of the assignees the tanning department of the business, and about the same time Mr. Rice, in company with Jonathan H. Nelson, bought out the currying department. For a period of twenty years Mr. Rice and Mr. Nelson carried on a fine growing business, and during the war it increased largely. After the death of Mr. Nelson, in 1872, Mr. Charles O. Green, for several years book-keeper of the concern, was admitted as a partner; the firm-name being Thomas Rice & Co., Mr. Rice remaining head of the firm until his death, which occurred May 29, 1888. Mr. Rice was always a public-spirited man; his town honored him with many offices of trust—such as selectman, representative—and he was a member of the State Senate in 1869. For more than half a century the interests of the town were his interests. His time, his money, his counsel were always available for the advancement of the public good. Progress in every direction, education, morality and religion found in him an earnest and steadfast supporter. Of a genial disposition he was ever on the watch to do a kindly act or speak a helpful word. He was for many years a director in the Northboro' Bank and the First National Bank of Worcester, and president of the former at the time of his death; also a director in many other well-known financial institutions.

As his business and wealth increased he grew in popularity. He built a fine residence where he dispensed a generous hospitality.

Mr. Rice was twice married: for his first wife Caroline P. daughter of Liberty Allen, of this town; for his second wife he married Ellen A. Lawrence, daughter of the late David B. Lawrence, of Brimfield, Mass. By this union there are two children—Edwin L. and Edith A.

CHAPTER CX.

GARDNER.

BY REV. WILLIAM S. HEYWOOD.

SITUATION, TOPOGRAPHY, SETTLEMENT, INCORPORATION, ETC.

THE town of Gardner, which has recently (1885) completed the first century of its corporate existence and duly celebrated the memorable event with appropriate exercises and festivities, is one of the most enterprising and prosperous of all those in the county whose annals these pages record. Taking its place in the retinue of Massachusetts municipalities soon after the struggle for American independence, it was characterized at the outset by the spirit that gave birth to the rising republic, and, under the influence of the same spirit, has kept abreast of the advancing civilization of the land down to the present day. During the earlier part of its career, its growth in wealth, population and social standing, in industrial, commercial and political importance, though slow and uneventful, was yet sturdy and healthful. But in later years new life and greatly increased vigor have entered into and stimulated its various interests and activities, resulting in a rapid and notable development of its resources, and a highly honorable and gratifying progress in every department of responsibility and effort within its borders. Its advance for the last decade has been truly remarkable in many aspects of it, and reflects great credit upon those of every class and degree who have in any way contributed to it. Hardly to be reckoned, at this time, as one of the foremost towns of Worcester County in those things which appear to advantage in statistical tables, it yet is excelled, even if it is equaled, by few in general thrift, in durable prosperity, in the tokens of comfort and happiness that abound on every hand, in the neatness, order and security of its homes, in the harmonious relations which characterize industrial and social life, in means and opportunities of intellectual, moral and religious culture, in public spirit, in the integrity, honor, virtue and happiness of all classes of its population. To sketch the history of such a town, to enter into the details of its genesis and growth, to search out the hidden springs of its unfolding and ever-rising life—to take account of the industry, the self-reliance, the persevering zeal, the unfaltering courage, the high resolve and all the worthy, grand qualities of mind and heart and character to which the existence and prosperous fortunes of such a town bear witness and of which it is the organic and living product and representative,—is a task fruitful not only of instruction, but of satisfaction and delight. To a task like this, the considerate attention of whomsoever it may concern is herein invited.

The town of Gardner is situated in the northerly part of the county of Worcester, and belongs to what may be termed the second range or tier of townships, counting from the extreme limits of the county in that direction—the line separating the States of New Hampshire and Massachusetts. It is bounded on the north by Winchendon and Ashburnham, on the east by Ashburnham and Westminster, on the south by Westminster, Hubbardston and Templeton, and on the west by Hubbardston, Templeton and Winchendon; or, in a simpler way, northwest by Winchendon, northeast by Ashburnham, southeast by Westminster, and southwest by Hubbardston and Templeton. The latitude of its Town Hall is 42° 35′ north and the longitude 71° 59½′ west from Greenwich, or 6° ½′ east from Washington. Its distance from Boston, in a W. N. W. direction, by direct line, is not far from 52 miles, and 65 miles by the Fitchburg Railroad; and from Worcester, in a N. N. W. direction, it is about 23 miles by direct line, and 26 miles by railroad. It includes within its boundaries an area of about 14,000 acres, or 21⅞ square miles, of which some 180 acres are covered by its several natural lakes and ponds, and probably a larger number by artificial bodies of water. Its highest altitude above the level of the sea (Reservoir Hill) is estimated at 1294 feet, and its lowest (where Otter River crosses its western boundary) at 890 feet.

Glancing at the natural or physical characteristics of the town, it is to be noted that the surface of its territory is uneven and considerably diversified. Between its lowest and highest points of elevation above sea-level, measuring over 400 feet, an almost unlimited variety of hill and dale, meadow and upland, lake, river and streamlet, is to be found. At the present day, after more than a hundred years of change and improvement that have transpired since the primeval wilderness prevailed in all the region round about, the town, with its existing proportion of forest and field; with its well-tilled farms and accordant farm-houses and out-buildings; with its several villages, neat and orderly; with its many clustering or scattered homes, and the gardens or orchards thereto belonging, some of them costly and elegant, few of them weather-worn, dilapidated and unsightly; with its manifold manufactories, the hives of productive and remunerative industry; with all the evidences of competency, thrift and contentment that greet the eye of the observer, presents, from any one of the commanding heights within its borders, a scene of unusual beauty and attractiveness. From such a point of vision, one may journey long and far to look upon a more picturesque and lovely sight than there reveals itself to the eye and mind, turn him whichsoever way he may. All about, near at hand and reaching to the utmost borders of the town and far beyond, are there pictures of surpassing beauty and enchantment; while in the distance, at the northwest and southeast, rise in silent majesty, cleaving the sky and lending grandeur and glory to the view, Monadnock and Wachusett,

> "Those mountains that like giants stand,
> To sentinel enchanted land."

HILLS.—The natural scenery of the town of Gardner is characterized by that constant and continuous variety of surface which relieves it of all tiresome monotony and renders it especially attractive and delightful. Scattered over all the length and breadth of its territory are there considerable elevations of land, which contribute largely to the beauty of the view and satisfy the demands of the artistic sense. The highest of these rise to an altitude of several hundred feet above the general level, not by abrupt and broken ascents, but by gradual slopes, making them capable of culture and even available for residential uses to the very summit. Indeed, some of them are already dotted with dwellings in every part and others are likely to become so at an early day. These hills took their names originally from their owners or from persons living near them, though in many instances those names have in later years been changed, either by change of ownership or by some other circumstance connected with their history. Their respective altitudes have been ascertained by a series of calculations made under the supervision of Mr. Aaron Greenwood, a skillful and accurate surveyor of the place, who assumed as the basis of such calculations the correctness of the figures indicating the elevation of the railroad at given points along the line as fixed by its chief engineer. A few of the more prominent of these natural formations are deemed worthy of mention.

Glazier Hill is the highest eminence in the town, rising to an altitude of one thousand two hundred and ninety-four feet above sea level and overlooking all the more thickly populated portions of its territory. It stands a little to the northeast of the Central Village, now almost within its borders, the growth of the place within the last few years having caused the erection of dwellings far up its westerly and southerly sides. Its summit is now occupied by the distributing reservoir of the Gardner Water Company, from which fact it is sometimes called "Reservoir Hill."

Bickford Hill or Parker Hill, as it is more recently designated, because owned and occupied for many years by the late Dr. David Parker, is located half a mile southeast of the one just spoken of, in full view from the town Common and quite near the junction of Elm and Temple Streets. It is one thousand two hundred and seventy-seven feet in height, and, like Glazier Hill, commands a fine view of the several villages of the town. It has no buildings upon it and is used for tillage and grazing purposes.

Howe Hill, rising one thousand two hundred and fifty-six feet above tide-water, is about a mile north of the Common on the easterly side of Kelton Street,

in the midst of a district wholly rural and sparsely populated.

Barber Hill, one thousand two hundred and thirty-nine feet high, is in the southeast part of the town, a little north of the residence of the late Thomas Greenwood. On its easterly slope, one of the earliest settlers of the place—Mr. David Nichols, from Reading—located, clearing up and cultivating what proved to be one of the best farms in the vicinity.

Temple Hill stands a short distance southeast of Bickford or Parker Hill, and is one thousand two hundred and twenty-four feet high, while Ray and Gates Hills, in the easterly parts of the town, rise respectively to an altitude of one thousand two hundred and seventeen and one thousand two hundred and fifteen feet. Near the summit of the first of these two are a farm-house and out-buildings, long the residence of Mr. Asa Ray, and a sort of beacon or landmark to a wide region round about.

Peabody Hill, originally known as Pork Hill, and for a long time as Lynde Hill, from Mr. Wm. S. Lynde, its owner for many years, occupies what is now almost the centre of the more northerly part of the thickly-settled portions of the town. It is one thousand one hundred and seventy-six feet above the level of the sea, and is for the most part covered with commodious and tasteful private residences, which have sprung up with marvelous rapidity during the past few years.

Besides these more noticeable and commanding hights, there are Greenwood Hill, in the southwesterly part of Gardner, at the rear of the house of Mr. Edward Greenwood, one thousand one hundred and seventy feet in altitude; Kendall Hill, on the western borders of the South village, originally named Jackson Hill, after Capt. Elisha Jackson, one of the first settlers and one of the most notable and influential of the early citizens of the town, who located on its southerly side near the top, 1130 feet above sea-level; Prospect Hill, on the southern side of the same village, formerly known as Wright's Hill, taking its name from Mr. Joseph Wright, who came from Sterling and settled upon it, 1129 feet high. Attention is called also to the B. F. Kendall Hill, in the south section of the town, now being used for dwellings; Cooledge and Beaman Hills, in the north part; Martin and Brooks Hills, in the west, and Bancroft Hill, near to Crystal Lake, on the southwest, the easterly side of which was taken up and settled upon by Mr. Jonathan Bancroft, whose name it has perpetuated to this day.

Lakes and Ponds.—There are in Gardner but few natural bodies of water—those "eyes of the landscape," as Goethe is reputed to have called them—though there are numerous artificial ones, which give variety and charm to the scenery. Of the former, the one lying to the northwest of the Common is largest and most worthy of notice. In the early records it was called Wells' Pond, though for what reason has not been ascertained. For a long time it was known simply as Gardner Pond. A few years ago, however, it was christened Crystal Lake by vote of the town—a name peculiarly appropriate and significant on account of the purity and clearness of its waters and the mirror-like tranquillity of their surface. Its greatest length is not far from a mile, while its extreme width scarcely exceeds half a mile, giving it an estimated area of one hundred and fifty-two acres. It is variously bordered with cultured fields, untamed pastures and groves of maple, oak and pine, sloping gently down to where its murmuring ripples kiss the solid earth, giving it a setting which makes of it a picture of exceeding loveliness and of bewitching charm to every lover of nature and of nature's fairest scenes. The modern cemetery, which is located upon its westerly side, with its granite and marble monuments, its exquisitely chiseled memorials of departed loved and honored ones, glittering in the sunlight, while, in a certain way, subduing and chastening the scene, yet, on the whole, gives it a more tender and sacred interest and significance. This lake, so accessible from all directions, is in the summer-time a somewhat favorite resort for the disciples of Isaac Walton residing in the vicinity, its waters having been originally well-stored with various kinds of native fish, and more recently stocked with those of foreign extraction; and for country swains and damsels or others fond of boating in one or another of its various forms. In the winter its icy surface attracts those who enjoy the pleasant and health-imparting exercise of out-door skating, and the airs of the neighborhood are often, on sunny days and moonlit nights, made vocal with the merry voices of converse, laughter and song, breathing forth from those who relieve the tiresome round of study, toil and care, or fill the fleeting hours with sports and pleasures which, while they exhilarate and thrill both body and mind, giving added zest to life, yet leave no sting behind. A delightful grove on the western margin, made attractive by the hand both of nature and of man, having been cleared of all rocks and underbrush and fitted up with numerous devices and appliances for the convenience and gratification of pleasure-seekers, and moreover being readily reached by railroad as well as by private conveyance, has become within a few years a frequent rendezvous for Sabbath-school, Grand Army and other parties, seeking rest and recreation amid the beauty and glory of the material world. With its pleasing surroundings and multiform attractions of a various sort, this lake merits the encomium given it by the local historian, when he characterizes it as "the pride of Gardner, 'a thing of beauty and a joy forever.'"

In the southwest part of the town is another natural body of water called sometimes Widow Wood's Pond and sometimes Kendall's Pond, from persons living near at different dates, but its location and surroundings are such as to give it little attractive-

ness or interest except to sportsmen who sometimes are well repaid for tempting with well-baited hook and line the finny denizen of its waters. In days gone by it was deemed good fishing-ground, but in later years it has lost its reputation in that respect. Its surface measures about twenty-two acres, and lies scarcely above the level of Otter River, near by, into which its contents flow by a sluggish stream.

In the same general locality, and not far away, is Snake Pond, crossed by the Templeton line, only a few acres of which are in Gardner. It is much like the last named in its general features, though more inaccessible by reason of the low, marshy grounds which surround it.

Quag Pond, in the easterly section of the town, is one of the sources of Pew Brook, and covers an area of about an acre. It is set in a bed of moss of varying width, but many feet in depth, resting upon a substratum of soft mud.

Of the artificial bodies of water mention will be made in connection with the manufacturing interests of the town to which they are tributary as conservatories of power for mechanical purposes. They are at present few in number in comparison with what have existed in days gone by. Several mill privileges in the outlying districts having been abandoned, the ponds, whence their motive-power was derived, have disappeared, while those formed successively by the stream flowing out of Crystal Lake, and used to run the several shops along the valley, have, since the establishment of the Public Water-works, been almost wholly given up, the need they served being now supplied by the introduction of steam-power.

STREAMS.—The situation of Gardner at the very summit of the highlands which divide the water-basin of the Merrimac River on the east from that of the Connecticut on the west, forbids the existence of water-courses within its borders, of any considerable size or importance. The only one that rises in any sense to the dignity of a river is that which enters its territory at the southwesterly side from Templeton, and flowing by a serpentine course in a general northwesterly direction some four or five miles, forming the greater part of that distance the boundary of the town, passes thence onward through the north part of Templeton into Winchendon, where it falls into Miller's River, a branch of the Connecticut. This stream bears the name of Otter River, presumably from the fact that the otter once inhabited its waters. Its descent through the town is very slight, and its movement consequently sluggish, except that in the last part of its course there is sufficient fall to enable it to be utilized by two or three manufacturing establishments located on the Templeton side.

Aside from Otter River the streams of Gardner are quite insignificant. And yet they have been an important factor in the development of the industries of the town and in the promotion of its prosperity. In a certain way they have made the town what it is today. They not only furnished power for the production of lumber for building purposes in the earlier stages of its history, but they supplied an essential need of the same sort in the evolution of its leading manufacturing interests at a period when, but for such supply, that interest would have been compelled to seek other localities in order to obtain the means and facilities necessary to its growth and perfecting. As an intermediate link between hand or foot power—the power of human muscle—and steam-power in the making of chairs, the principal and distinguishing product of the town, and the one which has given it reputation, prestige and success, the comparatively convenient and inexpensive power furnished by these small streams was not simply useful, but indispensable. But for this, so far as human vision can see, the fortunes of the town would have been entirely changed, its thrift and growth coming to an early and perpetual end.

Chiefest of these small but most valuable water courses was Pond Brook, so-called, the outlet of Crystal Lake, flowing into Otter River, scarcely two miles from its source. The relation of this little stream to the business interests of the community and the growth of the place cannot be over-estimated. Though its former channel is now essentially dry, the waters which otherwise would fill it being diverted to important uses in other directions, yet, historically, it has been a stream of the highest importance and of incalculable value.

Scarcely less worthy of notice and commendation is the stream flowing through the village of South Gardner, sometimes called Gardner Brook. In some respects, it stands at the head of the list of water-courses in the town. It began to serve the need of the public at an earlier day than any other, and more than any other at this date contributes to the business interest and prosperity of the town, as it promises to do for years and generations to come. It enters Gardner near the southern corner, from Westminster, and flowing northwesterly through the village, thence southwesterly a distance of two and one-half or three miles in all, increased in volume and in value by several tributaries on the way, it finally falls into Otter River, near the line of Templeton. Nine manufacturing establishments are in operation along its course, the motive-power of which is derived mostly from its waters.

Pew Brook is formed by several streamlets in the easterly part of the town, some of which come from Westminster, and running southwest and west, empties into Gardner Brook, near the eastern extremity of South Gardner Village, below the lumber-mills of Lewis A. Wright & Co. It furnishes power for one chair-factory.

Foster Brook rises in the easterly central portion of the town, and flowing southerly and westerly, discharges its waters into the South Gardner stream, just above where the Worcester Railroad crosses it.

Kneeland Brook has several sources in the northerly district, and by a southwesterly course finds an outlet in Otter River, near where the Fitchburg Railroad goes over it. Formerly several mills were run by power from this brook, but only one at the present time.

Wilder Brook is a branch of the last named, and is located to the west of it.

Bailey Brook, still farther west, rises in Winchendon, and flowing southwesterly, empties into Otter River, just above where that stream passes beyond the limits of the town.

Several small streams in the northeast part of the town constitute the head-waters of one branch of the Nashua River, flowing northwesterly through the so-called Nashua Reservoir into Ashburnham, and two or three others in a more easterly direction flow into Westminster. On two of these streams, one in the northeast and one in the east, mills formerly stood, but both have passed away.

SOIL.—The geological basis of the territory of Gardner, like that of most of the towns of the county, is ferruginous gneiss, an azoic formation which, according to Dr. Hitchcock, antedates all other deposits on the face of the globe. Gneiss is a somewhat demoralized form of granite, combining quartz, feldspar and mica in varying proportions, and tending to stratification. Into this combination, in the case before us, a tincture or element of iron enters, which gives it a rusty appearance, and renders it easy of oxidation and consequent decomposition. These primordial deposits occasionally come to the surface in ledges and broken rock, as they are also sometimes unearthed by excavation, as in the construction of the railroads through the town. Upon them, in the order of geologic progress from untold ages past, there rest strata of secondary and tertiary formations composed of sand, pebbles and clay, the latter of which is to be found in exceptional quantities in the south part of the town, where it has been utilized to a very considerable and profitable extent, as will hereafter appear. Still later in the order of nature are there drift and alluvial stores brought from foreign localities by ice or water or other means, which, mingling with the decomposed products of older periods and of later vegetable growths going on from the beginning, constitute what is called the loam or soil, of which the surface of the earth in this instance is composed, and in which are to be found the various chemical elements that give it native fertility and luxuriance and render it under proper culture capable of serving, by its productiveness, the needs of all animal life, and of ministering in manifold ways to human comfort and happiness.

The town of Gardner, considered with reference to the nature and quality of its soil, cannot be regarded as particularly adapted to purposes of agriculture. Occupying a position upon the very crest of the range of hills which separate two of the great water-systems of the State, its lands sloping and its waters running both east and west, it is constantly losing, by the operation of nature's forces, many of those elements which serve the husbandman's need as fertilizing agents in the earth he cultivates; while for the same reason it is subject to bleak and chilly winds, which tend to diminish the productiveness of its fields and to retard and jeopardize the growth and ripening of whatever may be planted or sown in them. Naturally, therefore, the land is gravelly, cold and sterile, and, next to the production of wood and timber, is better adapted to grazing purposes than to the cultivation of fruit and cereal crops. There are, moreover, scattered through the town numerous cold, marshy swamp lands, saturated with sour waters, and producing a sort of wiry grass which is neither palatable nor nutritious, and of little value in any respect.

Nevertheless, there are portions of the territory of the town which, by long and faithful husbandry, have been made to yield abundant returns for the labor expended upon them. On the slopes of some of the hills and in the intervening valleys the soil is deep and pliable and strong, and only needs thorough culture to make it produce satisfactory harvests. There are, indeed, a goodly number of fine farms in the outlying districts, whose commodious, well-kept buildings, broad fields of grass and grain, large herds and flocks, bespeak not only enterprise, good habits and general thrift, but competency and independence. Besides these, every householder almost and every owner of a little homestead has his or her garden or plot of land devoted to the growth of both the larger and smaller fruits, different kinds of edible vegetables and usually also to a pleasing variety of flowers and foliage plants, which speaks well for the kindly character of the soil and of what may come from it by proper care and nursing—by that sort of management which usually distinguishes a yeoman of New England.

CLIMATE.—The climate of Gardner, situated high above the level of the sea and far away from the modifying influence of oceanic breezes and currents, is exceedingly inconstant and often disagreeable, being subject to sudden changes and great extremes of heat and cold, which determine to a large extent the annual fall of rain and snow, and also the general dryness and humidity of the atmosphere, with its attendant sanitary qualities, tendencies and effects. The winters are long and severe, characterized as they are by high winds and heavy storms, which cause a large accumulation of snow and ice and seriously try the powers of endurance in the human constitution. But the physical conditions and circumstances which subject the place to many of the harsher moods of the winter-time have their compensation in the fresh, cool breezes of the summer season, which moderate the otherwise excessive heat, and make that part of the year more invigorating and agreeable. On the whole, the geographical situa-

tion of the town and its climatic conditions are favorable to both bodily and mental health and energy, indirectly, too, of moral soundness and force of character. As a result, the town is an unusually healthful one, and cases of pulmonary or malarial diseases are of rare occurrence among its native-born population. So that among the factors which have entered into the problem of the growth and prosperity of Gardner, the influence of its climate is not to be overlooked or underestimated.

"While tropic airs may tropic needs supply,
Brave souls are nurtured 'neath a sterner sky."

FLORA.—Of the one hundred and fifty thousand species of plants distributed over the surface of the globe, only a very small proportion can be indigenous to so limited an area as the territory of such a town as Gardner. And what are found within its borders are so like what grow throughout the county that even to name them would be needless repetition. It is not known that, in the matter of forest or fruit-trees, of berry-producing or flowering shrubs or plants of any sort, Gardner has a single specimen which would distinguish it from other towns in the vicinity, though of each and all of these it has a proportionate supply. Enough of wood and timber lots still remain to give pleasing variety to the landscape, to impart salubrity to the air, to soften the fierceness of wintry blasts and break the violence of summer tempests, and to aid in keeping up the supply of nature's water-fountains, to which the existence of forests so largely contribute, while shrubs of many a kind and name cover many an untilled acre more or less densely, and wild flowers of rich and varied hues in great diversity lend grace and beauty in all directions to the view. Moreover, the introduction of a liberal supply of exotics, especially in the departments of fruit trees and flowering plants, as witnessed in the orchards, gardens and conservatories so often seen, has enlarged and enriched very materially this feature of the natural history of the town.

FAUNA.—There is little to be said of the representatives of the animal kingdom, either native or imported, in addition to what may appear elsewhere in the pages of this work. The same kinds of wild animals originally prevailed here as in other parts of the county, only a few of the smaller and more prolific of which continue to this day, to vex the fields and gardens of the husbandmen or tempt the hunter through the still existing woods. Of the game birds scarcely one save the partridge remains, though the same winged songsters of the grove and field still make the air vocal with their melody in the spring and early summer as cheered and blessed the solitary way of the early settlers in these then wilderness retreats. Various other wild birds, with less of music in their voices, are found at the proper season in plentiful numbers, some of them hardly to be desired by reason of their mischievous habits in respect to the early sown or planted grain and corn. Most of these are migratory in their mode of life, coming and going with the warmer portions of the year, though a few remain the twelve-month through, fearless alike of winter's cold and of summer's heat. Of the finny tribes, dwellers in the waters of the town, the original stock still prevails to some extent, though in considerably diminished numbers. The handsome trout still glides up and down the gurgling brook, finding rest only in its most secluded places, where it would seem to hide away from the ardent fisherman, or, if pursuing, he seeks his wily victim, tantalizes him with the rareness of a bite. The pride of the olden time in this respect—the pickerel—and its companion residents of the ponds bearing various names, which served the fathers and mothers so well in place of flesh and fowl less easily obtained, have been much reduced in these later days, partly because of the greater search for them and partly by reason of the introduction of foreign fish, some of which appear to be the natural born enemies of the native denizens of our New England waters, making war upon them and pursuing them with disastrous results, sometimes even to extinction. The experiment of bringing in these new tenants of our inland lakes and ponds, though greatly commended a few years ago by certain classes of pisciculturists as of immense advantage to the fish-loving public, may be regarded, when judged by the test of experience, as of doubtful utility, even if it be not brought into utter condemnation. At any rate, the promises made in its behalf have rarely, if ever, been satisfactorily fulfilled. To let well enough alone is sometimes the highest wisdom.

EARLY HISTORY.—Having made a somewhat detailed presentation of the natural features of the town of Gardner, it now seems proper to take up the thread of its history as a distinct body corporate, possessing and exercising municipal rights, powers and privileges under the jurisdiction and sovereignty of the Commonwealth of Massachusetts. In doing so, it is not needful to go back of the movement initiated for the purpose of securing the formation and legal existence of the new township any further than to set forth the conditions and circumstances under which that movement was inaugurated and the prevailing reasons therefor.

Origin.—Unlike most of the older towns of Worcester County, Gardner was not carved out of the primeval forest nor did its territorial possessions come from any of the unappropriated lands of the Province or State of Massachusetts, but from contiguous portions of the four neighboring towns. Of these Westminster contributed, in round numbers, six thousand acres; Ashburnham, twenty-eight hundred acres; Winchendon, forty-five hundred acres; and Templeton, seven hundred acres, making in the aggregate the fourteen thousand acres already given as the extent of the town's surface. The early history of those several

towns is therefore in part the history of Gardner previous to its incorporation, for the essential facts and incidents of which the reader is referred to the sketches of those towns respectively on other pages of this work, only a few of the more important of them being mentioned in this connection. The townships named were first occupied by the present race of inhabitants at a date sufficiently indicated by the year 1740. As they gradually increased in population, portions of them far removed from their established centres, their area being very large, were in due time taken up and appropriated to purposes of permanent residence.

As this process of extension and settlement went on, it came to pass at length that about sixty families were established within the limits of what subsequently was assigned to the town of Gardner. Separated by long distances from the majority of their fellow-citizens and also from the recognized seat of public activity in their respective municipalities, the heads of these families began after a time to feel that it would be for their common convenience, interest and general welfare to sever the connection which had hitherto existed between them and their colleague townsmen, and unite in the formation of a new township more compact, so far as they were themselves concerned, than those to which they belonged, the so-called centre of which—where the meeting-house should be built, where trade should be set up, where public business should be transacted and public gatherings of whatever sort held—would be nearer at hand and the recognized duties of which, as a corporate body, could be more easily and readily performed.

The desirableness of a change like that outlined, by reason of the many advantages which would naturally accrue to all parties concerned, became very soon so apparent and so urgent that as early as 1781 a movement was started looking to its consummation. It does not appear, however, that any united and mutually concurrent action in relation to the subject was taken until the year 1784 or 1785, when the several towns liable to dismemberment were petitioned by the portion of their inhabitants favorably interested for leave to be set off with their families and estates, in order that they might join with others in neighboring towns, similarly situated and similarly minded, in the formation of a new town. The prayer of the petitioners seemed so reasonable to their fellow-citizens that, with very little opposition or delay, indeed, with remarkable unanimity and cordiality, it was in every instance granted. Ashburnham led off in a vote favoring the measure and granting the request passed September 3, 1774; Templeton followed in a vote to the same effect April 6, 1775; Winchendon May 16th, and Westminster May 17th of the same year. The generous and honorable spirit which animated the several towns involved in this movement is duly represented in a report of a committee of the town of Winchendon, to which the subject was referred, wherein the following passage occurs: "Considering the situation of the petitioners, we think it reasonable a part of said town should be set off when those towns concerned have determined the respective boundaries of the district to be so formed as that the same may be properly accommodated." The report was duly "accepted and adopted."

The consent of the towns having been obtained as stated, a petition signed by Mr. John Glazier, then of Westminster and about thirty others, was sent to the Legislature of the State at what was called its May Session, in 1785, praying that certain specified portions of the towns of Winchendon, Ashburnham, Westminster and Templeton, with the inhabitants thereof and their estates, might be set off from those towns respectively and erected into a new township bearing the name of Gardner. An appropriate map indicating the changes proposed accompanied the petition, and is still preserved among the State archives at Boston, though the petition itself is nowhere to be found. The result of this appeal to the Legislature is clearly attested by its action, which culminated, on the 27th of June, in the passage of an "Act of Incorporation," of which the following, with the omission of the boundary lines, is a copy:

An act for erecting the westerly part of Westminster, the southwesterly part of Ashburnham, the southeasterly part of Winchendon and the easterly part of Templeton in the county of Worcester, into a town by the name of Gardner.

Whereas, the inhabitants of the westerly part of the town of Westminster, the southwesterly part of the town of Ashburnham, the southeasterly part of the town of Winchendon and the easterly part of the town of Templeton in the county of Worcester, have represented to this court the difficulties they labor under in their present situation and request that they may be incorporated into a separate town, and it appearing to this court proper to comply with their request:

Be it enacted by the Senate and House of Representatives in General Court assembled and by the authority of the same: That the westerly part of the town of Westminster, southwesterly part of the town of Ashburnham, southeasterly part of the town of Winchendon and easterly part of the town of Templeton in the county of Worcester (bounds omitted) be, and they hereby are, erected into a town by the name of Gardner, and the inhabitants thereof hereby are invested with all the powers, privileges and immunities which the inhabitants of other towns within this Commonwealth do or may enjoy.

And be it further enacted: That where the lots that are now settled are cut by the above lines, every owner of such lot shall be holden to pay taxes for the whole of such lot to the town in which his house now stands. *Provided, nevertheless*, If any owner of such lot shall return a certificate into the secretary's office within six months after the passing of this act, expressing his desire to belong with his said lot to the other town, such lot and the owner thereof shall forever afterwards be holden to pay taxes to the other town accordingly.

And be it further enacted by the authority aforesaid: That the inhabitants of the said town shall pay their proportion of all taxes already granted to be raised in the several towns from which they were respectively taken.

And be it further enacted: That Nicholas Dyke, Esq., be, and hereby is, empowered to issue his warrant directed to some principal inhabitant, requiring him to warn and give notice to the inhabitants of the said town to assemble and meet at some suitable time and place in said town to choose all such officers as towns by law are required to choose at their annual town-meeting in the month of March.

SAMUEL PHILLIPS, JR., *Prest. of the Senate.*
NATHANIEL GORHAM, *Speaker of the House.*

Approved by the Governor,
JAMES BOWDOIN.

Agreeably to the provision contained in the last clause of the above enactment, Nicholas Dyke, of Westminster, a justice of the peace, did, on the 3d day of August following, issue his warrant in proper form to Mr. Peter Goodale, one of the inhabitants of the town of Gardner, requiring him

to warn all the inhabitants of said town to meet at the house of Mr. John Glazier in said town, on Monday, the fifteenth day of August present, at nine o'clock forenoon, to act on the following articles, viz.:

1st. To choose a moderator to govern said meeting.

2d. To choose all town officers as the law directs at annual March meetings.

3d. To know the mind of the town whether they will grant money to defray town charges.

4th. To see what method the town will come into to collect taxes or to transact any matter or business as they think necessary.

Pursuant to the requirements of this warrant, the inhabitants of Gardner came together and were called to order for the transaction of business by Justice Dyke, who was present.

Captain Elisha Jackson was chosen moderator of the meeting, and the following-named gentlemen were elected as the first officers of the town, respectively: Clerk, Seth Heywood; Selectmen, Elisha Jackson, Samuel Stone, John White, Simon Gates, John Glazier, who were instructed to act as assessors; Treasurer, Seth Heywood; Collector, Elijah Wilder, who agreed to collect the taxes for four pence on the pound and give satisfactory bonds for the faithful discharge of his duty. Subordinate officers were chosen in due form, and the oath of office, where required, was administered by Esquire Dyke. No other business was done and the meeting dissolved.

The town of Gardner was now legally organized agreeably to the provisions of its act of incorporation, and had entered upon its career as one of those primary little republics which go to make up the good old Commonwealth of Massachusetts. Before proceeding to sketch the details of that career, however, it seems to be desirable to dwell somewhat at length upon the conditions and circumstances attending the town's birth and its first starting into life.

It may be of some interest and importance, both to the general public and to the present inhabitants of the town, to have indicated those portions of the territory which were taken from the towns contributing thereto, and where the boundary lines of such towns originally ran. The northwesterly line of Westminster formerly extended from the present northeast corner of Gardner, nearly a mile southeast of Ashburnham Junction, in a southwesterly direction, crossing Glazier Hill just south of the reservoir, thence in a direct course through the central village, cutting the town-house lot into two nearly equal parts, and so along the southerly bounds of Lynde Street straight on to the westerly corner of Gardner near the old hotel below East Templeton, which was, in the old time, the westerly corner of Westminster. All the territory south of that line originally belonged to that town. The line between Ashburnham and Winchendon, running straight from the northward along Stone Street, passed between Green Street and Crystal Lake, and met the Westminster boundary a little east of the junction of School and Lynde Streets. The lands to the eastward of this line were from Ashburnham, those to the westward from Winchendon. Those derived from Templeton lay west of a line extending from a point in the original Westminster boundary near where the railroad crosses it, northwesterly till it met the present northernmost boundary between Gardner and Templeton, of which it was the continuation. It will thus be seen that the first meeting-house site, (now occupied by the First Congregational Church), the old burying-ground and the public common were on the Ashburnham territory, together with the north part of the central village, while Crystal Lake and the north part of West Gardner are on that coming from Winchendon. All of South Gardner village, the principal railroad stations and the southern part of the other villages are on territory originally belonging to Westminster.

At whose suggestion or by whose means the name Gardner was given to the town cannot be ascertained, but it was in honor of one of the most gallant and heroic patriots of ante-Revolutionary times, who fell a martyr to his country's liberties at the battle of Bunker Hill. Thomas Gardner was son of Richard of Cambridge and a descendant of the fourth generation from Thomas of Roxbury, the first of the name in the country, who died in 1633. He was born in 1724, and early in life began to display those traits of character which in later years won for him the confidence and high regard of his fellow-citizens and qualified him for the important part he was to play in the stirring events of his time. He was of strong mind, of great practical judgment and unusual executive ability, a natural adviser of men and leader in public affairs. He was called to fill important civil offices in his native town, and entering military life, rose rapidly to a station of honor and command. As colonel of the First Middlesex Regiment he was at the battle of Lexington, but did no effectual service by reason of the unsoldierly conduct of his men. Greatly chagrined thereat, he resolved to retrieve himself from disgrace at the first opportunity. Enlisting in a regiment of the Continental Army, he was commissioned colonel June 2, 1775. On the morning of June 17th he was ordered from his station on Prospect Hill to Charlestown Neck as a reserve in the expected battle, and about noon advanced to Bunker Hill, where, by command of Gen. Putnam, he with his men was engaged in throwing up earthworks for the protection of the patriot forces in case they should be driven from their intrenchments in front of the enemy. Twice had the British made attack and twice had they been repulsed with great slaughter. On the third advance, the ammunition of the Colonial troops giving out, Gen. Putnam rode in hot haste back to Col. Gardner and ordered him to the scene of conflict. Obeying, he hur-

ried forward, but before reaching the place of action was struck by a musket-ball which felled him to the earth. Being raised from the ground, he shouted to his men, "Conquer or die," and was carried from the field. He lingered till July 3d, the day when Washington took command of the army, one of whose first orders, issued the following day, was: "Col. Gardner is to be buried to-morrow at three o'clock P.M., with the military honors due to so brave and gallant an officer, who fought, bled and died in the cause of his country and of mankind." Such was the man whose name the town of Gardner perpetuates. May her children keep his memory green to many generations by emulating his spirit of self-forgetting, patriotic devotion to the principles of civil and religious liberty and to the inborn rights of man.

It is to be regretted that no complete list of the families resident in the town at the date of its incorporation is to be found among the generally well-preserved records of the time. But by referring to the histories and records of the several towns, from which its territory was taken previous to that period, and to the books of the town clerk of Gardner, relating to what transpired immediately after, a table of such resident families has been prepared, which may be regarded as substantially correct. As nothing of the kind has ever been put in print before, it is herewith presented in full, to wit:

Adams, John.
Bacon, Joseph.
Baker, George.
Baker, John.
Baldwin, Josiah.
Bancroft, Jonathan.
Beard, Andrew.
Bickford, William.
Bolton, Ebenezer.
Boyden, Joseph.
Brown, Jonathan.
Childs, Daniel.
Clark, Benjamin.
Clark, Joseph.
Comee, David.
Conant, Josiah.
Cooledge, James.
Eaton, Ebenezer.
Eaton, John.
Eaton, Jonathan.
Edgell, Samuel.
Fairbanks, Levi.
Fisher, Gideon.
Fisher, William
Foster, David.
Foster, Samuel.
Gates, Simon.
Glazier, John.
Goodale, Peter.
Goss, William
Graves, ——.
Green, Israel.
Green, Nathan.
Greenwood, Jonathan.
Hadley, Joseph.
Haynes, Reuben.
Heywood, Seth.
Hill, Asa.
Hill, Bezaleel.
Hill, Jesse.
Hill, Maverick.
Hill, Moses.
Holland, Joseph.
Howe, Ebenezer.
Jackson, Caleb.
Jackson, Elisha.
Kelton, Edward.
Kelton, Samuel.
Kendall, Benjamin.
Keyes, Ebenezer.
Kneeland, Timothy.
Matthews, John.
Merriam, Nathan.
Moore, Ezra.
Nichols, David.
Parker, ——.
Partridge, Jabez.
Payson, Joseph.
Perley, Allen.
Pratt, Ephraim.
Priest, Joseph.
Priest, ——.
Putnam, John.
Rice, ——.
Richardson, Jonas.
Sanderson, Samuel.
Samson, ——.
Sawyer, Jude.
Simonds, Elijah.
Stone, Samuel.
Temple, Ephraim.
Upton, Oliver.
Wheeler, Joel.
Wheeler, Josiah.
Whitcomb, Jonathan.
Whitcomb, Jonathan P.
White, John.
Whitney, Joshua.
Wilder, Elijah.
Wilder, Josiah.
Wood, Elijah.
Wright, Joseph.

The above, with rare exceptions, are old New England names, and suggest those substantial and exalted qualities of mind and heart and character which distinguished the founders of New England and that great class of people in the mother country whence they sprang, of whom the eminent and brilliant Lord Macaulay said they were "the most remarkable, perhaps, the world ever produced." By a study of those names through their ancestral lines the interested inquirer will notice how directly the town of Gardner stands connected in the order of historical continuity with the Plymouth and Massachusetts Bay settlements, and how closely related were her early citizens to the Pilgrim and Puritan immigrants to these shores. Such a study will show, moreover, how naturally it occurred that what are recognized and honored as New England ideas and principles characterized the earlier life of Gardner and helped to shape, in a large degree, its whole subsequent history. The distinctive type of civilization which was brought from beyond the sea in the "Mayflower" and "Isabella" was the type that presided like a good genius over the birth of all the older settlements of this whole region of country, finding expression alike in the character and habits of the people at large and in the social, civil, educational and religious institutions they established and sought to make perpetual. The town of Gardner was no exception to the general rule in this regard. In its most striking features, in what is most creditable and honorable in its career, it is but the outgrowth of the influences that prevailed at the beginning of its existence, the product of the seed sown by the hands of those brave, devoted men and women who first cleared the forests, tilled the fields, built the homes, and lighted the altar-fires within its borders.

In portraying the earlier history of the town, for the purpose of bringing into notice some of the prominent characteristics of its original inhabitants, together with the difficulties which they encountered at the outset, it is proper to call attention to the limited resources then available for the varied uses of life. What goes by the general name of property, or material possessions, consisted almost wholly of real-estate farm stock and the implements and utensils required for domestic and agricultural purposes, with a few tools and appliances for the simpler and more indispensable forms of mechanical handicraft. Very little money, of any sort, was in circulation, and what there was, being in the shape of Continental or Colonial scrip, was of uncertain value at the best and often wholly worthless. Government bonds, railroad stocks and other securities were not in those days at the command of the sturdy pioneers, whose available funds were chiefly the bones and sinews of their physical systems, subject to the control of a resolute and unconquerable will. It was at times impossible for them to obtain sufficient current funds with which to pay their taxes, and the town was frequently placed under the necessity of receiving various farm products as an equivalent therefor, the price of which was determined by public vote. Butter seems to have

been the most common substitute for money, probably because it was most convenient to handle and most sure of a ready market. The precise form of the town's action in this matter shows the then existing condition of things and also what a wise economy required in the management of public affairs. Under date of June 6, 1787, it was voted "that the collector take butter of the persons that are in his rates, provided that they bring the butter by the first of July next, at seven pence per pound, and the collector to provide firkins to put said butter in and to deliver butter to the committee that are to provide nails for the meeting-house when called for. It is expected that the collector put the butter into firkins, well salted, and the butter to be good butter." The provision in this vote for having the butter received for taxes delivered to the committee who were to procure nails for the meeting house, then in process of erection, indicates the extent to which what was called "barter," the exchange of one article of traffic for another, entered into the commercial transactions of those days when money was scarce and of doubtful worth—a practice which, in country towns especially, continued until within the memory of persons now living.

No data are known to exist by which to determine the actual amount of property in Gardner at the time of incorporation. The tax-lists of that day are not to be found, and whatever statistics may have been prepared, if there were any, have disappeared. The earliest available authority relating to this point is the general United States tax-lists made up in the year 1798 by order of the Federal Government, representing the assessments laid upon the entire country for the purpose of meeting the demands upon the national treasury. From a copy of those lists preserved in the library of the New England Historic-Genealogical Society, Boston, interesting and trustworthy particulars have been gleaned, some of which in a condensed form are herewith submitted.

At the date named, 1798, there were one hundred and fifty-five tax-paying residents in the town owning or occupying real estate, the appraised value of whose property in the aggregate was about $124,000, or a trifle over $800 each. Seven persons were worth $22,759 or an average of $3,251, ranging as follows: Elisha Jackson, $6,105; William Bickford, $4,710; James Cooledge, $2,634; Ebenezer Howe, $2,538; Seth Heywood, $2,325; Simon Gates, $2,274; William Whitney, $2,171. Forty-three persons had between $1000 and $2000 each, aggregating $57,979. The remaining $43,456 was distributed among one hundred and five persons, giving each one about $415. Several lots whose owners were unknown were valued at $186. The actual taxable property of the town, which excluded all public buildings and common lands, and also the estate of Rev. Jonathan Osgood, was $124,380. No one was taxed for money on hand or at interest, nor for plate or securities of any kind. Of the one hundred and fifty-five tax-payers in 1798 there were, as far as can be ascertained, thirty-five not living in town, whose aggregate property was $6,283, which would make the actual amount of taxable property held by residents, exclusive of Rev. Mr. Osgood, $118,097.

Of the citizens of Gardner at the date named, forty-nine with their families occupied dwellings, each of which, with a lot of one-quarter of an acre, was valued at more than $100, or at an average of $260. William Bickford owned the best one, doubtless the brick dwelling now standing at the South Village, which was appraised at $920. Other houses ranged as follows: Elisha Jackson's, built two years before, $720; James Cooledge's, $550; Jonathan Bancroft, Seth Heywood and Ezra Moore, $500 each; Joel Matthews and Joseph Simonds lived in dwellings taxed for $10 each. One hundred and six dwellings, the whole number then standing in the town and deemed of sufficient value to be taxed, were appraised at $16,099, an average of $151.87. There were probably a few other rude structures occupied at the time, but of no ratable worth.

The largest landholder in town in 1798 was William Whitney, who had three hundred and sixty-eight acres. He was followed by Elisha Jackson with three hundred and sixty-four acres; Wm. Bickford, three hundred and twelve acres; Josiah Wilder and James Cooledge, two hundred and fifty acres each. Thirty-four persons had between one and two hundred acres each. Twelve thousand two hundred and twenty acres of land, exclusive of house-lots, were taxed for $104,595, or for less than nine dollars per acre, the average valuation of land in the town generally. The estimated value of land in the village at that date may be learned from the fact that Jonathan Prescott, the first merchant in the place, residing on the site occupied for many years by the late Francis Richardson, Esq., was taxed for three hundred and forty-one dollars on an acre and a half of land, presumably attached to his house-lot, or at the rate of two hundred and twenty-seven dollars per acre.

Taking now the appraisal of the property in Gardner in 1798, thirteen years after it was incorporated, and making due allowance for the probable increase of population and wealth, it can be easily seen, without attempting to give the precise figures, with what meagre pecuniary capital the original inhabitants of the town began their municipal life. Their brain and muscle were, in large degree, their capital—their principal stock in trade and pledge of ultimate success. Their enterprise and perseverance, their resolute purpose and readiness to labor and endure,

> "The indomitable will and courage never to submit or yield;"

these qualities, under the circumstances, gave them strength of character and a sort of moral persistence and invincibleness which were full of promise for the

years ahead, which made an impress upon the public mind and heart, and became a force in the community not yet exhausted or overcome, the augury still of prosperous fortunes and happy destinies.

In what has thus far been offered to the reader as the opening chapter of this historical sketch of the town of Gardner, he will find a sufficiently detailed presentation of its situation, topography, settlement and incorporation, together with a brief portraiture of its early inhabitants and of the conditions and circumstances under which they started out in their municipal career. He will also find an account of the first town-meeting, at which the town, as a corporate body, was legally organized, its officers chosen, and its complex machinery made ready for active service. The line of historic development and progress will be taken up at that point in subsequent chapters and traced down to the present day by a separate consideration of several leading public interests in such order as may seem most convenient and appropriate.

CHAPTER CXI.

GARDNER—(*Continued.*)

TOWN AND COUNTY ROADS—FIFTH MASSACHUSETTS TURNPIKE—RAILWAYS.

PREVIOUS to the time of the incorporation of Gardner two county roads had been laid across its territory—one as early as 1754, extending from Lancaster to Quopoage (Athol), and the other in 1759 from Winchendon to Worcester. The first of these crossed the town-line about half a mile east of the Lewis A. Wright lumber-mill, and followed essentially the line of High, South Main and Kendall Streets to the junction of the latter with Broadway, thence by a varying course, still partially traceable, not far at any point from the present highway, to the Templeton boundary. This was the principal thoroughfare through the place from Boston and other lower towns westward for nearly half a century, or until the construction of the Fifth Massachusetts Turnpike in 1799 or 1800. The other road, built by order of the county authorities, entered the limits of the town near where Chapel Street now strikes them, half a mile east of Ray Hill, and followed the course of said street for the most part till it reached what is now Pearl Street, thence cutting across the intervening country in a northwesterly direction to Winchendon Street, and continuing along that street past the present town-farm buildings to Winchendon line. In addition to these, the several towns from which the territory of Gardner was received had caused a few highways to be made for the convenience of the inhabitants in getting to and from the centres of those towns respectively, and for freer communication with each other, but they were little more or better than cart-paths through the wilderness, quite unlike the well-graded streets of the present day. Aside from these, there were, no doubt, such other ways opened in different localities as might serve the temporary necessities of the settlers, without any formal survey or regard to permanent use.

About the time of the incorporation of the town a third county road was laid and ordered to be built from Royalston to Gardner. As far as can be ascertained, it ran along the line of Clark Street from the northwest till it reached the Jonathan Bancroft place, continuing thence, as seems probable, down the valley of the Crystal Lake outlet in a southerly direction, and along the general course of Mechanic Street to the Lancaster and Athol Road (now Broadway). The location of this road was not satisfactory to the people of Gardner, especially to those living at or near what had been fixed upon as the centre of the town. Hence at the second town-meeting, held September 6, 1785, it was, pursuant to an article in the warrant calling the same, "Voted, that it is the opinion of the town that the county road ought to go through the centre of the town," and a petition, in accordance with that vote, was prepared and ordered to be sent "to the Court of Quarter Sessions now sitting in Worcester," stating that the road "as it is now laid will not convene this town nor the public so well as if it was laid through the centre of the town," and praying that it might extend from near Jonathan Bancroft's "through our centre and come into the county road that leads from Winchendon to Westminster Meeting-house," near Josiah Wheeler's, or where it will best serve the public. The court seemed to accede to the request of the petition and changed the location of the road accordingly. It ran substantially from the original Bancroft place along the course of what are now Park, Central, Pearl and Smith Streets to Chapel Street, near the present residence of Asa F. Smith, and was known, for many years, as the Westminster and Royalston Road.

No other action appears to have been taken by the town in the matter of roads during that year except to vote, November 7th, to have them, when laid out, three rods wide, and then a week later to reconsider that vote and fix their width at two and a half rods. At the annual meeting in March, 1786, however, the subject of highways was taken up in earnest. The selectmen, who evidently had not been idle since their appointment to office, reported in detail the laying out of thirteen highways in different parts of the town, all of which were accepted and ordered to be built at an adjourned meeting held the following week. At the same meeting sixty pounds (about two hundred dollars) were voted for mending and making highways "this present year." By this action the inhabitants of the town were, for the most part, brought into ready communication with each other, with the Center, and with those larger thoroughfares by which access could be had to the neighboring towns to Worcester, the county seat, and to Boston,

the capital of the Commonwealth. Thus early in the town's history were laid the first meshes of that complex net-work of streets and highways which afterwards spread over its whole territory, and which has been extended from time to time down to the present day, as the demands of business or the comfort and convenience of the people at large might seem to require.

An interesting circumstance connected with the locating of roads in the early days of the town may be referred to at this point, not for its own sake alone, but because it illustrates somewhat the limited financial resources of the town at the time, the motives oftentimes influencing men in their action upon questions of public policy and the peculiar notions then entertained of what the public good would call for in coming years. In view of what has transpired since that date, the account of it is pleasant and suggestive reading. In the year 1793 some alterations were made in the County Road, running through the south part of the town, the principal of which was the straightening of it from near the head of Sawyer Street to a point near the present hotel site. By this change, travel would be diverted from the hilly, circuitous route past the Capt. Jackson place to the direct and comparatively level course across the lowlands south of the Bickford Mill, where the turnpike was afterward located. The new part running across the meadow was difficult and costly to build, which fact somewhat embarrassed the town, and it moreover was calculated to affect unfavorably the custom of the tavern at the summit of the hill by taking the principal part of the travel away from it.

Although the road had been so far completed as to be opened for use, yet the town voted, March 25, 1794, to ask for its discontinuance or re-location elsewhere. A petition corresponding to that vote was prepared and ordered to be sent to the County Court. In urging the discontinuance of the piece of road in question, which was the result aimed at, the petitioners represented that it had been laid "to the great damage of the town and individuals in said town, and we cannot see that the traveler can receive any real advantage by the same, and a great number of them seem to choose the old road, rather than the new one, as it is a good road and has been travelled upwards of forty years," etc. "It will also be of great damage on account of having mills being put up at the lower end of the meadow [where the Bent Brothers' chair-factory now is], which we shall stand in great need of, for the mill at the upper end of the meadow [on the site of the shop of James Sawyer] in some seasons cannot grind for one-half of the town, now it is small, and when we come to have three times our [present] number, and lands cleared up, which will much shorten the water, it will make a wide odds, and we shall have to travel five, six, seven and eight miles for grinding, which will be a very great grievance; it also takes it [travel] from a public-house that has been occupied for that service upwards of twenty years, and of late has been at great expense for buildings to serve the public; and as we have three county roads through this little town, and almost all our roads are new and very bad to make, and but a little while since our incorporation, and have had a meeting-house to build, and of late a minister to settle, and have school-houses to build, before we can reap any great advantage by schooling, We, therefore, pray your honors to take our case into your wise consideration and discontinue the new laid road, . . . and to keep the old road as it is now travelled, which is but two tallies further than the new one, which, had there been a full bench, we cannot think would have been accepted." Nevertheless, the County Court did not see good reason for reversing their previous action, but re-affirmed it, and the road was in due time finished to the satisfaction of that body. Almost a hundred years of experience in the use of this piece of highway, whose value at the outset was so stoutly questioned, have vindicated the action of the parties in authority in this matter beyond all doubt or peradventure. Few roads in all the town have rendered more important service to the general public, or contributed more to the convenience and needs of the community.

Space will not permit a detailed statement concerning the different highways and streets that have been constructed since the opening of the present century. They have multiplied with the growth of the town until they number, at this present date, over one hundred, without taking into account numerous alleys and by-ways, opened for public or private convenience.

In 1870 the town instituted measures for causing the different roads and streets throughout its territory to be designated by name, which resulted in the accomplishment of the end sought before the expiration of the year, and in directing the selectmen "to cause sign-boards to be put up at the termini of each street in town," which was accordingly done. More recently considerable has been brought to pass in the way of having side-walks laid along the more frequented streets of the different villages, partly by public and partly by private funds, the town for several years appropriating a thousand dollars or more for that purpose. These are of great convenience to pedestrians, while the carriage-ways generally, not only at the business centres, but in the suburbs, are kept in excellent repair, rendering them suitable both for the heavier kinds of transportation and for the ordinary purposes of journeying or pleasure-driving. The annual expenditure of the town for highways and bridges is about seven thousand five hundred dollars.

The Fifth Massachusetts Turnpike.—Towards the close of the last century the custom of forming private companies for the construction of important thoroughfares arose in the State of Massa-

chusetts, and prevailed quite extensively for a score or more of years, or until public roads became so common and so good that the others failed of necessary support, and so had to be abandoned or transferred to public management.

These companies operated under an act of incorporation received from the Legislature of the Commonwealth, which act fixed for them the location of their roads, and gave them power to establish tax or toll-houses at given distances along their routes, whereat to demand and receive tribute, at fixed rates, of the traveling and teaming public for the construction and maintenance of the same. Such roads received the general name of turnpikes from the turning-bar or gate, set up at the toll-houses to stop those desiring to pass until the stipulated fee was paid.

Among those receiving a charter at the date named or thereabouts was what was called the Fifth Massachusetts Turnpike, its name indicating the place it occupied in the series, running through the South Village of Gardner. Its eastern terminus was Jonas Kendall's tavern, Leominster, whence it extended "through Westminster, Gardner, Templeton, Phillipston, Athol, Orange and Warwick, to Capt. Elisha Hunt's, in Northfield," with a branch "from Athol, through Montague, to Calvin Munn's tavern, Greenfield."

The corporation, under whose auspices this road was built, was composed of gentlemen of influence and property along the line, who obtained authority in the matter by an act of the Legislature passed March 1, 1799. It provided for the construction of a road "four rods wide, the path to be travelled not less than eighteen feet wide in any place," and for "the erection of five turnpike gates convenient for collecting the toll." One of these gates was located in Gardner, near the line of Westminster, but changed afterward to the Elijah Foster place, and finally to South Gardner Village. This road was a great improvement on what had previously existed, being very straight and well-graded, and for many years it formed the principal thoroughfare from Brattleboro', Greenfield and Albany to Boston, the amount of passenger and freight traffic over it being very large. This corporation continued till 1832, when it transferred its franchise to the county of Worcester, and dissolved.

RAILWAYS.—As time went on, the common highway and the old means of travel and transportation became insufficient to meet the increasing demands of business and trade, in this section of country as elsewhere. The railway system came in to supply the existing and growing need. It had been tried in different localities with satisfactory results. Several lines in the State were in successful operation. The "Fitchburg Road" had been chartered, and was approaching completion, when the project was started looking to its extension westward to the valley of the Connecticut. It took form, with Brattleboro' for a terminus in that direction, under the name of the Vermont and Massachusetts Railroad, and was duly chartered March 15, 1844, though it was not built and opened for through traffic till 1850.

This road, so far as Gardner is concerned, has a unique and interesting history. The prime mover in its behalf was Hon. Alvah Crocker, a prominent citizen of Fitchburg, largely associated with the industrial development of that place, somewhat known to the general public, and afterward a member of Congress from his Representative District. To him, no doubt, its construction at the time was due. Thoroughly interested in the enterprise, he enlisted some of his responsible fellow-townsmen as co-workers with him, and visited most of the towns along the proposed route, holding public meetings and interviewing leading citizens for the purpose of calling attention to the matter, awakening interest and securing at last subscriptions to the capital stock required. All this was done under the assumption that the road was to go through the towns where encouragement was solicited, to their very great advantage, and that the route was entirely feasible and suitable to the end in view. Gardner, which was at that time beginning to be animated with new life, and to give promise of future growth and prosperity, was strongly appealed to on the grounds named, and responded liberally. Of course, this was done with the full understanding and expectation that the road would run through Gardner in such a way that it would greatly benefit the rapidly-growing manufacturing interest of the community by furnishing more convenient as well as greatly increased facilities for transportation. It was greatly to the surprise and indignation of those more immediately concerned, therefore, to learn, some time after they had pledged their co-operation, that Mr. Crocker and others acting with him were laying plans to have the road laid through Winchendon instead of Gardner, thereby depriving the latter place of the chief benefit hoped for and promised by its construction. So determined were the parties interested in these plans of turning the road away from Gardner, that before the Legislature of the State was called upon to grant an act of incorporation authorizing the building of the same, they had caused to be located and graded at their own expense what was called the eleventh section, lying between Ashburnham Junction and Winchendon village, apparently for the purpose of influencing the members of the General Court in their behalf. But they were doomed to disappointment. By the intervention of influential gentlemen in Gardner and Templeton, for Templeton was also to be cut off from railroad facilities by the devices referred to, the original bill for the chartering of the road, drawn in accordance with the wishes of Mr. Crocker and his friends, was so far amended as to locate it "through the north part of the town of Gardner to Otter River, thence down Otter River to the village of Baldwinsville, in the north part of

Templeton." Mr. Crocker, dissatisfied with this result, petitioned to have Baldwinsville taken out of the charter, and appealed to the County Commissioners, who had authority to act in the matter, to change the location of the road in accordance with his wishes. The citizens of Gardner were now thoroughly aroused to a sense of the danger that threatened them, and at a town-meeting held July 22, 1845, chose Levi Heywood, Samuel S. Howe and Edwin E. Glazier a committee to contest the appeal of Mr. Crocker before the commissioners, and to oppose the proposed alteration of the charter before the General Court, with power to employ counsel if deemed necessary. This committee, acting in hearty co-operation with gentlemen representing Templeton in the matter, succeeded in thwarting the designs of their opponents, and in preventing a change of the charter in the interest of those opponents. Finding themselves defeated, the managers of the corporation, with Mr. Crocker at their head, resolved to secure by indirect means what they had lost in open and fair fight. They asked for and obtained an extension of the time for building the road, apparently with the hope that something might transpire, or that some new way might be found, whereby their cherished purpose might be realized. But such hope, if it existed, proved delusive.

A proposition for a branch road to Gardner from Ashburnham was rejected with emphatic protest, and an accompanying declaration, that if a branch could be laid to Gardner, the main line could as well go there. And on the basis of the survey for the branch road, the Gardner committee and their allies convinced the Legislature of 1846 that their claim for the main line was reasonable and right, which resulted in the passage of an act on the 16th of April, re-locating the road in accordance with their wishes as follows: "Commencing at some convenient point in Westminster westward of Whitman's Village, or in Gardner, or in Ashburnham, and thence through the town of Gardner to the valley of Otter River, and thence, by such a line as shall be found most feasible, through Templeton to a point in their chartered line between Gibson's mill and the village of South Royalston." This was substantially where the road now runs and where the interest and convenience of the community are well served. But, although signally defeated by the skill, energy and tireless vigilance of those whom the town appointed to care for its interests in the affair and secure justice to the town and to those individuals who in good faith had, under the original representations, subscribed to the funds of the corporation, yet it would seem as if even then the opposition did not entirely abandon their former purpose of running the main road through Winchendon and of making the Gardner line ultimately a subordinate branch. No other supposition has been suggested to account for the adoption of what the author of the "History of Gardner" calls "that bewildering anomaly in railroad traveling"—the reversal of the engine and the turning of the seats of the passengers at South Ashburnham, which was in vogue for many years. The change in that regard enabling the trains to run by direct movement there as elsewhere, settles finally and forever the question of the permanent location of the road, and secures to Gardner for all time to come, no doubt, those railroad facilities eastward and westward which it not only needed, but was justly entitled to by every consideration of equity and the public welfare.

This railroad beyond all question has contributed largely to the development of the resources of the town and to the building up of its various manufacturing establishments, as the town in turn has done much by its rapidly increasing traffic to promote the prosperity of the road. The advantages derived from it have been greatly increased since it came into the hands of the "Fitchburg" corporation, and its service in every department is constantly becoming more effective and satisfactory. The recent abolition of several grade-crossings in the town has conduced to the common safety in a way which might be wisely applied to other places of danger, especially in the more densely populated localities. A spur-track up the valley of the Crystal Lake stream, built in 1881, adds materially to the convenience and value of the manufactories which line the route. In the construction of this spur, the interested parties were at the expense of the grading, while the railroad company laid the rails and furnished the rolling-stock. Under the present management of the road increased facilities and accommodations are supplied to meet the requirements of the business public and to minister to the comfort of travelers. A new Union Station, already in contemplation, will be another step in the right direction, and will secure the appreciation and grateful approval of the public.

But, although the construction of the Vermont and Massachusetts Railroad was of great service to the town of Gardner, yet it did not meet all the demands of the community in the matter of convenient and rapid transportation. An outlet southward became, after a while, an important consideration, not only for the advantage it would be to the business interests of the place, but as opening easy and ready communication with Worcester, the shire-town of the county, with which its people were somewhat intimately associated in many ways and becoming more and more so every passing year.

To satisfy this growing want, some of the leading citizens of Gardner united with those of other towns along the route in petitioning for a new railroad, to be called the Boston, Barre and Gardner Road. Some time previous to this movement, in April, 1847, a charter had been granted for a road from Worcester to Barre, to be called the Worcester and Barre Railroad. It provided for a main line between the termini named and for a branch therefrom to some

convenient point on the Vermont and Massachusetts Railroad in Gardner. The following year the name was changed to the Boston, Barre and Gardner Railroad. For good reasons nothing was done towards building this road for twenty years, the time for its construction being extended at different dates and some changes in its location made by special legislative enactment.

At length, in July, 1869, certain Worcester gentlemen, becoming deeply interested in the undertaking, authority was obtained from the General Court for the city of Worcester and towns along the line of the road to take stock in it, which gave new heart to its friends and new impetus toward its construction. Worcester subscribed liberally, as did Gardner and other towns, and private capitalists also helped in a similar way. By this action success was assured to the road, and measures were at once taken to carry the desires of those concerned in it into effect. Hence, on the 15th of the following September, the directors of the corporation voted to put that portion of the road lying between Worcester and Gardner under contract for construction at the earliest possible date, and two months later, terms were concluded with Messrs. Cook & Co., of Canada, in accordance therewith. Work was at once begun and pushed forward with energy and zeal under the general supervision of the efficient president, Colonel Ivers Phillips, of Worcester. On the 26th of April following, that gentleman drove the first spike in the laying of the rails at Gardner, and on the 4th of July of the same year (1870), an excursion train from Worcester to Gardner passed over the road, though it was not until several weeks afterward that it was formally opened for regular traffic. It proved to be of great convenience and value to the town, but, like roads similarly situated elsewhere, was obliged to struggle on by varying fortunes for many years, on account of financial limitations and other unpropitious circumstances.

Meanwhile the fact that immense quantities of lumber for manufacturing purposes were brought into town from the still extensive forest regions of New Hampshire, Vermont and Canada, created a need for better means of transportation in that direction, which the public recognized more and more, as the industrial interests of the community increased. Consequently a project was started in 1868 or '69—even before the opening of the Worcester road—looking to the extension of that road to Winchendon, which would give the facilities required. In furtherance of that project, a petition was forwarded to the General Court asking for such an extension under the name of the Gardner & Winchendon Railroad. Inasmuch as the enterprising citizens of the two towns interested had already pledged funds for the building of the road, it was confidently anticipated that a charter, in response to the prayer of the petitioners, would be granted without delay. But much to the surprise, annoyance and indignation of all interested parties, a vast amount of opposition to the enterprise was developed, in which the Vermont and Massachusetts, the Boston, Clinton and Fitchburg, the Nashua and Worcester and the Worcester and Providence Corporations were notably active, using all possible monetary and other influence to prevent the accomplishment of the object desired. This opposition prevailed temporarily, necessitating a vigorous fight of three years' duration, when, as in the case of the Vermont and Massachusetts road twenty years before, Gardner conquered and the act of incorporation asked for was granted by the Legislature in February, 1872. In due time the location of the road was fixed and a contract for its construction was made with Mr. B. N. Farren, of Greenfield, who began work upon it in December following. In less than a year the last rail connecting the Boston, Barre & Gardner road with the Cheshire was laid, and on Thanksgiving Day, November 27, 1873, a train from Worcester, conveying the officers of the corporation and the mayor and other gentlemen of that city to Winchendon, arrived there in season for a substantial dinner at the American House. The road was opened for regular business two months afterward, February 2, 1874. Thus, in spite of all opposition, was consummated an undertaking which was of vast importance, both to the Boston, Barre & Gardner Railroad corporation and to the industrial prosperity of Gardner for all time to come. The road as completed was made especially conducive to the town's welfare, by furnishing the leading manufactory of the place with direct facilities for transportation, and, by laying spurs of track, for the accommodation of other establishments. Struggling on for a series of years under difficulties already referred to, it was at length delivered from its many embarrassments by an arrangement with the Fitchburg corporation, according to the terms of which its entire management was tranferred to that body, which had previously secured control of the Vermont and Massachusetts road, so that at the present time all the railroad interests of Gardner are under the management of the Fitchburg Company, in which the citizens of the town are well represented. The present railroad system of the place, reaching out to the four cardinal points of the compass, and furnishing ready and easy communication with all parts of the country, and with all the markets of the world, seems to meet the essential needs of the people at large, and is highly satisfactory. A common station for both roads at the point of crossing, commodious and attractive, suited to the size of the town, the extent of business done and the style of public and private buildings in the place is an already existing need, and one which will undoubtedly be met at an early day.

CHAPTER CXII.

GARDNER—(*Continued.*)

INDUSTRIAL INTERESTS.

AT the outset the inhabitants of Gardner were, by the very necessities of the case, tillers of the soil. Indeed, one of the leading objects in locating upon its territory was to obtain a livelihood—an adequate supply of the necessaries of life for themselves and their households. And this was to be done by none of the modern methods of the industrial and business world, but by making levies, in good, primitive fashion, upon the products of the earth, to be obtained by earnest, honest and persevering work. It was each man's business, after making a clearing in the wilderness, and providing some sort of shelter for himself and his dependents, to break the sod and plant the seed of hoped-for harvests. So it was the town entered upon its career, beginning at the bottom and building up by slow but sure processes to larger and to better things.

Most of these early settlers, in addition to their knowledge of agriculture, which was, of course, crude and limited, knew something of the use of such tools as were employed in the more essential trades, and were able to build their own rude dwellings, the cabin or log-house, and also whatever other structures they might need, together with many of the implements of husbandry. Time and necessity developed latent skill in various kinds of useful handicraft; and some there were who, to their acquirements and toil as husbandmen, added, for their own and their neighbors' benefit, some special trade or branch of industry. Joseph Bacon, for instance, was a leading carpenter, and Andrew Beard and Timothy Kneeland pursued to some extent the same useful avocation. Seth Heywood, David Nichols and Jude Sawyer were blacksmiths; Jonathan Bancroft was a shoemaker, and no doubt "whipped the cat," as did others of that craft since that day. Gideon Fisher had the reputation of being "a mighty hunter," though to what profit to himself or others does not appear; and John Glazier, Jonathan Greenwood and Captain Elisha Jackson each kept an "ordinary," or public-house. Moreover, the first minister of the town, Rev. Jonathan Osgood, was a tanner by trade, though he probably never pursued that calling after coming to Gardner, except in a metaphorical sense. Albeit, like many another clergyman of days gone by, he was something of a farmer, and, moreover, a physician of acknowledged ability—withal, a man of many gifts.

For full fifty years farming was the principal occupation of the people of Gardner. Fathers trained their sons to the arts of the husbandman, and the sons, true to their training, succeeded to their father's calling and estate, each man's landed property usually going to his children. Mothers trained their daughters to be farmers' wives, and farmers' wives they usually became. By this honorable and honest vocation two generations of the first settlers of the town not only gained an adequate livelihood, but secured for themselves a competency, with provision, with rare exceptions, for misfortune and advancing years. Though the soil cannot be regarded as specially favorable to agricultural pursuits, yet it has always yielded fair returns for wise investments made, supplying many a household with the more substantial necessaries of life from the beginning and furnishing something for the growing home and outside markets with the flight of time. And while the farming interest of the town has relatively declined during the last half-century, yet it still, under the shadow of the more prosperous and imposing manufacturing and commercial activities, maintains a respectable place in the catalogue of industries, some of the more substantial and thrifty citizens being followers of the plow and keepers of flocks and herds. The demand which the constantly increasing population engaged in various kinds of manufacturing makes upon the tiller of the soil for all sorts of fresh produce is an ever-present stimulus to the farmer, and that he is by no means indifferent to it is sufficiently attested by the improvements continually going on in his department of the general industrial hive. To show what is being accomplished in his behalf, a few quotations are made from the last census reports sent to the Secretary of State, according to the requirements of the statutes of the Commonwealth. They relate to the year 1885, and are as follows, to wit: Number of farm-houses in Gardner, 72; number of farm barns, 77; other farm buildings, 27. Estimated value of property invested in farming, $378,948. Valuation of land devoted to farming, $223,618; of buildings, $102,670; of tools and machinery, $13,893; of domestic animals, $33,499; of fruit trees, $5,268. Value of agricultural productions for the year, $92,476. Eighty-nine farms are owned by the men who work them and one is hired. The whole number of men engaged in farming is one hundred and eighty-five.

COOPERING.—A considerable number of the people in Gardner at an early day supplemented their farming operations by the manufacture of tubs, barrels, pails and other kinds of wooden-ware of the same general sort, engaging in such work in the winter-time and at other seasons of the year when the weather was unsuitable for out door labor. After awhile this came to be in some instances the leading or perhaps the sole occupation, the call for such goods increasing as the town and country round about became more densely settled and householders more able to supply themselves with these conveniences of domestic life, or as the demands of the general market multiplied. Among those who carried on a considerable business in this line of production fifty or seventy-five years ago were Liberty Partridge, George Baker, Alvin

Greenwood, Robert Powers, Benjamin Kendall, Lewis Glazier, Smyrna Glazier, John Dyer, Hubbard Dunster, Walter Greenwood and others. The work was all performed by manual labor without the aid of any machinery, save only perhaps some very simple kinds that could be propelled by hand or foot-power. With the invention of mechanical devices, by which the same kind of goods could be produced much more easily and rapidly by water or other power, first introduced some sixty years ago, this sort of craft fell into disuse, and "coopering," as it was termed, existed only as a memery of bygone days.

POTASH-MAKING.—In clearing up the lands of the new settlements of this region of country considerable quantities of wood, which otherwise would have been of no account, were utilized and made a source of income by the manufacture of potash, for which there seems to have been a considerable demand at the time. A shop in which this article of commerce was produced once stood upon ground now covered by the extensive chair factory of the late S. K. Pierce & Co., owned and probably carried on by the William Bickfords—father and son—who had large tracts of the primitive forest in their possession. A similar establishment also occupied the site of the First National Bank. By whom this was conducted has not been definitely ascertained, but it seems likely to have been built and owned by John Glazier, who resided in the house which is now the dwelling of William Austin, and who was a large land-holder in his day. There were, without doubt, others in the early times, but no memorials of them have been found.

TANNERIES.—About the beginning of the present century there was a tan-yard located on the flat land directly below the lumber-mill of Lewis A. Wright & Co., owned by John and Isaac Nichols, sons of David Nichols, one of the first settlers on the Gardner territory. It passed from their hands into that of their brother, Asa, who sold it in 1811 to Joseph Sweetser, of Watertown, and he, in turn, to George Scott. Mr. Scott was the last one engaged in the business in that locality, and is remembered by the older inhabitants. A tannery once existed directly below the old Bickford Mill (now James Sawyer's), the vats of which could be recognized not many years since, but by whom it was run has not been ascertained. At a more recent date a Mr. Blaney carried on the same business on the west side of Green Street, just above the Elijah Brick place, the location of the vats being still plainly marked and readily recognized.

NAIL-MAKING.—In the year 1808 Abram G. Parker, of Westminster, and Francis Hill and David Perley, of Gardner, formed a co-partnership for the purpose of manufacturing nails and doing other kinds of iron work. They purchased the mill privilege now occupied by Wright & Read, built a dam and erected a factory, in which they placed machinery suited to their purpose, carrying on the business for several years. After some changes in the management, the property was disposed of, and the building was converted into a fulling and carding-mill, as will presently appear. Allusion has already been made to several blacksmiths in town during the first years of its history. It is proper to note the fact that at that period the making of nails was an important department of that trade, little or no machinery having been introduced or invented even for the production of that highly useful article.

THE MANUFACTURE OF CLOTH.—A very important industry of the first half-century of the history of Gardner, and one deserving a place in this review, was the production of cloth for domestic uses and to meet to a limited extent such demands as might come from the neighborhood and the community at large. Most of the goods from which the clothing of both men and women, as well as children, was cut, were not only home *spun*, but home-*woven*, as the garments themselves were home-*made*. The farmers, as a rule, kept sheep, and grew their own wool, at least enough for the needs of the family, which was in time carded, spun and woven by members of the household, and made ready for any service to which it might be devoted. The cardboards, the spinning-wheel and the loom were as essential articles of household furniture and implements of household use as were the plough, the hoe and the scythe for the proper equipment of the farm and tillage of the soil. And the wives and daughters were as familiar with the former and as skillful in operating them as were the fathers and sons the latter. Little time for idle hands, either within or without the dwelling, was there in those days, when the grandparents of the present generation were doing their best to keep the wolf from the door, to provide shelter, food and raiment for themselves and their children, and to guarantee themselves and theirs against any and every contingency of coming need,—laying in that way the foundations of a prosperity for their town, in which those coming after them to their latest posterity might rejoice.

FULLING AND CARDING-MILLS.—After the abandonment of the iron-works mentioned above, the building in which they were carried on was fitted up with machinery for cleansing and finishing the cloth produced in the homes round about, giving it, by what was termed the process of "fulling," greater compactness of texture, which rendered it more serviceable and more pleasing to the eye. After a time also a machine for carding wool was introduced, which greatly facilitated the process and relieved the household of a large amount of difficult and tiresome work. This mill was run until about the year 1829 by Colonel Ephraim Williams, who then disposed of his interest in it, and the building was converted into a shop for the manufacture of pine furniture, as will be duly set forth hereafter. In 1822 John Merriam having purchased the Caleb Jackson farm, lying on both sides of

what is Winter Street, with the adjacent mill privilege, now utilized by S. Bent, Bros. & Co., erected a mill for fulling purposes, which he afterwards enlarged sufficiently to enable him to put in a carding-machine to run in connection with the other business. The mill was used for the purposes indicated for about a dozen years, when Mr. Merriam left town. In 1836 it was purchased by Sullivan Sawin and has been devoted to the manufacture of chairs from that date.

CARD-BOARD MAKING.—The business of getting out boards to which cards were applied for purposes of hand-carding was carried on to quite an extent for a time in the history of the town. A shop devoted to this use belonging to Josiah Wilder, Jr., situated on the Knowlton place, in the north part of the town, was destroyed by fire in 1813. One Aaron Conant had a manufactory in the east part of the town. And as an adjunct to this industry Joseph Wright was engaged for awhile in getting out handles for such boards. The articles produced were readily disposed of at Leicester, where they were finished and made ready for the market.

PINE FURNITURE.—The building standing on the site now occupied by Wright & Reed's chair factory, and used for many years as a fulling and clothing shop, was afterwards bought by Daniel J. Goodspeed, who began the manufacture of toilet tables and wash-stands, with other articles of pine furniture. In 1846 the factory was burned, but immediately rebuilt and work resumed. Afterward Mr. Goodspeed left this locality and engaged in chair-making at the Henry Whitney Mill, the site of which is now occupied by the Howe Bros.' grist-mill, where he, some years later, was again burned out. Meanwhile a Mr. Baker associated with himself Lewis H. Bradford and the making of pine furniture was continued at the old stand, the firm bearing the name of Bradford & Baker. They went on for a few years, when the business was given up altogether.

TUBS AND PAILS.—One of the oldest existing industries of the town, and one which has been prosecuted with the fewest changes of any sort, is the manufacture of tubs and pails, now going on under the direction of Alfred Wyman, step-son of the late Amasa Bancroft, by whom it was represented for more than a half a century. It was established about the year 1832 by R. Heywood Sawin and his brother-in-law, John Damon, who had been previously engaged in getting out chair stock and in chair-making at the old Joshua Whitney Mill site, known in later years as the Pail Factory. A saw-mill was erected at this spot soon after the town was incorporated, or possibly before, by Mr. Whitney, who settled near by in 1778, or thereabouts, and who owned considerable land in the vicinity. From Joshua Whitney it passed into the hands of his son Joseph, who, in the year 1822 or 1823, sold it to his brother-in-law, Luke Sawin. In 1824, Luke sold to his kinsman, Sullivan Sawin, of Westminster, who in the year 1826 disposed of one-third of it to his son, Reuben Heywood Sawin, and one-third to his son-in-law, John Damon, retaining the remainder to himself. An addition was soon after put up, circular saws and turning lathes were introduced, and a large business was done in getting out chair stock, the rapidly increasing manufacture of chairs in the vicinity creating a great demand for that kind of production. A few years later, about 1831, a new shop was erected and chair-making was introduced, carried on in part by Sullivan Sawin, Jr., and also by the before-mentioned parties under the firm-name of "Sawin & Damon." But the then recent invention of machinery for the turning of pails and kindred ware, together with the abundance of timber near at hand suitable for the manufacture of such goods, induced the latter to go into that business, and they accordingly did so, associating with themselves Jonas Child, Moses Wood and a Mr. Vail, the last two of whom were located in Providence, and attended to the selling of what was made as part of the business of a general furniture house which they had established. This arrangement continued till 1836, when Sawin & Damon, having purchased a large tract of timber land in Fitzwilliam and erected a mill upon it, desired to dispose of their Gardner interests that they might devote themselves exclusively to the new enterprise in which they had enlisted. It was finally decided to dispose of the entire pail manufacturing business, which had been carried on under the style of the Gardner Pail Factory Co., and this was accordingly done. The purchasing parties were Amasa Bancroft, Jared Taylor, Frederick Parker and Joel Baker, the firm being known by the name of Taylor, Bancroft & Co. In 1840, Mr. Bancroft bought out his partners and continued the business alone for twenty-five years, when he associated with himself his son-in-law, John C. Bryant, who remained with Mr. Bancroft till his death in 1882, the name of the partnership being Amasa Bancroft & Co. About a year after the death of Mr. Bryant, Mr. Bancroft received his step-son, Alfred Wyman, as associate in the business under the former name, and this relation continued till the decease of the original member of the firm early in 1888, who had the reputation of being the oldest tub and pail manufacturer in the country. The business has always been carefully managed, without any effort to increase it to gigantic proportions, and has been attended with satisfactory results. For many years it has employed an average of eighteen men, and has turned out, annually, goods amounting to the value of about $25,000.

THE MANUFACTURE OF CHAIRS.

The leading industry of Gardner, overshadowing all others and contributing more than all others to the prosperity and wealth of the town, is chair manufacturing. It is this which distinguishes it above all other towns in the county, and has given it a name and an honorable fame far and wide throughout the length and

breadth of the land, and even in foreign realms. So important a factor in the development of the material, social and civil interests of the community, in shaping its fortunes and determining its history, deserves a somewhat detailed and careful statement of its growth from humble and unpretending beginnings through the various stages of expansion and progress up to the grand and imposing proportions which it has, at the present writing, attained. And to such a statement the attention of the reader is hereby invited.

It is generally understood and believed that the father and founder of the chair-making business in Gardner was James M. Comee, son of David Comee, who came from Lexington some ten or twelve years before the incorporation of the town, and settled near the junction of Pearl and Chapel Streets, in the east part. David was the son of David, who was the son of John Comee, the first of the family in the country, as is supposed, a resident of "Cambridge Farms," afterwards Lexington, at the time of its organization as a precinct in 1693. He is said to have served in the battles of Lexington, Bunker Hill and Bennington. He married (1) Christiana Maltman, also of Lexington, by whom he had seven children; and (2) Hannah Maltman, the mother of eight more. Of these fifteen children James M. was the second, born April 18, 1777. He married Sarah Putnam, and located at the top of the hill on what is now Pearl Street about the year 1800, upon the estate now owned and improved by Webster Gates, who married his grand-daughter, Mary F. Jaquith. In the year 1805, so far as can be learned, he began the making of chairs, in a very small way, in one of the rooms of his dwelling-house, doing most of the work at the outset with his own hands. Finding the business profitable, Mr. Comee soon called in some of the lads or young men of the neighborhood to assist him as apprentices. Among those thus employed at an early date were Enoch, Elijah and Jonas Brick, while, later on, were Isaac Jaquith, Elijah Putnam, Luke Fairbanks, Joseph Jackson and others. Several of these men afterwards started the same business on their own account and prosecuted it for a longer or shorter term of years, more or less successfully.

The chairs first made by Mr. Comee were undoubtedly constructed wholly of wood, the seats being of solid plank, either in one piece or in several pieces, firmly glued together. Rocking-chairs constituted a considerable portion of the goods produced; some having a seat entirely flat, except it may have been hollowed out somewhat with an adze; and others, more easy and tasteful, having what was called the *raised* seat. Not many years transpired, however, before a new style of seat came into vogue, known as the *flag* seat, which proved to be very acceptable and salable, and which was in good demand for a quarter of a century, or until superseded by the more modern and more artistic rattan or cane-seat. This seat was manufactured from a plant often found in this locality, growing in marshy places and along the borders of sluggish streams, known to botanists as a form of the genus *Typha Latifolia*, and to people at large as the cat-tail flag. Being of a tough, fibrous nature, with considerable thickness of structure and of sufficient length, it was well adapted to the use designated. The leaves were wound around the four sides of a seat-frame, and, when carefully twisted and woven by a skillful hand in four compartments, whose intertwining lines converged from the corners to a common centre, presented a neat and attractive appearance. It was much more pleasing to the eye and more comfortable than the hard, stiff wooden seat which it largely supplanted, and was deemed a decided improvement upon it in many respects. Few, if any, chairs of this sort are now made, though specimens of them may be found in the dwellings of most of the older New England families.

In the early period of chair manufacture, the work was done mostly by hand, even to the getting out of the stock, only a small turning-lathe, propelled by foot-power, being used for preparing the round stuff. What machinery was used was very simple and the tools were very few, so that the need of other than the force resident in the human muscle had not then been made manifest. Hence, for some years, chairs were made in the simple, slow, laborious way designated. The industry was in the elementary, formative period of its development, feeling its way along towards better methods and a well-assured success. An advance was made and a positive advantage gained when horse-power was introduced to facilitate the turning of stock and the doing of some of the more tiresome parts of the work, for which some simple mechanical apparatus had been invented.

The chairs made by Mr. Comee were, for many years, taken to Worcester, Lowell, Springfield and Boston, with teams of one or more horses, driven by himself or by persons in his employ, who sold them in small quantities, as opportunity offered,—sometimes even disposing of them from house to house, in the more sparsely-settled towns. In such a small way did Mr. Comee begin this important manufacture, and by such unpretending methods did he prosecute the work by which he earned for himself a name long to be remembered in his native town and wherever the business he did so much to make a permanent interest in the community is pursued.

Probably the first of Mr. Comee's apprentices to establish a business on his own account, and carry it on successfully for a long series of years, becoming thereby the second permanent chair-maker in Gardner, was Elijah Brick. He went to his trade in 1806, when fourteen years of age, and served in good old-fashioned style till he was twenty-one. Continuing with Mr. Comee as journeyman for a year, he bought, in 1814, a place half a mile north of the Common, on which he settled, built a small shop and commenced the making of flag-seat chairs. He em-

ployed his brother Enoch to assist him about the wood-work, and female help to make the seats. Later on, Benjamin Howe was in his service, and others, afterward, as his business increased. For many years he marketed his goods himself, carting them, with his own team, to Boston, Salem, Providence and elsewhere. About 1840 he extended his operations and commenced making cane-seat chairs, which had then become somewhat popular, and were rapidly rising into favor, with the trade and with the general public.

During the ten years following the date of Mr. Brick's setting up the making of chairs there were other persons who did the same thing, but their undertakings were small or of very brief continuance, and did but little towards building up the manufacture into a permanent and commanding position in the place. Among these was Jonas Brick, who began in a shop near the Wright saw-mill in 1818, the first of the trade, so far as is known, in the south part of the town. He was in business, however, but a short time, and at an early date left the town.

The chair-making era of Gardner history may be divided into two parts: the first covering a period of about twenty-five or thirty years, the second of fifty-five or sixty years. The former passed over or gave way to the latter with the introduction of machinery into chair-shops, to be run by water or other power, and also with the introduction of the use of rattan as an important element or constituent part of the material for the production of chairs. The transition from one to the other of these divisions may be regarded as having taken place substantially between the years 1830 and 1835, during which period the germs of most of the existing large chair establishments were first planted and began their process of growth and development, as will hereafter appear.

Recognizing the distinctive characteristics of the chair-manufacturing industry which marked the change alluded to, and looking over the list of those who were active and instrumental in bringing that result to pass, it is eminently just and proper to make special mention of the part taken in the matter by Mr. Elijah Putnam. Disappointed, as no doubt he was, in many of his plans and expectations, and not to be counted among the successful manufacturers of the town, he yet was, for a long series of years, connected with the chair business, and perhaps contributed as much, in his way, to the development of this branch of production and to the new departure which ushered in the better day of chair-making, as any other individual. Fertile in inventive resources, he yet was not gifted with that practical judgment and executive ability which were needful to use those resources to the best advantage, and make them productive of the most profitable and satisfactory results. Full of new ideas in regard to the manufacture of chairs, and abounding in designs and devices of a mechanical nature, he lacked the power of embodying his ideas in a feasible working system, and of applying his contrivances in an effectual way to the attainment of the ends proposed. Nevertheless, he rendered essential service to his calling and to the community by his suggestions, by his hints at improvements or his imperfect conceptions of tools and machines, which he could not of himself work out to successful issues, but which others, of a more practical turn of mind, getting possession of, could easily put to efficient and remunerative service. And it is believed that some of the more valuable kinds of chair-making machinery and various improvements in the business, which first came into use and rendered important aid in advancing to its present commanding position the chief industrial interest of the town, originated in the prolific brain of this man, who, himself, derived but little pecuniary advantage from them, but to whom credit for them in due degree should be assigned, even though others were instrumental in giving form to the ideas and principles involved, and in putting them into successful operation.

Mr. Putnam was one of the apprenticed workmen of James M. Comee. After closing his apprenticeship and perhaps working as journeyman for a time, he married, and settled upon the estate opposite the Common, where Charles Scollay now resides, going into business for himself about the year 1825. He possibly began in one of the rooms of his dwelling-house, but soon erected a shop in which to carry on his trade. He employed numerous workmen as time went on, some of the oldest and best known chair-makers of the town having served more or less under him. The usual foot-lathe was the only machinery he had at the beginning; but following the bent of his genius, he afterwards made use of a steam-engine of his own invention, which, however, did not prove a success. He then constructed and put up a windmill, as some still living remember, but this also failed to serve the purpose intended and was removed. He finally introduced horse-power, which supplied his needs till 1838, when he bought the mill privilege, now occupied by John A. Dunn, of William S. Lynde, built a dam and removed his shop thither, continuing the business for seven years, when he sold out to Cowee, Collester & Co., from whose hands the property passed, after several changes, to its present ownership. Mr. Putnam also carried on business awhile on the site to which Conant, Ball & Co. have recently removed, but his shop was burned in 1839 and the privilege was transferred after a time to L. H. Sawin, the predecessor of those now in possession of it.

To Mr. Putnam, moreover, belongs, with but little doubt, whatever credit is due for the introduction of the cane-seat to the chair manufacturing fraternity of Gardner and for making the rattan business an important branch of the predominating industry of the community. It was, so far as can be ascertained by

extensive and painstaking inquiry, under his auspices that the first cane-seating was done in the town; it was by his agency that imported rattan was first brought to the place, split, shaven and made fit for use; and it was under his management and in his name that cane-seat chairs were first actually produced here and put upon the market, as will be more fully set forth in subsequent pages.

Recurring once more to the date at which Mr. Putnam began his career and when several others also were looking to the same calling as a means of livelihood and of worldly prosperity, it may be stated that the increased and increasing demand for chair stock occasioned thereby suggested the use of water-power, of which there was considerable not yet improved in town, as an easily available agency for meeting that demand. Mr. Ezra Baker seemed to be the first to turn the suggestion to practical account and appreciate the opportunity offered for a new and promising industrial pursuit. A plan of action presented itself to him, which he very soon proceeded to carry into effect. He purchased a small mill privilege on Kneeland Brook, situated half a mile northwest of the northern extremity of Crystal Lake, constructed a dam, erected a shop and put in one or more lathes for the turning of posts and stretchers and other parts of chair material. At that time the timber used was bought of the farmers round-about, who prepared it for the lathe by cutting it the required length, splitting it and taking off the corners, as it was not then deemed possible to turn a square stick. The circular-saw had not come into use. But its day was at hand, and it was not long before Mr. Baker purchased one, put it into his shop and prepared his own lumber for the lathe. This was the first saw of the kind in town. In 1828, the business of Mr. Baker increasing on his hands, he purchased the Fairbanks grist-mill, afterwards sold to Elijah Putnam as stated, and transferred his machinery there, where he operated for several years. Previous to this change on the part of Mr. Baker, Asa Perley erected a shop of considerable size on the same stream, near where Clark Street crosses it, and fitted it up for the same kind of work. It was not long after this that Sawin & Damon engaged in the same business at the Pail Factory site, and about the same time Merrick Wallace, who married the daughter of Ezra Baker, bought of Deacon Fairbanks the small privilege above his grist-mill, where the main factory of Heywood Bros. & Co. now is located, built a shop and went into the business of getting out chair-stuff there. Similar enterprises were started elsewhere in town and went on with a varying success, until the demand was more than met, or until chair-makers came to see that it was for their advantage to prepare their own material, when the work of getting out stock as a separate and independent calling was given up and became an integral part of the general business of chair manufacture. This was another feature of the transition from the earlier to the later period of the chair-making era—from the old to the new system of ways, means and methods of chair production.

A sketch of the existing chair establishments of Gardner, such as is proposed, will involve a still further consideration of the change alluded to, since some of them date back to the time when it occurred, and since some of their founders were more or less active in bringing it about. But before going on to present such a sketch, it seems proper to submit as briefly as may be an account of the introduction and use of rattan as an important adjunct or component part of the manufacture in its more modern aspects and achievements. Constituting as it does a distinct branch of the general industry under notice, and possessing characteristics peculiar to itself, it may be considered under the specific name of

THE RATTAN BUSINESS.—Rattan is a species of the palm tree bearing the scientific name of *Calamus Rotang* and a product of the forests of the East Indian Islands, especially of Sumatra and Borneo, and of the Malayan Peninsula. It is a slender plant, scarcely ever exceeding an inch in diameter and of great length. It is sometimes supported by the larger trees among which it grows and sometimes runs along the ground forming a tangled web, through which it is impossible to pass. The peculiarities which render it valuable for a great variety of uses, and which give it commercial importance, are its remarkable flexibility and strength, its extreme length combined with uniformity of size, its capability of being split into small strips and the hard, silicious glazing with which it is coated. It is gathered by the natives of the region where it is produced, and prepared for shipping at very little expense, and then sent to different parts of the world. The eastern nations of Asia have for a long time known its value and have used it in making various articles of furniture, baskets, sieves, mats, and even hats and shoes. Large quantities of it are employed in China as bands for tea-chests, to secure them against the perils of transportation. It was probably in this way that it first became known to Western Europe and to America, where its properties are now so well understood, and where it is at the present day so largely utilized in the production of many kinds of house furnishing goods, children's carriages, and numerous styles of fancy articles; also for decorative purposes, being easily made to assume unique and newly-devised forms, pleasing to the eye and taste. Its adaptability to an indefinite but ever-increasing number of uses has given it in these later years a wide distribution and an unbounded popularity throughout the civilized world.

At what date rattan was first used as a part of chair construction in this country has not been determined, nor in what locality, nor by whom it was thus originally employed on these shores. It was first brought to the notice of the people of Gardner and vicinity in that connection about the year 1830, at which time

chair-seats were being made of it in or near the City of New York, whence they were sent in different directions and put into chairs by those already engaged in chair manufacturing. It does not appear that any of the trade in Gardner made use of any of these New York seats in their business previous to the date at which what are called cane-seats were actually produced within its borders, though it is quite certain that they were purchased and used to some extent in neighboring towns about that time. The work of putting the rattan, or cane as it was more familiarly called, into these New York seats was done in part, at least, by the inmates of the penitentiary of the State of Connecticut, and it was by that avenue that the "seating" of chairs and the making of cane-seat chairs first found its way into this town.

It was in the year 1832 or 1833 that John Cowee, an employé of Mr. Elijah Putnam, visited the Connecticut State Prison, and, by going through the department where the inmates were engaged in "seating" chairs and carefully watching their movements, obtained an idea of the way in which the work was done. Whether he did this on his own motion, or at the suggestion of Mr. Putnam, is not known. After leaving the prison he purchased a seat and also some cane made ready for use and returned home, bringing the articles with him. Going to the shop of Mr. Putnam, he carefully took the cane from the seat, studying the process closely, and then went to work with the prepared cane, putting the seat in again and so producing the first seat of the kind that was actually "seated" in town. This point gained, it was not difficult to go on to the construction of a cane-seat chair in all its parts from beginning to end. And this Mr. Putnam proceeded at once to do. Making the frames by facilities easily obtained, he engaged women to come to his house, where they were taught the mystery of seating, and where they were employed for a time in doing that part of the work, one of the rooms of his dwelling being devoted to that use. These seats he put into chairs which, when finished, were sold with other articles of his production, and the cane-seat chair business was fairly inaugurated in the community where it was in after-years to attain undreamed-of proportions and achieve a most wonderful success. The "seating" continued to be done on Mr. Putnam's premises until it was found that the demand for the chairs could not be met unless the seats could be produced more rapidly than was possible in that small way, when the practice of "putting out" seating was inaugurated—that is, of distributing the frames and cane in families in the neighborhood, by the members of which the interweaving process was carried on. As the cane-seat chair grew in popular favor and the business of manufacturing it increased, this work of "seating" was enlarged proportionally, expanding and extending itself until it became an important industry on its own account, affording employment to the inmates of hundreds and thousands of homes in the region round-about and contributing, as a source of income, largely to the comfort, prosperity and happiness of multitudes of people.

To begin with, the cane put into the seats was obtained from outside, probably from New York, prepared for use. Very soon, however, in 1833, Mr. Warren Sargent, from Dummerston, Vt., and a little later his brother, John R. Sargent, came to the place and went to work getting out cane, as it was termed, in Mr. Putnam's shop, and, most likely, under his auspices, where they carried on business for a time, inducting others into it and establishing it upon a permanent basis. Leaving town after a few years, they were succeeded by Benjamin H. Rugg, a skillful and successful cane-worker, for a long while at the Heywood shop and at his own residence on Green Street; Robert G. Reed, who worked first at Mr. Putnam's and afterward at James M. Comee's; Edmond Newton, at South Gardner; Asher Shattuck, who was first employed at Putnam's in 1838 and, after serving at several places, finally in the cane department at the Heywood establishment in the West Village, and perhaps others. Probably Mr. Shattuck is the oldest living cane-worker in Gardner, and the one who has been longest connected with that special industry.

For twenty years or more the work of getting out cane was done by hand. It was a slow, difficult, laborious process, requiring care, skill and quickness of motion for its successful prosecution. Numerous steps intervened between the taking of the material in hand by the worker and the leaving it ready for the hand of the seater. It was received, as it is now, just as it was shipped from its native shores, just as it was taken from its native forests, indeed, except that the leaves crowning its top and the spines grown at its several joints had been removed, after which it had been put into bundles of one hundred stalks each, about sixteen feet long, doubled in the middle and compactly tied together. The first thing done with it was to straighten it, so that it could be easily handled and conveniently worked. Each stalk was then passed through the hand from end to end and every joint was taken off or pared down with a common knife, so as not to interfere with the further working of it, or with the drawing in of the strands when woven by the usual method into a seat. This was termed cleaning the cane. When this was accomplished the act of splitting or slabbing took place, which consisted, in the case of the smaller rods or stalks, in quartering them from end to end, and when they were larger, in taking off from the several sides enough to make two strands, with the exception of the last one, perhaps, which would sometimes make but one. This was also done with a common knife and required special care and skill to prevent waste. Each strip thus produced was afterwards ploughed or passed under a sharp-edged tool, shaped like the letter V, being held in place by proper appliances,

which would cut away most of the core or woody portion of the strip, and at the same time so nearly split it into two equal parts as that they could be readily separated. Each of these parts was then drawn between two properly adjusted cutters, which reduced it to a uniform width and was termed gauging the cane. It was afterward planed or brought to a uniform thickness by passing it over another cutter set into a block of wood, likening it to the carpenter's tool from which this step of the process derived its name. This concluded the mechanical part of the work. The cane thus prepared was then parceled out into lots of one thousand feet in length in the aggregate, neatly tied in bunches of convenient size, and after being sufficiently bleached, was deemed ready for use. In this, the original method of getting out cane, each part of the work was distinct and separate from all others, and the power employed was that resident in the bones and sinews of the workmen, small pincers being used for holding the strands in the drawing processes and whenever the fingers could not conveniently and successfully serve the end desired.

But this slow method was destined to be superseded. The invention of machinery and the use of water or other power for the purpose of preparing rattan for the various kinds of service to which it was applied, was only a question of time, and the time came many years ago. In the year 1849, Mr. Sullivan Sawyer, then of Templeton, but now of Fitchburg, secured letters patent on a machine "for splitting and dressing rattan," and also on one for cutting rattan, in 1851. These are the first inventions connected with the business mentioned in the reports of the Patent Office of the United States, but for ten years from the date of the first of these they averaged one annually. A third patent was issued to Mr. Sawyer for a cane-working machine in 1854, and a fourth in 1855. In 1852 one was granted to Joseph Sawyer, of Royalston, and another in 1854, as also one in the same year to Mr. A. M. Sawyer, Templeton. In 1855 Mr. C. C. Reed, of Philadelphia, was similarly honored; also Mr. C. C. Hull, of Charlestown. In 1858, George S. Colburn, then of South Reading, but for many years a resident of Gardner, and the manager of the cane department of the Heywood Manufactory until a recent date, took out his first patent for a rattan-machine, as he has also received several since that period. Some of these machines were of only experimental service, not standing the test of practical use; but they were helps to that more perfect system of mechanisms and devices by which cane is now prepared for the multiform uses to which it is applied. As a matter of fact, out of these several inventions there were evolved two or three machines, differing from each other in some respects, which were put to effectual use, and for a time supplied very largely the needs of the cane-seat chair-making public. At what date these went into successful operation it is difficult to determine. Indeed, they were being experimented with and improved for several years, and turned out much imperfect work before they gave reasonable satisfaction, a result which was achieved about the year 1858 or, it may be, a little earlier; but it was not far from that time that the problem of getting out cane by machinery was regarded as solved, and that a new era had opened to that branch of business. For some years succeeding that period but little cane was worked in Gardner, that which was consumed in the town being prepared for the most part at Boston or Fitchburg, where large companies, organized for the purpose, had control of that department of the chair-making industry, and supplied the demand existing in this vicinity. Later on, however, arrangements were entered into by the parties concerned, under which the business of getting out cane was resumed in this place about the year 1875, where it has been continued under different and varying auspices to the present time. Numerous improvements have been made in cane-working machinery as the business has gone on, and many new inventions have been brought forward, some of which have proved valueless, while others have been of great service. Of these (produced mostly in the shops where the work is carried on) but few have been protected by United States patents, and so do not appear in any public record. One of the most important of these later machines, however, it may be stated, was the fruit of the practical sagacity of Mr. George S. Colburn, for which he received letters in recognition of its originality and merit from the United States Patent Office, bearing date November 18, 1879. It is substantially the machine now in operation in the only cane-producing establishment in Gardner, one of the largest in the world, and one from which all the cane used in the vicinity is now received, though it has been subjected since it was first started to sundry modifications and improvements, whereby its work is rendered more perfect and satisfactory.

But not only have there been great improvements in the methods of getting out cane or of preparing it for use, but also in the ways and means of working it after it is so prepared, as well as in the styles or forms it is made to assume, when it is finally adjusted and finished for the market. Originally the only seat produced was what has been called the Chinese pattern, whether because it was devised in China and brought thence to this country or not is not known, but probably for that reason. It consisted in arranging the strands of cane passing from one side to the other of the frame and from front to back, in pairs, crossing each other at right angles; each strand so interwoven with the others as that it passed first above and then below one running transversely, in regular order, all being attached to the frame by putting them in their proper place through holes made for the purpose. These pairs were adjusted according to the

distance between the holes, usually about half an inch apart, causing square openings of a corresponding measurement to be made. Through these openings other strands were interwoven diagonally in two directions, thus cutting off their corners and making them octagonal in form. This produced a firm, substantial piece of work, which when well executed was strong, durable and pleasing to the eye. A binding around the edge covering the holes in the frame gave it proper finish. This style of seat was the only one made for many years, and the same pattern of weaving was put into backs when cane-back chairs came into vogue. The work in it was always performed by hand, an adroit use of the fingers being necessary to a rapid execution of the different interlacing processes. This is the kind of seating substantially which was distributed far and wide throughout the community and furnished remunerative employment to a multitude of families for a long series of years. After a time some variations from it were introduced, gratifying to the popular taste, but not changing materially the character or method of the work.

It can be at once seen that seating according to this method was at best but a slow process, and so one not likely to satisfy the demands of this hurrying, fast-driving age. Seats must be made at a more rapid rate than was possible under the old, long-prevailing system. To meet the exigencies of the trade and of the times, a loom for weaving cane into a continuous web by the use of power was invented—the production of the mechanical skill of Mr. Gardner A. Watkins, formerly of Proctorsville, Vt., but at the time and since a resident of Gardner, whose ingenuity in this department of manufacture was repeatedly recognized and honored by the United States Patent Office during the years 1867–69. Other looms have been invented by other parties since that period, and numerous improvements have been made upon the original designs. The product of the looms first brought into use and run to much profit was what may be termed the solid web, similar to that of the simpler kinds of woolen and cotton cloth. It made a strong, durable seat, but had no artistic merits, and hence, was not suited to the higher, nicer grades of goods. Changes have been going on. New appliances have been added and different patterns of webbing have been devised, but everything thus far brought out as the result of the introduction of the loom has been open to the same objection. No invention for weaving cane, so far as is known, has yet been able to make the Chinese seat pattern or anything nearly equal to it in artistic excellence and attractiveness. Yet a loom, or a device, has been invented by the use of which the production of that precise pattern has been greatly facilitated. It admits of such an arrangement of certain parts of its mechanism as that the several pairs of transverse strands which enter into the construction of the ordinary seat, constituting what is often termed warping and checking, can be woven together in proper form to receive the oblique or diagonal strands. Moreover, an ingenious contrivance has been devised, by the use of which these diagonal strands can be interwoven with wonderful ease and dispatch. It consists of a large needle, long enough to reach in an oblique direction from one side to the other of a web of cane prepared as just stated, having a revolving point which works its way through the proper openings by the turning of a small crank on the part of the operator, carrying with it as it advances a single strand of cane which it leaves in its rightful place, when it is itself withdrawn. By the use of these two inventions in connection with each other, the work of making seats of the original Chinese pattern at an immense saving of both time and labor is accomplished, and their introduction is likely to affect very seriously the old practice of hand-seating, even if it does not eventually bring it to an end. Moreover, that practice is threatened in another direction. There is a machine in process of construction, passing through its experimental stages, and promising success, which, while it may not produce the Chinese pattern exactly, will fabricate something so much like it that the casual observer would scarcely notice the difference, and hence can readily be substituted for it in many if not in all the nicer kinds of cane-chair manufacture. And, besides, this machine, when perfected according to the plan of those engaged in developing it, as it is quite likely to be, will do not one style of weaving alone, but an indefinite variety of styles in form and figure, by simply changing some of its constituent parts relatively to each other, or some of its multiform and intricate movements. In view of what has already been accomplished and will probably soon be accomplished, the whole matter of making even the better classes of cane-seats is very likely to undergo entire reconstruction at an early day.

The invention of the loom, whereby a continuous web of the woven cane was rendered possible, necessitated the designing of some method of splicing the strands in some sure and effectual way. This necessity was met by Mr. Watkins, in the evolution of a machine or series of machines, about the year 1870, by the operation of which, in proper order, the ends of strands proposed to be united could be scarfed so as to exactly match each other, and then, the corresponding scarfed parts being duly charged with cement, be brought together and subjected to pressure in such a way as to cause them to adhere firmly without perceptibly enlarging the size of the strand at the point of juncture. The several devices by which this result is secured are exceedingly ingenious, and reflect much credit upon the inventor. The work is done so thoroughly and neatly that an inexpert eye will scarcely detect the place where the splicing is done, even in the strand, and much less when in the

finished articles of production. Another method of splicing, evincing considerable inventive skill, which has been widely employed, is that of bringing the squared ends of the strands to be united together in line, and then bending about the two a little band or clasp of thin metal with serrated edges, which, when pressed closely into the substance of the cane, holds the parts securely together. This, though much used, does not make so neat a piece of work as the other method, and is not likely to be so durable or satisfactory to the chair-using public.

The use of the loom-woven seat, or of a seat made independently of the frame to which it was to be finally attached, also made it necessary to originate some plan of effecting that attachment, instead of the old one of passing the strands through holes bored for the purpose, which had to be abandoned. Two new ones have been employed with fairly satisfactory results. One of these is to turn the edges of the seat, cut to a proper size, down inside the frame and fastening them by a thin strip of wood on each side, firmly kept in place by screws. When carefully adjusted, these strips would hold the seat securely, as in a vise, and being underneath, would not be seen to disadvantage. Another plan is that of making a groove or channel continuously on the four sides of the frame, then cutting the web or seat exactly large enough to have its edges pressed into this groove without protruding on the outer side, and made secure by a strip of wood or spline prepared for the purpose, and forced into place after a suitable application of glue, to render everything firm and sure. A contrivance for beading the spline, and also for embossing the frame around it, operating in connection with the other processes, gives the whole a neat finish when completed. Every part of this work is done by machinery, the fruit of the inventive faculty of different persons, some of it being very ingenious, complex and heavy and of immense power. It is capable of being worked with such rapidity that, operating in connection with the loom continuously, only four minutes are required to make an entire seat, reckoning from the time when the cane is in the strand ready to be woven, to the time when the work is completed ready to be put into the chair for the market.

It is a noteworthy fact in this matter of the use of rattan as an element of chair and other manufacture, that a much larger portion of it is now made serviceable than was formerly the case. For a long time after it was introduced it was believed that only the external parts were of any practical value, which must be put into the goods in such a way as that the wear would come altogether upon the smooth, silicated surface. It has been found, however, that what remained after the outer portions are removed may be utilized in a great variety of ways. And much of the reed and rattan work of the present day, so pleasing to the taste and so deservedly popular in the form of chairs and other furniture, children's carriages, baskets, etc., is composed of these portions once deemed of no account and consigned to the flames. These same portions are also split into strands and, after being properly dressed and made smooth, are put into seats and other parts of the chair, just as those strands are which have the silicated surface. Goods thus fabricated have a presentable appearance, are durable and acceptable to the trade. In the ways indicated, almost the entire substance of the rattan is now turned to some profitable account, the actual waste being exceedingly small.

Before proceeding to give an account of the several chair manufacturing establishments of Gardner, the history of which will present further details touching the development of this interesting and important industry, it seems desirable to offer a few general observations upon the business under notice. And it may be remarked, to begin with, that the practice of using labor-saving machinery, which was first resorted to fifty-five or sixty years ago, and which was one of the principal features of the change from the old to the new methods of production, has become essentially universal. Invention has kept pace with the ever-growing demand for goods and with the multiplication of styles, supplying every department of manufacture with mechanical devices suited to the ends it was designed to secure. Space will not admit of a description of any of these devices, even of the most wonderful and valuable of them, nor yet of the simplest statement of the special use to which they are respectively put. It must suffice to say that they are multitudinous in variety, ingenious in design, thorough and complete in construction, wonderful in operation and in the execution of their appropriate work, many of them seemingly gifted with almost human instinct and practical sagacity. So completely do they supply the needs of the chair manufacturer, that nearly all of what is termed hand-work—that is, work done by human strength—is that of feeding the machines and of putting the different parts together after they have been prepared as indicated.

It seems needful also to state that much of the work of getting out stock, by which is meant cutting it from the original stick or log, and making it ready for the machine which shall put it into its final shape, is done in or near the lumber regions of New Hampshire, Vermont and Canada, or of more western localities, what is thus prepared being sent in bulk to the factories for further manipulation and use. Tracts of wood-land are sometimes owned by the manufacturers themselves, as are also the mills employed in connection with them, so that the entire process, or series of processes, required in the production of chairs, from the time of the felling of the tree whence comes the material that enters into their construction to the time when they are finally put upon the market, is under one and the same general management. But usually the stock is brought

to the factories "in the rough," having been purchased of parties who make a distinct business of preparing it and supplying the demand which exists for it in that form.

Manufacturers usually finish their own goods,—that is, they not only put them into proper shape as complete articles of furniture, but they paint and varnish them and make them ready for final use in the dwelling of the consumer. It is not unfrequently the case, however, that in putting chairs together, they are left unglued, so that, after they have been finished, they may be taken to pieces and closely boxed for convenience of transportation to distant places, where they may be "set up" and made ready for sale. Sometimes, too, they are shipped "in the wood," without having been put together or painted at all, to be completed and put upon the market at the place to which they may be consigned. All the larger chair establishments at this day have a repair department, well equipped with the fixtures and appurtenances of a machine-shop, in which not only is the necessary repairing done, but new machines, or parts of machines, constructed, and where any new invention brought out in any establishment may be put into proper form, tested, experimented with and, if proved to be of practical value, made ready for service.

It is now in order to present as briefly as may be a sketch of the several establishments which are in successful operation in the town, and which, with their antecedents, to be incidentally noticed, may be regarded as fairly representing the industry under consideration during the more memorable part of its existence. They will be introduced substantially in the order of their historic and commercial importance.

Heywood Bros. & Co.—The history of this firm and of the business which it represents runs back more than half a century, to the early days of chair-making, and of those other activities in the community which have been closely related to it. During all this period the family name has been identified with this industry, and has occupied a prominent place in everything pertaining to its expansion and prosperity. As early as 1826 Walter Heywood, third son of Benjamin Heywood, whose father was one of the first residents of the town, having then but recently attained his majority, began the work of making chairs in a little shop standing in the yard attached to his father's house, which occupied the site of the present Town Hall building. At this date his older brothers, Levi and Benjamin Franklin, were engaged in running an old-fashioned country store near by, although it is probable that both of them worked more or less at chairs in the way of learning the trade. Not long after, a new shop was erected by Walter on the spot where now stands the dwelling of Asher Shattuck, at the corner of Central Street and Woodland Avenue, in which the business was carried on till 1834, when it was burned. Meanwhile, Mr. Heywood associated with himself his brothers B. F. and William, younger than himself, also Moses Wood, of Gardner, and James W. Gates, of Boston, and in May, 1831, bought the privilege and shop of Merrick Wallace, where the principal factory of the present firm stands, and at once enlarged the facilities so as to accommodate them to their plans of increasing business. About the same time Levi Heywood, who, with his brother Benjamin F., had previously given up the store, went to Boston, where he opened a warehouse for the sale of chairs on his own account. In 1835 he returned to town and entered the firm just referred to, which was operating under the name of B. F. Heywood & Co. In 1837 the partnership was dissolved, the business being assumed by the Heywood Brothers, residing in town. A few years later Levi Heywood, who seemed to be more enterprising and progressive than his associates, especially in regard to the introduction of machinery, bought out their interest and went on for a while sole owner and manager of the concern. Subsequently, about the year 1844, he formed a co-partnership with Moses Wood, then of Providence, a member of the original firm, and his youngest brother, Seth, the firm name being Heywood & Wood. This arrangement went on till 1847, when Mr. Wood retired and Calvin Heywood, son of Levi, and Henry C. Hill, for some years manager of the painting department of the establishment, came in to fill the vacant place; the style of the new partnership being Levi Heywood & Co. Four years after this the firm resolved itself into a joint stock association, to which employés were admitted upon subscription to the invested capital, constituting what was known as the Heywood Chair Manufacturing Company. This new plan continued in operation for about ten years. In 1861 the shops of the company were consumed by fire, when the joint stock experiment was abandoned.

As a result of the burning of the shops and the consequent relinquishment of the joint stock experiment, a new firm was formed the following year, consisting of Levi and Seth Heywood, Charles Heywood, son of Levi, and Henry C. Hill, assuming the style of Heywood Brothers & Co., which has been retained to the present time. Early in 1868 Charles Heywood and Henry C. Hill withdrew from the concern, and Henry and George Heywood, sons of Seth, entered it. Subsequently, Alvin M. Greenwood, son-in-law of Levi Heywood, was admitted, and still later, Amos Morrill, who married the daughter of Benjamin F. Heywood, long before deceased. In 1876 Charles Heywood re-entered the partnership, and remained in it till his death, in June, 1882. Before the year expired, his father, Levi Heywood, who had been connected with the establishment half a century, and to whose insight, energy, business ability and untiring persistency its success was chiefly due, as was in large degree the industrial prosperity of the whole town, also passed away. Seth soon retired, disposing of his interest to his sons, while Mr. Mor-

rill bought Charles' share and part of that of Levi, which reduced the firm to four members at the opening of 1883, each having an equal interest under the re-adjustment. Four years later George, son of Seth Heywood, left, and George H., son of Henry, purchased an interest and become a partner with the remaining members, the charge of the Boston warehouse, then recently opened, being assigned to him. During the present year (1888) an interest in the business has been purchased by Calvin H. Hill, a clerk in the Gardner office, and also by John H. Welch, of the New York house. The firm at this writing consists of Henry Heywood, Amos Morrill, Alvin M. Greenwood, George H. Heywood, Calvin H. Hill and John H. Welch, and retains the name of Heywood Brothers & Co., which has distinguished it for twenty-seven years and by which it is known and honored throughout the land, and in realms beyond the sea.

This company confined itself to the production of the line of goods usual in chair manufactories till the year 1874, when they started the business of making reed and rattan chairs and furniture, as a branch of their regular work. This department has proved a valuable adjunct to the establishment, having increased in extent and in variety of style and workmanship from the beginning, incorporating with it a few years since the making of children's carriages in every conceivable diversity of design and elegance, and attaining at length wonderful proportions and unexpected importance. It is carried on in a building three hundred feet long, sixty feet wide and four stories high, well supplied with machinery, run by a Corliss engine of eighty horse-power. The firm have had a large establishment for the manufacture of the same kind of goods in San Francisco for some years, and this very season have erected a building for the same purpose in Chicago, three hundred and sixty feet long, fifty feet wide and four stories high, in which some four or five hundred hands are to be employed.

The business done by this immense establishment in the town of Gardner for the year ending August 31, 1888, was upwards of $700,000, while its entire business for that period exceeded two and a half million dollars. Employment is given in the Gardner shops to about thirteen hundred persons, whose monthly pay-roll is not far from fifty thousand dollars, or six hundred thousand dollars per year. The extent of floorage in these shops is three hundred and forty thousand square feet, or a little less than eight acres. The several engines used to run the works amount, in the aggregate, to three hundred and twenty horse-power, while the boilers are capable of producing five hundred and sixty horse-power. The concern, including all its departments, is undoubtedly the largest of its kind in the country, and probably in the world.

PHILANDER DERBY & CO.—The site occupied by the extensive manufactory of this enterprising and prosperous firm experienced varying fortunes during the first half of its history. It was originally purchased of William S. Lynde, in November, 1834, by Benjamin F. Heywood & Company, who built a dam and erected a saw-mill for the purpose of getting out lumber for use, probably in their chair factory already in operation on the stream above. The building was afterwards enlarged, furnished with machinery and used in part for the manufacture of chairs. At a later date it was sold to Martin Dunster, who removed to it the business of making boxes and various articles of wooden-ware which he had previously carried on in a shop located on what is now Broadway, near Otter River. A portion of it was let to Colonel Ephraim Williams, who established there a machine shop for making repairs and doing incidental iron work. In 1844 the whole establishment was destroyed by fire, and the property was purchased by several gentlemen, the principal of whom were John Edgell and the late Charles W. Bush, who, under the name of Edgell, Bush & Company, rebuilt and began the manufacture of boxes, chairs, settees and house-finishing material. After running a few years, they sold to Nichols & Baker, who used the premises for a grist-mill and for carrying on a general flour and grain business. That being given up, the estate was bought at auction, in 1863, by Philander Derby and Augustus Knowlton, who had been making chairs at the present shop of A. & H. C. Knowlton & Company, under the firm-name of Derby & Knowlton. They fitted it up as a chair factory and run it in connection with their other establishment. Two years later, Henry C. Knowlton, brother of Augustus, entered the firm, and the name was changed to Derby, Knowlton & Company. Under this management business increased rapidly, necessitating new buildings and new machinery, which were supplied from time to time as the case required. In 1868 Mr. Derby and the Knowlton brothers separated, the former retaining this shop and continuing business on his own account for eleven years, when he received, as partners with himself, his son, Arthur P. Derby, and his sons-in-law George Hodgman and George W. Cann, who have gone on together to the present time under the style of Philander Derby & Company. From small beginnings this establishment, under the general supervision of the senior member of the firm, who has displayed great enterprise, business sagacity and untiring persistence in the pursuit of purposed ends, aided latterly by his younger associates, has grown to immense proportions, enlarging its facilities from year to year, and increasing its production until it holds a place second only in importance to that of any other concern in town. The firm has warehouses in Boston and New York, and a half-interest in a house in Chicago, one of the largest of its kind in the great West. The amount of business done in Gardner the last year was about two hundred and fifty thousand dollars, which employed from one

hundred and twenty-five to one hundred and fifty men, while the entire business of the firm has reached in the aggregate nearly a million dollars a year. The commodious shops of the company are filled with a good supply of the best machinery used in the manufacture of chairs, some of the most ingenious and serviceable portions of which were devised, constructed and perfected on the premises, especially those pertaining to the rattan department, which is an interesting and important feature of the establishment.

S. K. Pierce & Co.—The extensive manufactory with which the familiar name of S. K. Pierce, recently deceased, was identified for more than forty years, occupies the site where long ago stood the old potash works belonging to the estate of Captain Wm. Bickford, a large land-holder of his time in the village of South Gardner. It was purchased about the year 1830 by Stephen Taylor, a *protégé*, it is said, of the Pierce family, who had been doing a small chair-making business for a brief period in the fulling-mill of John Merriam, located on the site of the present establishment of S. Bent & Bros. He fitted it up for a chair-shop, and began the manufacture under the old system, all the work being done by hand. The business soon outgrew its narrow accommodations, when the old building was removed and a new, more commodious and more convenient one took its place. A dam was built across the stream near by and water-power was introduced, with which to run the simple forms of machinery that were put in. Here Mr. Taylor, by industry, economy and careful management, built up a large and prosperous business, rendering it necessary for him to secure additional facilities in order that he might meet the increasing demand for his goods—a demand created by the excellent quality of his work and by the reputation he had acquired for integrity, trustworthiness and honor in all his dealings with his fellow-men. Desiring at length to relinquish business, he sold out to Mr. S. K. Pierce, who had learned the trade of making chairs when a youth, and who, after working at different places, had entered the employ of Mr. Taylor a year before. Mr. Pierce formed a partnership with his brother, Jonas Pierce, and the two went on together for three years, when the relation was terminated by limitation. During that period a one-story building, sixty feet by thirty, served the purposes of the firm, in which eight men were employed, besides the proprietors, who themselves performed their regular day's labor with the others. The chairs produced, which met with ready sales, were carried to Boston by the then existing methods of transportation, a single team of two horses doing all the work at first, though at the end of the three years of partnership the business had grown so much as to require two teams of four horses each to meet its requirements in that regard. After continuing alone for some time Mr. Pierce associated with himself Philander Derby, one of his workmen, who remained a partner only two years, when Mr. Pierce assumed once more the sole control of affairs, going on prosperously as before. With the rapid growth of business, additions were made as seemed desirable to the shop included in the original purchase, until in 1858 it was deemed wise to begin a thorough readjustment of the entire establishment, with its fixtures and appurtenances. Accordingly, some of the old buildings were removed to make room for the first part of the present spacious structure, whose full proportions and complete equipment were reached nine or ten years afterward. Since that time additional buildings have been erected for work-shops or store-houses as the interests of the business required. The main factory, as it now stands, is ninety feet long by forty-five wide, four stories high above the basement, with an addition of the same height fifty-six by thirty feet. Numerous other buildings devoted to purposes incident to the business added to this, complete the outfit in the respect under notice of this great concern. The mechanical equipment now in use is of the most approved kinds and patterns, and is operated by a water-wheel of forty-five horse-power, with an accompanying steam-engine for supplementary purposes of seventy-five horse-power. Over a hundred men are employed in this establishment, and a business is done amounting to about $175,000 annually. Some six years ago Mr. Pierce associated with himself his son, Frank J. Pierce, who had grown up in the manufacture and was well acquainted with its details, and who was therefore qualified to share with his father the responsibility of its management. By a sad fatality the senior member of the firm was stricken with pneumonia in the latter part of the winter of 1887–88, and died after an illness of only five days. Arrangements have been made between the several parties financially interested in this establishment, whereby it is now going on as hitherto, under the name of S. K. Pierce & Son, Mr. Frank J. Pierce being manager.

John A. Dunn.—The business of chair-making was commenced on the location where now stands the large and busy factory of John A. Dunn, in 1838, when Elijah Putnam bought the water privilege of Wm. S. Lynde, and, having constructed a dam, moved his shop there, and supplying it with machinery, put himself and his men to work. Seven years after, Mr. Putnam sold out to Thorley Collester, Ruel G. Cowee and Benjamin H. Rugg, who continued the business under the firm-name of Cowee, Collester & Co. for a short time, when Maro Collester and Edward Stevens purchased Mr. Cowee's interest, and the style was changed to Collester, Rugg & Co. At a later day Maro Collester and Edward Stevens retired, and Franklin and George Eaton took their places, when the firm-name was again changed to Collester, Rugg & Eaton. When Mr. Collester died, in 1862, Mr. Rugg and George Eaton left, and Nathaniel Holmes became associated with Franklin Eaton, forming the company

of Eaton & Holmes. Later John A. Dunn was admitted to the firm, which then took the name of Eaton, Holmes & Co. In 1875 Mr. Holmes sold his interest to Isaac J. Dunn, brother of John A., and the firm-name became J. A. & I. J. Dunn, under which business was carried on till 1886, when John A. bought his brother's share and has since conducted the enterprise on his own behalf. Up to the year 1859 or 1860 the machinery of the factory was run wholly by water-power, at which date, a large addition having been made, a twenty-five horse-power steam-engine was put in for supplementary purposes. In 1870 Eaton & Dunn exchanged this for one of one hundred horse-power, which is still in use. In 1877 another considerable enlargement was made to the establishment. The business has been increasing rapidly in later years and promises well for the future. The amount done advanced from one hundred and forty thousand dollars in 1885 to one hundred and seventy-five thousand dollars in 1887, and the extent of shop-room at the present date is twice what it was ten years ago, while the facilities for doing work have been multiplied proportionally. A great advantage was gained to this establishment and to others in the vicinity in 1881, when a spur of the Fitchburg Railroad was laid, furnishing greatly-improved and much-needed conveniences for the transportation of stock and manufactured goods.

SAMUEL BENT BROS. & CO.—This is one of the more recently formed chair manufacturing firms of the town, and one which, by inherent energy, close attention to business and personal integrity and honor on the part of those concerned in its management, has attained a well-merited success. The privilege on Mill Street which it occupies was first improved by John Merriam in 1822, who used it for the purpose of carding wool and fulling cloth. In 1836 he sold it to Sullivan Sawin, who had recently left the pail factory and settled near by, and it was fitted up for chair-making, the business being carried on by his son, Sullivan Sawin, Jr., in a small way for a few years. Sullivan, Jr., was succeeded by his brother, John, who improved the premises, increased the business and continued it for about twenty-five years. Besides some of the cheaper grades of wood-seat chairs and stools, he manufactured what were called office-chairs, which had a large run for a time. For many years he made a specialty of school furniture, both chairs and desks, which he sold to William G. Shattuck, of Boston, a large dealer in that kind of goods, and which through him were scattered far and wide throughout the country. He also made large quantities of children's chairs of different patterns and sizes, employing some six or eight men in his business. About the year 1860 he retired, and was succeeded by his brother-in-law, A. Allen Bent, who had been many years in his service, and who run the establishment with satisfactory results until 1869, when he disposed of the property to his younger brother, Charles, then just returned from California. Mr. A. A. Bent made a specialty of children's chairs, but he also turned out *bent* work, some styles of which, designed by himself, proved very popular, and are still produced and put upon the market. Mr. Charles Bent at once associated with himself his brothers, Samuel and Roderic L., under the name of Samuel Bent & Bros., and the firm started out on its prosperous career. They soon found it necessary to enlarge their accommodations, and improve in many ways their facilities for business, an experience repeated several times during their history. The old buildings have been removed and new ones, adapted to the growing wants of the manufacture, have taken their places. Their main shop is one hundred and twenty feet long by forty wide, two stories high with a commodious, well-lighted basement in which the heavier work is done. There is also a building one hundred and sixty feet long by forty wide, two stories high, which is used for a paint-shop and store-house, and in which is the office of the firm. A large barn has recently been erected for the convenience of the business. In 1880 a spur track was laid to the factory from the B. B. & G. Railroad, greatly improving the shipping facilities —the firm doing the grading at an expense of $4000 and the corporation laying the rails and furnishing the rolling-stock. Besides the common style and grade of goods produced by this enterprising concern, they supply the market with a large number and variety of children's toy chairs, mostly of fanciful design, for which there has in recent years been a great demand. Besides an excellent water-power, which is rendered doubly valuable by reason of the South Gardner Reservoir, elsewhere described, the establishment is provided with a fifty horse-power steam-engine for heating purposes, and for supplementing the water-wheel if necessary. About one hundred men are employed, and an annual business is done of $150,000. Mr. Samuel Bent, the senior member of the company, died in 1883, his son, Charles Leslie Bent, succeeding him in the firm, the style of which was changed to S. Bent Bros. & Co.

CONANT & BUSH.—This company consists of Chas. W. Conant, formerly member of the firm of Conant, Ball & Co., and C. Webster Bush, the present clerk of the town. In 1875, Mr. Conant, having withdrawn from active participation in the business with which he had been connected for some years, took the lead in establishing the enterprise of which he is now the head, for the purpose of manufacturing reed and rattan chairs, getting out cane and doing other kindred work. The firm commenced operations in 1883, in the building known as the "Alley Paint-Shop," near the railroad stations, which they had purchased, fitted up and furnished with new and improved machinery suited to their special line of production, including a steam-engine for the supply of needed power. The venture proved successful, the firm rising rapidly to a creditable and commanding position,

having produced the first year over a thousand bales of cane prepared for use, besides what they did in the chair-making department of their establishment. Two or three years later they entered into an arrangement with other cane-workers, whereby they engaged to suspend for a time that line of work, and have since confined themselves strictly to the manufacture of reed and rattan chairs in a manifold variety of useful and ornamental forms. They have recently purchased the "Carney Building," standing near the "Kendall Crossing," on South Main Street, and have fitted it up for the manufacture of all kinds of children's rattan carriages, which will hereafter hold a prominent place in their establishment. They have been employing, on an average, about a hundred men, and doing a business of $140,000 a year, which, by the enlargement referred to, will be considerably increased in the immediate future. With ample accommodations and all needful appliances for turning out work, the prosperity of this firm, managing their affairs with characteristic enterprise and sagacity, is assured beyond all peradventure.

CONANT, BALL & CO.—In or about the year 1852 Aaron B. Jackson and Aaron L. Greenwood purchased the water privilege which for many years had been utilized by the father of the former for running a grist-mill, with lands adjoining, located on the north side of Broadway, three-fourths of a mile west of the South Gardner post-office, upon which they erected a factory for making various styles of cane-seat and back chairs. Here they started and carried on business till 1857 or 1858, when they sold out to Abner and Leander White, who continued the same under the name of A. White & Co. The leading member of this firm, Abner White, had been engaged in chair-making for many years in Gardner and elsewhere, and occupied, for a time, a notable place in that industry, though he seems to have been a wandering, rather than a fixed star in the brightening galaxy of chair manufacturers. In the year 1862, John R. Conant, who had been previously associated with Mr. White, entered the firm, from which, a year later, Mr. Leander White retired, Charles W. Conant, brother of John R., succeeding him. Mr. Abner White withdrew in 1866, and the business went on under the management and name of Conant Brothers for two years, when Carlos E. Ball, who had charge of the Boston department established some time before, entered the partnership, the name being changed to Conant, Ball & Co., which it still bears. Seven years later Charles W. Conant retired from active membership in the concern for the purpose of inaugurating a new undertaking, though he remained a silent partner till 1884, when he severed his connection with it altogether. Additions were made to the shop and fixtures from time to time as the requirements of the growing business dictated. Beginning with the use of water-power alone, a gradual change to steam was made, resulting in its exclusive use in 1882, when the Gardner Water-Works were established and the control of the stream issuing from Crystal Lake, on which this factory was located, passed into the hands of the corporation having charge of those works, by act of the Legislature. Early in the year 1888, the firm bought out the stand occupied by L. H. Sawin for a generation, to which the business has been transferred with reasonable expectation of railroad facilities not hitherto enjoyed, and of an increased production of goods. The buildings recently taken possession of are undergoing renovation, enlargement and a general improvement, as are all the accessories of the establishment. The works are operated by an engine of forty horse-power attached to a boiler of twice that capacity. The production of this firm has hitherto been restricted to a fine class of goods, mostly of mahogany, cherry and black walnut stock; but a decline in the popularity of the latter of these woods has necessitated somewhat of a change in the material used, though not in the quality or style of the work, which has been distinguished for excellence and good taste wherever it has been known. The business of the firm has nearly doubled in ten years, amounting now to about $100,000 annually, and furnishing employment to forty men. Within a few weeks the main factory, so lately vacated by this concern, has been destroyed by fire.

L. H. SAWIN & CO.—In this connection it seems proper to mention the immediate predecessors of the last-named company as now located, even though their name has disappeared from the list of those engaged in the distinguishing industry of the town. The senior member of the firm of L. H. Sawin & Co. is one of the oldest practical chair-makers in town, and has been identified with the business as workman and as manager for more than half a century. When but eighteen years of age, Levi Heywood Sawin learned the trade of making chairs under Messrs. Amasa Bancroft and Frederick Parker, who carried on a small business in an insignificant shop on Elm Street. He went thence to the Heywood factory, where he remained for fifteen years, when, in 1851, he purchased the shop and privilege, just below, of Ezra Baker, to whose hands it had reverted after the occupancy of it by Mr. Elijah Putnam. It had been used for some years previous to Mr. Sawin's purchase by the firm of Levi Heywood & Company for getting out stock. It was immediately put in order for the manufacture of chairs, and the business was carried on in a small way for four years, when, larger and better accommodations being needed, Mr. Sawin removed the old building and erected a new and more commodious one, the beginning of the spacious establishment now occupying the site. The work increasing, Mr. Sawin, in 1861, received as a partner Mason J. Osgood, constituting the firm of Sawin & Osgood, which continued till 1869, when Mr. Osgood withdrew, giving place to Reuben H. Twitchell, son-in-law of Mr. Sawin, and Edward H. Sawin, his son, thus forming the new firm of L. H. Sawin & Co., which continued till the ter-

mination of business, as heretofore stated, and the consequent dissolution of the partnership. An enlargement of the factory was made in 1865, bringing it to its present size of one hundred and twenty by forty feet, to which later subordinate additions were affixed for necessity or convenience' sake. As in all the shops on the Crystal Lake stream, water-power was originally used as the motor, but was gradually superseded by steam-power, which has alone been used in later years. For some years thirty-five or forty men were employed here, producing goods to the value of fifty thousand dollars annually.

A. & H. C. KNOWLTON & Co.—The establishment of this prosperous and reliable firm is located on North Main Street, forming one of the series of chair factories deriving power originally from the Crystal Lake outlet, which has now become practically extinct. It was started in 1848 by Abner White, who, having obtained possession of the site, purchased the old Cooledge house, in the northwest part of the town, and moved it thither, fitting it up with machinery suited to chair-making purposes. Going on alone for two years, he took as a partner his brother Leander, whose share was purchased later on by Philander Derby, and the business continued under the name of White & Derby till 1857, when Mr. Derby became sole owner and manager. In 1861 Augustus Knowlton became associated with Mr. Derby under the name of Derby & Knowlton. Two years later Henry C. Knowlton, brother of Augustus, entered the firm, the name being changed to Derby, Knowlton & Co. In 1868, Mr. Derby and the Knowltons, who had been operating the present Derby factory for half a dozen years, separated, the latter retaining the site which they still occupy and conducting business under the name of A. & H. C. Knowlton. In 1881, Alec. E. Knowlton, son of H. C., entered the firm, the name being changed to A. & H. C. Knowlton & Co. A large addition was made to the original shop in 1857, and still another in 1881, extending it to its present capacity. The main factory is one hundred feet by thirty, a part of it three stories high, with a basement. Attached to this is a two-story extension and store-houses, affording ample accommodations for the business. The machinery, with which the factory is fully equipped, is of the best known to the trade, and is run by an engine of ninety-six horse-power. Both cane and wood-seat chairs are produced, of a grade and quality of material and workmanship that give them a high standing wherever known. The firm has a branch house in Philadelphia and also in Los Angeles, Cal. Fifty or sixty men are employed in Gardner, and the sales in 1887 amounted to eighty-five thousand dollars. The firm has an honorable reputation in the business community.

EPHRAIM WRIGHT & Co.—This firm manufactures the standard kinds of cane-seat chairs, and gives constant employment to about thirty men. It occupies a site first improved about the year 1845, by Abner White, a man with a seeming genius for starting new enterprises, who moved to it a two-story house from Green Street, which he furnished with suitable machinery, and associating others with him, went on with the manufacture of chairs until about 1853, when he sold to Ephraim Wright, who had been doing a small business previously at South Gardner, and his son William, the two being associated under the name of E. Wright & Co., by which the firm is still known. Subsequently another son, Edwin L. Wright, was received into the partnership, who is the present head of the establishment. The father died in 1866, and the two sons went on together till 1882, when William also deceased, leaving his interest in the business to his widow, who still retains it. In 1871 the present main factory was erected, one hundred and twenty-five feet long by forty feet wide, three stories high in part and partly two. All requisite out-buildings are attached. Adequate power for the machinery of the concern is supplied by a steam-engine, all of the most approved kind. Without ambition for display or for startling results of any sort, the management of this enterprise is content to move on in the even tenor of its way, maintaining a well-earned prosperity and an honorable reputation for fair dealing and the production of an excellent quality of goods for the market. The annual business done is about fifty thousand dollars.

WRIGHT & READ.—The senior member of this firm, David Wright, is believed to be the oldest living chair-maker in Gardner, with the exception of Samuel S. Howe, who exceeds him in connection with the trade by about two years. He began service with Elijah Putnam in 1826, and afterward worked for Horatio N. Bolton in the old Bickford potash-shop and for others till about 1836, when he entered a co-partnership with the late Calvin S. Greenwood, thus establishing the firm of Greenwood & Wright, so well known in former days. This firm conducted business under varying auspices at the privilege now utilized by the C. S. Greenwood's Sons and elsewhere for many years, purchasing the present Wright & Read location, which they had previously rented about the year 1858 of Marcius L. Gates, who had bought the property after the relinquishment of the manufacture of pine furniture in it by Bradford & Baker. Upon the dissolution of the firm of Greenwood & Wright a few years later, and the consequent division of property, Mr. Wright received the shop and fixtures under notice. Associating with him John M. Moore, the manufacture went on under the name of Wright & Moore. A disastrous fire in 1866 destroyed the shops with their contents, but they were at once rebuilt substantially as they now are and made ready for occupancy. In 1872 Charles F. Read, the son-in-law of Mr. Wright, took an interest in the business, and the firm-name was changed to Wright, Moore & Co. Five years after, Mr. Moore withdrew, and the business was con-

tinued by the others, taking the name, still borne, of Wright & Read. The establishment includes a capacious, well-furnished factory, partly four and partly three stories high, a two-story paint-shop and other needful buildings adjacent thereto. This firm produces many kinds of bent work, facilities for bending constituting a part of their equipment. Dining, library and office chairs, with both fixed and rotary seats, are found among its goods; also children's chairs of different patterns and styles of finish. Forty hands are employed, with a yearly production of about fifty thousand dollars. The works are run by water-power, which has the benefit of the series of reservoirs above, while a steam-engine used for heating purposes could be called into service as a motor if needed. Mr. Wright has practically retired from the management of the business, although he retains an interest in it, his good name contributing still to its prosperity and success.

C. S. Greenwood's Sons.—This firm, consisting of Charles H. and Frederick M. Greenwood, occupy the site in the easterly part of South Gardner Village, opposite the Baptist Church, where Albert Bickford, in the early days of chair-making, built a dam on land belonging to his father's estate, erected a shop and fitted it up with saws and lathes for the preparation of chair stock. Mr. Bickford carried on this business for some years, when Greenwood & Wright, who had associated together for the manufacture of chairs, purchased the property and, having supplied the requisite facilities, commenced operations there. They went on, for about twenty years, increasing their accommodations to meet the demands of their growing business by enlarging their shops, by renting additional room in the vicinity, and ultimately by the purchase of the premises referred to above, now owned by Wright & Read. About the year 1857 the partnership was merged into and succeeded by the South Gardner Manufacturing Company, a joint-stock corporation, in which the employés and others were privileged to hold shares and participate in whatever results might be realized. Not proving satisfactory, this experiment was abandoned at the expiration of a year and a half, the several enterprises combined in it resolving themselves into their previous conditions under their old names. Soon after, Greenwood & Wright dissolved partnership and divided the property, the original stand being assigned to Mr. Greenwood. He continued the business, associating with himself about this time William Hogan, who subsequently died, by which event Mr. Greenwood became sole owner and manager, going on by himself till his death, in 1873. He was succeeded by his sons, named at the head of this sketch, who continue to this day.

The large, though somewhat inconvenient, shops of the firm were burned on the day following the town's Centennial Celebration, in June, 1885, but a building better adapted to the special needs of the establishment was immediately erected and filled with improved machinery, so that work can go on with greater efficiency than before. About twenty men are employed, and business is mostly done under contract. Fancy chairs of various patterns are a specialty, and much is done in the way of producing, upon order, new styles of goods, which are in great demand.

Greenwood Bros. & Co.—The site upon which this firm is located has been in possession of the same family for four successive generations. It was included in the original purchase of the great-grandfather of the present proprietors, Jonathan Greenwood, who came from Sherburne to Gardner about the time of its incorporation. He located at first on the old County Road from Lancaster to Athol,—the first thoroughfare through the town,—some twenty or thirty rods southwest of the present mill-site, where he lived till the opening of the Fifth Massachusetts Turnpike, in 1800. He then erected the large two-story house now standing on the premises, opened a hotel which he kept during the remainder of his life. He died in 1821 and was succeeded by his son, Walter, who was a cooper by trade, carrying on business in a little shop near by, and having as an associate for a time one Jonas Childs. That business failing, Mr. Greenwood converted his cooper-shop into a chair-shop, and began making chairs in 1827, with a single man, Joseph Maynard, to help him. The new business proving profitable, he built, in 1834, a dam across Pew Brook, which flowed in the rear of his house, erected a shop in which he put a few simple kinds of machinery to be operated by water-power, for carrying on the work. For some years he did quite a large business with flag-seats, but later used cane-seats, preparing the cane on his own premises. He continued in the manufacture until his death, in 1861, when his son, Thomas, followed him in the same line of production. In 1870 the shop was considerably enlarged and an improved water-wheel was put in, greatly augmenting the available power. A large store-house was built in 1882, adding increased accommodations to the establishment.

Thomas Greenwood died early in the year 1888, but the business is going on in the same lines pursued by him under the direction of his two sons, Charles W. and Marcus J. Greenwood, who, with their mother, constitute the firm whose name appears at the head of this sketch. Cane rocking-chairs are a specialty among the goods produced. The lack of railroad facilities is a hindrance to the highest success of this enterprise, though it is otherwise well-equipped for business, has a good market secured and a reputation for honest and honorable work, all of which gives the young men upon whom the burden of management has fallen, an excellent opportunity to attain for themselves an enviable reputation and a successful career. They employ some twelve or fifteen hands and produce an excellent quality of goods.

JAMES SAWYER.—Mr. Sawyer, whose place of business is on Travers Street, near its junction with South Main Street, occupies the oldest improved mill privilege in the town. It was first used in or before the year 1770, when Mr. Bickford, from Reading, came to the place, then Westminster, and, purchasing a large tract of land in the vicinity on which was this site, proceeded to erect a saw and grist-mill for the convenience of the new settlement. In this double capacity it served for many years, under the management of the builder and his son, Captain William Bickford, of later memory. In 1829 the property, still consisting of a saw and grist-mill, with the privilege and rights thereto belonging, was sold to Elijah Travers, who, after a time, added to his original purchase a shop for the manufacture of chairs, in which his sons carried on business under different auspices for many years. After their decease the property passed through the hands of Stearns & Whittemore to those of James Sawyer, who has since been engaged there in making cane-seat chair frames, doing a small but prosperous business in that department of the general trade.

LUMBER MANUFACTURE.—In the early days of the history of Gardner there were six saw-mills erected in different localities upon its territory, for the supply of the new and growing community with lumber for building purposes. These were severally the Bickford Mill, which stood where James Sawyer's shop now is, owned by William Bickford; one where the Lewis A. Wright & Co.'s works now are, on High Street, owned by Jonathan Greenwood; one at the Pail Factory, owned by Joshua Whitney; one on Kneeland Brook, near Parker Street, where the Dr. Parker Mill now stands, owned by Simon Stone; one on Bailey Brook, near the junction of West and Bridge Streets, and one on Wilder Brook, north of Clark Street, the ownership of the last two being unknown. Subsequently one was built in the northeast part of the town, near the present homestead of Ebenezer Ballou, and at a still later date one in the east part, on a stream running into Westminster, near where it is crossed by the railroad. The products of these mills found, for the most part, a ready home market, little being done in the way of exportation. After a time, the original growth of wood being cut off, some of these mills were abandoned altogether, while others were converted into shops for the getting out of chair stock or the making of chairs. Two only have remained true to their original purpose through all the passing years. One of these—the Simon Stone Mill—was for a long time run by the late Dr. David Parker, or by agents to whom he relinquished the business in the latter part of his life, some eight or ten men being employed in getting out about twelve thousand dollars' worth of lumber annually.

The other establishment of this kind, and the only one, practically, in operation, is that of Lewis A. Wright & Co., on High Street, occupying the site of the original Jonathan Greenwood Mill. Near the beginning of the present century, Mr. Greenwood sold to Joseph Wright, then recently from Sterling, whose descendants have retained possession of the privilege to the present day. It passed first to Joseph's sons—Joseph and Nathaniel—the latter of whom had charge of it for many years. Upon his death the property came into the hands of his son, Marcus A. Wright, who associated with himself David A. Wright and Calvin S. Greenwood, under the firm-name of Marcus A. Wright & Co., and continued business till 1857, when the whole thing was united with other interests in the formation of the South Gardner Manufacturing Company. Upon the abandonment of that undertaking, the mill, fixtures and appurtenances reverted to their former condition and management. In 1877 Mr. Marcus A. Wright bought out his partners and went on alone till his death, in 1883. He was succeeded by his son, Lewis A. Wright, a young man just coming to maturity, under whose charge the business has been greatly enlarged and abundantly prospered. The enterprise bears the name of Lewis A. Wright & Co., the mother of the present manager having an interest in it. In addition to the manufacture of lumber the firm deals largely in the product of other localities—in Michigan and Canada pine, black walnut and a good assortment of the harder woods. During the present year this department has been greatly enlarged by the purchase of the extensive concern of George E. Utley & Co., wholesale and retail lumber dealers, located at the junction of North Main and Mechanic Streets, near the railroad, which will add very much to the convenience both of the firm and of their customers, it being the design to make this hereafter the chief depot for the sale of goods. The business of this establishment has doubled within the last ten years, and the present outlook is better than ever before.

CHILDREN'S CARRIAGES, CHAIRS AND TOYS.—In the year 1868, Levi Warren bought the premises on Mill Street, where this industry is now carried on, of Mr. Henry Whitney, building a dam and erecting a shop for the purpose of getting out chair-backs. Prosecuting this kind of work for awhile, he afterward converted the building into a factory for the manufacture of toys. Subsequently he received as a partner John Lovewell, who at the expiration of three years purchased his interest and became sole proprietor and manager of the business. Not succeeding in the enterprise, Levi B. Ramsdell, one of Mr. Lovewell's creditors, bought the property in 1877, and, associating with himself G. C. Goodell, under the style of Ramsdell & Goodell, continued the business for two or three years, when Mr. Ramsdell became sole proprietor by purchase, and has since gone on by himself. The business has increased rapidly under Mr. Ramsdell's management, a large trade having

been built up, extending throughout the United States and even to England, necessitating an addition to the shop and greater facilities generally. Unfortunately, a destructive fire in April, 1887, resulted in a complete loss of buildings and their equipment. With commendable enterprise and zeal, the proprietor immediately rebuilt his establishment, supplied it with new and improved machinery, and is going on prosperously as before. The South Gardner stream furnishes power for running the works. Employment is given to thirty-five or forty men, who turn out goods to the value of forty thousand dollars annually.

EAVE TROUGHS, PUMPS, LADDERS, ETC.—In the year 1874 Charles O. Stone, with his brother E. A. Stone, came to Gardner from Hubbardston, where they had been associated in business for two years, and, after erecting what is known as the Carney Building, at Kendall's Crossing, set up there their former line of manufacture. At the expiration of five years C. O. Stone sold his interest to his brother, who was sole owner for a time, when Charles bought the whole and has been going on by himself to the present time.

In 1882 Mr. Stone disposed of his building on South Main Street, and erected a new one on Chestnut Street, where he is now located. Without power till 1885, he then put in an engine, and introduced machinery suited to the manufacture of his own goods, many kinds of which he had previously procured ready-made. He also added to his original business that of getting out house-finishing stuff for carpenters' use. A Weymouth lathe and other facilities for variety-turning were put in a year later. Mr. Stone has recently sold the house-finish and turning department to A. Priest & Son, who conduct it on their own account, while he confines himself solely to his original line of work. His trade has increased one hundred *per cent.* during the past five years. A branch shop is maintained at Fitchburg, though all the manufacturing is done at Gardner. Sales are generally made in the region round-about, teams being upon the road for the distribution of goods through the greater part of the year.

CHAIR MACHINERY.—As has already been suggested, the larger factories for the production of chairs have a machine-shop attached thereto for doing their own repair-work, and, in some instances, for making their own machines. Of these no note needs to be specially taken in this review. There is, beside these, one establishment devoted exclusively to the manufacture of chair machinery and appliances pertaining to such machinery—the only one of the kind, it is claimed, in the country. It was founded in the year 1876, when Levi G. McKnight, from Connecticut, came to Gardner and, associating with himself a Mr. Carter, leased shop-room of P. Derby & Co., and began business in the line under notice. At the end of two years they moved to the Foundry, where the business was carried on two years more, Mr. Carter meanwhile leaving the firm. In 1880 another change was made to a building belonging to A. & H. C. Knowlton, Mr. McKnight taking another partner, the style of the firm being L. G. McKnight & Co. During that year the present spacious accommodations were provided, and at its close were occupied. They consist of a main building, fifty feet by forty, two stories high, with a basement for storage purposes. A fifteen horse-power engine, with a twenty-five horse-power boiler, drives the machinery. Twenty-five men are employed and goods are sent all over this country, and also to Canada and some of the countries of Europe. Seventy-five machines, designed particularly for the making of chairs, are produced, many of them the fruit of Mr. McKnight's own inventive skill, who has the reputation of being a superior mechanic and a trustworthy and honorable business man.

IRON CASTINGS.—The Heywood Foundry Co. was established in 1876, and prepared for business by erecting, off Chestnut Street, below Cross Street, near the railroad track, a brick building fifty feet square, two stories high, with a moulding-room attached, eighty feet by fifty, and furnishing the whole with fixtures and conveniences for making all kinds of iron castings. The furnace is of ample dimensions, and a steam-engine of thirty-five horse-power runs the works. Three tons of iron are melted per day, and the business amounts to about $40,000 per year. Thirty men are employed. The firm, as now constituted, consists of Alvin M. Greenwood and Jonas R. Davis, Mr. Davis being the active manager of the establishment. As germane to their special work, the firm were interested for some years in the manufacture of a cooking-range, which had an extensive sale. They are now making what is called the Royal Steam Heater, of which they have the entire control. It is said to serve an excellent purpose and is being introduced quite largely, in town and elsewhere.

OIL-STOVES, LAMPS, ETC.—This industry was started in 1884 by an incorporated body of gentlemen, of which Calvin H. Hill was president; William H. Wilder, treasurer, and Charles A. Fletcher, business manager; with a capital of $10,000. At the expiration of three years, Mr. Fletcher having sold out his interest, Messrs. Hill and Wilder, with Alvin M. Greenwood, formed a partnership, and have since carried on the business. The chief work done is the manufacture of oil-stoves of a special pattern (of which they are the exclusive owners), and lamps corresponding thereto, adapted to heating purposes. They claim to produce an article superior to all others of a similar kind, with none of their defects. The business has had a remarkable growth, and is in an exceedingly prosperous condition, the demand for goods but recently put upon the market, exceeding the ability to supply them. Beginning four years ago, with a single workman, in a small room in the Foundry Building, they now employ forty hands, and occupy an entire factory, built and equipped for

their own use in 1887. It is located in the rear of the foundry, and has unsurpassed railroad facilities. Every part of the articles produced is made in the establishment. Work is done mostly on orders received through special agencies at Baltimore, Chicago, Atlanta, Ga., and other large cities. A considerable export trade has also been secured.

TIN-WARE MANUFACTURE.—The establishment representing this industry is a lineal descendant of the little shop started in Templeton in 1825 by John Boynton, whose success in the business enabled him to found by bequest that excellent institution at Worcester—the "Worcester County Technical Institute." Mr. Boynton late in life associated with himself David Whitcomb (having had other partners previously), under the name of Boynton & Whitcomb. They were followed in the business by Colonel Henry and William Smith, brothers, who had charge of it till 1870, when, the former having retired, the latter formed a partnership with Andrew H. Jaquith, the senior member of the present firm. In 1877 the business was transferred to Gardner, the interest of Mr. Smith passing into the hands of Charles F. Richardson. Buildings suited to the manufacture had been erected on North Main Street, near the railroad stations, which were destroyed by fire in 1883, when the more spacious and convenient ones, now occupied, took their place. For five years the present company, bearing the firm-name of Jaquith & Richardson, restricted themselves to the old line of production, the making of tinware and corresponding goods, but in 1882 a stove and furnace department was established, whereby the field of operation was materially enlarged, and the enterprise greatly benefited. The efforts of the proprietors have been duly rewarded by a healthful increase of business, including a large traffic in paper-stock, the whole amounting annually to about $50,000. They have one of the largest and best appointed warehouses in the county, and are continually introducing new features to their trade, which inure alike to their own advantage and that of their patrons.

HARNESS-MAKING.—This branch of handicraft was started in a small way in 1869 by George R. Godfrey, who, by close attention to business, excellence of work, promptness and reliability in the fulfillment of contracts and gentlemanly demeanor, has built it up to its present proportions and condition of thrift and prosperity. It is located in the Bank Building at the Central Village, where may be found not only a fine array of the proprietor's own manufactured articles, but an extensive assortment of kindred goods, such as trunks, valises, carriage robes, whips, &c., and where there are ample facilities for carrying on the work. The production is largely custom-made, though considerable supplies are furnished the general trade. The goods are regarded as of superior quality in respect to both stock and workmanship, and the Godfrey harness, the work of which is performed by hand, has attained an enviable reputation throughout New England. Some twenty or twenty-five men are employed, who turn out twelve or fifteen thousand harnesses a year, besides considerable corresponding work.

PHOTO-MECHANICAL PRINTING.—Warren P. Allen is the oldest photographer in Gardner. He came to town in 1864, from Keene, N. H., with a traveling car fitted up for making pictures, and located at the South Village, where he remained several years. He then opened rooms in Market Block, on Chestnut Street, near Central, in which he practiced his art eleven years, and gained for himself a wide reputation as a faithful and skillful workman. When the Lithotype Publishing Company, mentioned below, was first organized, in 1879, Mr. Allen connected himself with it for a time, helping to give it a start and to put its work before the community. Afterwards he commenced at the West Village what he denominates photo-mechanical printing, an invention partly his own, where he remained three years, developing and improving his specialty and getting his art recognized and appreciated by the general public. The demand for his style of pictures increasing, he outgrew his accommodations and sought the larger and better ones in the building of Howe Bros., on Chestnut Street, near North Main, where he now is. He does his own work mostly, and his productions are deservedly popular. Excellent specimens of what he can do are to be found in the views he has furnished for illustrated sketches of Bellows Falls, Vt., Holyoke, Mass., Elgin, Ill., Wellesley and Princeton Colleges, &c., the character, standing and high culture of his patrons attesting to the artistic excellence and thoroughness of what he gives in his line to the world.

LITHOTYPE PUBLISHING.—In the year 1879 Mr. A. G. Bushnell, who since 1869 had been connected with the *Gardner News* as editor and general manager, becoming interested in a new style of producing pictures, associated with himself Mr. W. H. Cowee, Charles Heywood, and perhaps others, and started what is called the lithotype publishing business. Before getting fairly established, Mr. Heywood, an important member of the partnership, died, causing a partial suspension of the work for awhile, although Mr. Cowee assumed the care of it and continued it on his own responsibility for several years. In 1886 new interest in the enterprise was awakened, and a corporation was constituted called the Lithotype Printing and Publishing Company, with a capital of ten thousand dollars, of which Charles D. Burrage was president, W. H. Cowee, secretary, and Herbert S. Stratton, treasurer and manager. The following year the capital was increased to twenty-five thousand dollars, the business going on as before. In 1888 a private company, consisting of Burrage & Stratton, bought out the corporation and are now going on under the name of the Lithotype Publishing Company, prosperously and promisingly. Twenty-five lith-

otype presses are in use, and fifty-five or sixty persons, mostly young women, are employed in the large, well-furnished establishment on Green Street. The work now done amounts to sixty or seventy thousand dollars a year, and is of excellent quality, growing continually in popular favor. Much attention is given to furnishing illustrations for family and town histories, sketches of interesting localities, popular resorts, manufacturing centres, educational institutions and similar kinds of delineation for which there is a constantly increasing call. The company has recently purchased an engraving establishment in New York City, which is running in connection with the Gardner house, under the care of Mr. A. G. Bushnell, agent.

SILVER-WARE.—One of the later industries now in operation in Gardner is that of the manufacture of the more substantial and serviceable articles of silver-ware, which was started in the year 1887 by Frank W. Smith, who came from Concord, N. H., where he had previously been engaged in the same business. A commodious brick building three stories high, with a basement, was erected on Chestnut Street near the corner of Walnut, and thoroughly furnished with the most modern machinery and appliances for carrying on the work. Only skillful hands are employed, of whom there are forty-five in number, including several women, and only solid sterling silver goods are produced. This is a valuable acquisition to the manufacturing interests of the town, having the promise of a prosperous future before it, and destined to shine with a lustre distinctively its own, varied, enriched and beautified at times with golden hues.

BRICK-MAKING.—A large section of territory in the southern part of the town has an aluminous or clayey subsoil unusually free from foreign substances and lying in many places quite near the surface of the ground, which renders the manufacture of brick at numerous points comparatively easy of accomplishment. At what particular date, or in what locality, this business was first started here has not been ascertained. But it is understood by the older inhabitants that the material of which the Bickford house in South Gardner was built, shortly after the town's incorporation, was obtained on the premises and moulded and burned there ready for final use. Abel Jackson at an early day made brick near by where the yards and factory of George N. Dyer are now located, some tokens of which are still to be seen. And the present stand of Abijah Hinds has been devoted to this industry for a long term of years. For two generations or more the only brick made in town were the product of this establishment, the father of the present proprietor carrying on the business in his day. The demand of the community could then be met by this one concern, and there was no necessity for another yard. With the growth of the place and the increasing tendency to put up brick buildings, even the home market was greater than Mr. Hinds, with all his facilities, which he had multiplied as time went on, could supply. And so Mr. H. N. Dyer, an old brick-maker of Templeton, seeing the opportunity, came to town, purchased the property where his son, George N. Dyer, now carries on the business, and there, near the site of the old Jackson yard, started anew. He soon gave way to his son, who has been highly prospered, his trade increasing from year to year, necessitating a constant increase of productive power. He has made the present year one and a half million bricks, for most of which he finds a ready sale within the limits of the town. For several years he produced a fine quality of pressed brick, the clay on his grounds being suited to that kind of goods, but at present he deems it more profitable to limit his production to the more common grades. Both Mr. Dyer and Mr. Hinds employ steam-power to run their machinery, which is of the latest and best pattern, and their facilities for speedy and efficient work are excellent and unsurpassed in all the region round-about. Mr. Hinds turns out about seven hundred and fifty thousand bricks a year, making the entire production of the town two and a quarter millions.

CARRIAGES AND SLEIGHS.—The principal establishment for the manufacture of carriages and other vehicles is located in South Gardner village, near the railroad crossing, and is conducted by Lyman Sawin and his son, Wm. O. Sawin. The senior member of the firm came to Gardner from Ashburnham more than thirty years ago, and entering into partnership with Amasa Lovewell, carried on the general blacksmithing business for a dozen years, when he sold out and went to Ashby. After an absence of a year or two he returned, and having erected the buildings since occupied by him started anew, combining the wheelwright business with his former trade. The call for his work increasing, he took his son into company with him and subsequently consolidated his business with that of Albert Barron, who had for some years made carriages in a portion of his shop, assuming the style of the South Gardner Carriage Company. Besides common carriages, the firm made a specialty of heavy team wagons and gained a reputation for thorough and substantial work. They also manufactured open and top buggies and sleighs of various patterns. The carriage business declining somewhat, more attention latterly has been given to repairs, other work being done chiefly upon orders. Half a dozen men find employment in the establishment. A similar enterprise of some years' standing has recently been re-organized, bearing the name of the Chestnut Street Carriage Manufactory, in which James D. Gay and others are interested, and Townsend L. Bennett, No. 10 Cross Street, does something incidentally in the same line of manufacture.

GRAIN AND FLOURING-MILLS.—The need of the

early settlers of Gardner in respect to the grinding of corn and other cereals for domestic use was originally met by the putting in a set of stones in connection with facilities for sawing lumber by William Bickford as early as 1770 or 1775; and a few years later a grist-mill was built in the north part of the town near the school-house on the site, probably, which was afterwards occupied by the Cowee Brothers as a chair factory. More recently an extensive business has been done in the same direction by T. Augustus and Marshall M. Howe, under the name of Howe Brothers, who succeeded by purchase the late Charles W. Bush in the manufacture of meal and flour at the factory on Mill Street near Sawyer. This privilege had a varied and somewhat unfortunate history during the earlier years of its occupancy. In or about the year 1824, Luke Sawin and Dr. David Parker, then a new resident of the town, bought the Abel Jackson farm, which covered a large tract of land in the vicinity, including the site under notice. Mr. Sawin soon built a dam and erected a shop, which he fitted up for the purpose of getting out chair stock. The business went on but a short time, the shop being burned. Henry Whitney then purchased the privilege and lands adjoining, erecting a saw-mill upon it, which was also destroyed by fire in 1834. The mill was immediately rebuilt and run a few years as before, when it was sold to Daniel J. Goodspeed, who converted it into a factory for the making of chairs, having enlarged the facilities by putting up an additional building to suit his needs. In 1852 a third fire destroyed the buildings and their contents. Charles Travers bought the premises and put up a new chair-shop, which was run by himself for awhile and then sold to Charles Britton, from Westmoreland, N. H., who, being a carpenter, used it for getting out moldings, trimmings and stock in general for his trade. It afterward passed into the hands of Calvin Conant, who reconverted it into a chair-shop for his own use. Subsequently it came into the pos-ession of Charles W. Bush, who removed the old machinery and fitted it up as a meal and flour-producing mill, in which capacity it has remained till now. Howe Brothers, the present proprietors, have occupied it for eighteen years, doing a large and growing business, amounting at this time to an annual value of $50,000.

Ready-Made Clothing.—The Monadnock Clothing House may be regarded as the representative of one of the important industries of the place, inasmuch as the goods in which it deals are to a large extent manufactured on the premises. Its stock embraces every style, grade and quality requisite for the wear of men, boys and even children. The establishment was founded by E. Ballard and A. A. Jerould in 1869, it being the first ready-made clothing store in town. Passing through some changes, it came into the hands of Mr. Samuel Despeaux, a veteran in the trade, in 1880, who gave it the name it now bears. It has one of the largest and best appointed sales-rooms in this section of the State, carrying a heavy stock and doing an extensive business. There are several other ready-made clothing stores in town, besides some half-dozen merchant tailors, so that the needs of the public in this regard are abundantly supplied.

Marble-Cutting.—Mr. T. J. Stafford, an experienced marble-worker, came from Cambridge in 1870 and commenced the marble-cutting business in Market Block near the head of Chestnut Street. Building up a respectable and satisfactory trade, he, after several changes, located in the shop erected for his use toward the lower end of the same street, where he now is. Numerous tomb-stones and monumental pieces of various design and styles of finish in the burial-places of the town and vicinity testify to the artistic excellence and superior quality of his work. Messrs. John E. Partridge & Co., located near the railroad station, and Joseph C. Sargent, 105 Chestnut Street, are engaged in the same line of business.

Contractors and Builders.—Milton M. Favor, a native of Bennington, N. H., came to Gardner in 1867, and after working awhile for Heywood Bros. & Co., started business on his own account. He has had a large patronage, having erected, since locating in the place, over five hundred buildings in this and adjacent towns, or about twenty-five a year. He employs a force of from sixty to seventy-five men, according to the season and demand for work. In the same business are John R. Hosmer, Wm. N. Moore, Cyrus F. Boutelle, Michael J. Ryan, George B. Hager, Joseph J. Gale & Son, Silas Holt and Thomas Wheeler.

Printing and Publishing.—The first printing-office was opened in Gardner in the year 1868, when A. G. Bushnell, formerly of Templeton, took possession of one room in the third story of the bank building, where he was engaged in doing job work till the following spring, when, his business having increased sufficiently to warrant it, he employed an assistant. About that time the project of starting a local weekly paper was agitated, resulting in the organization of an enterprise for the purpose of carrying that project into effect. Charles Heywood associated himself with Mr. Bushnell under the firm-name of A. G. Bushnell & Co., and a prospectus for a paper was immediately issued. Satisfactory patronage being promised, the first number of the *Gardner News* was published July 3, 1869. The original subscription price was two dollars a year, but the patronage increasing, it was soon reduced to one dollar and fifty cents. The size of the paper, to begin with, was twenty-two by thirty-two inches folio, containing twenty-four columns of matter, or six columns to a page, but has been much enlarged since. Though chiefly a local journal, it yet contains much general news, and has correspondents in all the neighboring towns, thus representing a wide constituency and securing a circulation far beyond the limits of Gardner. It claims to be independent in religion and politics,

fearless in expressing honest convictions upon questions of private and public morality, and especially desirous of promoting the welfare and prosperity of the town. It has always been a bright, wide-awake publication, displaying more than average editorial ability and maintaining a creditable standing among its contemporaries. Upon the death of Charles Heywood, in 1882, Mr. Bushnell became sole proprietor, as he had been sole manager from the inception of the undertaking. In 1885 he sold the whole establishment, including the paper, to Asa E. Stratton, of Fitchburg, who now has its several departments in charge, conducting the business on the same general lines as before. The circulation of the *News* is twenty-one hundred. The business of job printing has increased from year to year, making frequent additions of materials and machinery necessary as well as new accessions of room, so that the entire floor of the third story of the bank building is required for the use of the establishment, which now commands the service of from twelve to fifteen employés.

In the year 1880 Mr. E. J. Fuller, from Winchendon, started a second paper in town, called the *Gardner Record*, having his headquarters in Stevens' Block, West Village. In the fall of 1883 the office was removed to the building of Howe Brothers, near the depot. The following June Mr. Fuller sold to Charles Adams and Daniel Rowe, when the name of the sheet was changed to the *Worcester County Democrat*, in order that its title might indicate the politics which the new proprietors designed to have represented in its columns. Struggling on for two years under much difficulty, the experiment of a daily issue was tried for a few weeks in the hope, apparently, of retrieving its falling fortunes, but it had practically the opposite effect, and late in 1886 yielded to the inevitable, and ceased to be. At the end of about three months R. W. and C. A. J. Waterman, of Athol, purchased the stock and fixtures of the office, removed them to Opera-House Block, Pine Street, near Lynde, and commenced the publication of the *Gardner Journal* under the firm-name of Waterman & Son. The first number was issued April 12, 1887, and was favorably received by the public, obtaining at the start a respectable list of subscribers, which has increased since, until at the expiration of twenty months they number seventeen hundred and fifty. The paper is independent in spirit and purpose, and aims to be a general news sheet as well as a medium of local intelligence, seeking to maintain and promote the general welfare by fair dealing and an honest expression of opinion upon all matters pertaining thereto. A good business at job printing has been built up in connection with the publication of the *Journal*, the whole giving employment to nine persons.

MERCANTILE INTERESTS.—A few general statements in regard to what may be called the mercantile affairs of Gardner will no doubt serve the specific purpose of the present volume and satisfy the desire of those who may read it. The first merchant in the place was Mr. Jonathan Prescott, from Lancaster, son-in-law of John Glazier, who located on the east side of Green Street, opposite the Common, where the residence of the late Francis Richardson, Esq., now stands. His was the only store in town for many years, and even down to a date within the memory of large numbers now living, a single old-fashioned country store supplied all the needs of the Central village and a large section around it, reaching in some directions into neighboring towns. A store was opened in South Gardner early in this century, or perhaps shortly before its opening, and for several decades this and the one at the Centre were amply sufficient to meet all the existing needs of the community in this respect. But to-day the shop-keepers of the place are numbered by scores, if not by hundreds. Certain sections of the different villages are almost wholly given up to traffic of one sort or another, and one in them need not go far to find, with rare exceptions, whatever may be desired in the line of merchandise for personal, domestic or more general use. Dry-goods merchants, grocers, clothiers, furniture and crockery dealers, druggists, jewelers, traders in hardware, paper-hangings, gentlemen's and ladies' furnishing goods, cutlery, stoves and furnaces, sewing-machines, stationery, meat, flour, grain, farm produce and venders of all sorts of small wares, confectionery, fruit and peanuts—all these have a place in this busy town, and stand ready to serve the public need.

Before leaving the manufacturing interests of Gardner altogether, it is desirable that a statement be made respecting an important adjunct to that portion of them located in the southern part of the town, to which reference has been several times made in the foregoing pages, to wit:—The South Gardner Reservoir. This body of water covers an area of about one hundred and eighty acres, of which nearly three-fourths are in this town, the remainder in Westminster. Up to a comparatively recent date the owners of what is known as the Wright Mill were allowed to flow the broad expanse of meadow-land which the dam was high enough to cover, only through the later autumn, winter and early spring months, so as in no wise to lessen or damage the grass grown thereon. As a consequence, a large amount of water would pass by that and other privileges on the stream below when the pond was drawn down to its summer level, with advantage to no one, while, later in the season, a scarcity of water would compel the stopping of the machinery at all of those privileges for weeks, or perhaps months, before the autumn rains came on. It was evident to practical men that, if the amount of water which thus ran wholly to waste could be held in some way for use when needed, the mills, so often idle in the dryer parts of the year, could, with rare

exceptions, be kept in operation the twelvemonth through. It was for Mr. David Wright, who was eager for improvement, and who had sagacity to discover chances for improvement, to turn this thought to practical account. He set himself about interesting his co-manufacturers on the stream with him in a project for a reservoir for the purpose indicated. The dam mentioned, as it was and had been for years, was capable of holding an immense body of reserve water, and, by raising it a few feet, which could be easily done, the quantity could be greatly augmented. The raising of the dam would involve some expense, and the using it for permanent flowage would involve still more, since it would necessitate the payment of heavy damages to the proprietors of the meadows above, or the purchase of those meadows. Mr. Wright, therefore, when the subject had been sufficiently discussed, circulated a paper and secured subscriptions enough to buy the lands in question, which put the matter on a permanent basis. Previous to the consummation of this scheme, however, a canal had been cut from the Walter Greenwood mill-pond to the proposed reservoir, in order that whatever surplus water existed there might be diverted from its natural course, and held in reserve with the other, to the extent of the capacity of the new pond. And so the plan of Mr. Wright was carried out to the fullest extent, and all the advantages to be gained from it were secured. The expense of keeping the reservoir-dam in repair is met by occasional assessments upon the owners of the privileges benefited by it.

Nor was this all. The owners of certain mill-sites on the stream, desirous of gaining still other benefits of the same sort, bought two dams, and the meadows flowed by them, situated above the reservoir itself, while, still later, S. K. Pierce & Co. purchased a third one,—the Minot Meadow, so-called,—and dam thereunto belonging, which now constitutes a part of his estate. So that, in fact, there is a series of four reservoirs on the upper part of the stream, each one of which contributes directly to the value of every mill-property below, and indirectly to the prosperity of the whole town.

CHAPTER CXIII.

GARDNER—(*Continued.*)

EDUCATION—SCHOOLS AND LIBRARIES.

At an early day in the history of the Pilgrim settlement at Plymouth the subject of education became a matter of general interest and the question of the public instruction of children and youth entered very soon into the deliberations that pertained to the permanent policy of the colony. And the Puritan founders of Massachusetts, animated by the same spirit, soon after acquiring a foothold on these shores, made provision for the establishing of schools of different grades to the end, as they said, "that learning may not be buried in the graves of our fathers." So, under a wise inspiration and guidance, the founders of New England built the school-house beside the church, making education and religion, intelligence and piety, co-ordinate factors in the new civilization they proposed to establish on this virgin soil—living forces to energize, direct and give character to its advancing life. True to their noble descent, the founders of Gardner did the same thing. At the first annual meeting, held March 7, 1786, action was taken which resulted in the division of the town into four districts, or squadrons, as they were called, in each of which a school was soon after established. These were respectively in the parts of the territory corresponding to the four cardinal points of the compass and were designated accordingly. One-half of the money appropriated for schools, which was thirty pounds, was to be divided equally between the four squadrons, and the other half according to the number of scholars in each between four and twenty-one years of age. The complex duty of providing a place for the schools, of selecting and employing teachers and of caring for and expending the money was assigned to four persons, one in each squadron respectively. The names of this first School Committee were William Bickford, David Foster, Ebenezer Howe and Josiah Wheeler. There was but one school-house in the town, which was built by Westminster some years before, "on Mr. Bickford's land on the County road, or the road leading to Mr. Timothy Howard's (Heywood's) house, where the major part of the squadron shall appoint." It actually stood on the site of the house built and formerly occupied by Amos B. Minott on South Main Street. It is likely that this building was used by the South Squadron for some years, although in 1791 it was declared to be "so old and shattered that it is not fit to keep school in." It would seem by this record, and by the absence of any record regarding the erection of school-houses previous to this date, that the schools in other squadrons were held for some years in private dwellings. At the annual town-meeting in 1795 it was voted to build four school-houses, but the appropriation of four hundred and fifty pounds to pay for the same was not made till April, 1796. In March, 1797, the town voted to provide a chair and table for each house, so that it may be presumed that about this time Gardner was fully and satisfactorily equipped with the institutions and accompanying facilities for public education. The school-houses were indeed small, incommodious and unpainted, but they served the needs of the time and were important helps to the laying the foundations of that more complete system of common-school instruction, with its large array of instrumentalities and appliances, which now exists—a blessing unspeakable to the entire community and an honor to the town.

In 1802 an article was inserted in the warrant calling

the regular March meeting, "to see if the town will choose a committee to see what repairs, if any, the school-houses need and paint them Spanish brown and lye." The town voted "to pass over the article," though it has an inherent interest to the present generation, since it shows what was used in those impecunious days as a substitute for oil in the preparation of paint. In 1807 an attempt was made to increase the number of school districts by certain individuals asking the town "to build a school-house in the middle of the town or otherwise give the petitioners and others the privilege of building on the Common." The town decided to do neither of the things desired. The same request was made at several times afterward with the same result, though it appears from the records that a school building had been erected at the place designated about the year 1814, probably by private funds, for the special accommodation of the families living near. In 1809 the citizens evinced their sense of the need of more careful supervision of the schools as well as an interest in their prosperity, by choosing "a committee of four men to inspect the schools" "at the opening and closing of said schools the year ensuing." This was the inauguration of a new policy in that regard.

With the growth of the town came the demand for increased school accommodations. So far as the records show, the original plan of having four districts continued in operation till 1818, although, as a matter of fact, the people of those districts living near to the central village had for several years been privileged to draw their portion of the school-money and spend it in support of a teacher in the private school house referred to above. But in the year mentioned, the desirableness of new districting the town became so apparent that a committee was chosen for the purpose of putting the matter in proper shape for final action. This committee reported in favor of making six districts agreeably to an accompanying detailed plan, which provided for a district in the east, the southeast, the southwest, the northwest, the north and the central portions of the territory, each in its order, and under the name designated by its locality. These six districts included in the aggregate one hundred and fifty-three families,—the east one containing thirty; the southeast and southwest, twenty-seven each, and the remaining three twenty-three each. Each district was to build its own house and to locate it, if those concerned could agree upon a spot; otherwise the town should do it. This division continued for over half a century, or until the abolition of the district system according to public statute, in 1869.

Different rules prevailed at different times in regard to the division of the public-school money among the several districts. What the policy was at the beginning has been stated,—that is, one-half equally between the districts and one-half according to the number of children between the ages of four and twenty-one. In 1820 the town voted that "the school money be divided according to the number of families that shall be in each district on the first of May next." This method prevailed till 1837, when it was decided to divide one-third of the money according to the number of scholars in the respective districts of the ages named before, the remainder equally between the districts.

In 1840 the rule was so far changed as to have the children numbered between four and sixteen years of age. In 1844 one-half was divided equally between the districts and one-half according to the number of pupils, which proportion was changed in 1850 to one-fourth and three-fourths respectively, and in 1854 to one-third and two-thirds respectively. In the same year the "Annual Report of the School Committee" was first printed and circulated among the families of the town.

The changes in the appropriations for educational purposes can be indicated only in a general way. The first sum voted was thirty pounds, or about a hundred dollars in United States currency. Up to the year 1800 the annual amount averaged thirty-five pounds, or one hundred and seventeen dollars. In that year it was two hundred dallars. It rose in 1806 to three hundred dollars, where it remained many years. In 1817 it was three hundred and thirty dollars; in 1818 four hundred. The same figures prevailed till 1832, when they were increased to four hundred and fifty dollars, and in 1833 to six hundred. They rose to seven hundred in 1840; to eight hundred in 1847; to nine hundred in 1849; and to one thousand in 1852. From that time on, with the growth of the town and the increase of its inhabitants, the increase of school appropriations was rapid, reaching two thousand dollars in 1859 and 1860, but falling off somewhat during the four years of the Rebellion. After that period it went up again more rapidly than before. It was thirty-five hundred in 1867, forty-five hundred in 1871 and five thousand in 1873. In 1875 it had risen to six thousand five hundred dollars, and in 1878 to seven thousand dollars. Since that date the increase has been very rapid, reaching, in the year 1888, the generous sum of fifteen thousand dollars, which sufficiently indicates the degree of interest the citizens take in the public schools and the value at which they estimate the American system of popular education as related to the welfare of the community and to the strength, perpetuity and glory of the republic. Besides the High School, which has one principal and two assistants, there are twenty-four schools of the lower grades, each supplied with competent instructors and all in prosperous condition.

At the time of the abolition of the old district system, in 1869, there were six school-houses taken by the town, whose appraised value was $19,758, of which that on School Street, built ten years before, was estimated at $10,666; the one in the Southeast District

at $2,550; and the one in the Southwest, on Broadway, at $5,150. In 1878 a house for two schools was erected on West Street, at a cost of about $5,000, which has recently been enlarged to double that capacity at an additional expense of $3,500. Within a few years, also, a two-room wooden building has been put up on Park Street (Little Canada) at a cost of $3,600; a brick house with four rooms, on Pleasant Street, costing $10,000, and a very fine brick edifice, on Prospect Street, South Gardner, with all modern conveniences, costing about $15,000. Whole school property valued at $69,000.

GARDNER HIGH SCHOOL.—For some years previous to 1856 a growing interest in the establishment of a High School had existed among the more intelligent and thoughtful people of the town, but it was not till that date that such interest assumed a definite form and crystallized into a practical effort to accomplish the contemplated result. But the time had now come when the statutes of the Commonwealth required such a school, and the matter was brought up in a meeting held February 5th, and referred to a committee of seven persons, who subsequently reported adversely to the proposition. The town accepted the report, and the subject rested for ten years. On the 2d of April, 1866, "Voted, on motion of Allen Folger, that a High School be established in town, according to law, and that the Selectmen and Superintending School Committee be a committee to carry into effect this vote." Pursuant to this action a High School was opened the following autumn in the old school-house of the Central District, which had been vacated upon the occupancy of a new building a few years before. This house furnished the best accommodations that could readily be obtained at the time, but it ere long became apparent that a more commodious and better arranged one, as well as one more centrally located, was needed, and in 1872 the town took definite action looking to the supply of the need. The subject was referred to a committee of three persons, who reported unanimously that "after examining the building now occupied by our High School, they were of the opinion that the accommodations and conveniences which it affords are not what the best interests of such a school demand." "Its location is also unsatisfactory to a large portion of those now sending children to the school, and to others who would send if its location was more central." They therefore recommended a new building to be placed on a lot selected by them lying on Chestnut Street, below the "Atherton House," so called, in the Heywood pasture. They also conveyed to the town the gratifying intelligence that after deciding upon this location they consulted with the owner, Mr. Levi Heywood, in regard to the terms upon which it could be obtained, who generously proposed to donate it to the town, if it should be accepted for the purpose specified. The report was accepted, and steps were immediately taken to carry its recommendations into effect. As a result, the proper deeds transferring the site finally fixed upon from Mr. Heywood to the town were passed, plans for a building were secured and the present neat, commodious and attractive structure was built under the direct superintendence of Francis Richardson, Esq., since deceased, and made ready for occupancy December 21, 1874. It is a substantial brick edifice, with foundations of Fitchburg granite and brown sand-stone trimmings. The main part is forty-six by seventy feet with a front projection and porch seventeen by twenty-two feet, the whole being two stories high and surmounted by a tower rising to an altitude of ninety feet. It has three front entrances, reached through open porches and leading into spacious halls. Its internal arrangement, including a commodious basement with cemented floors, is such as to serve well the uses for which it was designed, and the grounds outside are ample and well graded, The entire structure with its furnishings and surroundings, cost twenty-two thousand dollars, and is an ornament and an honor to the town. The citizens are to be congratulated upon having so admirable a High School building, and upon the excellent standing the school has maintained since its establishment.

PUBLIC LIBRARIES—*The South Gardner Social Library.*—Some time about the year 1840 a number of ladies and gentlemen in the south part of the town became interested in a movement for furnishing themselves and the neighborhood a higher and more extensive range of reading than had hitherto been enjoyed. Enlisting a goodly number of their friends and fellow-citizens in the matter, they secured the formation of a society bearing the name of the South Gardner Social Library Association, with a constitution and by-laws duly providing for the orderly government and administration of its affairs. It was a joint stock company, each member being required to pay two dollars on every share subscribed for, to be devoted exclusively to the purchase of books, for the purpose of founding a library; all other expenses to be met by equal assessment on the shares in proportion to the amount thereof. This institution started out under favorable auspices, and for many years was liberally patronized and successfully maintained, deriving support from levies made upon the stock, from annual fees for drawing books and the contributions of friends. In 1852 the association received a bequest of one hundred dollars from the estate of Abijah M. Severy, who died some years before, and in the following year it began to receive an annual income of about twenty-five dollars from a fund created by the same generous donor. This has continued year by year to the present time and of late has been the principal source of supplies for the purchase of new books, the fees of members, the number of which has become greatly reduced, and of book-drawers being little more than sufficient to meet current expenses. The multiplication of libraries connected with the Sunday-schools of the town, the increased

facilities for getting reading matter from other quarters, and more recently the opening of the large and attractive library and reading room at the Central Village, have had a tendency to diminish interest in this institution and to weaken its support. It has upon its shelves about twelve hundred volumes, to which additions are made from time to time as the condition of its finances will allow.

Some years ago a public library was started at the centre of the town, which contained many valuable books and was well patronized for a time, but no records of it have been found and none of the details of its history can be given. The public lost interest in it, and as a result it gradually fell into decay and finally disappeared.

The Levi Heywood Memorial Library Association.—A few years before the death of the late Levi Heywood, he became personally interested in the question of a Public Library and instituted some measures with a view of making that interest felt and of turning it to some practicable account. In order to call attention to the matter, he caused a lecture to be given in town upon the value and importance of such institutions by Hon. Theodore C. Bates, of North Brookfield, at which many influential citizens were present. As a result of this lecture and of the impression it made upon the hearers, a paper providing for contributions to a fund for the establishment of a library was circulated and money was pledged to the amount of about three thousand dollars for the realization of the object proposed, whereupon a petition was presented to the town for a vote authorizing the erection of a building for the proper housing of the contemplated library, "to be located within sixty rods of the Town Hall." The town, probably on account of the designated location, refused to grant the request. This action put the whole matter at rest for the time being, and nothing further was done about it till after the decease of Mr. Heywood in 1882.

A year or two subsequent to that event, Rev. Lawrence Phelps, then pastor of the First Congregational Church and Society of the town, revived the subject and brought it once more before the public. By personal influence and effort, aided by the co-operation of other interested parties, he secured the formation of an association which took the name of the Gardner Library Club, afterward changed to the Gardner Library Association, under which title it was chartered by the Massachusetts Legislature, June 19, 1884. The name of the corporation sufficiently indicated the object it was designed to promote. Under its auspices papers for subscriptions were again circulated, and pledges amounting to seven hundred dollars were obtained for the specific purpose of purchasing books and creating a nucleus of an institution, such as was hoped for at an early day. But as yet no place had been found in which to locate this germ of a library yet to be, and something must be done in that direction before proceeding further in regard to purchasing books.

Happily for the undertaking and for all concerned, while the question of a library building was under serious, if not anxious, consideration, Mr. Calvin Heywood and Mrs. Helen R. Greenwood, the only surviving children of Mr. Levi Heywood, recalling their father's interest in the matter of a Public Library, and desiring to honor his name and memory, proposed, without solicitation, to erect or cause to be erected, a library building, at a cost of not less than $25,000, to be presented to the corporation, when completed and made ready for use, on condition that that body should take the name of the Levi Heywood Memorial Library Association, and provide for the running expenses and general proper maintenance of the institution,—the building to be called "The Levi Heywood Memorial Building." The corporation voted to accept the generous offer on the terms specified, and work on the building began at an early day, and was carried on to completion as rapidly as possible.

Meanwhile the corporation was busily engaged in carrying out their plans as best they could with the means in hand, and in preparing for the occupancy of the building when it was ready for use. The money subscribed for books was expended. An old library, belonging to the Young Men's Christian Association, consisting of about two hundred volumes, was donated to the association, as was also a circulating library of James Emerson, M.D., numbering about one hundred volumes—making a collection of eight hundred books, which were properly arranged, catalogued and offered to the public in February, 1885, in the drug-store of Dr. Emerson, under the Town Hall. The association also qualified itself for receiving the title-deed of the property to be conveyed to it, by a new act of the Legislature, passed April 14, 1887, authorizing the change of name required by the donors, and granting power to hold real estate to the value of $80,000.

Before the completion of the library building Mrs. Fanny B. Heywood, widow of the late Charles Heywood, son of Levi, and her children, Mrs. H. S. Stratton, Mrs. Charles D. Burrage and Charles Heywood, came forward of their own free will and generously offered to supply an appropriate room in it, to be called the Charles Heywood Memorial Reading Room, with a good variety of magazines, papers and current literature of the day and to make adequate provision for the continued support and renewal of the same; thus greatly enlarging the field of the association's influence and much augmenting its power for good as an educating and elevating force in the community. Moreover, for the perpetual maintenance and increased usefulness of the library itself, Mrs. Helen R. Greenwood, since the death of her last surviving brother, and her husband, Alvin M. Greenwood, have laid the public under renewed

obligations by creating an endowment fund of $25,000, the income of which is to inure, year by year, to the benefit of the institution. In addition to the means thus put at the disposal of the Library Association, the town for the past two years has voted it the amount of the dog-tax, about $440 per year, (which will, it is hoped, be continued in time to come), and numerous donations of books, pamphlets and public documents from different sources have been received.

The Levi Heywood Memorial Library Building was completed, furnished and made ready for occupancy early in 1886, and on Thursday, the 4th day of February of that year, was formally dedicated to the important uses for which it was erected, an address appropriate to the occasion being delivered by Mr. S. S. Green, the accomplished and widely-honored librarian at the Public Library in Worcester. Since that date both the library and the reading-room have been open to the public—the former on Wednesday and Saturday afternoons and evenings from two o'clock to six, and from seven to nine; the latter every afternoon and evening during the week, except Sundays, at the same hours. The number of volumes in the library is now about twenty-six hundred, seven hundred and nineteen having been added during the present year. The whole number of books loaned in 1887 was 11,404. Two hundred and thirty-six new names were added to the roll of subscribers during the same period. Miss Nellie S. Osgood has had charge of the institution from the beginning, performing the duties of her position with credit to herself and to the satisfaction of all concerned. The officers of the Levi Heywood Memorial Library Association are: Rev. Lawrence Phelps, president; Charles D. Burrage, secretary; Volney W. Howe, treasurer; Herbert S. Stratton, James Emerson, M.D., vice-presidents; Rev. Lawrence Phelps, Alvin M. Greenwood, Martha W. Burrage, Helen R. Heywood, Helen R. Greenwood, Laura A. Heywood, James Emerson, M.D., Sarah L. Conant, Geo. W. Cann, Herbert S. Stratton, Mrs. Franklin Eaton and Charles D. Burrage, directors.

The library building is located in what is called the Central Village, directly east of the First National Bank, and is a neat and pleasing specimen of the Romanesque style of architecture, with enough original variations to give it a character distinctively its own. It is fifty by seventy-eight feet in size, one story in height, with large gables on the south and east sides fronting spacious rooms on the second floor. Its foundations, which rise five feet above the sidewalk, are of faced granite, and are crowned with a fine-cut water table. It is built of pressed brick, with brown-stone and terra-cotta trimmings. In the upper part of the front gable is a triangular panel of terra-cotta, bearing the name "Levi Heywood," while underneath, on a brown-stone frieze, are the words "Memorial Building." Below this are three large double windows, arched and flanked with decorated pilasters, giving ample light to the interior. In front is a massive open porch, nine by sixteen feet, floored with variegated tiles, and entered on either hand by broad circling granite steps. This porch has a large brown-stone arch in front with smaller ones at the sides, all supported by polished granite columns of a reddish hue, which rest on solid bases, and all surmounted by a terra-cotta cornice and balustrade.

On ornamented spandrels above the main arch are the figures 1885, indicating the date of the erection of the structure. The entrance opens into a spacious waiting-hall, fourteen by twenty-eight feet in size, and twelve feet high. On the right is the directors' room, fifteen by twenty feet, and on the left the reading-room, twenty by twenty-five feet in size. Back of the reading-room is a large reference-room, and, correspondingly, on the other side are there a librarian's room, lavatory and a stairway to the second floor, where there are a parlor, ten by twenty feet in size, and a hall, measuring twenty-four by thirty-six feet. In the rear of the waiting-room, below, and occupying the entire back part of the building, is the book-room, thirty-eight feet long by twenty-five feet wide, in a semi-circular form, having a height of eighteen feet, which will allow a gallery and additional shelving when needed. Alcoves radiating from a common centre, but not extending to the walls, afford the necessary conveniences for books. This room is sufficiently lighted both from the sides and from above as the other rooms are from the sides, and all are finished in excellent manner and handsomely decorated. The basement is divided into various apartments, having cemented floors, and devoted to such uses as convenience requires. The whole building is heated by indirect steam radiation and lighted at night by gas,—both generated in a basement room, set apart for that particular service. The architects of the structure were Messrs. Fuller & Delano, of Worcester, whose skill and efficiency in their distinctive profession this piece of work abundantly attests. It is unquestionably the most chaste and elegant specimen of architecture in town, a beautiful memorial, not only of one of its leading citizens for half a century, but of the wise generosity of its donors.

CHAPTER CXIV.

GARDNER—(*Continued.*)

RELIGION, HOUSES OF WORSHIP, PARISHES, ETC.

"It concerneth New England always to remember," said the pious old minister of Salem, John Higginson, "that these are a plantation religious and not a plantation of trade." And this she did remem-

ber through all her earlier history, to her own enduring honor and glory and to the welfare and happiness of many generations, over whose fortunes and destiny she exercised, unconsciously to herself, magic and mighty influence. And so it was that the founders of the town of Gardner, sons and daughters of New England, true to their ancestral heritage, regarded well at the outset the moral and spiritual interests of the people at large and took active measures to have them properly guarded and promoted. One of the first things done by the new town as a corporate body was to provide a place for the public worship of God and a minister to serve at the altar of religion. A site for a meeting-house, with a burying-ground and Common or training-field adjoining, according to the custom of the time, had been selected midway between the extremes of population, so as to accommodate the largest possible number of people, probably by mutual arrangement of those most interested, and at a legal meeting held on the 7th of November, 1785, four months after the act of incorporation was granted, steps were taken to secure the same to the perpetual use of the town by proper title deed. That site was very near the spot where the present church of the First Congregational Parish stands—the burying-ground in the rear and the Common in front substantially as they are to-day. At the same meeting Joseph Bacon, John White, Captain Kelton, Moses Hill and David Foster were chosen a committee "to draw a plan of a meeting-house and to see what stuff it will take;" and Simon Gates, Elisha Jackson and Captain Kelton a committee to hire preaching. It was also voted "To hire four days' preaching." At an adjournment of this meeting a week later, the committee on a meeting-house reported, whereupon it was voted "to build a meeting-house, forty feet wide and sixty-five feet long, with three porches," the size of which was afterwards modified to forty-five feet by sixty, with two porches. The material for the construction of said house was divided into more than a hundred lots, according to a schedule still preserved, and let out by auction to the lowest bidder. The work of providing material for and laying the underpinning was divided into ten lots and let out in the same way. The material was to be delivered before April 1, 1787, and the underpinning was to be completed June 20, 1787. The responsibility of erecting and finishing the building to the extent of framing and covering it, setting the glass, painting the outside, laying the lower floor and making the inside doors was committed to Joseph Bacon, the leading carpenter in the place, who was to do it for £172 10*s.*, "he assisting with his hands in raising" it. On the 27th of June, 1787, the frame was ready to be put up, and that part of the work is supposed to have been done on that day. It was a great occasion. Help from neighboring towns had been sought and was on the ground in due season. A crowd of spectators gathered to witness the proceedings, which began early in the morning and continued till sundown. With commendable forethought, authority was given Joseph Bacon by the town to keep the Common so far clear of spectators as that they should not interfere with the raising of the house. With equal forethought, a committee was appointed to furnish food and drink for the workmen and instructed, with prudent hospitality, "to give the spectators one drink." An accident, whereby a Mr. Day, of Winchendon, and a Mr. Gregory, of Templeton, came near losing their lives by the falling of a stick of timber, marred somewhat the harmonies of the day and gave it a tinge of sadness. Nevertheless, the frame was up, strong and sure, before night, its pitch-pine sills twelve inches square and posts of oak of equal size and other timbers in proportion, including two hundred oak braces, giving it a solidity and power of endurance which might defy storm and tempest, if not time itself.

But the building, though raised and soon after enclosed and covered, and so made available for public uses, was not completed according to the original plans for several years. Work in the way of finishing it and making it comfortable was done upon it as the means of meeting the expense involved would allow. To raise money, the pews, seventy-one in number, were sold in 1788, long before they were put in, a method of dealing in "futures" not unknown to the modern commercial world. At that date, indeed, the galleries were not built, nor the floors wholly laid, nor the doors and windows cased, nor the lathing and plastering done. There was the shell of a building and nothing more. At length, in January, 1789, the town closed a contract with Lieutenant Foster to finish it, "as Westminster Meeting-house is finished," by the 1st of November, 1790, for £199,10*s.*, all the material to be furnished as he needed it. Under this arrangement, the house was finally completed, though not to the satisfaction and acceptance of the town, till the summer of 1791, four years after the frame was erected. It was a plain, unpretending structure, scarcely larger than a moderate-sized chapel of these days, painted stone-color, with green doors and white trimmings, quite unlike the elaborate, complex, highly decorated, fully-equipped piece of ecclesiastical architecture which now stands in its place.

During these years of the building of the meeting-house, preaching had been maintained the greater part of the time, for awhile in private houses, but afterward in the unfinished building, seats and pulpit being improvised in true primitive style. Four days' preaching were provided for at first, then three months, then a year. There is no record of any action of the town in regard to the employment of a minister during the year 1787. Whether this was an omission of the clerk, or whether the citizens felt obliged to economize in this particular on account of straitened circumstances, is left to conjecture. If the latter, the experiment was never tried

afterward, no year having transpired since in the town, and but very few Sundays, when the voice of the preacher has not been heard, when public prayer and praise have not been offered to God.

A place of worship having been provided, even though it was as yet unfinished and in a crude condition, some one must be found to preside at its altar and lead in its service as the permanent minister of the town. A church had been formally organized February 1, 1786, but under what auspices or by whose agency, no one can tell. And who were the first preachers in the place—"the transient supply"—has not been ascertained. But after a time, Mr. Frederick Parker seemed to commend himself to the people as a suitable man to fill the responsible position, and received from the church a formal call "to settle in the work of the Gospel ministry in this place." The town, at a meeting held May 11, 1789, concurred. The terms of the proposed contract were: "for the settlement £150, to be paid in neat stock at the market-price, and for the salary, £60 a year for five years, and £66 afterwards; one-half to be paid in produce from the farm, viz.: beef, pork, grain, butter, cheese at the market-price; also twenty cords of hard wood yearly, cord-wood length, delivered at his dwelling-house." Mr. Parker seems not to have been ready to accept the invitation on the terms proposed. The call was renewed the next year with the same result, and that ended all negotiations with Mr. Parker.

The town in appropriating money for preaching the following year, 1791, instructed the committee on pulpit supply, in terms indicating a wise caution worthy of emulation in later times, "to hire some person of *good character* for four Sabbaths." The person of good character very soon appeared, and proved so satisfactory that he received an invitation to settle from the church in the usual order, which was ratified by the town, July 21st, the same year. The acceptable candidate was Jonathan Osgood, a native of Andover, Mass., and a graduate of Yale College in the class of 1789. The terms upon which the call of Mr. Osgood was offered, were, "£160 for his settlement and £75 annual salary," to which was subsequently added "twenty cords of hard wood, to be delivered at his dwelling-house, beginning three years after his settlement." On those conditions Mr. Osgood accepted the invitation in a letter dated September 21, 1791, which is preserved in the town records, with the proviso that "if at any future period, as you increase in wealth, I should stand in need, I trust you will be ready to afford me relief," adding significantly, "I shall depend that you punctually fulfill the proposals you have made." Mr. Osgood was duly ordained and installed as minister of the town of Gardner, October 19, 1791, the five neighboring churches, together with the two churches in Andover, the second church in Boxford, the church in Littleton and the church in Bolton, ten in all, with their pastors, being invited to representation in the council called to aid in his settlement. Mr. Osgood was a "cure" of bodies as well as of souls, and served in both capacities with such skill and efficiency as to secure the confidence, esteem and cordial support of the people of the town and community at large. For over thirty years he filled the two positions of minister and physician, his labors ending with his life, May 21, 1822.

For two years the town was without a minister, at the expiration of which period Mr. Sumner Lincoln, a native of Warren, and a graduate of Yale College, in the class of 1822, having studied theology at New Haven, and qualified himself for the profession, was invited to the vacant place with the offer of "a salary of five hundred dollars and a pew in the meeting-house." Mr. Lincoln accepted the call and was regularly ordained and installed as pastor of the First Church in Gardner June 16, 1824. Mr. Lincoln was settled as minister of the whole town, according to the old custom, and served in that capacity for about three years, when the secular and religious interests of the inhabitants were separated, the town yielding all its hitherto exercised rights in ecclesiastical affairs to the newly-formed religious society called the First Parish of Gardner, which became the lineal successor of the town in such matters. Under this new *régime* things went on as before until 1830, when the controversy between the Unitarian and Trinitarian branches of the Congregational denomination, which had been going on elsewhere in the State for several years, reached the place and became so decided and marked in its expression as to cause a division among the members of the church and parish, which resulted in a separation of the two opposing parties and the formation of a new religious organization, representing the views of those who withdrew from the previously existing body. The turning-point of this matter was the vote of the parish, dismissing Rev. Mr. Lincoln, who had assumed the Trinitarian position in the discussion, thereby committing itself fairly and unmistakably to a strictly Unitarian position. In accordance with the now declared views of the parish—the dissenting members having severed their connection with it—the Rev. Jonathan Farr, a minister of pronounced Unitarian views, was settled December 9, 1830, by a council composed wholly of ministers and delegates in full theological sympathy with himself. He was dismissed, after a pastorate of two and a half years, in July, 1833. His successor was Rev. Curtis Cutler, a native of Lexington, and a graduate of Harvard College and Divinity School, who was settled October 30, 1833. This relation was dissolved in 1839, when Rev. George W. Stacey took charge of the pulpit. He remained but a year or two and was followed by Rev. William H. Fish, who was the last acting minister of the First Church and Parish of Gardner in its distinctively Unitarian character and fellowship.

At the close of the ministry of Rev. Mr. Fish, the society and all its interests fell into a state of

suspended animation, which continued for several years, no minister being employed and none of the functions of a church being exercised, when, in 1846, the house of worship having been remodeled and made convenient and suitable for religious services, the question of a resumption of the public exercises of religion within its walls arose, awakening considerable interest and feeling in the community. This question involved another of deeper import, to wit: Under what auspices, theologically considered, shall the re-constructed edifice be opened? In other words, Shall the old lines of religious opinion and affiliation be taken up and followed out, or shall a new departure be made, ignoring the history of the society for the past sixteen years and starting out independently of all previous professions, declarations and alliances? It was finally decided by those who had been chiefly instrumental in re-constructing the meeting-house, and who had the larger pecuniary interest in it, that thenceforth the parish should act in sympathy with the more popular branch of the Congregational body, and maintain ecclesiastical relations with the so-called Orthodox Churches of the general community, retaining its old name and all the prestige, historical and ecclesiastical, properly belonging to it.

In accordance with that decision, overtures were made to the Evangelical Congregational Society, under which name those withdrawing from the First Parish in 1830 had organized and were legally known, for a union of the two bodies, which were favorably received, but which finally failed, by reason of the inability of the two parties to agree upon the conditions of the proposed intermarriage. Whereupon a call was extended to Rev. Mr. Banister to become the pastor, which was so far accepted as that he acted in that capacity for about a year, when Rev. John C. Paine, a native of Ashfield, succeeded him, being formally installed in office January 12, 1848. Mr. Paine proved to be a man of ripe culture, of pleasing manners and a popular preacher. After sixteen years of service he left, in May, 1864, and in the following October Rev. Wm. D. Herrick, a graduate of Amherst College in 1857, who had studied theology at Andover, and been settled four years at Redding, Conn., was installed in his place, Rev. Julius H. Seelye, D.D., president of Amherst College, preaching the sermon. He remained four years, when the union of the two societies, attempted twenty years before, was consummated, and he was dismissed, agreeably to the terms of the consolidation of the two distinct organizations and the churches connected with them referred to. The Articles of Faith and Covenant of the Evangelical Church were to be retained, while the names of the religious and secular departments, under the new arrangement, were to be the First Congregational Church and the First Parish in Gardner, respectively.

Thus it came to pass that, after twenty years, during which time there had existed two churches in town nominally of one form of theological doctrine and both struggling for existence, their houses of worship only a few rods apart, yet with more or less of alienation, if not bitterness of feeling, between the members of them, not altogether becoming those who the same faith profess and "the same Lord obey," these separate religious bodies came together, their two lives blending in one common life thenceforth as time went on. If, at the time of the union there was not, as the historian of Gardner intimates, that spirit of cordiality and co-operation between all the parties concerned that could be desired, yet since then, we are assured, "the old lines of separation have become less distinct," a growing harmony is displacing former unfriendliness or distrust, and there seems to be a disposition prevailing more and more to "keep the unity of the Spirit in the bonds of peace."

Under the new dispensation a call was extended to Rev. William Belden to become the pastor of the united Church and Society, which was accepted by him, and he was installed January 22, 1868. His pastorate was brief, being terminated by his dismission, March 22, 1869. August 25th, the same year, Rev. John E. Wheeler, a native of Amherst, N. H., and a graduate of Amherst College, was clothed with the honors and assigned the duties of the same office. He remained but about three years, closing his labors early in July, 1872. The parish was without a minister for nearly two years, several attempts to obtain one proving ineffectual. At length, on the 15th of May, 1874, the parish united with the church in extending a call to Rev. Wm. D. Herrick, pastor of the First Parish and Church at the time of the consolidation seven years before, who, although he had declined a similar one made a few months previously, finally accepted. Mr. Herrick was installed the second time in Gardner, June 11, 1874, and entered at once upon an active and useful career in the church and community. After two or three years' service, however, his health began to give way, and he was obliged to curtail his labors and, after a time, to suspend them for a season altogether, in the hope that he might find complete restoration of his depleted energies and be able to resume his ministerial work with his old-time vigor and promise of success. But he only partially recovered, and on taking up his professional duties again found himself unequal to the task of performing them to his own satisfaction, and seeing no prospect of entire recovery, deemed it due to his people as well as to himself to proffer his resignation. It was reluctantly accepted, and he closed his labors not long afterward. During his ministry he prepared, under directions from the town, an elaborate and detailed history of Gardner from the date of its incorporation, including a genealogical record of many of the principal families, which was published in a large volume of five hundred and thirty-five pages, in 1878.

During the same period the parish greatly improved its property and facilities for prosecuting the various departments of ministerial, church and parish work. In 1875 it erected a commodious and attractive parsonage, with stable and other conveniences attached, at an expense of about six thousand dollars. Early in the year 1878 the project of a new house of worship was started, which resulted in the completion, the year following, of the present spacious, well-arranged and well-equipped, imposing edifice, located at the head of the Common, very near, if not on the exact site, where the original town meeting-house was built. Until this was ready for occupancy, the church and society, subsequent to the union of the two parishes in 1867, had worshipped in the sanctuary of the Evangelical Congregational Parish, which stood on the east side of Green Street, fronting the Common. The present edifice is one of the finest pieces of church architecture in the northern part of Worcester County. It is of Gothic style, with steep, slated roof, and covers an area of sixty-four feet front, which is the width of the structure, and a length of one hundred and eighteen feet, having, at the southeast corner, a tower one hundred and twenty-five feet high, in which is a clock with four dials. The material is principally brick, with underpinning and steps of light-colored granite and brown sandstone trimmings. The building is lighted by stained-glass set in lead sashes, a large rose window adorning the front part. It has convenient entrances in front and at the sides, the latter leading to the main audience-room and to the chapel in the rear. There are six hundred sittings in the auditorium, all facing the preacher's platform and desk, at the right of which is the choir and organ-loft, and at the left a pastor's room. Nearer the walls there are ample passage-ways to the other parts of the building, where there are on the lower floor a spacious lecture-room, an infant class-room, library room and parlor, with a stairway to the second floor, where may be found a dining-room, kitchen, lavatory and all the modern improvements and conveniences. The whole is warmed by hot water and steam and lighted by electricity. The cost of the building, including organ and furnishings, was thirty thousand dollars, which amount was raised by the persevering efforts of Mrs. Henry Heywood and Mrs. Alvin M. Greenwood. The present pastor is Rev. Lawrence Phelps, who has served the church and society about five years. Everything betokens prosperity and usefulness.

THE EVANGELICAL CONGREGATIONAL CHURCH AND SOCIETY.—As the history of the religious enterprise represented by this name is so closely interlinked with that of the First Parish and Church, it is noticed next to it in this review, although, chronologically considered, it would be assigned a later place in the list of the religious organizations of Gardner. The members of the First Parish who, as has been said, withdrew on account of marked theological differences in the year 1830, were legally organized on the 25th of June, the same year, under the title given at the head of this paragraph. A constitution was drawn up, approved and signed by forty-one male members, who were thus qualified for the transaction of business. Steps were at once taken toward the erection of a meeting-house, which was accordingly built and dedicated June 16, 1831. The church connected with this parish was instituted agreeably to Congregational usages August 11, 1830. Rev. Mr. Lincoln, who had been minister of the old church and society, withdrew with the seceding members and by previous arrangement was at once chosen minister of the new body. The same council which was called to formally dismiss him in ecclesiastical order from his former pastorate installed him in the later one the same day, August 11, 1830. In addition to the regular salary of four hundred dollars in money voted Mr. Lincoln for his services, he was granted "his choice of all the pews in the house for his use." He remained pastor of this church and society until February 23, 1842, when the relation was dissolved. Mr. Lincoln is still living in the enjoyment of a fair degree of bodily and mental vigor, his heart warm as ever towards all generous and noble things, at the advanced age of eighty-nine years. Although at the time of the division in the First Parish of Gardner he sympathized with and became the minister of the Trinitarian party, he yet subsequently entered the fellowship of the Unitarian denomination and has been for a long time one of its most devoted and honored clergymen.

The several pastors of the Evangelical Congregational Church and Society succeeding Mr. Lincoln were, Rev. Wm. B. Stone, settled February 23, 1842, and dismissed in August, 1850; Rev. D. C. Frost, who served as acting-pastor about two years; Rev. Abijah Stowell the same for five years; Rev. J. W. Healey, who was installed December 3, 1857, and was dismissed July 11, 1859; Rev. Samuel J. Austin, installed December 8, 1859, and dismissed in May, 1864. Subsequent to this date there was no regular minister for about two years. Several persons had been favored with an invitation to the vacant place, but declined. At length Mr. George F. Stanton, of Lowell, a recent graduate of Bangor Theological Seminary, accepted a call extended to him, and was ordained to the work of the ministry and installed pastor of the church under notice, June 6, 1866, the sermon being preached by Rev. E. D. Foster, D.D., of Lowell. In the following May he retired in order to facilitate the union of this church and society with those represented by the First Parish, which was at that date accomplished. Thus, after an existence of thirty-seven years, this body was reunited to the lineal descendant of that from which it seceded, the changed theological attitude of the latter making this step possible without offence to the distinctive religious convictions of the members of either party.

It is a fact worthy of record and remembrance, that this Evangelical Church and Society, besides representing its own characteristic form of Christian faith, and doing the work incumbent upon it in its religious capacity, was, from the beginning, earnestly devoted to the reform movements of the age, maintaining a consistent and unequivocal position in their behalf, and displaying unusual fidelity, zeal and courage in the support and furtherance of the cause of temperance and of the abolition of American slavery.

The first meeting-house of this parish, built in 1831, was remodeled in 1846, and finally supplanted by a new one, more favorably located and better suited to existing needs, which was dedicated May 8, 1856. This house was used by the party erecting it until the union spoken of was effected, and by the consolidated churches until the occupancy of their present place of worship.

The First Baptist Society and Church.—In the year 1827 a few individuals living in the village of South Gardner and vicinity, desirous of having better religious privileges than they had previously enjoyed, inaugurated measures for the formation of a new society in that part of the town. In a brief time the object aimed at was accomplished, the organization taking the name of The Baptist Society of Gardner, as an indication of the religious convictions and preferences of its members, who were encouraged in their efforts by the sympathy and co-operation of the Baptist Church and Society in Templeton. The original membership consisted of ten persons, among whom Messrs. Sullivan Jackson and George Scott occupied the most prominent position. The immediate object of the association was to raise money for the purpose of sustaining a meeting and supporting the preaching of the Gospel in South Gardner village. To more effectually promote this object, an auxiliary association, called the Parochial Society, which is still connected with the church, was legally instituted January 30, 1828, for the management of the business interests of the enterprise. Moneys were raised, and regular religious services were opened at once in the house of Mr. Jackson, and continued for several years. Other activities of church life were established, among them a Sabbath-school, which consisted, to begin with, of fourteen members. The movement, once fairly started, attracted public attention and increased in numbers and importance. The need of a house of public worship was soon recognized, and steps were taken to provide one. Money was raised and a building was erected in 1833, at a cost of three thousand dollars, which amply met the wants of the society for many years, and was used as first constructed, with slight improvements, till 1872, when it was much enlarged and greatly improved in many ways, at an expense of over seven thousand dollars. The audience-room was entirely remodeled and newly furnished, and a commodious vestry with ante-rooms in the basement, was fitted up. A new and graceful spire supplanted the former inartistic cupola or belfry, in which was placed an excellent clock for the convenience of the neighborhood. Ten years later, in 1882, a good pipe-organ was introduced and other improvements made, at an aggregate cost of three thousand dollars. At present the edifice is exteriorly neat and attractive, and also well-furnished and equipped within, rendering it admirably adapted to the uses of a living Christian body of believers.

The church connected with this society was established in the year 1830, when twenty-three members of the Baptist Church in Templeton, who resided in Gardner, withdrew from that organization by mutual consent and in the spirit of brotherly love, for the purpose of having church privileges nearer at hand, and of exerting a greater influence for good upon the public mind and heart. An ecclesiastical council convened at the house of Sullivan Jackson on the 15th of November of that year, under whose authority the First Baptist Church in Gardner was organized, Mr. Jackson being chosen the first deacon. Its present deacons are Marcius A. Gates and Elmer L. Lovewell. The total number received into the church from the beginning is five hundred and forty, the present membership being one hundred and ninety-five.

Fifteen pastors have served this church and society during the fifty-eight years since they were organized, the Rev. Robert F. Tolman being the present incumbent of that office. In addition to the Sabbath-school, whose fourteen original members have increased to three hundred and ninety-six, there are, as auxiliary agencies for interesting and benefiting those who may be reached and helped to the better life, and especially the children and youth, "The Band of Hope," "The Cheerful Workers," "The Young Ladies' Mission Circle" and "The Society of Christian Endeavor." It is proper to add that legacies left by Abijah M. Severy, Mrs. Susannah Stone and Mrs. Rebecca Greenwood, the benefits of which are now being shared by this church, are fully appreciated as assisting very substantially in maintaining "the preaching of a Gospel of Salvation, of Anti-Slavery, of Temperance and of Peace."

Church of the Sacred Heart.—Who the pioneer Catholics were, or when they settled in Gardner, is involved in mystery. The most reliable information dates their coming in the year 1845. For many years they were few in number, and it was not till 1856 that the first Catholic service held in town took place in a grove west of Baker's Lane, Rev. Edward Turpin, of Fitchburg, officiating. Subsequently Mass was celebrated from time to time in private houses by priests from neighboring parishes. At length Bishop Fitzgerald, seeing the need of a clergyman to minister to the steadily increasing Catholic population of the northern part of Worcester County, sent Father Bannon to make his residence at Otter River, giving him jurisdiction over all the outlying districts north

of Worcester and west of Fitchburg. Thither the Catholic people of Gardner went to attend divine worship until they became sufficiently numerous to warrant a separate service for themselves, when the town hall was secured for that purpose and used at stated intervals. Meantime the Catholic population grew apace, with which came a demand for more clergymen. Therefore, in 1872, Winchendon, Gardner and Ashburnham were set off as a new parish, and Rev. D. C. Moran was appointed to administer its affairs, with headquarters at Winchendon. Father Moran was a man of great executive ability, and threw himself at once into the work of building up the spiritual interests of his people, and of putting the affairs of the parish into good working order. One of his first cares was to provide a suitable place of worship for his people in Gardner, who were adding to their numbers daily. He caused funds to be raised, selected and purchased a lot on Cross Street, and secured plans from Architect James Murphy, of Providence, R. I. In 1874 ground was broken, and before the end of the following year a handsome wooden structure of Gothic style, capable of seating six hundred people, was reared and dedicated to the service of God under the title of the "Sacred Heart of Jesus." Its total cost was about $26,000, and it was, at the time, the finest church edifice in town, a monument of which both pastor and people might be proud.

Gardner continued as a mission of Winchendon till 1880, when it was deemed able to maintain a resident pastor, and Rev. M. J. Murphy was placed in charge. Father Murphy soon became a great favorite. He took an active part in everything calculated to promote the best interests of the town, being a member of the School Board several years. He directed his efforts at the outset to a thorough organization of the parish, in order that his labors for the spiritual welfare of the people might be more effective, and the beautiful ritual of the Catholic Church be carried out in all its splendor. Sodalities, literary and temperance societies were established, so that the old and young of both sexes might benefit by their good influence.

The erection of a parochial residence next claimed his attention. Funds were collected, and the present substantial and commodious house was completed. The grounds about the church were graded at the same time, and concrete walks were put in. Much praise is due Father Murphy for the good taste displayed in the laying out and care of the grounds, which made the site one of the most attractive spots in town. Not long after, the French Canadians, who had formed a large portion of the growing congregation, wishing to have a clergyman of their own nationality, who could speak their own language and enter more fully into their feelings and sympathies, expressed themselves to that effect. Their desire was favorably considered, and in 1884 they withdrew, organized a church by themselves, and had a pastor installed over them. The Sacred Heart Church went on enjoying an era of prosperity, when, lo! on the evening of May 28, 1887, flames were seen to issue from the church edifice, and in one short hour it was in ruins. Soon after this, Father Murphy was transferred to another field of labor, and Rev. J. F. McDermott was intrusted with the work of rebuilding the church. On assuming his duties, the scene of desolation which met his view might have disheartened a less intrepid spirit; but nothing daunted, he threw all his energy into the task before him. Infusing into his people something of his own hope and confidence, they met his appeals for funds with a liberal response, while willing hands volunteered to clear away the *débris* and make ready for a new structure. Architect P. W. Ford, of Boston, furnished plans therefor on the old lines, with a slight addition to the rear, which will not only improve the outward appearance of the building, but give a hundred more sittings in the main auditorium. Work was soon begun, and pushed forward with such vigor that the congregation were enabled, in the following January, to occupy a handsomely, finished basement, which has since served as a place of worship. The superstructure will be completed in the near future, and will surpass its predecessor both in beauty and design. Thus it will be seen that the Catholic Church has made wonderful progress in Gardner since the sowing of the little mustard-seed in 1845, which has grown to include in 1888 nearly half the population, numbering now about thirty-eight hundred souls, and destined, under favorable conditions, to keep abreast of the general advance of the town in years to come.

THE UNIVERSALIST CHURCH.—In the year 1864, Rev. Jacob Baker, State missionary of the Universalist denomination, began holding religious services in Gardner, at which he preached with earnestness and emphasis the distinctive doctrines of the body represented by him. Those doctrines met with a hearty response in certain directions, and an effort was very soon made to bring together those who were in sympathy with them, and to provide for the regular and permanent advocacy of them in the community. On the 4th of June a society was organized pursuant to that effort, and a constitution was adopted for the orderly government of its affairs. One of its first acts was the appointment of a parish committee, who were subsequently instructed to secure, if possible, the services of Mr. Baker for half the time during the ensuing year. This purpose was carried out, and Mr. Baker's labors continued till the spring of 1867. Considerable interest having been awakened in the movement among the people of the town, and the society having increased its membership proportionally, it was deemed advisable, for the good of those concerned and to help on the cause, that a permanent minister be employed, and the Rev. Harrison Closson was called to that office with the understanding that he was to serve the

Gardner Society on alternate Sundays, the others being at his disposal to devote to the more general work of his profession, as opportunity offered. This plan was carried out for a year, when the financial condition of the society had so much improved as to warrant the engagement of Mr. Closson for the whole time. Soon after this was done, the minister, who was possessed of much religious fervor and zeal, was instrumental in establishing a church in connection with the society in accordance with New England usage, which was organized April 23, 1868, and publicly recognized with appropriate solemnities on the first Sunday in June following. This body was called "The Church of the Unity and Restoration," adopting a "Covenant" which embodied in a general way the principles of the Universalist branch of the Christian church.

A year later, Mr. Closson, who had been thus far employed annually as the incumbent of the ministerial office, was installed as pastor of the church and congregation according to Universalist custom, the Rev. A. A. Miner, D. D., of Boston, preaching the sermon. Under the ministry of Mr. Closson the movement was greatly prospered for a time, though later there was some decline of interest occasioned by differences which grew out of the matter of a place of worship. Services had been held for several years in what was called "the bell meeting-house," which was the former house of the First Parish. But the time had come for a change, as was recognized by all. The old house must be repaired where it was, or moved to a new site and refitted, or a new house must be built. Failing of an agreement upon any one of these propositions, disaffection arose and the organization became much weakened. Mr. Closson left in 1871 and for three years there was no regular religious service. But at length new interest arose, and measures were taken to build a church edifice. Funds were raised to that end. Mr. Wm. S. Lynde, an influential member of the parish, gave an eligible site at the corner of Cross and Maple Streets and one thousand dollars in money, which revived the hearts of all engaged in the enterprise. The house was erected and dedicated on the 26th of May, 1874. Soon after, Rev. Royal T. Sawyer became pastor and remained three years. He was an earnest, able preacher and a faithful worker in and out of the pulpit, and the church and society grew and prospered. Rev. Ephraim A. Reed was his successor, who rendered good service to his people for about two years, when he left and was followed by Rev. Mr. Barber, who gave way to Rev. James Taylor, a devoted minister and an excellent man, honoring his calling and sharing the esteem and confidence of the public. He took charge of the pastorate in 1884 and remained about three years. Rev. H. W. Smith is the present pastor, who is laboring with energy and ability for the people of his charge and the building up of the "larger hope" in the hearts and lives of men. The parish has a pleasant place of worship, commodious and convenient, an efficient Sunday-school and various healthful activities for the prosecution of its own distinctive work and for the promotion of "peace and good-will among men."

The Methodist Episcopal Church.—According to the records of the town clerk of Gardner, there were disciples of John Wesley and adherents of the so-called Methodist form of religious doctrine within its borders at an early period of its history. In the year 1797 Philip Wager, elder of a Methodist Society in Ashburnham, certified to the fact that Samuel Stone, of Gardner, "attended public worship" with that society and "contributed to the support of its ministry," which, under the provisions of a recently enacted law of the State, absolved him from the duty of paying a "ministerial tax" in his own town. In the following year a similar certificate was filed in reference to Mr. Simon Stone, also a resident of Gardner. It would seem, furthermore, from the same records, that in the year 1800 there actually existed in town a society of the same persuasion, of which one Henry Eames was public teacher, and Ebenezer Richardson and Samuel Stone were a standing committee. Further than this, touching this organization, nothing has come to light, and it is probable that it had but an ephemeral being, of which no account has been preserved.

During the first quarter of the present century a growing interest in the doctrines of Methodism prevailed in the north part of Worcester County, and what was called a "circuit" of preaching stations was established, extending through about a dozen towns, of which Gardner was one. It was known as the Ashburnham Circuit, that town having an established church, as others had not, and being the centre of operations.

In the year 1826 Rev. John E. Risley was the preacher of this circuit and Rev. John Lindsay presiding elder of the district under the auspices of which its activities were carried on. It is understood that about that date, religious services were held from time to time in the town, though so far as is known no attempt was made to found a church. Occasionally a preaching service would be held in a school-house or private residence by some itinerant, temporarily in the place, zealous in broadcasting the seed-grain of the Methodist faith. Finally, the town having grown considerably, and evincing signs of increasing prosperity, Rev. Wm. P. Blackmer, preacher in charge at East Templeton, seeing, as he thought, an opportunity for instituting a church representing his own conception of Christian truth, early in 1869 conducted a few meetings in the lower town hall. A good interest was awakened and a stated preacher was asked for, of the proper authorities, to enter and occupy the newly-opened field. In response to the request, the New England Conference, which met at Lowell, March 24, 1869, appointed Mr.

Blackmer to take charge of the work already promisingly begun. He at once commenced his labors and prosecuted them with such success as that in July of the same year the Rev. Loranus Crowell, presiding elder of the Worcester District, formally organized a church with a membership of eighteen and a Sunday-school of fifty persons, thus forming the nucleus of what has grown to be a large, active, useful branch of the religious brotherhood of Gardner.

In April, 1870, Rev. W. M. Hubbard was appointed to succeed Mr. Blackmer. During his administration of affairs a chapel was erected upon a site on West Street, donated for the purpose by Mr. Lewis H. Graham, which was dedicated September 14, 1870. Rev. Daniel Atkins followed Mr. Hubbard, who, at the end of a two years' pastorate, in 1875, reported ninety-nine members of the church and thirteen probationers. Rev. Seth C. Carey became pastor in 1875. The growth of the movement had been so great that larger accommodations for public worship and other departments of the general work were needed, and measures were started to meet the existing demand in that regard. A lot on Chestnut Street was procured, ground was broken September 20, 1876, a new edifice with a seating capacity for six hundred persons was built and dedicated August 9, 1877, Bishop R. S. Foster, of Boston, preaching the sermon. The cost of the building, with its various appointments for the use of a living, active body of Christian believers, was less than thirteen thousand dollars. At the close of Mr. Carey's ministry the church had one hundred and twenty-three members and thirty-four probationers. Revs. W. D. Bridge, W. P. Ray, J. H. Twombley and M. H. A. Evans have successively had charge of the field since Mr. Carey's retirement. Rev. E. P. King is the present pastor. Under wise and energetic administration all the interests of the church are well cared for and effectively promoted.

St. Paul's Episcopal Church.—The Episcopal services in Gardner are yet held under the auspices of the Missionary Society of the Diocese of Massachusetts. There is, therefore, no organized parish. The first service ever held here was conducted by the Rev. J. S. Beers, the Diocesan Missionary of this State, on December 10, 1882, in the Lower Town Hall. After said service, the Holy Communion was celebrated at the house of David Parker, M.D. The following persons beside the Missionary partook: Dr. Parker, Mrs. L. D. Rose, Miss Kate Skein and Miss Sarah Muzzy (now Mrs. H. P. Upham).

The work was put into the form of an organized mission February 9, 1883, at a meeting in the Town Hall, presided over by Rev. W. R. Huntington, D.D., then of All Saints' Parish, Worcester, but now rector of Grace Church, New York City. The mission was named St. Paul's by the suggestion of Mr. Wm. Briggs, a gentleman interested in the movement, who so named it after St. Paul's, New Castle-on-the-Tyne, England, where his father is buried. At its organization an Executive Committee were chosen, as follows: David Parker, M.D., Mr. Briggs, Mrs. Geo. A. Ellis, George W. Black, J. W. Jefts, James H. Rose and Miss Kate Skein. Dr. Parker was elected senior warden; Wm. Briggs, treasurer, and Mrs. G. A. Ellis, secretary. From February 9, 1883, services were led by different clergymen and lay-readers until July 16th, when the Rev. John C. Hewlett took charge by appointment of the Massachusetts Diocesan Missionary Board. After a time Mr. J. W. Jefts and Miss Skein resigned by reason of removal from town, and Messrs. M. Shumway and Frederick Conant were chosen to fill the vacancies. May 25, 1883, Miss Sarah Muzzy was added to the Executive Committee.

In the month of July, 1883, a Sunday-school was organized with the Rev. J. C. Hewlett, superintendent; Mr. Wm. Briggs, treasurer, and Mr. W. B. Ellis, librarian. Soon Mr. Ellis resigned, and Mr. Frank Allen succeeded him. The first person baptized was Mrs. Mary A. Van Benthuysen, by the Rev. J. S. Beers, in the Town Hall, April 15, 1883. The first confirmation service was held April 16, 1883, by the Rt. Rev. B. H. Paddock, D.D. Dr. David Parker and Mrs. Mary A. Van Benthuysen were then confirmed.

The Rev. J. C. Hewlett was in charge for about one year. He was followed July 22, 1884, by the Rev. Thomas A. Hyde. During the pastorate of the latter the chapel on North Main Street, now occupied, was built. He continued in charge about one and three-fourths years. May 1, 1886, Rev. J. S. Lemon was appointed to follow the Rev. Mr. Hyde. The first marriage in town, by an Episcopal clergyman, was that of Mr. E. J. Rose and Miss Libbie E. Jacob, November 21, 1883, by Rev. J. C. Hewlett.

The first serious loss met by the parish was the death of the senior warden, David Parker, M.D., May 8, 1886. The origin of the mission was largely due to his efforts, and was the realization of hopes indulged for over sixty years. He lived, however, only a short time to enjoy the services of his choice. The next serious loss of the parish was the death of the general Diocesan Missionary, the Rev. J. S. Beers. At present, the Executive Committee consists of Messrs. William Briggs, G. W. Black, Frederick Conant, Alfred Wyman, Herbert Morse, George Glazier and Mrs. George A. Ellis. The Sunday-School superintendent is the pastor; the assistant superintendent and treasurer, Mr. Briggs; the secretary, Alexander Hamilton; the librarian, William Kennedy. The organist and choir-leader is Mrs. A. A. Williams. The treasurer of the mission is Mr. G. W. Black. The parish has a pleasant place of worship worth more than six thousand dollars. There are about fifty communicants, Rev. J. S. Lemon still filling the office of pastor. With the exception of the French congregation, St. Paul's is the only church in West Gardner.

The Unitarian Church.—For more than forty

years after the close of the labors of Rev. William H. Fish as minister of the First Parish there was no distinctive Unitarian preaching in the town. At length, on the 27th of January, 1884, the Rev. A. C. Nickerson, pastor of the First Church and Society in Templeton, to test the question of the existence in the community of sympathy with that form of Christian faith, held a service in the Lower Town Hall, the birth-place of several religious enterprises, with an attendance of thirty-five persons. A good degree of interest was manifested on the occasion and more was developed afterward, so that two months later, March 27th, a legal organization of a society was effected, the necessary papers having been drawn up and receiving many signatures. At a later date the first permanent officers were elected, as follows: Webster Cowee, moderator; Edgar V. Reynolds, clerk; Edwin A. Colby, M.D., treasurer; Orange F. Smith, collector; Orange F. Smith, Jonas R. Davis and Julian P. Dunn, parish committee. Before the expiration of the year, steps were taken in reference to a site for a church edifice which resulted in the purchase of a lot in the Central Village, at the corner of Elm and Cherry Streets, on which a house of worship was subsequently built.

From the time of the first meeting in January, 1884, until April, 1886, the movement was in charge of Rev. Mr. Nickerson, who supplied preaching regularly; the service being held in the afternoon for his accommodation. Upon his removal from Templeton, at the date named, it was deemed wise to have a resident pastor, who should devote his entire time to building up the enterprise and establishing it upon a permanent basis. After hearing several candidates the society, on the 19th of July, by a unanimous vote, instructed the Executive Committee "to extend a call to the Rev. Wm. C. Litchfield, of Berlin, to become our Pastor." The committee acted according to instructions, and the call was accepted. The regular labors of Mr. Litchfield began on the first Sunday in August, and on the 28th of October he was duly installed as the first pastor of the Unitarian Society of Gardner, Rev. Austin S. Garver, of Worcester, preaching the sermon.

The need of the society for a house of worship becoming more and more imperative, the effort to secure one was renewed and charged with fresh vigor and zeal. The necessary funds were soon pledged and the project was urged forward with commendable rapidity. On the 7th of May, 1887, ground was broken on the lot already bought, and on the evening of January 25, 1888, the building, which, with the exception of the basement, was finished and furnished suitably for church purposes, was dedicated with appropriate exercises, the sermon being delivered by Rev. Minot J. Savage, of Boston. It is a substantial structure, eighty feet by forty in measurement, built of brick with granite trimmings and having a circular tower of ample height at one of the front corners, through which entrance is gained to the main auditorium and parlor adjoining. These, when opened as they may be to form one audience-room, will accommodate three hundred persons, constituting, with the furnishings and adornings, a neat, convenient and attractive place of religious service. The basement when completed will have pleasant, well-arranged and appropriate rooms for Sunday-school and other purposes. The society is slowly gaining in numbers, in public confidence, in efficiency of administration, in power of usefulness and in promise of future growth and prosperity. The congregation has more than doubled during the last two years; the Sunday-school, with a proportionate increase, is well organized and doing good service, and other activities are in successful operation. On the 1st of April, 1888, one hundred families were connected with the various departments of the institution.

The French Catholic Church.—Some twenty-five or thirty years ago the first installment of French Canadians came to Gardner seeking employment and a chance to better their worldly fortunes. The success attending their search induced others to follow them, and others still in constantly increasing ratio, until at the present time this element of the population numbers about eighteen hundred souls. At first, and for many years, these people contemplated only a temporary sojourn here, as was the case in other places,—one long enough to acquire a competency or what was deemed such, then going back to their native boroughs to enjoy it. But latterly they are more disposed to a permanent residence in their new homes, and a desire and purpose of becoming part and parcel of the community in which they dwell and of the American people, by naturalization and other processes of affiliation and coalescence, have become widely prevalent and are shaping their lives to new issues, in all social and civil respects.

These new-comers, by inheritance, education and conviction are, generally speaking, Catholics, and strongly committed to the faith and polity of the Papal Hierarchy. Very naturally, they at first attached themselves to the movement which ripened into the "Church of the Sacred Heart," becoming members with others of that church when it was finally established and domiciliated in the community. This relation continued till 1884, when, the congregation having greatly outgrown the accommodations of the church building, and the French members feeling that they were able to maintain a church of their own, which should have a minister of their own nationality, a separation of the two distinct elements of the church was effected, with the approval of all parties concerned, and the French Catholic Church was organized, the Rev. F. X. Soly being installed as pastor in November, 1884. The new parish first worshipped in the skating-rink, but soon built the structure now in use on Nichols

Street, which is designed to serve its needs until a more commodious and substantial edifice can be erected, in the near future. In this building, which, with the grounds, cost about eight thousand dollars, besides the main auditorium, with a seating capacity for five hundred persons, there are rooms for a pastor's residence, schools, social and society meetings, etc., etc. After two years of faithful service, Father Soly, on account of failing health, resigned his pastorate, and was succeeded by the Rev. C. E. Brunault, the present incumbent. Under his wise and prudent management the parish has flourished, and grown to be the leading one in town in respect to numbers. Various activities have been instituted for purposes of charity, and to promote the material, intellectual and moral welfare of the people, among which are St. John the Baptiste's Society, for mutual help, a temperance society for men and also one for boys, a literary club, a club for naturalization purposes, the League of the Sacred Heart, St. Ann's Society for married women and a Society of the Immaculate Conception for girls. Two day-schools are in operation, having both French and English teachers, over which Father Brunault exercises a watchful supervision.

CHAPTER CXV.

GARDNER—(*Continued.*)

RELATIONS TO THE STATE AND NATION.

THE spirit of patriotism and of loyalty to those principles of civil and religious liberty which are embodied in the Declaration of Independence, and which underlie both the Commonwealth of Massachusetts and the American Republic, has from the beginning animated the hearts and actuated the lives of the sons and daughters of this representative New England town. If at any time it has seemed to slumber or grow cold, it would, on occasion, revive again, and burn and glow with renewed ardor and zeal, ready to meet bravely any emergency, to stand fast in any lot, and to endure any hardship or sacrifice for liberty's sake, to vindicate the honor of the old Bay State or to save the imperiled country.

Gardner was not incorporated until after the signing of the treaty of 1783, whereby the English colonies in America were acknowledged and declared by the mother country to be free and independent,—until the thunders of the Revolution had died away upon the air. Nevertheless, a goodly number of its early citizens had taken part in the great struggle, and had shared, with those better known to fame, the honors and rewards with which a hard-won but glorious victory had been crowned. Thirty-five of the early citizens of the town are known to have been connected with the Continental Army in one capacity or another, or to have contributed by personal service in some different form to the mighty achievement which broke forever the bonds of colonial allegiance to despotic power, and it is more than probable that several others whose names are not found on any existing records belonged to the same triumphant patriotic category. The list of Revolutionary soldiers, as derived from trustworthy authorities, is as follows:

Baker, George.
Baker, John.
Baldwin, Josiah.
Beard, Andrew.
Bickford, William.
Bolton, Ebenezer.
Clark, Joseph.
Comee, David.
Eaton, John.
Fairbanks, Levi.
Foster, David.
Foster, Samuel.
Glazier, John.
Goodale, Peter.
Greenwood, Aaron.
Greenwood, Jonathan.
Haynes, Reuben.
Heywood, Seth.
Hill, Jesse.
Hill, Moses.
Holland, Joseph.
Howe, Ebenezer.
Jackson, Elisha.
Kelton, Samuel.
Kemp, John.
Kneeland, Timothy.
Matthews, John.
Simonds, Elijah.
Simonds, Joseph.
Stone, Samuel.
Wheeler, Josiah.
White, John.
Whitney, Joshua.
Whitney, William.
Wood, Elijah.

Several of these were commissioned officers, though it does not appear that any of them rose to a higher position than that of captain. Elisha Jackson had command of a company of minute-men raised by order of the Provincial Congress, and with those under him hurried away to Cambridge on receiving tidings of the battles of Lexington and Concord, April 19, 1775. William Bickford and Josiah Wheeler had been soldiers in the French and Indian Wars. Ebenezer Bolton and David Foster were at the battle of Bunker Hill, the latter helping to carry the body of General Joseph Warren from the field. Jonathan Bancroft, Benjamin Eaton, Reuben Haynes and Samuel Stone were at the taking of Burgoyne at Saratoga, October 17, 1777, the most important of all the victories of the seven years' contest.

It was about a year after the incorporation of the town that the general feeling of unrest and disquietude in the central and western parts of Massachusetts arose, which ripened later into that episode in post-Revolutionary history denominated "Shays' Rebellion." The citizens of Gardner at the outset sympathized very fully with the prevailing dissatisfaction caused by excessive taxation, a depreciated currency, and other conditions of political and social life consequent upon a long and costly war, which, combined with the poverty of the masses of the people, made the public burdens "heavy indeed, and grievous to be borne." They therefore, with commendable heartiness and dispatch, responded to a call for a convention, to be held at Paxton on the 26th of the following November, for the purpose of consulting upon the existing grievances, and of finding some way of relief from the disabilities and burdens to which all classes of the population were subject, and at a legal town-meeting chose Captain Samuel Kelton

as delegate thereto, and instructed him in regard to his action at its sittings. It cannot be learned from the records that the delegate made any report of his mission, or of the doings of the convention, or that the town took any further action in the matter. It is but reasonable to suppose that the citizens, seeing to what extremes the master-spirits of that and kindred gatherings were inclined to go, and that there was violence and treason in the movement as it was manipulated, could not find it in their hearts to have anything more to do with it. Their sense of justice and of patriotic duty would not allow them, probably, to be parties to the bloody designs of the leading agitators, and so quietly allowed the whole subject to go by default, so far as they were concerned. By this course they fortunately escaped becoming involved to any extent in those measures which led speedily on to open insurrection or mad defiance of the State government, and which came to their tragic culmination at Springfield on the 25th of the following January, 1787, when five of the insurgents were killed by the United States troops stationed there, in an insane attempt to capture the arsenal of the Federal Government, and its military stores. The repulse of the assaulting party on that occasion virtually put an end to the whole wicked and foolhardy affair.

Although the town, in its corporate capacity, appears to have been absolved from all complicity with the rebellion, yet there were several individuals who were so far implicated as to be required to go before a justice of the peace, take and subscribe to an oath of allegiance to the State and National governments, and deliver up such fire-arms as might be in their possession. Certificates from magistrates attesting to the fact that at least three persons conformed to that requirement, and so may be judged guilty of some act of disloyalty in connection with the revolt, were received by the town clerk in the spring of 1787, and were copied in full into the records. The impartial historian, looking through the vista of more than a hundred years, sees some justification for the discontent which prevailed during the critical period under notice, even while pronouncing emphatic condemnation upon those violent, blood-thirsty spirits, who would not only have sacrificed human life to an indefinite extent to gain their ends, but imperiled all those precious interests which the recently-closed Revolutionary War had been waged to secure.

The year 1794 was a year of great discontent and excitement throughout the entire country. There were various causes for this unfortunate state of the public mind. The trouble with the Indians of the great Northwest, the so-called Whiskey Insurrection in Pennsylvania, which at one time assumed threatening proportions and called for the intervention of the general government, the complications growing out of the conduct of the minister of the new French Republic, and, perhaps, most of all, the growing feeling that England was not fulfilling the terms of the Treaty of 1783 honestly and in good faith, arousing in many quarters a disposition to let loose upon her again the dogs of war—all these things served to unsettle the public mind and to jeopardize the public welfare. The wisdom and statesmanship of President Washington were taxed to the utmost to avert threatening ills and guide the Ship of State safely through the troubled waters to serener and safer seas. Pending efforts to secure by peaceful means and in quiet ways assumed-to-be-invaded rights, to allay popular disquietude and to promote public order and tranquillity, he deemed it wise and prudent to put the country in a state of defence and to prepare it for whatever emergency might arise. Measures were instituted to that end. State governments rallied to the support of the National authority, and seconded its methods and plans of action. The Commonwealth of Massachusetts issued a call to all the towns to raise certain quotas of men, who should be ready at the shortest notice for any service to which they might be called. Gardner responded with loyal good will. In town-meeting it was voted "to give a bounty of twenty shillings to men who should enlist, when they were called into service, and to make up their wages to ten dollars per month." A military company was formed, with William Bickford captain, which was kept under drill till the crisis was passed and the statute requiring its formation repealed.

Upon the issuing of the proclamation of war against Great Britain, in 1812, by President Madison, the people of Gardner were evidently largely in sympathy with the so-called Federal Party of the country, the members of which were disposed to regard the action of the Chief Magistrate with disfavor, and to look upon the conflict which such action was designed to inaugurate as not only unnecessary and unjustifiable on general principles of national polity, but as hostile to the best interests of the Republic. Under this prepossession, they were moved to join with their fellow citizens of other towns and localities in creating a movement or state of public sentiment which should have a tendency to terminate hostilities even before they had fairly opened, and avert the calamities which it was claimed by the Federalists would inevitably result from a continuance of the struggle. They accordingly sent Rev. Jonathan Osgood a delegate to a convention held at Worcester on the 12th day of August, only a few weeks after war was declared "to consult upon the alarming condition of our country" and "to petition the President of the United States to bring about a speedy and honorable peace with Great Britain."

But the efforts of the opponents of the war were without avail. The national administration was fully committed to its declared policy, and was not to be dissuaded from its purpose to urge it forward with all possible vigor and efficiency. Seeing that there was no alternative in the matter, and deeming the cordial support of the regularly constituted govern-

ment a token of loyalty to the nation, the citizens of Gardner, or at least a reputable proportion of them, responded to the call for enlistments in the public service. A company of militia was organized under the name of the Gardner Light Infantry, which was soon ordered to repair to South Boston for the defence of the metropolis of New England against any possible attacks from British cruisers that were looking for vulnerable points all along the Atlantic coast, and there it remained on duty until the cessation of hostilities, early in 1815. The officers of this company were: Ephraim Williams, captain; Samuel Sawin, lieutenant; Joel Cowee, ensign; Ebenezer Bolton, Charles Hoar, Benjamin Stone and Reuben Wheeler, sergeants. The organization was maintained for some twenty years, but, fortunately, there was no occasion for its being called again to swell the ranks of horrid war.

But there are duties which the patriotic citizen owes his country in times of peace as well as when commotion fills the air, and armed foes threaten the public welfare and the nation's life. And these the people of Gardner discharged with more or less of constancy and fidelity, according to personal conviction or party preference, for nearly half a century, little apprehending the fiery ordeal through which they were to be called to pass. But it came nevertheless, and they rose to meet it with wonderful unanimity and alacrity,—with characteristic and praiseworthy loyalty and zeal. When the mutterings of secession first arose, after the election of Abraham Lincoln to the Presidency of the United States in the autumn of 1860, and when, in the following April, by the firing upon Fort Sumter, open and armed rebellion against both the constituted authority of the nation and the Republic itself in the interest and for the perpetuation of chattel slavery was inaugurated, they girded the loins of their strength about them, and, in the name of outraged justice and an insulted flag, they rallied to the support of the Federal Government, and furnished men and means to repel the domestic invader and suppress the unwarranted and traitorous revolt.

On the 30th of April, in response to the proclamation of the President declaring the existence of an armed rebellion in the slave-holding States, and calling for seventy-five thousand volunteers to meet the rising foe and overthrow the conspiracy, a special town-meeting was held for the purpose of taking appropriate action in the way of meeting the demands of the crisis. At that meeting it was unanimously

VOTED, That the selectmen be and hereby are authorized to purchase, at the expense of the town, clothing or uniforms (suitable for wear in actual service) sufficient for the members of a volunteer militia company, which may be raised by enlistment of the citizens or inhabitants of the town, and be organized agreeably to the laws of the Commonwealth, on or before the first day of June next. Provided, that said company shall pledge themselves to enter the service of the Commonwealth of Massachusetts, or of the government of the United States, to defend and sustain said government against the traitors and rebels, which now or may hereafter threaten its destruction, if called for by the proper authority or authorities for that purpose at any time within one year from the date of the organization of said company. Also provided that, if an entire company cannot be raised in the town of Gardner, the selectmen are hereby authorized to furnish uniforms or clothing, as aforesaid, to such citizens or inhabitants of said town as shall enter the service of their country for the purpose aforesaid.

VOTED, That the selectmen pay to the order of the several members of a militia company, which may be raised from the citizens of the town, or to the order of their families in their absence, the sum of one dollar per day, payable monthly, for three months from the commencement of actual service.

The same spirit which is manifested in these initial votes of the town was displayed throughout the entire four years of the war, prompting corresponding action from time to time as the exigencies of the country required. In illustration of this fact, a few instances of what was done, and a few only, are here referred to. On the 23d of July it was "Voted, that the selectmen be and hereby are authorized to offer a bounty of one hundred dollars (in addition to the bounty now offered by government) for each and every volunteer who may enlist into the service of the United States on or before the fifteenth of August next as a part of the quota of forty men to be furnished by the town of Gardner under the late requisition of the Governor of Massachusetts, and that the sum of $4,200 be and hereby is appropriated by said town for the purpose of carrying the same into effect." A month later the same bounty was again voted, and the sum of six thousand dollars was appropriated accordingly. By vote of the town passed June 27, 1863, the selectmen were authorized to draw on the treasurer at their discretion for funds to render "the necessary aid to the families of those who have been or may be engaged in the military service of the United States." On the 4th of April, 1864, one hundred and twenty-five dollars was voted to "each recruit under the recent call of the President." Similar votes were passed at several successive dates during the remaining period of the conflict.

According to a carefully prepared list of the number of men sent by the town to aid in the suppression of the slave-holders' rebellion, there were two hundred and ninety-one in all, of whom one hundred and eighty-five, including half a dozen re-enlistments, were citizens or residents, the others being engaged from outside to fill the required quotas. Of those belonging to the place, seven were slain in battle, three died of wounds, seventeen were victims of various diseases incident to the fortunes of war, while a number of others, returning home, sunk slowly into their graves as the result of ailments contracted while connected with the army; others, yet living, have been sufferers from maladies or disabilities incurred in the same way.

It has been estimated that the whole amount of money expended by the people of Gardner during the four years of the war, for the purpose of prosecuting it and carrying it to a successful issue in the

complete suppression of the Rebellion, was sixty-two thousand two hundred and sixty-nine dollars, according to the following itemized statement:

Raised and paid out by the town	$23,062
Voluntary subscriptions	13,344
State aid paid soldiers or families	17,363
Paid for twenty-five substitutes	7,500
Sent to soldiers by Soldiers' Aid Society	1,000
Making a total of	$62,269

This sum, according to the census of 1860, would be nearly twenty-four dollars to each man, woman and child in the town, or at the rate of almost six dollars a year, which may be regarded as the actual annual cost of the Rebellion to every inhabitant during its continuance. Aside from this vast expenditure, there has been paid what is called State Aid, which comes primarily and substantially from the citizens of Gardner, being included in the State tax. The amount of this at first was twenty-three hundred and twelve dollars, but has been reduced to about six hundred dollars a year. And this payment is to continue, though in constantly diminishing figures, as time goes on, indefinitely, or until the last man in Gardner who heard and answered his country's call during those years of her distress and threatened overthrow, 1861–65, shall have passed beyond the realm of all earthly conflicts and of all mortal needs, when it may be said of him:

> "He sleeps his last sleep, he has fought his last battle.
> No sound shall awake him to glory again."

Since the close of the war the citizens of Gardner have been content and happy in following the pursuits and fulfilling the obligations of their common every-day-life, in guarding and fostering their domestic and social interests, in providing for the general needs of the community, in giving encouragement to both private and public morality and piety, in promoting the growth and prosperity of the town, all of which things sustain definite relations to the national welfare, and in discharging the more quiet but highly important duties of good citizenship in the spirit of true loyalty to those principles and institutions of civil and religious liberty which the republic properly regarded represents and was founded to maintain and perpetuate. Their patriotism, though it may not display and report itself in those more open and striking forms assumed in the time of the great uprising, is nevertheless, as may be believed and hoped, burning, a steady, never-dying flame, within their breasts, ready as of yore to respond to any call of the country for brave defenders in the hour of peril, should it come again, and for true and noble men and women always and forever, in whom alone, with the favor of God, is to be found its assurance of permanent prosperity and of unfading glory.

CHAPTER CXVI.

GARDNER—(*Continued.*)

MISCELLANEOUS TOPICS.

GARDNER WATER WORKS.—With the rapid growth of Gardner and the accompanying multiplication of wooden buildings in the more thickly populated districts, the need of some effective system of public water works, both as a protection in case of fire and as a means of domestic supply, became apparent to many of its leading citizens. After agitating somewhat the subject of providing for this need, a public meeting in the interest of the project was held March 10, 1880, at which S. L. Wiley, of Greenfield, president of the Wiley Construction Company, who was familiar with such enterprises and who had looked the ground over to some extent with a view to practical results, was present and made a statement in regard to the feasibility of the thing proposed and the probable cost, both of the works and the water as it might be furnished to consumers. His representation made so favorable an impression upon those who heard it that a town-meeting was called on the 28th of April, when, after considering the subject at some length, a committee was chosen "to contract with any Company or Corporation for sixty or more hydrants for a term of years for the use of the town, and to authorize such Company or Corporation to lay water-pipes along or across any highway and make necessary excavations for the same." This committee, after due inquiry and deliberation, closed a contract with the Wiley Construction Company in the autumn of the same year, and in the following June the work of laying the mains was commenced and carried forward to completion four or five months afterward. During the succeeding winter, the reservoir on Glazier Hill was constructed, as was also the pumping-station at the southeast corner of Crystal Lake. At an adjourned annual town-meeting in 1882 the committee reported their doings with the agreement made with the Construction Company, which was as follows: "The Company are to put in sixty hydrants according to accompanying plans, and furnish water for extinguishing fires for twenty years, at the rate of sixty dollars for each and every hydrant per year, the town to have the privilege of putting in new hydrants at its own expense on lines of pipe already laid, without additional cost. If new lines of pipe are laid, the Company will put in new hydrants on the same terms as the original ones were furnished. All hydrants to be accepted by the town and warranted to be kept in good working order. The Company to supply all public buildings, fountains and watering-troughs, without cost to the town, and all private parties at rates not to exceed those established in the town of Athol. The control of the hydrants to be in the hands of the Chief Engineer of the Fire Department.

At the end of twenty years the Company agrees to sell to the town at a price determined by three disinterested appraisers." This agreement was ratified by the town.

On the 10th of April, 1882, the Gardner Water Company was incorporated by act of the Legislature, and given the privilege of taking water from Crystal Lake, with the additional "right of eminent domain." The capital stock of the company was $100,000. S. L. Wiley was chosen president, and Volney W. Howe secretary and treasurer. The water was first let into the mains May 4th, and a trial of the hydrants took place May 11, 1882. Everything proving satisfactory, the Gardner Water Company bought of the Wiley Construction Company all its interest in the undertaking, assuming all its stipulated obligations to the town. The cost of the works, to the present time, has been about $80,000. More than sixteen miles of street pipes have been laid, with seventy-four hydrants and six public watering-troughs attached. About one-third of the families in the town are accommodated by the works. School-houses and engine-houses, as well as other public buildings, receive water free. About three hundred thousand gallons are used per day. The reservoir will contain five million gallons, and is supplied from Crystal Lake, the water of which is of superior quality and practically inexhaustible, by two compound, duplex, condensing pumping engines, made by the Deane Steam Pump Company, of Holyoke, which are capable of pumping four million gallons per day. Henry W. Conant is the present skillful and efficient superintendent of the works, and the officers of the company at this date are C. H. Green, of Northfield, president; Volney W. Howe, secretary and treasurer.

Fire Department.—Few towns anywhere are better furnished with facilities for extinguishing fires than Gardner, and its immunity, in late years, from the devouring flame is worthy of note. Since the construction of the water-works, with more than seventy hydrants distributed through the densely-peopled sections of the town, it has been, under the efficient direction of the chief engineer of the Fire Department, comparatively easy to control a conflagration whenever one has broken out, and to prevent seriously disastrous results. The pressure in the mains is sufficient, at almost any point—except in close proximity to the reservoir—to throw water over the highest buildings, and the protection is therefore as perfect as possible from that source. The town has also four hand-engines, which are kept in good order and may be called into requisition in localities lying beyond the reach of the hydrants. Besides these, there are four hose-carriages and two hook-and-ladder trucks, for each of which there is a company of twenty men, with an ample amount of hose and other equipments equally complete. A patent life-saving apparatus is provided for cases of extreme danger. Two engine-houses, for the proper protection and care of the apparatus, are located in different parts of the town—one in South Gardner, built in 1880, for the erection of which $4,000 were appropriated, and one in the West Village, erected in 1883, at a cost of $5,000. There are also supplementary stations in the Town Hall building and at the depot. The department is thoroughly manned and under good discipline, and can be called into service at any point by a system of well-arranged signals at the shortest possible notice. The officers of the department for 1888 are: Chief Engineer, Charles N. Edgell; Assistant Engineers, Benjamin T. Joslin, Dexter Gleason, Theodore W. Learned, Frank P. Cowan.

Street Lighting.—It is but a few years since anything like a systematic method was attempted in the way of illuminating the streets of the different villages of the town by night. The records of the clerk show that small sums were voted to parties who should maintain street lamps in localities approved by the selectmen. More recently a gas company has been formed, under whose superintendence pipes have been laid, posts erected and lights kept burning along the more frequented thoroughfares. The company was incorporated in the year 1888 with a capital of fifty thousand dollars, the officers being C. H. North, president; J. L. Robinson, treasurer; T. King, secretary. The works and office are on Logan Street, with Charles A. Roebuck in charge as manager. Not to be behind the times in the matter of lighting streets, halls, shops, stores and even private dwellings, the Gardner Electric Light Company was also incorporated in the year 1888, with Roderic L. Bent, president, and Charles F. Richardson, secretary and treasurer. The capital is $15,000. Works have already been erected on Park Street, near Crystal Lake, illuminating stations have been established and practical operations have been begun and are now going on. The machinery employed consists of one arc dynamo, capable of supporting fifty lights, and an incandescent dynamo with a capacity of five hundred lights. The demand for the latter light is already so great that a second dynamo will probably be put in at an early day. The machinery and appliances are from the manufactory of the Thomson-Houston Company, Boston. Mr. J. W. Thurber is the electrician and manager of the concern.

Public Buildings and Halls.—The principal public building in the place, besides the churches and school-houses, is the Town Hall Building, located in the Central Village, at what was formerly the very heart of the community. It is a wooden structure, built originally in 1860 at an expense of twenty-one thousand dollars. It is two stories high, with spacious basement and high pitched roof relieved by dormer windows. Its exterior walls are broken by buttresses which are surmounted by well-proportioned rooflets and pinnacles. The main hall is on the second floor, occupying with its various accompanying side-rooms the entire area, above which is a commo-

dious, well-lighted apartment used as a Masonic lodge-room. There is a small hall on the lower floor which is used as a District Court-room and for smaller gatherings, also the central post-office and several stores. The edifice was greatly enlarged and improved in 1883, at an additional cost of twenty thousand dollars. The seating capacity of the principal hall is now twelve hundred. It is not only well adapted to ordinary gatherings, but is provided with an ample stage, sets of scenery and other conveniences for dramatic representations.

Citizens' Hall is a spacious apartment on the second floor of the engine-house in South Gardner. In order to meet the need of some place for public gatherings in that part of the town, the residents of the neighborhood supplemented the appropriation made in 1881 for better accommodations for the Fire Department in that locality by voluntary contributions to the extent of about $3000, thus securing an additional story to the structure proposed to be built, and the conveniences they desired. The hall is easily accessible and serves a most excellent purpose as a place for holding lectures, social parties and entertainments of whatsoever kind.

Besides these more public places of assembly, there are several belonging to or occupied by different social and benevolent associations or orders — such as the Grand Army Hall, near the railroad stations; Odd Fellows' Hall, in West Gardner; and the Knights of Pythias Hall, in the Bank Building; Good Templars' Hall, on Chestnut Street; Unity Hall, near the Universalist Church; and still others owned by private parties, like Hager's Hall and Garland's Hall, in West Gardner.

Hotels.—The first hotels in the town were kept by John Glazier, on the spot and in the house where Wm. Austin now resides; Capt. Elisha Jackson, on Kendall Street, near the summit of the hill; and Jonathan Greenwood, on High Street, near Minott. In these several localities was furnished entertainment for man and beast after the fashion of those primeval times. Numerous taverns or public-houses of varying grades, during the more than a century intervening, have accommodated the travelers and other people with food, drink and lodging, at other points within the town limits, of which no record has been sought. At present there is no lack of such establishments in the community for the benefit of either the transient or the permanent guest. The most spacious and imposing of them all is the Windsor House, in the Central Village, owned by a syndicate of Gardner gentlemen and kept by Colby & Hartwell, who have recently taken the place of the former landlord, Mr. W. H. Barnes. The building was put up in 1882, on the site of the old "Central House," for many years neither an ornament nor an honor to the town in any sense, nor a blessing to the community. It is constructed of brick, with granite and brown-stone trimmings, having a frontage of eighty-three feet on Green Street, where is the main entrance, and of eighty-eight feet on Pearl Street. It is three stories above the basement, which is high and commodious and is arranged and fitted up with ample facilities for mercantile purposes. The superstructure contains nearly one hundred rooms, well-apportioned and elegantly furnished, and is provided with steam-heat, gas, electric bells and all the appointments of a first-class establishment.

The South Gardner Hotel is the oldest stand of the kind in town. It is located on the line of the first county road that was laid through the place and of the Fifth Massachusetts Turnpike, and was probably erected and opened as a public-house about the time of the construction of that important thoroughfare in 1800. It has been greatly improved within a few years and adapted to the requirements of the present time.

The Gardner House is more favorably located to accommodate the traveling public than any other in the town, being directly opposite the Fitchburg Railroad Station and central to several important business interests. It was first opened in 1881 by Mr. L. H. Horton, of the South Gardner Hotel, who died not long after, leaving the property to his widow. She had charge of it for about two years and then sold it to Mr. Frank Rafferty, of Claremont, N. H., who enlarged the building and made it more convenient and attractive to guests. It is heated with steam and well-supplied with modern improvements.

Richards' House, on Parker Street, near Vernon, formerly the Methodist Chapel, is a pleasant and commodious place of public entertainment, dispensing a free and generous hospitality to its guests and offering special inducements to commercial travelers, by whom it is liberally patronized.

Citizens' House, on Parker Street, near West, presents a pleasing and somewhat imposing external appearance, being three stories high above the basement, with a double piazza on three sides and other corresponding architectural features. It contains forty-five rooms, besides a large hall, is heated by steam and is furnished with due regard to both comfort and beauty. The proprietor is Agnes Jacques, who is also manager.

The American House, the Crystal Lake Hotel and the Montreal House are hostelries of smaller proportions and of less note, yet claiming their share of favor and patronage from the general public.

Elegant Residences.—Gardner is honored and adorned with a goodly number of beautiful and ornate private buildings—the homes of the better-conditioned class of its citizens, who, by the skill, care and good taste displayed in their dwellings and grounds, contribute not only to the general attractiveness of the place, but to the pleasure and happiness of all lovers of fair and comely things. Some of these, it is said, excel in architectural proportions, in artistic appointments, in chasteness and delicacy of ornamentation, in richness

of color and perfection of finish, anything elsewhere in the county outside of the city of Worcester, while others, less elaborate, costly and perfect, are yet models of refined taste and elegance in the line of art which they represent. Among these as worthy of special mention are the residences of Messrs. George and Henry Heywood, Alvin M. Greenwood, Philander Derby, Mrs. Fannie B. Heywood and Mrs. Ellen L. Pierce, while those of Seth Heywood, Roderic L. Bent, John A. Dunn, Charles D. Burrage, John D. Edgell and others are exceedingly pleasant and attractive.

THE CENTENNIAL CELEBRATION.—On the 27th of January, 1885, it being the year on which the town would complete a full century of its corporate existence, it was voted, at a legal meeting of its citizens, to celebrate the event with observances and exercises appropriate to so important and interesting an occasion, and the matter of providing ways and means for carrying this vote into effect was entrusted to the charge of the selectmen. On the 2d of March, following, at the annual town-meeting, a large committee of citizens was chosen to advise and co-operate with the selectmen in arranging the details of the celebration and in making due provision for the proper execution of whatever plans might be adopted in relation thereto. These parties addressed themselves to the duty assigned them with praiseworthy promptness, fidelity and zeal. The work in hand was wisely divided into numerous departments representing distinct and important interests, and the proper subcommittees were chosen to have these departments in charge, so that nothing should be neglected or omitted which might be deemed necessary to make the proposed demonstration a grand success. Fifteen hundred dollars had been appropriated by the town to defray whatever expenses might be incurred, and private contributions increased the sum to an extent that left the Committee of Arrangements great liberty in the adoption of measures suited to the ends they were appointed to promote and secure. The result of their labors furnished ample evidence of the wisdom and efficiency of their management.

The exact day of the proposed anniversary was the 27th of June, and that was the time fixed upon for the event to take place, preparations for which being made accordingly. But as it had been deemed advisable to unveil and dedicate the newly-erected soldiers' monument on the same day as a prominent and attractive feature of the occasion, it was decided, in order to have time for carrying out the full programme, which was considerably lengthened by this arrangement, that the oration and the more formal exercises accompanying it should be given in the town hall on the evening of the preceding day, June 26th. The hall was elaborately and splendidly decorated and at an early hour was filled with an intelligent, earnest and expectant audience. The Honorable John M. Moore, one of Gardner's best known and most respected citizens, presided, calling the vast assemblage to order and conducting the proceedings according to the following

PROGRAMME.

Opening Address	Hon. John M. Moore.
Prayer	Rev. Lawrence Phelps.
Song of Welcome	Centennial Glee Club.
Address of Welcome	John D. Edgell.
Centennial Hymn	Glee Club.
Oration	Rev. Wm. S. Heywood.
Poem	Hon. John M. Moore.
Closing Song	Glee Club.

The following day was ushered in by a reveille at sunrise from the camp of Battery B, Massachusetts Artillery, located just outside the Central Village, and responding bugle-calls from the neighboring hilltops, followed by a salute of a hundred guns, the ringing of bells and the blowing of steam-whistles. People were early astir, and as the morning advanced, crowds gathered from the adjoining towns and all the region round-about. The streets put on a holiday appearance, public and private buildings were profusely decorated with the national colors, an indefinite number and variety of tasteful designs, emblematic figures, mottoes and words of welcome and rejoicing. The Governor of the Commonwealth, His Excellency George D. Robinson and suite, with other distinguished guests, arrived about ten o'clock, being received with an appropriate salute, when the procession formed, and passing through the principal streets of the different villages of the town, ended its march at length at the immense tent in the rear of the residence of Charles W. Conant, where an excellent dinner was spread and enjoyed, and where the post-prandial exercises were held. On its way the procession halted at the square where the soldiers' monument stood, and where services appropriate to the unveiling and dedication of that tribute to patriotic virtue took place. The procession was nearly a mile long and moved to the strains of martial music floating from several well-trained bands through the air, lending exhilaration and enchantment to the scene.

After the dinner was over the president of the day assumed his proper place, and invited the Rev. James Taylor to offer prayer. He then introduced Geo. W. Cann, Esq., who was to serve as toast-master, and call out the speakers whom a large and eager audience was waiting to hear. "Our Commonwealth" was responded to by Governor Robinson in his usual happy style. Other well-selected sentiments opened the way for Col. W. S. B. Hopkins, of Worcester; Hon. J. Q. A. Brackett, Speaker of the House of Representatives; Hon. C. C. Coffin, the "Carleton" of the *Boston Journal;* Philander Derby, an honored citizen of Gardner; Rev. W. D. Herrick, of Amherst; Rev. Wm. S. Heywood, of Boston, the orator of the day; Harvey B. Whitney, of New Jersey, a native of the town; Rev. Increase S. Lincoln, of Wilton, N. H., the second minister of Gardner, who had just passed the eighty-sixth year of his age, and Charles F.

Reed. The president closed the exercises with a few well-chosen words. A dress parade on the Common by the local and visiting militia terminated the day's proceedings, and a grand illumination in the evening with fire-works, and concerts by Reeve's Band, of Providence, and the Fitchburg Band brought to a fitting end the celebration of the one hundredth anniversary of the incorporation of the town of Gardner.

THE SOLDIERS' MONUMENT.—Sometime in the year 1882 a committee consisting of John D. Edgell, Charles F. Reed and J. Warren Spring was chosen by the town to act with the selectmen in considering the matter of erecting some suitable testimonial in honor of the brave men of Gardner who, in the time of the great Rebellion, "died that the Republic might live." On the 3d of March, 1884, that committee reported in favor of such action, and $5000 was appropriated for the purpose designated. Subsequently the parties to whom the responsibility of carrying the project into execution was assigned made a contract with the Smith Granite Co., of Westerly, R. I., for the erection of a monument of a certain specified design and height, at a cost of $5000, to be completed before the 27th of June, 1885, which action was communicated to the town at its annual meeting that year. The conditions of the contract were fulfilled, and the ceremony of unveiling and dedicating the beautiful granite structure constituted, as before stated, a prominent part of the proceedings of Centennial Day. The exercises consisted of a prayer by Rev. F. B. Sleeper, a poem written for the occasion by Elizabeth Stuart Phelps, and read by Comrade John D. Edgell, a statement of the Monument Committee by Ezra Osgood, chairman, and an address by Captain John F. Ashley, interspersed with appropriate songs and martial music. They enlisted the attention of a large auditory, and were received with manifest favor and enthusiasm. The monument is made of Westerly stone and is of fitting design, of excellent proportions, well-executed and finely finished. It consists of a square shaft resting on a pedestal having a solid base with substantial foundations, the whole being surmounted by a color-bearer in bronze, supporting a flag. Appropriate symbolic illustrations and inscriptions are cut upon its different sides, together with the names of the principal battles in which soldiers from the town were engaged. On the south or principal front, at the foot of the pedestal, in large, raised letters, is the word "GARDNER," and beneath in three lines, "*To her brave sons, who fought for the Union in the War of the Rebellion,* 1861–1865."

MILITARY AFFAIRS.—Mention has already been made of the volunteer military companies formed in response to calls of the United States Government in the troublous times of 1797 and thereafter, and upon the declaration of war with Great Britain in 1812, or in consequence thereof. For nearly twenty years after the disbanding of the latter of these there seems to have been no organization of the kind in town, although the military spirit was somewhat rife in the general community, and military companies were popular in many localities. In 1844 one was formed, however, with James Cooledge 2d as captain, and David Kendall, Joseph Wood and Hiram Wood as lieutenants, which bore the name of the Gardner Greys. But it did not meet with general favor from the public; interest in it soon began to decline and it had but a brief existence. People began to think the time had come when men should "beat their swords into plough-shares and their spears into pruning-hooks and learn war no more." But the Rebellion of 1861 dispelled that illusion, and the citizens of Gardner rose to meet the exigency thrust upon them in a spirit becoming the sons of Revolutionary sires, as has been duly narrated in another chapter. The Rebellion over, the military spirit did not altogether pass away with it. Kept alive by memories of battle scenes and valorous deeds, or awakened by other influences, that spirit came to the surface again and put on an outward form of existence in 1884, when, on the 20th of May, the "Heywood Guards" was chartered agreeably to the statutes of the State, and assigned a place in the volunteer militia of the Commonwealth, as Company F, Second Regiment, with Solon T. Chamberlain captain, and Charles N. Edgell first lieutenant, who are still in command. In the same year the town appropriated five thousand dollars to build an armory for the new company, and chose a committee to superintend the work, which was completed in a few months. The building is a fairly good-sized one of some architectural pretensions, and stands on Elm Street near the railroad stations. The company is under good drill and maintains a respectable standing among its compatriot organizations.

THE TOWN POOR.—Like most towns of the early times, Gardner availed itself of the privilege accorded it by the public statutes of "warning out" persons and families coming to settle within its borders without the consent of the authorities, whereby it was relieved of the responsibility of supporting them should they ever come to want. As a rule, most newcomers were thus treated, among whom may be found those who proved to be in after-years some of the most thrifty and honored citizens of the place. As to persons legally subject to the public charge, the policy generally prevailing years ago of letting them out to the lowest bidder to be cared for and supported, was at first adopted. The first case of this kind recorded is that of Oliver Upton and wife, with their children, early in 1789. Those having them were "to provide victuals and drink convenient for them and to take care of them." An effort was made the same year to have the town buy a farm with suitable buildings, and use it for the proper sustenance and shelter of those who had or might become public charges. But it did not succeed, and nothing was done in that direction for many years. The original policy of letting to the

lowest bidder was continued as time went on until, out of considerations of kindness and humanity, the matter of providing for the poor was left to the discretion of the selectmen. This course was pursued till 1849, when the Abram Stone place, in the northwest part of the town, was purchased, and, with its buildings, put in order for the proper care and maintenance of the unfortunate class under notice. Since that time those designed to be benefited by such an establishment have been accommodated there. The farm contains two hundred and eighty-three acres, having a due proportion of wood, pasture and tillage lands, all in good condition. The house is large, convenient and, though old, is well suited to the purposes for which it is used. A new barn, seventy-two feet by forty, superseded the old one in 1872 at an expense of three thousand dollars. The present annual appropriation for the support of the poor is six thousand dollars.

PHILANTHROPY AND REFORM.—The people of Gardner have never been indifferent to the great humanitary movements which more than ever before in the history of the world have characterized the century now drawing to its close. A long list of benevolent and reformatory activities to be found in the annals of the town proves this. It has already been said that the Evangelical Congregational Church and Society from the beginning maintained an open, unqualified, consistent testimony against the evils of society and in favor of all enterprises calculated to elevate and improve mankind. No doubt this fact did much to mold public sentiment and create an interest in the community in all good causes and in all philanthropic endeavors. But outside of that communion, there was a respectable number of those who, out of their own best convictions and emotions, were devoted to the welfare of their fellow-men, and counted it a duty and a joy to do what they could for the advancement of truth and righteousness in the world. The great temperance reform has had from its very beginning friends and champions ready to do what they could to destroy one of the greatest evils that ever afflicted human society, to overcome one of the greatest of the foes of God and man. Soon after the question of temperance began to be agitated, in 1829, the Gardner Temperance Society was formed, with Rev. I. S. Lincoln as president, and later, to meet the new demands laid upon those who would do effectual service in this behalf—demands created by the increased light which had been thrown upon the nature and injurious effects of all kinds of intoxicating beverages—"The Washington Total Abstinence Society" was organized with Dr. David Parker as chairman and Thomas E. Glazier as secretary. At a still more recent date have "The Sons of Temperance" and the "Good Templars" kept their respective "Lamps of Temperance" trimmed and burning, the rays of which might illumine some darkened mind or guide some lone wanderer into paths of safety and of peace. Aside from these outside and special activities, the several churches of the town have combined more or less of temperance influence and effort with their other work in these later years, and maintained a Gospel broad enough to include the principles of temperance among the "good tidings of great joy for all people." The cause, so far as it assumes organic form, is at present represented by a Lodge of Good Templars, a Prohibitory Club, two branches of the Women's Christian Temperance Union, and perhaps other associations of which no report has come to hand.

As with the cause of temperance, so was it, in its day, with the question of anti-slavery. In the irrepressible conflict between liberty and tyranny which antedated the Rebellion by more than a generation and prepared the way for the triumph of the right in that bloody strife—a conflict which "tried men's souls" as few things in American history ever did before, or ever will again—the friends of the oppressed, the friends of impartial liberty were not a few, and they stood strong and fearless for the right, coming up "to the help of the Lord against the mighty." And in the same spirit have other reforms and good causes, unpopular, perhaps but having the interests of justice and humanity in them, been fostered, upheld and advanced by men and women of this goodly town.

SOCIAL AND BENEVOLENT ORGANIZATIONS.—Under this head are included those associations which, while partaking largely of the same spirit as the enterprises or causes just referred to, are more private in their nature and character and more restricted in the sphere of their activity and influence. Of these, so popular at the present day and so numerous in the community at large, Gardner has its full share. Little more can be done than to catalogue them in these pages without a detailed account of their objects, methods of operation, officers or present degree of prosperity and success. They are mentioned in a miscellaneous way with little regard to their relative importance or any other principle of orderly succession as follows: D. G. Farragut Post No. 116, G. A. R.; Women's Relief Corps; Sons of Veterans; Hope Lodge of Free and Accepted Masons; William Ellison Lodge, No. 185, Independent Order of Odd Fellows; Gardner Encampment, I. O. O. F.; Gardner Lodge, Knights of Honor, No. 1582; Gardner Lodge, American Order of United Workmen; Achilles Lodge, Knights of Pythias, No. 48; Narragansett Tribe, Improved Order of Red Men, No. 48; Puritan Council, Royal Arcanum, No. 1018; American Order of Hibernians, No. 6; American Legion of Honor; Crystal Lodge, Knights and Ladies of Honor, No. 1072; Gardner Commandery, No. 347; United Order of the Golden Cross, Charles Sumner Camp, No. 37, Massachusetts Division Sons of Veterans, and others, perhaps, of which no record has been obtained.

The town is also honored with a Rifle Club, and a Knockabout Wheel Club, both duly organized and

equipped for service in their respective spheres of activity. No attempt is made to enumerate the many societies organized, under many different names, in connection with the several churches of Gardner, as agencies for aiding in the efficient prosecution of the recognized work of the church.

BANKS.—The First National Bank of Gardner was established early in 1865, receiving its charter on the 25th day of February, with a capital of one hundred thousand dollars, derived mostly from the citizens of the town. Mr. Amasa Bancroft was chosen first president and Mr. John D. Edgell, first cashier. In 1875 its capital was increased to one hundred and fifty thousand dollars, the amount of it at the present time. March 27, 1876, Mr. Volney W. Howe was appointed assistant cashier. In 1872, Mr. Bancroft retired from the presidency and Mr. Charles Heywood was chosen his successor. At the death of Mr. Heywood, in 1882, Mr. John D. Edgell was promoted to the vacant position and Mr. V. W. Howe was made principal cashier. These persons serve in the places indicated at the present day. This bank has been under wise and prudent management from the beginning, building up for it an excellent reputation and securing for it the confidence and support of the business community. It has a surplus of thirty thousand dollars.

The Gardner Savings Bank was established in 1868 and duly incorporated for the transaction of business under the laws of the Commonwealth. Charles Heywood was the first president and John D. Edgell, treasurer. This institution has been of great value to the financial interests of the town, especially those of the middling classes, by whom it is largely patronized. It has had a fortunate experience and may be regarded as thoroughly sound and trustworthy. Its present president is Mr. Franklin Eaton and Mr. J. D. Edgell is still the treasurer. The amount of its deposits to date is one million and thirty-eight thousand dollars and its guarantee fund is thirty-eight thousand dollars.

POST-OFFICES.—The first office for the reception and distribution of mail matter established in town was located in the village of South Gardner, that being on the great line of travel between Boston and the towns lying westward in the Connecticut Valley. Mr. Clement Jewett was the first postmaster. His successor was Moses Wood, who, having business interests at the Centre, moved the office there. The people of the south part of the town were much dissatisfied, and petitioned the department at Washington for a new office. Their petition was granted, and Abijah M. Severy was given the charge of it. He was succeeded by Lewis H. Bradford, Samuel S. Howe and S. W. A. Stevens, who received the appointment about the year 1854. At the central office Mr. Wood was probably succeeded by Levi Heywood, C. Webster Bush and Miss Sarah E. Richardson, who has filled the position since 1873, to the entire satisfaction of all interested and concerned. An office was established in the West Village some years since; it is now in charge of Mr. Albert A. Upton.

CEMETERIES.—There are four of these cities of the dead within the limits of the town—the old burying-ground in the rear of the First Congregational Church, lying between Green, Heywood and Woodland Streets, which was laid out about the time of the incorporation, and in which sleep the remains of nearly three generations of the earlier inhabitants; Green Bower Cemetery, off Union Street, South Gardner, which is in control of an association organized in 1849, though it had been used previously to some extent for burials; Crystal Lake Cemetery, purchased "for a cemetery for the use of the town" in 1858, and occupying a beautiful site on the west side of the lake which gives it its name; and St. John's (Catholic) Cemetery, off West Street.

POLICE.—The Police Department of the town consists of fourteen men, at the head of whom is Mr. Henry Carney, with headquarters in the basement of the Town Hall building.

PHYSICIANS.—The first medical practitioner was Joseph Boyden, who came to town early in its history from Sturbridge, married the daughter of Seth Heywood, followed his profession until about the time of the settlement of Rev. Jonathan Osgood in 1791, when he left for Tamworth, N. H., where he spent the remainder of his days. He is said to have been a man of superior ability and of wide reputation. Dr. Boyden was succeeded by Mr. Osgood, who was not only a minister, but a physician of acknowledged skill, serving in that capacity for more than thirty years with a good degree of success and to the satisfaction of his patrons. The third physician of the town was Dr. Howard, whose stay was brief and of whom nothing further is known. In 1822 Horace Parker, M.D., from Westford, began the practice of his profession in the place and continued till his health failed in 1829, when he returned to his old home, resigning his place to his brother David, who had studied with him and who had already practiced somewhat in the community. Dr. David Parker came to Gardner well-qualified for the duties of his calling and cordially endorsed by the highest medical authority in the Commonwealth. He early evinced unusual skill in the treatment of disease and endeared himself to the people of the town and vicinity, both by his success as a physician and by his kindness and sympathy in times of sickness, anxiety and bereavement. Had he given himself wholly to his chosen work he would have risen to a high and commanding position in the medical world. For nearly sixty years he lived in Gardner, was familiar with its affairs and with the great mass of its people, attending to the duties of his profession almost to the last, and passing away at the advanced age of more than four-score years in the spring of 1886. Others of the profession in town have been: Drs. Carpenter, Jew-

ett, Harriman, Warner, Whittier, Sanborn and Sawyer, Sr. The present physicians are: Drs. R. F. Andrews, C. H. Bailey, E. A. Colby, J. E. Gallagher, G. W. Garland, J. R. Greenleaf, H. P. Grise, F. E. Hale, Waldo Mason, ——— Mulligan, J. H. Pilardy, F. S. Riopelle, E. A. Sawyer, W. A. Smith, G. B. Underwood.

ATTORNEYS.—Among the first men who practiced law in Gardner were C. H. B. Snow, Esq. and C. W. Carter, Esq. Mr. Snow died many years ago, and Mr. Carter is still in the profession at Leominster. The present lawyers are Charles D. Burrage, Thatcher B. Dunn, Ephraim D. Howe, Edward P. Pierce and James A. Stiles.

POPULATION, ETC.—The population of the town, indicating its growth from the beginning, is given as copied from statistical tables preserved in the office of the State Secretary, at Boston, to wit: 1785, about 300; 1790, 531; 1800, 667; 1810, 815; 1820, 911; 1830, 1023; 1840, 1260; 1850, 1533; 1855, 2183; 1860, 2666; 1865, 2553; 1870, 3333; 1875, 3730; 1880, 4988; 1885, 7283.

Of the 7283 inhabitants in 1885, there were native males, 2650; females, 2630; foreign males, 1067; females, 891; mulatto males, 35; females 10. This population was distributed in 1673 families, who occupied 1148 dwellings.

According to the assessor's estimates for the last year (1888) the property of the town is as follows:

Total value of personal estate	$1,006,070
Total value of real estate	2,883,476
Whole valuation	$3,889,546

From the same authority it appears that on the 1st day of May the last year there were in town: horses, 732; cows, 511; sheep, 45; other neat cattle, 139; swine, 119; dwelling-houses, 1251½; land assessed, 12,558.44 acres; number of tax-payers, 2,955; number of polls, 2,635; amount of money to be raised by taxation in 1888, $71,313.29.

The public property of the town of Gardner in the year 1888, as reported to the Tax Commissioner of the Commonwealth, Alanson W. Beard, was follows:

School-houses	$65,000
Town-house	30,000
Armory	3,000
Almshouse—real and personal property	9,000
Eighty-four shares in Fitchburg Bank	7,300
Fire apparatus	6,000
Engine-houses	12,000
Other assets (cash on hand)	10,000
Cemeteries	5,000
Public grounds	5,000
Total	$152,300

The liabilities of the town are:

Funded debt	$106,000
Temporary loan	8,000
Trust funds	425
Total	$114,425

The present town officers are: Clerk and Treasurer, C. Webster Bush; Selectmen, Charles Bancroft, Webster Cowee, G. N. Dyer; Assessors, R. P. Adams, Marcus Whitney, Thomas F. Carney; Overseers of the Poor, Charles Eaton, Charles Whitney, Jos. D. Frinney; Collector of Taxes, Edwin H. Cady; School Committee, Dr. E. A. Sawyer, Mrs. Clara Howe, J. M. Moore.

BIOGRAPHICAL.

LEVI HEYWOOD.

Prominent among the business-men and inventors of this his native town stands the name of Levi Heywood, a sketch of whose ancestors' lives and inventive genius we here give. In connection with each of the varied industries which have made New England the work-shop of the country, there is in almost every case some single name, that of a pioneer, or especially successful manufacturer, which is at once suggested when the industry is named. In this relation to the chair manufacture stands the name of Heywood. The various families of this name, widely disseminated through Middlesex and Worcester Counties, are all of them, it is believed, descended from John Heywood, who, prior to 1650, came from England and settled in Concord, Mass. His son, well and widely known as Deacon John Heywood, was a man of large influence both in civil and in ecclesiastical affairs. One of his sons, Phineas, born in Concord in 1707, removed in 1739 to Shrewsbury, Mass. He was selectman, a Representative in the Provincial Congress, a member of the Committee of Correspondence in 1774–75, and a man of large influence in public affairs. His son Benjamin, born in 1746, was commissioned, in 1776, a captain and paymaster in the army, and served through the war. He was present at the surrender of Gen. Burgoyne. From 1802 to 1811 he was one of the judges of the Court of Common Pleas, and for many years was one of the most eminent citizens of Worcester County. His older brother, Seth, born in Concord in 1738, was carried with his father's family to Shrewsbury, and in 1762 was married to Martha Temple, of that town. He soon after moved to Sterling, and served as lieutenant in the Army of the Revolution, purchasing a farm within the limits of what is now Gardner. He was living there at the time of the incorporation of the town in 1785, and, in connection with John Glazier, was one of the petitioners and chief promoters of that act, and was the first town clerk. His son Benjamin, born in Gardner in 1773, married Mary Whitney. He inherited his father's farm. He was for many years the town treasurer. His children were Levi, Benjamin F., Walter, William, Seth and Charles. He died in 1849, in his seventy-seventh year.

Levi Heywood was born in Gardner, December 10, 1800. His early advantages for education were only those of the common schools of that day, with the

ett, Harriman, Warner, Whittier, Sanborn and Sawyer, Sr. The present physicians are: Drs. R. F. Andrews, C. H. Bailey, E. A. Colby, J. E. Gallagher, G. W. Garland, J. R. Greenleaf, H. P. Grise, F. E. Hale, Waldo Mason, ——— Mulligan, J. H. Pilardy, F. S. Riopelle, E. A. Sawyer, W. A. Smith, G. B. Underwood.

ATTORNEYS.—Among the first men who practiced law in Gardner were C. H. B. Snow, Esq. and C. W. Carter, Esq. Mr. Snow died many years ago, and Mr. Carter is still in the profession at Leominster. The present lawyers are Charles D. Burrage, Thatcher B. Dunn, Ephraim D. Howe, Edward P. Pierce and James A. Stiles.

POPULATION, ETC.—The population of the town, indicating its growth from the beginning, is given as copied from statistical tables preserved in the office of the State Secretary, at Boston, to wit: 1785, about 300; 1790, 531; 1800, 667; 1810, 815; 1820, 911; 1830, 1023; 1840, 1260; 1850, 1533; 1855, 2183; 1860, 2666; 1865, 2553; 1870, 3333; 1875, 3730; 1880, 4988; 1885, 7283.

Of the 7283 inhabitants in 1885, there were native males, 2650; females, 2630; foreign males, 1067; females, 891; mulatto males, 35; females 10. This population was distributed in 1673 families, who occupied 1148 dwellings.

According to the assessor's estimates for the last year (1888) the property of the town is as follows:

Total value of personal estate	$1,006,070
Total value of real estate	2,883,476
Whole valuation	$3,889,546

From the same authority it appears that on the 1st day of May the last year there were in town: horses, 732; cows, 511; sheep, 45; other neat cattle, 139; swine, 119; dwelling-houses, 1251½; land assessed, 12,558.44 acres; number of tax-payers, 2,955; number of polls, 2,635; amount of money to be raised by taxation in 1888, $71,313.29.

The public property of the town of Gardner in the year 1888, as reported to the Tax Commissioner of the Commonwealth, Alanson W. Beard, was follows:

School-houses	$65,000
Town-house	30,000
Armory	3,000
Almshouse—real and personal property	9,000
Eighty-four shares in Fitchburg Bank	7,300
Fire apparatus	6,000
Engine-houses	12,000
Other assets (cash on hand)	10,000
Cemeteries	5,000
Public grounds	5,000
Total	$152,300

The liabilities of the town are:

Funded debt	$106,000
Temporary loan	8,000
Trust funds	425
Total	$114,425

The present town officers are: Clerk and Treasurer, C. Webster Bush; Selectmen, Charles Bancroft, Webster Cowee, G. N. Dyer; Assessors, R. P. Adams, Marcus Whitney, Thomas F. Carney; Overseers of the Poor, Charles Eaton, Charles Whitney, Jos. D. Frinney; Collector of Taxes, Edwin H. Cady; School Committee, Dr. E. A. Sawyer, Mrs. Clara Howe, J. M. Moore.

BIOGRAPHICAL.

LEVI HEYWOOD.

Prominent among the business-men and inventors of this his native town stands the name of Levi Heywood, a sketch of whose ancestors' lives and inventive genius we here give. In connection with each of the varied industries which have made New England the work-shop of the country, there is in almost every case some single name, that of a pioneer, or especially successful manufacturer, which is at once suggested when the industry is named. In this relation to the chair manufacture stands the name of Heywood. The various families of this name, widely disseminated through Middlesex and Worcester Counties, are all of them, it is believed, descended from John Heywood, who, prior to 1650, came from England and settled in Concord, Mass. His son, well and widely known as Deacon John Heywood, was a man of large influence both in civil and in ecclesiastical affairs. One of his sons, Phineas, born in Concord in 1707, removed in 1739 to Shrewsbury, Mass. He was selectman, a Representative in the Provincial Congress, a member of the Committee of Correspondence in 1774–75, and a man of large influence in public affairs. His son Benjamin, born in 1746, was commissioned, in 1776, a captain and paymaster in the army, and served through the war. He was present at the surrender of Gen. Burgoyne. From 1802 to 1811 he was one of the judges of the Court of Common Pleas, and for many years was one of the most eminent citizens of Worcester County. His older brother, Seth, born in Concord in 1738, was carried with his father's family to Shrewsbury, and in 1762 was married to Martha Temple, of that town. He soon after moved to Sterling, and served as lieutenant in the Army of the Revolution, purchasing a farm within the limits of what is now Gardner. He was living there at the time of the incorporation of the town in 1785, and, in connection with John Glazier, was one of the petitioners and chief promoters of that act, and was the first town clerk. His son Benjamin, born in Gardner in 1773, married Mary Whitney. He inherited his father's farm. He was for many years the town treasurer. His children were Levi, Benjamin F., Walter, William, Seth and Charles. He died in 1849, in his seventy-seventh year.

Levi Heywood was born in Gardner, December 10, 1800. His early advantages for education were only those of the common schools of that day, with the

addition of two terms at the academy in New Salem, Mass. He taught school for two terms, in 1820-21-22. In the spring of the latter year he went to Rochester, N. Y., and was employed for about one year in stone-work by contract. Returning in 1823 to Gardner, he entered into partnership with his brother Benjamin, in the business of a country store. In 1826 he commenced, in Gardner, the manufacture of wood-seated chairs. In 1831 he went to Boston, and opened a store for the sale of chairs, in which business he continued till 1836.

He also, in connection with W. R. Carnes and his brother William, under the firm-name of Heywood & Carnes, started a mill for sawing veneers from mahogany, etc., in Charlestown. This mill was burned in 1835. He then returned to Gardner, and entered into partnership with his brother Walter, who with others had been for some years engaged in the manufacture of chairs on part of the premises now occupied by Heywood Bros. & Co. The veneer-mill in Charlestown was rebuilt, and Mr. Heywood retained his interest in it until 1849. The business of the new firm in Gardner was conducted with success, the manufacture being mainly by hand, the only machinery being the ordinary turning-lathes and circular-saws, which were operated by water-power, obtained from the pond now known as Crystal Lake.

In 1841 it occurred to Levi Heywood that machinery specially adapted to the various processes of manufacture might be introduced to advantage. His brother, of a more conservative disposition, hesitated to leave the well-worn paths in which they were achieving reasonable success. This difference of opinion led to a dissolution of the partnership, Levi purchasing his brother's interest. He at once gave his thoughts and labor to the devising and constructing of special machinery, as well as to the introduction of different kinds of wood-working machinery, which were already in use for other purposes, and were also adapted to his purpose. In the successful carrying-out of this idea he inaugurated a new era in the chair manufacture, and herein manifested much enterprise, together with the fertility of resource, mechanical skill and inventiveness, and the purpose to introduce constantly new and valuable features, both in methods of manufacture and in style of product, which have always characterized him, and have been large elements of his success.

As an instance of his originality in the matter of mechanical devices, it may be said that as early as 1835 he conceived the idea of the band-saw, now universally adopted as one of the most valuable tools in wood-work. The idea was not original with him though, nor really novel, for as early as 1808 Wm. Newberry, of London, England, had conceived the same idea, and made a crude model of a band sawing machine, but did nothing more with it. So thoroughly were its advantages anticipated by Mr. Heywood, that he consulted with B. D. Whitney, of Winchendon, and with Charles Griffiths, of Boston, as to the feasibility of constructing a machine of this kind. Both of these gentlemen, experts in such matters, agreed that with the quality of saw-blades then made, or any known methods of uniting them, so as to make an endless band, the idea could not be successfully carried out. As is well known, M. Perin, of Paris, France, has since that time accomplished what Mr. Heywood so many years before conceived to be both desirable and feasible.

In 1844 he took into partnership General Moses Wood, then of Providence, R. I., and his brother Seth, the style of the firm being Heywood & Wood. This partnership continued till July 1, 1849. At that time General Wood retired from the firm, and Messrs. Calvin Heywood and Henry C. Hill were admitted, the style of the firm being changed to L. Heywood & Co. Mr. Heywood, in addition to his business relations as the head of the firm of Heywood Bros. & Co., in 1847 formed a partnership with Hon. W. B. Washburn, of Greenfield, Mass., in the manufacture of chairs and wooden-ware, at Erving, Mass., the style of the firm being Messrs. Washburn & Heywood. At this point it is proper to refer to the inventions of Mr. Heywood, which have been mostly to meet the demands of his own business, and have largely contributed to its success. Among them may be named one for wood chair-seat, one for tilting chair, three for machines for splitting, shaving and otherwise manipulating rattan, and four for machinery for bending wood. Of the merits of his wood-bending process it may be proper to introduce the testimony of M. Fr. Thonet, of Vienna, Austria, the head of the largest chair manufacturing firm in the world, employing some five thousand operatives. After visiting the factories of Messrs. Heywood, he wrote: "I must tell you candidly that you have got the best machinery for bending wood that I ever saw, and I will say that I have seen and experimented a great deal in the bending of wood." The Heywood patents have been combined with those of John C. Morris, of Cincinnati, Ohio, on which the patents of Blanchard have, after protracted litigation, been decided to be infringements. The combined patents owned by the Morris & Heywood Wood-Bending Co. it is believed cover the really effective methods for bending wood.

Mr. Heywood represented the town in the convention for revising the Constitution of the State in the year 1853, and in the lower branch of the Legislature in 1871. He was a director in the Gardner National Bank, and a trustee of the Gardner Savings Bank from the organization of those institutions; an attendant of the Congregational Church in Gardner, and a liberal contributor to its support. He was largely interested in educational matters, and made liberal donations of land and otherwise to the town in this direction. He was respected in the highest degree for his personal integrity and excellence of

character, and his example was for good to the large number of his employés, and to the community in which he was long regarded as the most influential citizen. He died July 21, 1882.

CHARLES HEYWOOD.

The subject of this sketch, Mr. Charles Heywood, was the second son of Levi and Martha (Wright) Heywood, and was born during the temporary residence of his parents in Boston, on the 12th day of November, 1831. At an early age, having received a good elementary education in the public schools and at the Fitchburg Academy, he entered the office of E. D. Brigham & Co., commission merchants on Long Wharf, when he was subjected to a thorough training in mercantile affairs, which, in addition to his native abilities and previous acquirements, admirably fitted him for his subsequent career in life. When nineteen years old he went into the counting-room of the rising establishment of which his father was the founder and head, and in which he himself was to become an important factor in later years. There he applied himself not only to the clerical duties pertaining to his position, but to the study and mastery of the details and practical workings of the great industry with which he was brought in contact, and of the means and agencies by which that industry could be carried forward to larger issues and a grander achievement than had as yet been attained or conceived of as possible for it. He thus became amply qualified for membership in the firm of Heywood Bros. & Co., to which he was admitted a few years later, and for a responsible place in its multiform activities. For a while he had charge of the Boston department of the establishment, having his residence at Winchester, a few miles out of the city. In 1866 he returned to Gardner, where he was brought into more immediate relation to the processes of manufacture and to the development and growth of the business, and when he assumed a more direct responsibility in the control of the company's affairs. In 1868 he withrew from the firm, but returned to it six years later and remained in its active service until compelled to desist by failing health, which resulted in his death June 24, 1882. By his removal from the scene of his earthly labors, Gardner lost one of its first citizens, and one of the best representatives of its important interests and prosperous fortunes.

It is difficult to justly estimate such a man as Charley Heywood, to set in proper array his many estimable qualities, and to give him that complete and symmetrical portraiture which will reproduce him, as he was, to the reader's eye and mind. Only a few hints to this end will be attempted in this delineation. As a man of business, quick to grasp business problems and efficient in executing business demands, he was, by common consent, pre-eminent. Nature seemed to have made him, under the eye of a wise Providence, for business pursuits and achievements, endowing him with a keen, clear insight in that direction and a discriminating, practical judgment which, acting with such spontaneity and precision, was akin to genius, if not genius itself. An eminent citizen of a neighboring town, well qualified to judge in such matters, declared him to be "the ablest financier in the northern part of Worcester County."

But he was more than a business man by far—a man of affairs was he in a large sense, built after a generous pattern, to serve many uses, and to answer numerous ends in life. He was a many-sided man. Of versatile gifts, of wide sympathies, of broad views, of comprehensive purposes and aims, of a liberal spirit, he was restricted to one line of effort, to no narrow field of desire or endeavor. Nothing relating to the public good or to the prosperity and welfare of the community was foreign to him or failed to enlist his interest and active support. His ability, his manly character, his disinterested spirit were recognized by his fellow-citizens, who were swift to acknowledge them and ready to honor them by suitable tokens of confidence and appreciative regard. At different periods he held by election and appointment the responsible offices of selectman, School Committee and town treasurer. When in Winchester in 1861 he was chosen Representative to the General Court, and again in 1868 in the district of which Gardner formed a part, though he was a pronounced Democrat, while the district was decidedly Republican — his well-known ability, combined with his sound judgment and fair-mindedness, securing for him the cordial support of many of his political opponents. As a Democrat, he was repeatedly nominated for Congressman and State Senator. At the organization of the Gardner Savings Bank in 1868 he was elected president, and in 1872 was called to the presidency of the First National Bank upon the retirement of Amasa Bancroft, a position which he held till his decease. He took an active part in the long struggle to secure the construction of the Boston, Barre and Gardner Railroad and contributed very largely of his personal effort and pecuniary means to that result. In recognition of his services the corporation made him, for many years, one of its vice-presidents and finally its president. An ardent admirer of the principles, ritual and objects of the Masonic order, he was greatly interested and chiefly instrumental in the founding of Hope Lodge in Gardner, of which he was made first Master. Devoted to the mystic rites, he was held in high esteem by his associates, and rose by regular gradation to the thirty-second degree in the ascending series of honors conferred under the jurisdiction of the order.

Whatever he deemed a benefit to the community and town received his cordial encouragement and support. His name was identified for twenty years with almost every public improvement that was made.

Chas: Heywood

William Reynolds

He was the prime mover in the project for establishing a system of water works. He took part in the preliminary proceedings relating to the founding of a Public Library. He furnished means wherewith to start a printing-office and a local paper in the place. The lithotype business, which has risen to considerable importance and given the town a notoriety in circles which did not know of it before, was inaugurated mainly through his influence and by his help. Mr. Heywood had great interest in and sympathy for young men, and often aided such as manifested a laudable ambition to make a successful start in a business career and fill an honorable place in life by his counsel and pecuniary means. He was liberal to benevolent and charitable movements and objects, and the deserving poor and unfortunate were often relieved and cheered by his unostentatious acts of kindness and good-will. He was a faithful friend to the needy and suffering, and will long be held by such in grateful remembrance. A friend also to religion and to religious institutions, he contributed liberally to the activities connected with the First Congregational Church and Society, whose influence in the community he deemed most salutary and indispensable. Deeply interested in the erection of the church edifice which now graces the head of the Common, he was made chairman of the building committee, and to his influence and efforts its existence was largely due. Not narrow and exclusive, but broad and tolerant in his religious views and sympathies, he respected those who honestly differed from him in opinion, and often, by his contributions, aided other churches than his own in their early struggles to get a foot-hold in the community in order to do some earnest Christian work for God and man. The high regard in which Mr. Heywood was held, not only by the people of his own town, but by the general community, as a business man, a high-minded citizen and a public benefactor, was abundantly attested at his obsequies, when a vast multitude from all the region round, and from far-away places, gathered in the spacious church he had done so much to rear, to express by their presence the sense of loss which filled their hearts, and to pay respectful and appropriate honors to his name and memory.

SETH HEYWOOD.

Seth Heywood was the youngest of the five sons of Benjamin and Mary (Whitney) Heywood who lived to grow up to maturity, all of whom were intimately connected with the chair-making industry in Gardner and elsewhere, and most of whom gained a creditable reputation for business enterprise and efficiency through their manufactured goods, distributed far and wide in this and other countries of the globe. He was born November 12, 1812, and spent the first twenty years of his life upon his father's farm, which then comprised a large portion of the territory now covered by the central village of the town. Having shared the educational advantages which the public schools offered him in his youth, he went to work, before attaining his majority, for his older brothers, then engaged in business under the style of B. F. Heywood & Co., and with the enterprise long identified with the family name he has been connected to the present day—first as workman for several years, then as partner in the management from 1845 to 1882, and finally as confidential adviser and friend. He is the only surviving member of the original firm of Heywood Brothers & Co., reorganized and put upon permanent footing in 1861. Less aggressive and venturesome than his brother Levi, with whom he was so long and so intimately associated, he yet has not only witnessed the growth of the gigantic establishment to which he has been attached from its very inception, but, in his more quiet, unobtrusive way, by his influence and counsel, as well as by his pecuniary means and more active efforts, has done his full share, no doubt, to promote its development and wonderful success. Fortunately, when he desired to lay aside the responsibilities pertaining to the management of the still growing business, he had sons trained under his own care to something of his own wise and prudent methods, whose ability and efficiency had been thoroughly tested, to whom he could resign the weighty interests he had helped to guard and conserve in the assurance that they would not suffer detriment by the change.

Extremely modest and unassuming, Mr. Heywood has not only shrunk from everything that might seem to partake of the spirit of self-seeking or desire for popular favor, but also from taking positions of public trust which he was in every way well qualified to fill, and to which his fellow-citizens would gladly have called him had he consented to yield to their wishes. He has, however, been induced to accept the office of treasurer of the town, a position which he held for several years, discharging its duties with scrupulous fidelity and care. He was sent to the General Court in 1860, his political opponents confiding in his good judgment, integrity and interest in the public welfare, helping to secure to him whatever honors a seat in the lower branch of the Legislature might be able to confer upon him. He has been officially connected with the management of the National and Savings Banks of Gardner, as director and trustee respectively, from the time they were instituted to the present day, and to his financial ability and conservative spirit is due, in proportionate degree, their acknowledged strength and their good standing in the financial world.

He is also a member of Hope Lodge of Free and Accepted Masons, and is in good repute as a brother of the mystic tie. Public-spirited and liberally-minded, kind and charitable, he is ready to do his part in all movements and enterprises in which the good of the people at large and the prosperity of the

town are involved. He is a Trinitarian Congregationalist by religious association, though of the more liberal type, and has always been a generous patron of the First Congregational Church and Society. As a man and a citizen he is above reproach and without guile. Of agreeable, though retiring manners, reticent, but cheerful in disposition and countenance, eminently just in his dealings with all men, of incorruptible probity and honor unstained, no man in the community and town is more sincerely respected than he, and no one is deemed more worthy of trust.

HENRY C. HILL.

The subject of this sketch, Mr. Henry C. Hill, was the son of Bernard and Sarah More Hill, of Newport, R. I., where he was born November 8, 1821. Of his boyhood and early youth little has been learned. While yet but a lad he was employed in the paint shop of Levi Heywood & Co., at Boston, whence he was transferred in the year 1841, before attaining his majority, to the same department of the same firm in Gardner, where, by his fidelity and skill and manifest devotion to his employers' interests, he soon rose to the position of foreman. Proving an efficient manager and displaying general business capacity, and, moreover, having shown himself to be a man of sterling principle and undoubted honor, he was deemed so essential a factor in the development and successful issue of the important industry with which he was connected, that in 1847 he was admitted as an active member of the firm, with which he remained through its several changes and under its varying names for twenty-one years, retiring with a satisfactory fortune in 1868. After severing his old business relations he led a more quiet life, attending to some less onerous but responsible public trusts which he had assumed, answering the calls that naturally came to him in a community whose interests and well-being he desired to foster and promote, enjoying the society of his friends and the hallowed intimacies of his own household until his death, which occurred on the 13th day of February, 1878.

Mr. Hill was a man of generous, noble nature, commending himself not only to his business associates and others with whom he met in a business way by his practical wisdom, financial ability, trustworthy judgment and downright honesty of purpose, but also to the general public by those more general qualities of character which go to make up a complete manhood, and which are calculated to secure the confidence and regard of all classes of people. As a consequence and proof of this, he was called to fill numerous positions of responsibility and trust, the duties of which he discharged with such fidelity and care, with such cheerfulness and courtesy, as to constantly gain to himself new friends or to rivet more closely friendships formed before. For two years he served the town on the Board of Selectmen, and was an influential adviser in regard to many matters of public interest and concern. Upon the retirement of Mr. Charles Heywood from the presidency of the Gardner Savings Bank, in 1876, Mr. Hill was chosen to fill the vacant place, in which he served with highly creditable faithfulness and sagacity until his failing health obliged him to desist. He was for some years director of the First National Bank of Gardner, and to his valuable and highly appreciated services to that institution his associates furnished ample testimony in the resolutions passed by them at the time of his death. Interested in the principles and ritual of the Masonic fraternity, he assisted in the founding of Hope Lodge as one of the charter members, and served as its second Master to the acceptance of his brothers of the craft. He was also a member of the Jerusalem Encampment of Knights Templar of Fitchburg, and of the Worcester County Commandery. Politically attached to the principles and policy of the Democratic party, he was repeatedly honored, under its auspices, with the candidacy for Congress in his Representative district and for both houses of the State Legislature.

Interested in public affairs, he kept himself well-informed upon what was going on about him to the last. The prosperity and welfare of his adopted town he had much at heart, and contributed liberally to what he deemed conducive thereto. He cultivated literary tastes, and collected in his own home a considerable library of well-selected standard works, which he found to be a great source of comfort and satisfaction when failing health obliged him to withdraw from more active life. His habits and inclinations were largely domestic. He took great delight in making his home cheerful, pleasant, attractive, happy, and sought his chief enjoyment in the bosom of his family. His kind, thoughtful, constant effort in this direction and behalf fill that home, now that he has left it, with tender, touching, sacred memories.

Mr. Hill was not formally connected with any church, but he held the Christian faith in sincere respect, and honored Christian institutions by his personal influence, encouragement and liberal pecuniary support. He was a regular attendant upon the public religious services of the First Parish of the town, and one of the last acts of his life was to give two thousand dollars to aid in the erection of its present beautiful and commodious house of worship. Unassuming in manner and in spirit, he abhorred shams and pretenses, and delighted in what is substantial and real, whether relating to articles of manufacture or to personal character, and sought to illustrate in himself the genuineness he professed to believe in and admire.

PHILANDER DERBY.

The second largest chair manufacturing establishment in the town of Gardner is that of which Mr. Philander Derby is the acknowledged head, and to which he, above all others, has imparted life, energy

Shumaker Cohn

S. W. Purdue

and indeed all the essential elements of its phenomenal success. The career of this man is in many respects a remarkable one, full of interest, full of instruction, full of encouragement to all humble, honest workers in any and every field of human effort and achievement. Its more salient and suggestive features are herein brought to the reader's notice.

Philander Derby was born in the town of Somerset, Windham Co., Vt., June 18, 1816. He was the son of Levi and Sally (Stratton) Derby, of the same place, grandson of Nathan and of Abigail (Pierce) Derby, of Westminster, and great-grandson of Andrew Derby, one of the early settlers of the last-named town, and for many years clerk of the proprietors, previous to its incorporation. He worked upon the home farm till he was twenty-one years of age, when he left the familiar fields and hills behind him and went forth to seek his fortune. Coming to Massachusetts to visit relatives and friends, and to find, if possible, some favorable opening for himself, he after a little time made an engagement with Phelps & Spofford, of Sutton, to work in and about their factory, doing such incidental and odd jobs as might be assigned to him in the interest of his employers. There he remained two years and then went back to his old home and made an arrangement with his father to take the farm, with a view of settling upon it and devoting himself thereafter to the primitive calling of tilling the soil. At the expiration of three years, however, he changed his plans, gave up the place and again turned his steps to Massachusetts. He went to Templeton, entered the chair-shop of Mr. Windsor White, in whose employ he continued two years. Having mastered the trade of making chairs, as he thought, and feeling himself competent to carry on business for himself, he removed to Jamaica, Vt., not far from his native town, and there, in the midst of a lumber region, where material could be easily obtained, he began manufacturing on his own account. Not succeeding to his satisfaction, he sold out his investment and the third time took his way to the old Bay State. Coming to Gardner—the place of all others for the chair business—he made an engagement with Rugg, Collester & Co. as a workman, at the termination of which he was employed by S. K. Pierce, with whom he afterward entered into partnership, which continued but a short time. At its dissolution, Mr. Derby, thrown out of a place, tried two or three kinds of business, but, finding nothing that suited him, seized upon the opportunity offered him to purchase a half-interest in the chair manufactory owned and managed by Abner White, located at the site now occupied by A. & H. C. Knowlton & Co. Not long afterward he bought out his partner and continued the business by himself for several years, covering the period of great financial depression in 1857 and reaching to the time of the breaking out of the war in 1861, when the whole land was filled with uncertainty and alarm and all business interests and enterprises were seriously disturbed and imperiled. It was a time of trial to Mr. Derby, just fairly started in the chair manufacture, with the burden of heavy responsibilities resting upon him. But he nerved himself to meet the crisis in a manly way. By various expedients requiring hard work, sagacity and a resolute will, he succeeded in going through the ordeal without serious harm, meeting his obligations as they matured, saving his business, maintaining his credit and his honor unimpeached and firmly established before the world. Taking a fresh start, he has gone on from that time to the present in a career of exceptional prosperity, as detailed in one of the chapters preceding these sketches.

The success of Mr. Derby is due chiefly to himself rather than to any fortuitous circumstances or outside aid—to his untiring industry, his determined purpose, his unfaltering perseverance, which no discouragements could check, no obstacles deter and no dark forebodings overcome. These native endowments, acting along the lines and according to the conditions of business prosperity, have given him the victory and crowned him with well-earned and durable honors. It is, however, a matter of simple justice to note the fact that he has had in his wife a valuable helper throughout his business career. Her faith and courage have reinforced and fortified his energies in some of his more trying experiences, while in the practical management of his affairs her cool judgment and clear-seeing sagacity have often rendered him essential service.

Mr. Derby, though closely confined to the building up and developing his business interests, has not been disposed to ignore his relations to the general public nor to be indifferent to matters pertaining to the welfare of the community. He has been ready and happy to do his full share in supporting the institutions of society, to contribute to benevolent and charitable objects and to help in any enterprise which he deemed promotive of the good order, real prosperity and enduring welfare of the community. Declining all invitations to public office, he has yet consented to serve for some years as director of the National Bank and as trustee of the Savings Bank in his own town. A man of principle and honor, he shares the confidence and regard of his fellow-citizens; a friend of temperance, he commends the cause by both precept and and example. A Republican in politics, he is true to his convictions, but holds no one in disesteem for honestly differing from him in relation to matters of public policy. An Orthodox Congregationalist in religion, he is tolerant of all faiths and seeks to honor his Christian profession by a Christian life.

SYLVESTER K. PIERCE.

One of the most active, enterprising, successful business men of the town of Gardner was he whose

name stands at the head of this biographical sketch. Mr. Pierce was the son of Jonas and Achsah (Haynes) Pierce, of Westminster, where he was born April 11, 1820. He was a descendant in the seventh generation of Anthony Pierce, who came to this country from England about the year 1630, settled in Watertown, Mass., and was made a freeman there September 3, 1634, becoming the common ancestor of a large posterity, whose representatives are scattered all over the United States. When Sylvester K. Pierce was but three years of age his father died, leaving him and several other children to the care and training of a mother who, with limited resources, struggled hard to provide for her dependent ones the means of subsistence, and to fit them for the duties and responsibilities of maturer life. At the age of eleven he was sent to reside with a sister, who had married a farmer of his native town, where it was thought he could be better cared for than at home, and where he remained three years, going thence to spend another year with another sister similarly situated in Ashburnham. At the expiration of that period, when fifteen years old, he came to Gardner and engaged in the service of Elijah Putnam as apprentice to the trade of chair-making, under an arrangement by the terms of which he was to remain two years, and receive, besides his trade, board and schooling, the sum of $120 in money. After this he was for five years employed as journeyman in Ashby and Ashburnham, when he returned to Gardner and entered upon that career of business and financial prosperity which is sufficiently indicated in its appropriate place in the preceding historical sketch of the town of his adoption. That active and successful career was brought to a sudden termination by his decease January 28, 1888. A man of large frame and of robust constitution, he had enjoyed general good health until, having contracted a violent cold which in its early stages took the form of typhoid pneumonia, he came to his death five days afterward.

Like many another successful manufacturer and prominent citizen of Gardner, Mr. Pierce was a good example of a self-made man. Starting out in life from humble conditions, deprived of a father's protection and guidance when but a child, put to manual labor at an early age, compelled by necessity to forego many of the comforts and delights so acceptable to youth and so desirable at all times, and to endure many privations and hardships, dispossessed of advantages and opportunities so helpful to the development of a self-reliant and well-balanced character, he yet, by his own energy, ambition, industry, sleepless vigilance and unfaltering perseverance in the pursuit of business ends according to business principles and methods, built up from inconsiderable beginnings one of the largest and most substantial manufacturing enterprises of the town in which he lived, and became one of the most active, prominent and influential, as he was one of the most wealthy, of its citizens. For a generation he was the leading man in the industrial interests of the community where he resided, and the renewed life and increasing prosperity of the village of South Gardner during these later years are largely due to his efforts and influence. The enlargement of his business as the years have gone by called in workmen with their families from abroad, conducing to the material growth of that part of the town, as well as to its social, educational and religious advancement and importance. The immense establishment with which his name is especially identified is the most prominent feature of the neighborhood, while his residence opposite, with its imposing front of fine architectural design and stately proportions generally, arrests the attention of every passer-by. A furniture and carpet store erected by him, and put in operation in 1869, has attracted patronage from a wide circle of surrounding country, and his farming operations, carried on as a sort of pastime or recreation supplementary to the more onerous duties of his regular business, have won the recognition of connoisseurs in that department of human activity.

Politically Mr. Pierce belonged to the Republican party, but, while loyal to its principles and devoted to its interests, never aspired to leadership in its councils or to any office at its disposal. He has, however, been called to, and has filled acceptably, important positions in financial enterprises both in his own and other towns, his business sagacity and integrity securing to him the confidence of those having important trusts in charge. He was for many years a director of the Wachusett Bank, Fitchburg, and of the First National Bank, Gardner; also a trustee of the Gardner Savings Bank, and of the People's Savings Bank, Worcester. To him have been assigned, from time to time, important interests in the management of town affairs. He was a member of the First Congregational Church and Society in the town, serving for many years on the board of management connected therewith, and taking an active interest in all matters pertaining to church activity and usefulness. A kind husband, an affectionate and devoted father, an enterprising and honored citizen, his sudden removal from the midst of his earthly labors, while "his eye was not yet dim nor his manly force abated," was a loss to his family and to the community widely felt and deeply lamented.

EDWARD J. SAWYER, M.D.

Edward Julius Sawyer, son of Rev. Pember and Laura Sawyer, was born in West Haven, Rutland County, Vt., August 3, 1829, and died at Gardner, Mass., May 10, 1883. He received his early education at New London, N. H., and Chester Academy, Vt., where were laid the foundations of that broader and more thorough culture which characterized his maturer life.

Choosing the profession of medicine for a calling, he studied with Dr. Lowell, of Chester, and attended

Edward Julius Sawyer.

Calvin S Greenwood

lectures at the Medical College in Castleton, in the same State, from which institution he graduated with the honors of a degree in June, 1853. He soon after began the practice of his profession at Acworth, N. H.; but, at the expiration of five years, desiring a larger field and better opportunities, he removed to Gardner, Mass., where he found an opening and a sphere of activity more congenial to his tastes and better suited to his ability and power of usefulness. Entering into his work here with earnestness and zeal, he soon gained the confidence of the community and secured a good practice, which grew year by year till his decease.

Dr. Sawyer was well qualified for the duties of his profession and fully equipped for every department of service in it. Thorough in his diagnosis and skillful in his treatment of disease, of deliberate judgment and high character, he was often called upon to act as professional consultant in difficult cases, where he proved himself as acceptable and trustworthy as he did in the more regular duties of a family physician.

In the sick-room he was cheerful, sympathetic and encouraging, his presence and personal influence contributing to the benefit of his patients as well as his prescriptions. There was to him a sacredness in his work which called into exercise all his best powers, and to those committed to his professional care he gave unwearied and conscientious attention.

But Dr. Sawyer commended himself to the confidence and esteem of the general public not only by his professional ability and success, but by his manly qualities, his courteous manners and consistent Christian life. He was a pleasant companion, a faithful friend, a public-spirited, honorable and honored citizen. Well read in the current literature of the times, familiar with passing events, of broad sympathies and generous culture, and withal a ready, entertaining speaker, he was often called upon to address public gatherings on important occasions, which he was able to do with ease and eloquence and to the edification and delight of his hearers.

Dr. Sawyer was one of the founders of the Worcester North District Medical Society, and for two years its president. He was also a member of the Massachusetts Medical Society and of the American Medical Congress. During the war he was appointed examining physician by Governor Andrew, a position which he filled with credit to himself and acceptably to all.

Politically he was a Democrat of the "old school," and as such received the nomination of his party as a candidate for important offices in both the State and National Legislatures. But he was not guilty of "offensive partisanship," and so commanded the respect of his political opponents and received a commission of justice of the peace at three different times from a Republican Governor.

As a member of the Masonic order he was held in high regard by his brethren, and was honored with repeated tokens of their confidence and favor. He was a charter member of Hope Lodge, and for many years occupied in it the high and responsible position of Master. He received all the usual degrees of the order attainable in this country, and was well versed in its ritual and mysteries. In recognition of his ability and worth as "a just and upright Mason," he was appointed Deputy Grand Master for the Masonic district in which he resided.

In religion Dr. Sawyer was an Orthodox Congregationalist of the modern type, and a member of the First Church of Gardner; one who proved the sincerity and intelligence of his Christian profession by the purity and uprightness of his character and life. He served the God he believed in and adored by serving well his fellow-men.

As an indication of the high place which Dr. Sawyer had gained in the esteem of those most intimately associated with him, the testimonials given below are respectfully submitted. The first is from the record of the action taken by his Masonic associates with regard to his death, and the second from remarks made by Dr. J. P. Lynde, of Athol, President of the Worcester North Medical Society, in view of the same event, which were adopted as expressing the sentiments of the members, and ordered to be placed upon the records of their association, as a fitting tribute to his memory:

WHEREAS, The intimate relations so long held by the deceased with the members of Hope Lodge as their Master and otherwise render it proper and desirable that they should record their appreciation of his many virtues and eminent services for the good of Masonry, whether as Master of Hope Lodge, or as District Deputy Grand Master, or in humbler positions, &c.; therefore,

Resolved, That we extend to the family of the deceased our heartfelt sympathy in this their great affliction, and assure them that his memory will ever be treasured by us as an incentive to noble and right endeavor.

Resolved, That with profound sorrow and regret we mourn the loss of our brother, consoled only by the trust and confidence that what is our loss is his gain. JOHN D. EDGELL, *Secretary*.

As a physician he was prudent, intelligent, skillful and successful. In his intercourse with his patrons he was kind, courteous, urbane, self-denying, and was held by them in high esteem, and had to a great degree their confidence and love. . . As a citizen and as a man among men, he was respected by his neighbors and all who shared his society. . . He had reached the meridian of life and was rapidly growing in usefulness and influence. . We shall remember his manly form, his dignified presence, his cheerful greetings, his work and worth among us for twenty-five years past, and we will cherish his memory with affectionate respect, and sympathize with his family in their bereavement. CHARLES H. RICE, *Secretary*.

CALVIN S. GREENWOOD.

Calvin S. Greenwood was born in Gardner, May 18, 1810, and died there August 25, 1873, having scarcely passed the summit of an active, useful, honorable life. He was the son of Alvin and Mary (Childs) Greenwood, and the grandson of Jonathan Greenwood, one of the early settlers of the town, whose great-grandfather was Thomas Greenwood, a resident of Newton, Mass., in 1667, and probably the first of the name in this country. He shared the

meagre educational advantages proffered him in his boyhood and youth, and early in life learned the trade which was then just beginning to present some signs of its future prominence in the community, and of which he was destined to become, in after-years, an efficient promoter and a worthy representative. In 1837 he went into company with Mr. David Wright, and, the two having purchased the privilege now occupied by his sons with its appurtenances, and made the requisite changes and improvements, began the manufacture of chairs under the name of Greenwood & Wright—a firm long and favorably known in the vicinity and among business men. Mr. Greenwood was connected with the industry carried on at this stand, either as co-partner with others or as sole proprietor and manager, until his death, a period of thirty-six years, evincing more than usual native business capacity, which was improved by experience, and which crowned his efforts and endeavors with a well-earned and reputable success.

Mr. Greenwood was an earnest, enterprising man, doing with his might what his hands found to do, and entering into whatever project secured his confidence and co-operation with unfaltering purpose and persevering zeal. He accomplished much in the way of advancing the material interests and industrial prosperity of the village of South Gardner, not only by developing and extending the special enterprise with which his name was identified, but by encouraging undertakings outside of his own particular field of activity even to the extent of furnishing at times personal credit and financial support, when those undertakings were entered upon with an honest purpose and were calculated to enhance the common welfare. Indeed, whatever seemed to him conducive to the real prosperity and happiness of the community, was sure to receive sympathy from him and such substantial aid as he could render it.

But he was not only public-spirited in the general sense indicated, he was in every way large-minded and large-hearted, of generous impulses and disinterested aims, desirous of making the world better and happier by his being in it. He had something of an "enthusiasm for humanity" dwelling and burning in his breast, causing him to be actively interested in moral and social reforms, in philanthropic movements, in charitable objects,— in everything that had in its keeping the permanent good of his fellow-men, which he deemed consonant with the honor and glory of God. He was a decided, outspoken anti-slavery man in the early days of that cause, when to be such was to subject one oftentimes to obloquy, scorn and open denunciation—a brave soldier he was in the "irrepressible conflict" which was raging for twenty years or more before the strife at arms, summoning to service the horrid enginery of war, was inaugurated in the land; and which, while it no doubt hastened the crisis, also determined its final issue in the victory of Freedom and the Republic over their misguided and murderous foes. And when the outbreak came and treason struck at the nation's life in order that the slave-power might reign perpetual in the nation's councils, he, grasping the meaning of the fight and the mighty interests at stake, took an active and influential part in rousing the patriotic ardor of his fellow-citizens, and in securing that action of the town which proved its loyalty in the time of the country's need, and contributed in due degree to the triumph of the right, wherein was included the proclamation of "liberty through all the land to all the inhabitants thereof." Mr. Greenwood was, moreover, a strong and tireless friend of temperance, adopting, as of vital importance in advancing the interests of that cause, the principles of total abstinence demonstrating, the sincerity of his faith by his personal habits in his daily life. Other reforms received the smiles of his approving favor and every good word and work found in him an advocate and helper. To him came the blessing pronounced upon those that consider the poor, and he distributed his benefactions liberally, but quietly, among such according to his means.

He received undoubted assurances of the confidence and appreciative regard of his fellow-townsmen, in that he was repeatedly called to the service of the public in positions requiring sound judgment, impartial justice, unimpeachable integrity and an unselfish regard for the good of the community. He filled acceptably positions of grave responsibility in the adminstration of town affairs and in the financial institutions of which he was an associate member. He also represented the town in the Massachusetts Legislature of 1869. He possessed qualities of mind and character, which, supplemented by a kind spirit, an enthusiastic manner and a pleasing address, gave him wide and salutary influence wherever he was known.

An ardent Republican in his political convictions and associations, he was truly democratic in feeling and according to the principles of the Declaration of Independence. Of reverent and devout spirit and of Christian principles and faith, he entered the fellowship of the Evangelical Congregational Church of Gardner, and was earnestly devoted to its interests and prosperity. But he was not dogmatic nor sectarian, but gave a broad interpretation to the teaching of the Gospel, and was happy to recognize and confess the presence and power of the Spirit of God wherever the fruits of that Spirit were found. He was unusually domestic in his habits and tastes, delighting in his home, affectionate and happy in all his relations with those near to him there, to whom he was most dear, and by whom he is held in tender and sacred remembrance. Moreover, he was one of the most genial, approachable and affable of men, always courteous and kind, and withal of cheerful, sunny countenance, making him an agreeable companion as well as a choice friend. To him, as to few

Amasa Burnes

beside might be appropriately applied the significant and highly honorable title of a *Christian gentleman.*

AMASA BANCROFT.

The subject of this notice, whose name appears above, was the son of Smyrna and Sarah (Whitney) Bancroft, and grandson of Jonathan and Sarah (Case) Bancroft, who were among the earliest settlers upon the territory now included within the boundaries of Gardner. He was a descendant of Lieut. Thomas Bancroft, who was born in England in 1622, and, coming to New England in his opening manhood, settled in Lynn for a short time, but before the year 1648 was permanently located at Reading, Mass., where he became the common ancestor of a large posterity bearing his own and other names, among whom are those who have attained distinction and high honor, not only in this but in foreign lands.

Amasa Bancroft was born March 16, 1812, on the place situated three-fourths of a mile northwest of the Common, first occupied and improved by his grandfather some years before the incorporation of the town. His boyhood and youth were spent in the manner that was usual with farmers' sons in this section of the country half a century or more ago. In the routine of his daily tasks, and under the responsibilities laid upon him, there were developed in him those habits of industry, prudence and general thriftiness, and that self-reliant spirit, so essential to a strong and reliable character, which, in after-years, served him so well in the various positions and relations in life he was called upon to fill. Arriving at mature age, he did not go out to seek his fortune in larger communities, where there was greater promise of promotion and worldly success, but remained in his native town, content to enter upon whatever career of usefulness might open to him there. The business of chair-making was at that time just becoming established in the community, and beginning to display some indications of what it was destined to be in the future, and he spent three years in learning the trade. This accomplished, he formed a partnership with Frederick Parker, and the two carried on the manufacture for a year in a small shop standing near the present residence of Mr. Henry Lawrence. They then associated with themselves Messrs. Jared Taylor and Joel Baker, forming a company which bore the name of Taylor, Bancroft & Co., and bought the so-called "Pail Factory" property in the south part of the town, of Sawin & Damon, who had started the making of pails, buckets and kindred wooden-ware by machinery not long before, for the purpose of continuing the production of the same line of goods. This they did for four years, or till 1840, when Mr. Bancroft purchased his partners' interest, and went on from that time, as represented heretofore, till his death, which occurred January 25, 1888, when he is said to have been the oldest pail and tub manufacturer in the United States.

Mr. Bancroft was a man in whom the town of Gardner might take a just and laudable pride. Born within its borders, trained in one of its homes, educated in its schools and churches, aiding in the development of its industrial prosperity, and extending sympathy and support to whatever might promote its intellectual, social, moral and religious interests, he merited, as he received, the esteem and confidence of his fellow-citizens, and of all classes of the community. He was repeatedly called to fill places of responsibility and trust, and discharged the duties of those positions with conscientious fidelity, and to the satisfaction of all concerned. He was a member of the Board of Selectmen for five years; he was the first president of the First National Bank, an office which he held for seven years; and he was trustee of the Savings Bank from its establishment in 1865 to the time of his death.

Endowed by nature with a good mental and moral constitution, Mr. Bancroft made it the foundation of an upright, useful, exemplary life. Among other native gifts, he was the possessor of an unusually musical voice, combined with a quick ear and delicate taste for the concord of sweet sounds. These capabilities, improved by such culture as he could command, made him a favorite in musical circles wherever he was known. With pleasing address, and power of imparting whatever musical knowledge he had acquired, he was for many years an acceptable and efficient teacher of singing-schools in the neighborhood round about, and a respected leader of the choir of the church to which he belonged for forty years. His singing was with power and effect. His early pastor in characterizing it said, "He sang from his own heart into other hearts."

A man of cheerful disposition, humane feelings, tender sympathies and generous impulses, every good work found in Mr. Bancroft a helper, and every philanthropic cause a friend. He was considerate of the men in his employ, of the unfortunate and worthy poor, and his benefactions to such were many, but scrupulously kept from the public eye. He shrank from whatever might seem like notoriety or love of display, and many of his donations to objects he held most dear were not only unknown to the world, but to those nearest to him in life.

In his home he was genial, affectionate, kind and helpful, making life there sunny and glad by his presence. His immediate relatives were very dear to him, and upon them he lavished the wealth of his tender, manly heart. He dispensed a liberal hospitality, and his friends were always met at his door with a warm and earnest welcome.

Mr. Bancroft was a man of strong religious convictions and of deep religious feeling. A Congregationalist of the Evangelical school, he was sincerely devoted to his church, and to the doctrines for which it stood. But with him religion was not simply a form of belief, but also a mode of life. He accepted

the Christian faith as the basis and inspiring source of a Christian character, and his daily walk and conversation before God and men testified to the sincerity of his convictions, to the purity of his motives, and to the exalted quality of his purposes and aims. When he passed away the church lost a conscientious and faithful devotee, his native town a worthy son and citizen, and the world a high-minded, honorable man.

GEORGE S. COLBURN.

The student of local history who has carefully followed the pages of these volumes has not failed to be impressed with the record of mechanical devices produced and perfected by the men of Worcester County. To their inventive genius is due the thanks of all our citizens, for they primarily, have produced the whirling wheels of the mill and factory to sing of comfortable homes and good table for the operatives there employed.

The manufacture of chairs, which forms by far the largest part of our industry, has materially changed during the past quarter of a century, and prominent among the names of the men who have by their brain invented and developed machinery for this particular branch of our industry is that of George S. Colburn, the subject of this sketch, who was born in Leominster, May 5, 1820. His father, Simeon Colburn, died when the boy was but three months old, leaving his widow in straitened circumstances, and as soon as the boy was sufficiently large to "do chores" he was sent to live with an uncle in Cambridge, where he remained working for his board two years. Then he went to live with Deacon Joseph Dickenson in Swansea, N. H., with whom he remained until his seventeenth year, working early and late on the rocky farm nine months in the year, attending the district school the other three, and acquiring the branches then taught therein.

A taste for mechanics developed itself early in Mr. Colburn's life, and in boyhood he was wont to arrange and adjust small mechanical devices. At the age of seventeen he apprenticed himself with Mr. James Clark, of Royalston, to learn the shoe-maker's trade, remaining four years, receiving his board and $2.00 for his labor, out of which he had to clothe himself. At the age of twenty-four he went to work in a furniture shop. Here he was impressed with the lack of machinery for the treament of cane, and began to study and experiment upon machinery for doing this work. He was so successful that he gave his whole attention to the manufacture of this class of machinery and to the manipulation of cane.

In 1857 he went to Wakefield to assist Mr. Cyrus Wakefield in the development of the "Wakefield Rattan Co.," one of the most important industries of that whole section. Here he remained until, his health breaking down, he was obliged to go out of doors and so purchased a small farm. After about a year he recovered, and in 1875 came to Gardner to assist Messrs. Heywood & Co. in the development of that part of their extensive plant relating to the treatment of cane. He remained with them several years, and having acquired a competency, he retired from active business, and with his wife, who was Miss Frances R. Sawyer, of Royalston, and whom he married in 1843, he occupies a charming home in the west village, conscious of having performed life's allotted tasks uncomplainingly and faithfully.

S. W. A. STEVENS.

Simeon W. A. Stevens, the oldest merchant in Gardner and the postmaster in the South Village for thirty-five years, was the son of Abel and Sally (Spaulding) Stevens of Westford, Mass., where he was born July 27, 1818, and where he lived until he was about eleven years of age. At that time, his father having died, he came to Gardner and worked as office and errand boy for his brother, Abel Stevens, who was then running the South Gardner Hotel. At the expiration of two years he returned to Westford, his mother still residing there, remaining nearly the same length of time employed in helping one of the townspeople about his farm and in supplementing his previous district school education by a few terms' tuition at the widely-known Westford Academy. He then, being fifteen years old, came again to Gardner, went into the chair-shop, learned the trade of making chairs and worked as a journeyman till he was twenty-one. His health having become somewhat impaired by continuous in-door employment, he left the shop and engaged in driving team for Mr. Stephen Taylor, by whom he had previously been employed at his trade. He continued in this service two years, going then to Leominster and running a team on his own account from that place to Boston. This continued till the opening of the Fitchburg Railroad four years later put an end to that method of transportation. Returning once more to Gardner, he carried on the same business for several years, having David Kendall for a partner a portion of the time, and serving the general public even after the railroad was built through the place, by carting goods to and from the depots at both ends of the line.

On the 1st of January, 1850, Mr. Lewis H. Bradford, who had for some years been engaged in the miscellaneous merchandise traffic in South Gardner, being about to remove to Fitchburg, formed a partnership with Mr. Stevens and William Hogan, to whom he committed the care of the store previously occupied by him. A few years later, Stevens and Hogan bought Mr. Bradford's interest and went on in their own behalf. When the South Gardner Manufacturing Company was formed, they merged their special business in the general undertaking, which aimed to ab-

Geo. B. Carpenter

Anastasia

sorb and control nearly all the industrial activities in that part of the town. While the new experiment was going on and proving its incapacity, Mr. Stevens turned his attention for a while to the manufacture of chairs at the stand now occupied by Wright & Read. But not succeeding to his satisfaction, and the joint stock enterprise failing to meet the expectations of its friends and coming to an end, he, in the readjustment of affairs, took the store and its contents, and associating with himself Mr. George Greenwood, went on as before under the name of S. W. A. Stevens & Co. Ten years after, in 1868, Mr. Stevens by purchase became sole proprietor of the establishment. In 1876 he received as partner his son Ambrose, and the two have been in company since, the firm-name being S. W. A. Stevens & Son. They do the same kind of miscellaneous business that has always been transacted where they are located, after the manner of an old-fashioned country store.

According to the above review it appears that at the opening of the present year (1889), Mr. Stevens has been in trade at the same stand for a period of thirty-nine years, with the exception of the brief interval alluded to (and even then he was indirectly connected with it), and has fairly earned the title of the veteran merchant of Gardner. By close attention to his business interests and careful management, combined with his gentlemanly manners and evident disposition to accommodate and please, he has gained for himself a widely-extended patronage, and achieved what may be regarded as an honorable success in life and a good standing among his business associates, and elsewhere. In addition to the personal qualities mentioned, he is characterized by a sense of justice, and a purpose to deal fairly and honorably with all men, that are calculated to inspire and secure that confidence and respectful esteem in the community where he has lived for nearly sixty years, which he seems fortunate enough to share to a very high degree. The fact that he has held the office of postmaster for more than a generation, having been first appointed to the position under the administration of Franklin Pierce in 1854, through all the vicissitudes of political life, and especially through six successive terms of the supremacy of his political opponents, he being an outspoken and well-known Democrat, and without any special effort on the part of himself or his friends, is an enviable testimonial to his kindness, courtesy and readiness to oblige, as well as to the honest, equitable and impartial manner in which he has discharged the duties of the station he has been called upon to fill. His ability, fidelity and trustworthiness in other directions have been recognized by his fellow-citizens and publicly acknowledged, in that they have chosen him selectman at different times, and assessor, and appointed him on committees to which important public interests have been referred. He was one of the first directors of the National Bank in Gardner, and has been a trustee of the Savings Bank from the beginning. He is a member, and has been for some years the treasurer, of the Baptist Society, to the activities connected with which he has long been a cheerful and liberal contributor. He is also president of the Green Bower Cemetery Association.

The career of such a man as Mr. Stevens is full of lessons of wisdom and practical utility for all classes and conditions of people, and especially for those who, having come to, or are approaching mature years, are soon to enter upon the more active duties and labors of life. It indicates to every aspiring, right-minded youth the direction in which true success lies, and the general conditions upon which a good standing in the world, the esteem of those whose esteem is worth having, usefulness, honor and happiness may be gained. It presents an example which furnishes instruction and encouragement for such and is commended to them as worthy of study and emulation.

JOHN EDGELL.

William Edgell, first of Woburn and afterward of Lexington, a tinman by trade, who married Elizabeth Norman, of Marblehead, about the year 1720 and died before 1734, leaving four sons, was, so far as is known, the common ancestor of the family in New England. The name was probably Edgehill at the outset, as it so appears in some of the earlier records, and, if so, was very likely derived from Edgehill in the mother country, a locality whence the emigrant may have come to these shores, and in which his ancestors may have for a long time resided. The youngest of the sons referred to, also called William, was an early settler in Westminster, where he purchased lands in 1750, on which he soon after located, becoming a prominent man and an influential citizen in local and public affairs. Among the children of this second William was a third William, who married Thankful Puffer, of which union John Edgell, the subject of this notice, was born October 15, 1804.

The first years of John Edgell's life were spent upon the farm of his father, but before arriving at his majority he learned the trade of shoemaking, which he followed for a time, going from house to house with his kit of tools, after the fashion of those days, and stopping where his services were required long enough to supply the existing family needs in that particular —a practice familiarly termed "whipping the cat." He subsequently learned to make chairs, and was engaged in that business for many years under different auspices in his own and neighboring towns. An important change occurred in his life when, in 1836, he removed from Westminster to Gardner, just in season to take advantage of the tide, then beginning to rise, which was to bear the little town of a thousand people on to prosperous fortunes and an undreamed-of success. He resumed there his former calling, pursuing it for some years by himself in a shop attached to

his dwelling-house, and attending personally to the transporting and selling of his own goods, and afterward for a time, with the late Charles W. Bush and others for partners, in the oldest of the buildings now composing the large establishment of Philander Derby & Co., some other kinds of work being connected with that of manufacturing chairs.

Long before this, however, he had been running a weekly coach to Worcester, going on Tuesdays and returning on Wednesdays, for the accommodation of travelers, the distribution of Worcester papers to patrons along the route and the transaction of a general carrying and express business in the interest of the public. This was but incidental and subsidiary to his regular vocation. As more rapid means of transit and more frequent intercourse between the towns through which he passed were established, his patronage declined and his coach line was eventually given up. But his experience in this direction opened the way to the more satisfactory employment of his later years. His miscellaneous business at the county-seat brought him into contact with gentlemen representing some of the more important interests located there, with which he afterwards became permanently identified. This was especially the case with reference to the matters of fire insurance, of settling estates and of conveyancing, to each and all of which he has devoted himself as a means of livelihood and of profit for the last thirty or more years. He was the first regular underwriter in Gardner, and for a long time was without a competitor. No one probably in the vicinity did as much conveyancing for a generation as he, and no one in that northwest part of Worcester County has probably taken so many cases to the Probate Court and carried them through satisfactorily as he has done. In actual knowledge upon all these important matters, and in ability to transact business relating to them, he has rarely been equaled, perhaps never excelled. In all these matters, too, and especially in the settlement of estates,—a department in which he has had much to do with people in the humbler walks of life,—there has been such confidence in his knowledge, ability, impartial judgment, conscientious regard for what is just and right, and disposition to make reasonable charges for services rendered, as that the humblest and those least skilled in business of any sort would entrust their monetary affairs, sometimes their all, to him, as to a tried and devoted friend, assured that their interests would be guarded and promoted with scrupulous watchfulness and care.

Aside from the duties devolving upon him in the lines of activity indicated, Mr. Edgell has been called upon by his fellow-citizens to fill almost every office at their disposal. To his efforts and influence the founding of both the National and Savings Banks in Gardner was largely due. Of the former he has been one of the directors from the beginning, as he has been one of the trustees of the latter, and its president for three years after the decease of Francis Richardson, Esq. He has always been on the investment committeee of the Savings Bank, a position to which he brought qualities fitting him pre-eminently for the efficient discharge of the responsible duties it required. No man for a generation has been better acquainted with landed property and every kind of real estate in Gardner and vicinity than he, and the judgment of no one in regard to such property has been more earnestly sought for or more implicitly trusted.

Mr. Edgell is a man of decided opinions upon questions of both private virtue and of public policy, and is open and frank in the expression of them. But his recognized kindness of heart, sincerity of purpose and high character generally have prevented personal alienation or distrust on that account. Naturally modest and retiring, he yet shirks no duty when laid upon him and evades no responsibility when once assumed or made known. He has much of the spirit of a reformer, and has given aid and encouragement to the great moral movements of the age. He called himself an Abolitionist when the name was a reproach; he has been for long years in precept and practice a friend and promoter of the temperance cause, and other needful and important changes in personal and social life he has advocated and maintained. Originally a Whig in politics, his sympathy with the anti-slavery cause inclined him, after a while, to withdraw from the support of that party and to look for the rising of a political movement which should stand boldly against the usurpations of the slave power, inscribing upon its banner "Liberty" as well as "Independence." He was consequently ready with his sympathy and support for the Free-Soil party in 1848, and even more so for the advent or formation of the Republican party in 1856, to the principles, interests and fortunes of which he has ever been warmly and conscientiously attached. Elected to the Lower House of the Legislature of Massachusetts in 1850 and 1851 by the suffrages of his neighbors and friends, he counts it an honor to have belonged to that company of the faithful who, after a hotly-contested struggle extending through twenty-six successive ballotings, at length succeeded in sending that noble son of the good old Commonwealth, Charles Sumner, for the first time to the Senate of the United States, where for more than twenty years he rendered valiant service for his country and for liberty.

Though not of late years connected with any great industry or popular organization which would give him influence in the community, yet few men have exerted greater power for good than he or done more for the prosperity and enduring welfare of the town of his adoption. Withdrawn somewhat from active business and from open participation in public affairs by reason of his advanced age, he nevertheless still retains in a marked degree the full possession and use of his intellectual and moral faculties, and his counsel and guidance are still much sought for and heeded in the practical concerns of life.

Yours Truly
